(*Astron.*) The apparent angular elevation of the celestial bodies above their true places, caused by the refraction of the rays of light in their passage through the earth's atmosphere. It is found by experiment that the refractive power of a gas, or æriform substance, is proportional to its density. Now the earth's atmosphere is not a medium of uniform density, but of a density continually diminishing as the distance from the centre is increased. For the purpose of illustration, the atmosphere may be regarded as composed of a great but finite number of concentric spherical strata (Fig. 2233), each having a uniform density greater than that of the stratum by which it is enveloped, but less than that of the stratum which it envelopes. Hence, on entering each successive stratum the light must undergo a slight deviation from its rectilinear course, and the amount of all these deviations constitutes the phenomenon of astronomical refraction. So, in Fig. 2233, we see the star at S' along the tangent of the curve described by the luminous rays, instead of at S.

Fig. 2233.

(*Mech.*) The change of direction which takes place in the motion of a body when it passes obliquely out of one medium into another of different density.

Refractive, *a.* [Fr. *réfractif*.] That refracts, or has power to refract or turn from a direct course; pertaining or relating to refraction, as, *refractive powers*, *refractive densities*.

Refractive power, the degree to which a diaphanous body deflects a ray of light which passes through it. For the measure of this influence, modern writers generally adopt the square of the index of refraction diminished by unity, or $n^2 - 1$, where n denotes the principal index of refraction.

Refractometer, *n.* [Eng. *refraction*, and Gr. *metron*, measure.] An instrument for exhibiting and measuring the refraction of light.

Refractory, *n.* The refracting telescope. See TELESCOPE.

Refractorily, *adv.* In a refractory manner; perversely; obstinately.

Refractoriness, *n.* State or quality of being refractory: perverse or sullen obstinacy in opposition or disobedience; stubbornness; contumaciousness; unmanageableness; as, *refractoriness of conduct*.—Unmalleability; difficulty of fusion, or of yielding to the hammer; as, *refractoriness of metals*.

Refractory, *a.* [Fr. *réfractaire*; Lat. *refractorius*, from *refringo*.] Sullen or stiff in opposition, antagonism, or disobedience; contumacious; stubborn; perverse; obstinate; unruly; unmanageable; ungovernable; as, a *refractory criminal*; obstinately vicious or unyielding; as, a *refractory horse*.—Hence, by analogy, unmanageable; difficult of fusion or reduction; impervious to ordinary methods of working, as metals, &c.

—*n.* A contumacious individual.

Refrangible, *a.* [L. Lat. *refragabilis*—*re*, and *frango*, to break.] That may be broken;—hence, specifically, that may be opposed, resisted, gainsaid, or refuted; as, *refragable testimony*.

Refrain, *v. a.* [Fr. *refrèner*; Lat. *refræno*—*re*, and *fræno*, from *frenum*, a bridle.] To hold back; to restrain; to curb; to govern; to bridle; to keep within limited bounds, or from independent action;—with a reciprocal pronoun.—To abstain from; to keep aloof from. (*R.*)

—*v. n.* To keep one's self from action, intervention, or interference; to abstain; to forbear; as, to *refrain from drinking or swearing*.

—*n.* [Fr.] The burden or chorus of a song.

Refrainer, *n.* One who refrains.

Reframe, *v. a.* To frame again, or anew.

Refrangibility, **Refrangibleness**, (*-je*), *n.* [Fr. *réfrangibilité*.] (*Physic.*) State or quality of being refrangible; the disposition of rays of light, to be refracted or turned out of a direct course in passing out of one transparent body or medium into another; refrangibleness.

Refrangible, *a.* [Fr., from Lat. *re*, and *frango*.] That may be refracted, or caused to deviate from a direct course in passing from one medium to another; as, *refrangible rays of light*.

Refresh, *v. a.* [Fr. *rafraichir*, from Lat. *refrigescere*, to grow cold.] To allay the heat or thirst of; to give new strength or vigor to; to raise the tone or body of; to relieve after fatigue; to invigorate; to revive; to give new animation to after depression; to reanimate.—To renew; to restore; to improve by new touches; as, to *refresh a cornice with new gilding*.

Refresh'er, *n.* One who, or that which, refreshes, revives, or invigorates;—specifically, among lawyers, an additional fee paid to counsel when a cause is not heard in the term for which it was originally set down.

Refresh'ing, *p. a.* Cooling; invigorating; reviving.

Refresh'ingly, *adv.* In a refreshing or reanimating manner.

Refresh'ingness, *n.* State or quality of being refreshing.

Refresh'ful, *a.* Refreshing; powerful to refresh.

Refresh'ment, *n.* Act of refreshing, or state of being refreshed; new strength and vigor received after depression or fatigue; relief after suffering or prostration; restoration of animation, nerve, or liveliness.—That which refreshes, or gives new strength, vigor, or animation; particularly, food or rest.

Refrigerant, (*-frij'*), *a.* [Fr., from Lat. *refrigerans*.] Cooling; allaying or assuaging heat.

—*n.* (*Med.*) One of a class of cooling medicines given in fevers as an astringent and refreshing drink, to lower the temperature of the body, and abate the febrile symptoms. Refrigerants are sometimes applied externally, to reduce the heat of the part where they are placed. Among the foremost of this class of medicines stands ice, and freezing mixtures; all the mineral and vegetable acids, diluted, and taken in water; cream of tartar, lemonade, soda-water, nitre, sweet spirits of nitre, spirits of milderers; all the summer fruits; tamarinds, oranges, lemons, and limes.

Refrigerate, *v. a.* [Lat. *refrigero*—*re*, and *frigero*, *frigeratus*, to make cool.] To cool; to make cool again.

Refrigera'tion, *n.* [Fr.] Act of cooling; abatement of heat; state of being cooled; as, *refrigeration of the air*.

Refrigera'tive, *a.* [Fr. *réfrigératif*.] Cooling; allaying heat; serving to refrigerate; refrigeratory.

—*n.* A cooling medicine; a remedy to abate heat.

Refrig'erator, *n.* That which refrigerates or keeps cool;—specifically, an ice-box; also, an apparatus, consisting of a system of pipes contained in tanks of cold water, used for the cooling of large quantities of liquids which are made to circulate through the pipes.—See CONDENSER.

Refrig'eratory, *a.* Cooling; mitigating heat.

—*n.* That which cools or refrigerates; a refrigerator.

Refringency, (*-frin-jen-sy*), *n.* (*Physic.*) The power exerted by a substance to refract a ray.

Refrin'gent, *a.* [From Lat. *refringere*.] Pertaining or having reference to refringency; refractive; as, a *refrington substance*.

Reft, *imp.* and *pp.* of REAVE, *q. v.*

Reft, *n.* A rift; a crevice; a chink; a cranny.

Refuge, (*ref-ūj'*), *n.* [Fr.; Lat. *refugium*, from *refugio*—*re*, and *fugio*, to flee.] Shelter or protection from danger or distress; as, to take *refuge*.—That which shelters or protects from danger, distress, or calamity; an asylum; a sanctuary; a retreat; a shelter; a covert; a stronghold; any place inaccessible to an enemy.—An expedient, contrivance, or device to secure protection, defense, or shelter.

Cities of refuge. (*Jewish Hist.*) Six cities are mentioned in the Pentateuch as appointed for the reception of those who had caused the accidental death of any one. It is stated that if a deliberate murderer should flee to one of these cities, the elders of the city are to deliver him "into the hands of the avenger of blood." (*Deut. xix.*; *Josh. xx.*)

—*v. a.* To shelter; to protect; to afford asylum to.

Refugee, (*ref-ū-jee'*), *n.* [Fr. *refuge*, from Lat. *refugis*, to flee.] One who flees to a place for shelter or protection; one who, in times of persecution or political commotion, flees to a foreign country for safety. The term was first applied to the French Protestants who, by the revocation of the Edict of Nantes, were constrained to fly from persecution, and take refuge in foreign countries.

Refugio, in Texas, a S.S.E. co., bordering on the Gulf of Mexico; area, abt. 1,300 sq. m. Rivers, Guadalupe, Arkansas, San Antonio, and Mission rivers. Surface, mostly level; soil, fertile. *Cup.* Refugio, a post-village on Mission River, abt. 40 m. above its mouth. *Pop.* abt. 2,500.

Refulgence, **Refulgency**, (*fūljens, fūlj'en-sy*), *n.* [Lat. *refulgentia*.] State or quality of being refulgent; radiance; lustre; brilliancy; splendor; also, a flood of light.

Reful'gent, *a.* [Lat. *refulgens*—*re*, and *fulgeo*, to shine.] Reflecting a shining light; casting a bright light; radiant; brilliant; lustrous; luminous; splendid; effulgent; as, the *refulgent beams of the sun*.

Reful'gently, *adv.* With a flood of light; in a shining manner.

Refund, *v. a.* [Fr. *refondre*; Lat. *refundo*—*re*, and *fundo*, to pour out, to shed.] To pour back. (*R.*)—To repay; to reimburse; to restore; to return in payment or as compensation for what has been taken; as, to *refund money taken as a bribe*.

—*v. a.* To fund again or anew; to place again in the funds, as money.

Refund'er, *n.* One who refunds.

Refurbish, *v. a.* To furbish afresh, or a second time.

Refur'nish, *v. a.* To furnish over again; to supply or provide afresh; as, to *refurnish a house*.

Refusable, (*-fūz'-a-bl*), *a.* That may be refused; susceptible of refusal.

Refusal, (*-fūz'-al*), *n.* Act of refusing; denial of anything demanded, solicited, or offered for acceptance; as, I met with a direct *refusal*.—The right of taking in preference to others; the choice of taking or rejecting; preemption; option; as, to give one the *refusal of a bargain*.

Refuse, (*ref-fūz'*), *v. a.* [Fr. *refuser*, from Lat. *refutare*, to pour back.] To repress or check, as a solicitation; to deny, as a request, demand, invitation, or command; to reject; to repudiate; to decline to do or grant what

is solicited, claimed, or commanded; as, to *refuse to sell goods on credit*.—To decline to accept what is proffered; to reject; as, he *refused* the invitation extended to him.

—*v. n.* To decline to accept; not to comply with or accede to.

—*v. a.* [Fr. *refus*.] Literally, refused; rejected; worthless; valueless; left as unworthy of acceptance or re-ception; as, *refuse scraps from the table*.

—*n.* That which is refused or rejected as valueless or useless; waste matter; debris; dregs; sediment; scoria; seum; dross; scraps; chips; offal; as, the *scum and refuse of the people* (*Govt. of the Tongue*); the *refuse of slaughtered beasts*, &c.

Refuser, (*-fūz'*), *n.* One who refuses, or declines, to accept.

Refusion, (*-fūzh'un*), *n.* Restoration; as, *refusion of the soul*.

—*a.* Resmelting, as of metals.

Refut'able, *a.* [Fr.] That may be refuted or disproved; that may be proved false, fallacious, or erroneous; as, a *refutable argument*.

Refut'al, *n.* Refutation.

Refuta'tion, *n.* [Fr.; Lat. *refutatio*.] Act or process of refuting or disproving; act or operation of proving to be false, fallacious, or erroneous; confutation; proof of falsehood or error; as, the *refutation of an opinion, doctrine, or theory*.

Refuta'tory, *a.* [Sp. *refutatoris*.] Tending, or serving, to refute; containing refutation; as, *refutatory evidence*.

Refute, *v. a.* [Fr. *réfuter*.] To overthrow by argument, evidence, or countervailing proof; to prove to be false, fallacious, or erroneous; to disprove; to confute; as, to *refute testimony*, to *refute a disputant*.

Refuter, *n.* The person who, or thing which, refutes.

Regain, *v. a.* [Fr. *regagner*.] To gain anew; to obtain again what has escaped or been lost; to recover; to retrieve; to repossess; as, to *regain one's liberty*.

Reg'al, *a.* [Fr. *régale*; Lat. *regalis*, from *rex, regis*, a king.] Pertaining to a king; kingly; royal; as, a *regal title*, *regal dignity*, &c.

—*n.* (*Mus.*) A small portable organ used in the Middle Ages, and frequently represented in painting and sculpture, as carried by saints and angels of the heavenly choir. It was supported by a strap round the neck; the left hand inflating with a small bellows, while the right was employed in playing on the keys. Fig. 2234 represents an angel thus employed, from a painting by Memling, on the reliquary of St. Ursula, at Bruges.

Fig. 2234. — REGAL.

Regalbu'to, a town of Italy, in Sicily, 25 miles W.N.W. of Catania; *pop.* 6,400.

Regale, *n.* [From Lat. *regalis*.] Monarchical prerogative. (*R.*)

—*v. a.* [Fr. *régaler*, to treat, from Lat. *regalis*, belonging to a king.] To refresh or entertain in a kingly or magnificent manner; to treat sumptuously;—hence, to gratify; to refresh; to entertain with something that delights or exhilarates; as, to *regale the senses*.

—*v. n.* To feast royally; to fare sumptuously; as, to be *regaled with delicacies*.

—*n.* A royal, or magnificent, entertainment given to ambassadors and other persons of distinction;—hence, a sumptuous banquet or repast.

Regale'ment, *n.* Act of regaling; refreshment; entertainment; gratification.

Rega'tia, *n. pl.* [Lat. *pl. nent. of regalis*, kingly, from *rex, regis*, a king.] That which pertains to royalty;—particularly, the rights, privileges, and prerogatives of a king.—Ensigns of royalty; regal symbols, parapher-

Fig. 2235. — ENGLISH REGALIA.

nal, &c.; in England the royal insignia, (Fig. 2235,) crowns, sceptres, globes, crosses, &c., used at the coronation; also, the crown jewels.—Hence, insignia of an

office, order, society, &c.; as, the *regalia* of the Freemasons, knights Templars, &c.

Regalia of a church, endowments or privileges granted to it by kings;—sometimes, also, its patrimony.

Regality, *n.* [L. Lat. *regalitas*.] Royalty; kingship; regal or sovereign sway or jurisdiction.

"He neither could, nor would, yield in *regality*."—Bacon.

Regally, *adv.* In a royal or regal manner; in a manner befitting a monarch.

Regard, *v. a.* [Fr. *regarder*; It. *riguardare*.] To notice with some particularity; to observe; to remark; to attend to with respect or estimation; to heed; to consider seriously; as, he *regarded* me with scrutinizing eyes.—To respect; to esteem; to attend to as a thing that affects one's interest or happiness; to fix the mind on, as a matter of value or importance; to hold in respect or affection; to keep with religious or solemn attention; to care for.—To attend to; to lay to heart; to love and hold in esteem; to consider; to deem; to look upon; as, he was always much *regarded* by his friends.—To have relation to, as bearing upon; to view in the light of; to consider; to reckon; as, the question does not *regard* the matter in hand.

To *regard* the person, to esteem or value for extrinsic power or advantages.

—*v. n.* To care, heed, or consider.

—*n.* [Fr.; It. *riguardo*.] A looking at; a look; aspect directed to another; gaze; view.—Notice; heed; observation; attention of the mind with a feeling of interest.—Respect; esteem; affection; deference; honor; reverence; that view of the mind which springs from a sense of value, estimable qualities, or anything that excites admiration; as, I have a high *regard* for him.—Matter demanding notice; that which is regarded, or is to be regarded; object of view. (R.)—Account; note; esteem; repute.—Relation; reverence; respect.

Regardable, *a.* That may be regarded; observable; noticeable; deserving regard or attention. (R.)

Regardant, **Regardant**, *a.* [Fr., from *regarder*.] Looking behind; as, a *regardant* eye.

(Her.) Looking backward or behind;—applied to any figure of an animal whose face is turned towards the tail in an attitude of vigilance; as, a stag *regardant*.

Regard'er, *n.* One who regards.

Regardful, *a.* Full of regard; taking notice; observing with care; heedful; mindful; attentive; observant; as, *regardful* of consequences.

Regardfully, *adv.* With regard; attentively; heedfully; respectfully.

Regardless, *a.* Without regard; not looking or attending to; heedless; negligent; careless; inattentive; unobservant; as, *regardless* of danger.

Regardlessly, *adv.* Heedlessly; carelessly; negligently.

Regardlessness, *n.* Quality of being regardless; heedlessness; inattention; negligence.

Regather, *v. a.* To collect anew; to gather a second time.

Regatta, *n.*; *pl.* REGATTAS. [It. *regata*, from *riga*, a line, row.] A term originally used in Venice, signifying a grand *fête*, in which the gondoliers contested for the superiority in rowing their gondolas on the canals which intersect the city. The term has been received into nearly every European language, and signifies a day set apart for the diversion of boat-racing, or yachting, either on fresh or salt water.

Regel, **Rigel**, *n.* [Ar. *ridjl*.] (Astron.) A star of the first magnitude, in the left heel of the constellation Orion.

Regelation, *n.* [Lat. *re*, and *gelatio*, a thawing.] Act or process of freezing again.

Regen, a river of Bavaria, rising in the Böhmerwald, and after a S.W. course of 70 m., falling into the Danube opposite Ratisbon.

Regency, (*re'jen-sy*), *n.* [Fr. *regence*; from Lat. *regens*—*rego*, to rule.] The rule or government of a regent; office or jurisdiction of a regent; state or condition of a regent.—Vicarious government; the territory under the jurisdiction of a viceroy.—The body of individuals intrusted with vicarious government; as, the *regency* conducted public business during the sovereign's absence.

Regency, **Regency**, *n.* State of being regenerated; regenerateness.

Regenerate, (*re'jen-er-ät*), *v. a.* [Lat. *regenero*, from *genus*, origin.] To generate or beget anew; to make to be born again; as, to *regenerate* gases.

(Theol.) To renew by a change of carnal nature to a Christian life; to form into a new or better state of heart and mind.

—*a.* [Lat. *regeneratus*.] Reproduced; generated or born anew.

(Theol.) Renovated in heart; changed from a natural to a spiritual state.

Regeneration, *n.* [Fr.] Act of regenerating, or state of being regenerated; reproduction.

(Theol.) Act of forming into a new or better state of heart and mind; new birth by the grace of God. There are various interpretations of the mode and meaning of this change, but its necessity in some shape or another may be said to be admitted by all branches of the Christian Church. By all, man is supposed, as the condition of his becoming truly Christian, to pass from a state of nature to a state of regeneration, from a state in which he obeys the mere impulses of the natural life to a state in which a new and higher—a divine—life has been awakened in him. The words of our Lord to Nicodemus: "Verily, verily, I say unto thee, except a man be born again, he cannot see the kingdom of God," are accepted as the expression of this universal necessity by the Christian Church. It may be further stated, that every branch of the Catholic Church recognizes,

although under very different conditions, the Holy Spirit as the author of this change.

(Physiol.) The reproduction, or reformation, of a part cut off or destroyed; as, *regeneration* of flesh.

Regenerative, *a.* [Sp. *regenerativo*.] Producing regeneration.

Regeneratively, *adv.* After the manner of regeneration.

Regenerator, *a.* Regenerating; tending to reproduce or renovate; having the power to renew; serving to regenerate. (R.)

Regensburg. See Ratisbon.

Regent, (*re'jent*), *n.* [Fr., from Lat. *regens*, from *rego*, to rule.] A ruler; a governor.

"Junio, *regent* of the marriage-bed."—Dryden.

—Hence, one invested with or exercising vicarious authority; one who governs a kingdom during the minority, absence, or disability of the reigning monarch.—A member of a governing body or board; a trustee; an overseer; as, a *regent* of the Smithsonian Institute.—In the great English universities, a master of arts of less than five years' standing, or a doctor of less than two;—also, in colleges, a teacher of arts and sciences whose pupils are generally of the lower orders;—the regents form the governing body of the universities in the convocation and congregation at Oxford, and in the academical senate at Cambridge.

—In the State of New York, a member of the corporate body which is invested with the superintendence of all the colleges, academies, and schools in the State.

Regent, *a.* Regnant; ruling; governing; as, a *regent* principle.—Exercising vicarious authority.

Queen-regent, or *queen-regnant*. See REGNANT.

Regentess, *n.* A female regent. (R.)

Regentship, *n.* State or office of a regent; power of governing.—Vicarious authority.

Regeminate, (*re'jen-i-nät*), *v. a.* [Fr. *regerner*; Lat. *regeminare*.] To germinate a second time; to sprout afresh, as plants.

Regeneration, *n.* A sprouting again; a germinating anew.

Reges, *v. a.* To get back, or again.

Reggio, a town of Italy, prov. of Modena, 16 m. W.N.W. of Modena. *Manuf.* Silks, hempen fabrics, horn, ivory, and wooden articles.

Reggio, (*re'djo*), (anc. *Regium Julii*), a town of Italy, cap. of Calabria Ulteriore II., on the strait which separates Sicily from the mainland 8 m. S.E. of Messina. It was destroyed, with nearly all its people, by an earthquake in Dec. 1908.

Regicide, *a.* Belonging, or relating, to a regicide; a regicidal act.

Regicide, (*re'ji-sid*), *n.* [Fr., from Lat. *rex*, *regis*, a king, and *cado*, to kill.] A king-killer; the murderer of a king;—specifically, one of the judges who condemned King Charles I. of England, or Louis XVI. of France, to death.—The slaying, or murder, of a king.

Regime, (*re-zhem*), *n.* [Fr.; Sp. *regimen*.] Mode or form of rule or management; style or character of government; administration.

Ancient régime. [Fr. *ancien régime*.] Old-time style or society;—specifically, in France, the political or social system existing before the Revolution of 1789.

Regimen, (*re'je*), *n.* [Lat., from *rego*.] Any regulation or remedy which is intended to produce beneficial or efficacious results by gradual operation; a rule prescribed or followed.

(Med.) The regulation of diet with a view to the preservation or restoration of health; the plan of a systematic mode of living;—occasionally used synonymously with HYGIENE, *q. v.*

(Gram.) In syntax, the government of words;—also, the words governed.

Regiment, (*re'je*), *n.* [Fr., from L. Lat. *regimentum*, from Lat. *regimen*—*rego*.] (Mil.) A body of soldiers, consisting (if infantry) of several companies, (if cavalry) of several squadrons, or (if artillery) of several batteries, under the command of a colonel or lieutenant-colonel.

—*v. a.* (Mil.) To form into a regiment, or regiments. (R.)

Regimental, *a.* Belonging, or having reference, to a regiment, or regiments; as, *regimental* officers, the *regimental* staff, *regimental* duties, clothing, &c.

Regimentals, *n. pl.* The uniform worn by the officers and privates of a regiment; as, the staff appeared in full *regimentals*.

Regiminal, (*re'jim*), *a.* [From *regimen*.] Pertaining or relating to regimen; as, *regiminal* rules or regulations.

Region, (*re'jün*), *n.* [Fr.; Lat. *regio*, from *rego*.] A tract of land or space of indefinite extent, usually a territory of considerable size; a country; province; district; as, strange and distant *regions*.—Part, tract, or space, spread about and including anything; vicinity; neighborhood; sphere; as, the Polar *regions*.—Place; station; rank; grade. (R.)

(Bot.) A tract of land distinguished by the production, or predominance, of particular plants.

Register, (*re'j*), *n.* [Fr. *registre*, from Lat. *re*, back, and *gero*, *gestum*, to carry.] A written account or entry of acts, judgments, or proceedings for preservation; a chronicle; an official record; a list; a roll; a schedule; as, parish *registers* of births, marriages, and deaths, a *register* of voters, &c.—That which registers or records;—specifically, an instrument or apparatus for noting down or calculating the performance of a machine, or the rate of motion of a process.—A sliding-plate in a furnace, grate, or stove, &c., for regulating the admission of air, or the quantity of heat;—also, a contrivance, as in a wall, floor, &c., for letting in or keeping out heat from a hot-air chamber.

(com.) A document issued by the custom-house authorities, containing a description of a ship or vessel;

its name, tonnage, country belonging to, ownership, &c., always to be kept on board on a foreign voyage, as evidence of its nationality. Coasting-vessels are *enrolled*, not *registered*.

(Printing.) The matrix of the mould in which types are cast.—The correspondence of relative position of pages or columns on the opposite sides of the sheet.

(Mus.) A term applied to the different kinds of sound distinguishable in the graduated scale of notes produced by any individual voice. Those sounds which, like the ordinary sounds of speech, proceed naturally and freely from the voice, constitute what is called the *chest-voice*. By means of a strained contraction of the glottis, notes may be produced of a higher pitch than those of the chest-voice; these are called *falsetto*, or *head-voice*, and have a peculiar flute- or flageolet-like quality of their own. Though often sweet and exceedingly pleasing, they cannot be used for a length of time without some amount of constraint or effort, and they are never so powerful, so open, or so impressive, as the chest-voice. The lower notes, and, in most voices, by far the greater number of notes, belong to the chest-voice, the falsetto being only employed in the higher and highest sounds. The sounds produced by the head-voice are called the *upper register*, those produced by the chest-voice the *lower register*, of the voice; and such notes of the chest-voice as may also be produced by the falsetto are said to belong to the *middle register*. In a properly trained voice, the falsetto is so blended with the chest-voice, that there is no perceptible break between them.—The term is also applied to the sets of pipes or stops of an organ.

Lord Clerk Register, in Scotland, an officer of state who has the custody of the archives of the realm. The office is now merely honorary, its duties being performed by the Registrar-general, and Deputy Clerk Registrar.

—*v. a.* To record for official use; to enter in a book for preserving an exact account of facts or of proceedings; as, to *register* a will, to *register* a ship.—To enter in a list; to enrol; as, a *registered* voter.

—*v. n.* (Print.) To correspond in relative position, as the pages or columns of a sheet of printed matter, so that the sides and heads of one form shall coincide with those of the other, or so that line shall be parallel with line in opposite pages.

Registrar, **Registrary**, (*re'j*), (sometimes written REGISTER, *n.* [L. Lat. *registrarius*.] An officer who writes or keeps a public register or record; as, a *register* of the Court of Chancery.

Registrar, *v. a.* To register. (R.)

Registration, *n.* Act of registering, or of inserting in a register; enrolment; registry; as, the *registration* of voters.

Registry, *n.* Act of recording or entering in a register; enrolment.—The place where a register is kept.—A series of facts recorded.

Regium, **Regins**, *a.* [Lat. *regius*—*a*—*um*, royal.] Royal; pertaining or relating to a king.

Regive, (*re'gi*), *v. a.* To give back again, or anew.

Regla, (*rai'ghla*), a fortified town of the island of Cuba, being a suburb of Havana, on the opposite side of its harbor; *pop.* 3,000.

Reglementary, *a.* [Fr. *règlementaire*.] Pertaining or relating to, or embodying, regulations; regulative; as, a *reglementary* charter. (R.)

Reglet, *n.* [Fr. dimin. of *régle*, a rule.] (Arch.) A flat, narrow moulding, employed to separate panels or other members, or to form knots, frets, and similar ornaments.

(Print.) A sort of furniture of an equal thickness throughout its length, and of quadrat height. The length is three feet, and the thickness that of the various sizes of types.

Regma, *n.* [Gr., a fracture.] (Bot.) One of the terms applied to a trilocular fruit, like that of the Castor-oil plant, and the *Euphorbia*.

Regnancy, *n.* State, condition, or quality of being regnant; reign; predominance.

Regnant, *n.* [Fr.; Lat. *regnans*, from *regno*, to have royal power.] Reigning; exercising sovereign or royal power.—Predominant; ruling; having the chief or controlling power; as, the law is *regnant* over all people.

Queen-regnant, a queen who governs; a reigning female sovereign; a queen-regent;—opposed to *queen-consort*.

Regnard, JEAN FRANÇOIS, a French comic poet, b. at Paris, 1658. He ranks next to Moliere in French literature, and is remarkable for his adventurous life. His best comedies are *Le Joueur*, *Les Ménechmes*, *Démocrate Amoureux*, and *Le Distrait*. D. 1709.

Regnitz, (*rai'nitz*), a river of Bavaria, which, after a N.W. course of 35 m., falls into the Main near Bamberg.

Regorge, (*re'gorj*), *v. a.* [Fr. *regorger*.] To vomit or bring back from the stomach; to throw up, back, or out again.—To swallow eagerly or greedily.—To swallow back, or again.

Regraft, *v. a.* To graft afresh.

Regrant, *v. a.* To grant back or anew, as lands.

Regrate, *v. a.* [Fr. *regratter*, to peddle.] To purchase as provisions, &c., in order to resell in or near the same fair or market;—a practice involving increase of price, and, consequently, in former times, punishable as a public offence. See FORESTALL.—In masonry, to chip the surface of an old hewn stone, in order to improve its appearance.

Regrat'er, **Regrat'or**, *n.* [Fr. *regrattier*.] One who forestalls the market.

Regrede, *v. n.* To retire; to retrograde. (R.)

Regreet, *v. n.* To salute a second time; to greet again.

—*n.* Return, or exchange, of salutation or greeting.

Re'gress, *n.* [Fr. *regres*, from Lat. *re*, and *gradior*, to step, to go.] Return; passage back;—opposed to *pro-gress*.—Power or liberty of returning or passing back.

Regress', *v. n.* (*imp.* and *pp.* REGRESSED,) (*re-grést'*.) To go or pass back; to return to a former place or condition.

Regression, (*-grësh'un*.) *n.* [Fr., from Lat. *regressio*.] Retrogression; act of going or passing back or returning; retrogradation;—correlative to *progression*.

Edge or point of regression. (*Geom.*) The cusp point. (*Astron.*) The *R.* of the moon's nodes is the motion of the line of intersection of the orbit of the moon with the ecliptic, which is retrograde, or contrary to the order of the signs. This motion of the nodes of the lunar orbit takes place with considerable rapidity, the whole revolution being accomplished in about eighteen and a half years. The nodes of the planetary orbits also regress on the ecliptic; but, in the case of the planets, the regression is extremely slow, that of the nodes of Mercury, which is the most rapid, amounting only to about 42 seconds of a degree in a solar year.

Regressive, *a.* [Fr. *régressif*.] Passing, or going, back; returning.

Regressively, *adv.* In a regressive mode or manner; by backward way or method.

Regret', *v. a.* [Fr. *regretter*; Lat. *regressus*—*re*, and *gradior*.] To turn the thoughts or feelings back, as upon the past; to remember with sorrowful yearning; to mourn the loss of, or separation from; as, to regret the loss of a near and dear relation.—To be sorry for; to grieve at; to lament; to bewail; to repent of; as, I shall not regret the trouble, if the business be successful.

—*n.* [Fr. *regret*.] A turning back of the thoughts and feelings upon the past, sorrowfully or longingly; pain of mind at some sad or untoward event; sorrow or grief for the loss of; concern; as, fond regrets and tender recollections.—Remorse; penitence; pain or distress of conscience.

Regretful, *a.* Full of regret. (Tautological.)

Regretfully, *adv.* With regret, sorrow, or compunction.

Regulable, *a.* That may be managed or regulated.

Regular, *a.* [Fr. *régulier*; Lat. *regularis*, from *regula*, a rule.] Conformed to a rule; agreeable to an established rule, law, or principle, or to a prescribed mode or method, or to established customary forms; normal; as, a regular plan, regular practice, a regular verse in poetry, &c.—Governed by a rule, or rules; steady or uniform in a course, practice, mode of procedure, or occurrence; not subject to abnormal or irrational variation; steadily kept up; methodical; orderly; periodical; as, regular attendance.—Instituted or initiated according to established forms or discipline; as, regular troops, a regular physician.—Pertaining to a monastic order or establishment; as, regular clergy, in distinction from the secular clergy, or those not under vows.

(*Bot.*) Applied to flowers which have all the parts of each series of a similar form and size. Thus, the Buttercup is regular, while the allied Larkspur is irregular.

Regular polygon. (*Geom.*) A plane rectilinear figure with equal angles and sides.—**Regular polyhedron**, a polyhedron whose faces are all equal and similar regular polygons; of these solids there are five: viz., the pyramid, the cube or hexahedron, the octahedron, the dodecahedron, and the icosahedron.—**Regular troops.** (*Mil.*) Soldiers of a permanent or standing army, as opposed to militia or volunteers.

—*n.* (*Eccl.*) In the Roman Catholic Church, a member of any religious fraternity who professes and follows a certain rule of life, and observes the three vows of poverty, chastity, and obedience, and is thereupon solemnly recognized by the Church.

—*pl.* (*Mil.*) Soldiers belonging to a standing or permanent army.

Regularity, *n.* [Fr. *régularité*.] State, quality, or condition of being regular; agreeableness to a rule or to established order; conformity to certain regulations or settled principles; steadiness or uniformity in a course; method.

Regularize, *v. a.* To make regular; to regulate. (*R.*)

Regularly, *adv.* In a manner accordant to a rule or established mode; in uniform order; at certain intervals or periods; in due form; methodically.

Regularity, *n.* State or quality of being regular; regularity.

Regulate, *v. a.* [L. Lat. *regulo*, *regulatus*, from *regula*, a rule.] To adjust by rule, method, or established form; to subject to rules or restrictions; to direct by governing principles or laws; to dispose; to arrange.

—To put or keep in good order; as, to regulate a disordered household, or state of the public finances, &c.

Regulation, (*-lă'shun*.) *n.* [*Sp.* *regulación*.] Act of regulating or reducing to order: state or condition of being regulated; as, the regulation of one's own temper or disposition.

—A rule or order prescribed by a superior for the management of some business, or for the government of a community, company, or society; regulating principle; governing direction; law; precept; as, to act contrary to regulations.

Regulation sword, *cap. uniform*, &c. (*Mil.*) Articles of the kind or quality prescribed by the official regulations.

Regulative, *a.* Serving to regulate; regulating. (*Metaph.*) Supplying fundamental principle; primarily assumed by the mind as fundamental to all other knowledge; as, the regulative faculty.

Regulator, *n.* [*Sp.* *regulador*.] One who regulates;—specifically, in the U. States, one of a band of men who, in the absence or inadequacy of ordinary or competent legal authority, take into their own hands the punish-

ment of crime and the regulation of society.—*Webster*. See LYNCH-LAW.

(*Mech.*) That which regulates or controls; that part of a machine which serves to make the motion equable; as, the spiral spring attached to the balance of a watch; the throttle-valve of a steam-engine; the pendulum or balance of a time-piece, a fan-wheel, &c.

(*Steam-eng.*) See GOVERNOR.

Regulator-cock. (*Mach.*) In locomotive engines, a cock placed to admit oil or tallow to lubricate the faces of the regulator or governor.—**Regulator-cover**, the outside cover, movable at will to examine the regulator.—**Regulator-shaft and levers**, the shaft and levers placed in front of the smoke-box when each cylinder has a separate regulator. A rod connected with the shaft leads to the foot-plate, where a handle is placed conveniently for use.—**Regulator-valve**, the valve in the steam-pipe of a locomotive engine, for regulating the supply of steam to the cylinders.—**Regulator-valve spindle**, the spindle for moving the regulator-valve; being fixed to it at one end, the other end of the spindle passes through a stuffing-box joint over the fire-box, and has a handle fixed on the end to turn it.

Regulus, MARCUS ARTILIUS, a Roman general, celebrated for his patriotism and devotion in the service of his country, was made consul a second time about 256 B. C., and with his colleague, Manlius Vulso, commanded in the first war against Carthage. Made prisoner by the Carthaginians, he was sent to Rome with an embassy, that peace might be procured on favorable terms, and bound himself, by an oath, to return if the terms were rejected. He, however, considered it his duty to advise the continuance of the war; which, being determined on, no entreaties or supplications could prevent him from fulfilling his solemn engagement; and the Carthaginians, on his return, put him to a cruel death.

Regulus, *n.*; Eng. *pl.* REGULUSES; Lat. *pl.* REGULI.

[Lat., a petty king, dim. of *rex*, *regis*, a king; Fr. *regule*.] (*Chem.*) The old chemists designated by this term several of the brittle or inferior metals when freed from impurities, and obtained in their metallic state. Thus they speak of *regulus of antimony*, of *bismuth*, &c. The term is now often used by metallurgists to denote the metallic button which is found at the bottom of an assay crucible.

(*Astron.*) A star of the first magnitude in the constellation of *Leo*;—called *Leonis*, or *Cor Leonis*, (Lion's Heart.)

(*Zoöl.*) A genus of birds, family *Turdidae*, the species of which are very small, olive-green above, and whitish beneath. The Golden-crested wren, *R. satrapa*, of the Northern United States, almost identical to the European *R. satrapus*, which may be taken as the type of the genus, is less than $3\frac{1}{2}$ inches long, and when stripped of its feathers, the body is only about an inch long. The bill is slender and dark; eyes hazel; on the top of its head the feathers are of a bright-orange color, bordered on each side with black, which forms an arch above the eyes, and with which it sometimes conceals the crown, by contracting the muscles of the head; the upper part of the body is yellowish olive-green; all the under parts pale reddish-white, tinged with green on the sides; the greater coverts of the wings are dusky-brown, edged with yellow, and tipped with white; legs yellowish-brown. The female is distinguished by a pale-yellow crown; and her whole plumage is less than that of the male. This delightful little fairy bird is very active, and may generally be found with other smaller birds gleaning among the foliage of trees and bushes in search of the smallest insects. Its song is said to be very melodious, and it has besides a sharp shrill cry, somewhat like that of the grasshopper.

Regurgitate, *v. a.* [It. *regurgitare*, from L. Lat.;—Lat. *re*, back, and *gurgis*, *gurgitis*, a whirlpool.] To throw or pour back, as from a whirlpool, or from a deep or hollow place; to pour or throw back in great quantity.

—*v. n.* To be thrown or poured back.

Regurgitation, *n.* [Fr.] Act of throwing or pouring back by the orifice of exit.—Act of reswallowing; reabsorption.

(*Med.*) The natural and easy vomiting of their food by infants.

Regusa, a town of Italy, in Sicily, prov. of Syracuse, on the Regusa, 30 m. W.S.W. of Syracuse. *Manuf.* Woollens and silks. *Pop.* 22,000.

Rehabilitate, *v. a.* [Fr. *réhabilité*.] To reinstate; to qualify or restore afresh; to restore, as a delinquent to a former right, rank, or privilege lost or forfeited.

Rehabilitation, *n.* [Fr.; L. Lat. *rehabilitatio*.] Act of reinstating in a former rank, capacity, or privilege; restoration of a man to former rights or qualifications, of which he had been deprived by a conviction, sentence, or judgment of a competent tribunal.

Rehash, *v. a.* To hash a second time.

—*n.* Something hashed over again; something dished up from old and previously used materials or constituents; as, a rehash of an old story.

Rehear, *v. a.* To hear anew; to try again, or a second time; as, to rehear pleadings in equity.

Rehearsal, (*re-hers'al*.) *n.* Act of rehearsing, or state of being rehearsed; repetition of the words of another, or of a written work; narration; a telling or recounting, as of particulars in detail; as, "in rehearsal of our Lord's Prayer." (*Hooker*).—The recital of a piece before the public exhibition of it; as, the rehearsal of an opera.

Rehearse, *v. a.* To say, speak, tell, or relate in the hearing of another, or of others; to tell over again; to recite.—To relate; to recount; to narrate; to give an oral account of events or transactions.—To recite or repeat in private for experiment and improvement, pre-

vious to a public representation; as, the rehearsal of a comedy.—To cause to tell, recite, or relate. (*R.*)

Rehears'er, *n.* One who rehearses, recites, or narrates.

Reheat, *v. a.* To heat anew, or a second time.

Rehelm, *v. a.* To cover again, as with a helmet.

Relibition, (*-bîsh'un*.) *n.* [Lat. *re*, back, and *habere*, to have.] (*Law*) The annulling of a sale.

Rehibitory, *a.* Pertaining or having reference to rehibition; as, a rehibitory action.

Rehire, *v. a.* To hire again.

Rehobo'am. (*Script.*) The son and successor of Solomon, by Naamah, an Ammonitess. He was 41 years old when he began to reign, and was therefore born at the beginning of his father's reign. He ascended the throne about 975 B. C., and reigned 17 years at Jerusalem. Under his reign the ten tribes revolted, and formed the kingdom of Israel under Jeroboam. The immediate cause of this schism was Rehoboam's headstrong folly in rejecting experienced counsellors, and claiming tyrannical power. *R.* relapsed into idolatry; and, in the fifth year of his reign, Shishak, king of Egypt, invaded his kingdom, and carried off all the golden ornaments of the temple. *R.* subsequently repented, and replaced the ornaments of the Temple, using brass, however, instead of the more precious metal. His reign was afterwards almost unbroken by war. *D.* abt. 958 B. C.

Rehoboth. (*Script.*) I. A city of ancient Assyria, site unknown, (*Gen.* x. 11.)—II. A place in the wilderness south of Gerar and Beersheba, so named by Isaac on the occasion of his digging a well there, (*Gen.* xxvi. 22.)—III. A city on the Euphrates, thought to be the modern Er-rahabe, south of Carchemish, (*Gen.* xxx. 37.)

Rehoboth, in Delaware, a post-town of Sussex co., on the Atlantic Ocean, 5 m. S.E. of Lewes.

Rehoboth, in Georgia, a village of Wilkes co., abt. 75 m. N.E. of Milledgeville.

Rehoboth, in Massachusetts, a post-vill. and twp. of Bristol co., abt. 41 m. S. by W. of Boston.

Rehoboth, in S. Carolina, a post-village of Edgefield dist., abt. 80 m. W. of Columbia.

Rehoboth, in Virginia, a post-village of Lunenburg co., abt. 85 m. S.W. of Richmond.

Rehoboth Bay, in Delaware, an inlet of the Atlantic Ocean, in Sussex co.

Rehobothville, in Georgia, a village of Morgan co., abt. 57 m. N. by W. of Milledgeville.

Reh'ersberg, in Pennsylvania, a post-village of Berks co., abt. 25 m. N.W. of Reading.

Rei, *n.* See REE.

Reichenau, (*ri'ke-nou*.) an island in the grand-duchy of Baden, in the Untersee, 4 m. N.W. of Constance; *ext.* 3 m. long, and 1 m. broad.

Reichenau, a town of Bohemia, 18 m. E.S.E. of Königgrätz; *pop.* 4,500.

Reichenbach, KARL, BARON VON, a German naturalist and technologist, b. at Stuttgart, 1788, was the discoverer, as he thought, of a new force in nature, which he called *Op*, *q*, *v*.

Reichenbach, (*ri'ken-bak*.) a town of Germany, in Saxony, circle of Zwickau, 12 m. N.N.E. of Plauen. *Manuf.* Woollen, cotton, and linen stuffs. *Pop.* 8,200.

Reichenberg, or **Lim'berk**, a town of Bohemia, on the Neisse, 58 m. N.E. of Prague. *Manuf.* Woollen, cotton, and linen stuffs.

Reichstadt, (*rik'stat*.) DUKE OF. See NAPOLEON II.

Reid, MAYNE, a popular novelist, b. in the north of Ireland, in 1818, and educated for the Church. A taste for travel and adventure induced him, in 1838, to set out for Mexico, without any very definite aim. On arriving at New Orleans he went on two excursions up the Red River, trading and hunting in company with the Indians; and afterwards made other excursions up the Missouri and on the prairies, where he remained for nearly 5 years, enjoying the wild freedom of Indian life. He afterwards travelled through almost every State in the Union, and in these journeys, with his previous prairie and backwoods experiences, acquired that knowledge of character and incident so liberally displayed in his writings. In 1845, upon war being declared between the U. States and Mexico, Mayne Reid, then devoted to literature, sought and obtained a captain's commission in the U. States army. He was present at the siege and capture of Vera Cruz, led the last charge of infantry at Churubusco, and, also, the forlorn hope at the assault of Chapultepec, where he was severely wounded, and reported killed. For his gallantry throughout the war, Capt. Reid was honorably mentioned in the dispatches. At the close of the war, resigning his commission, he repaired to London, where he again resumed a life of literary employment. Of his numerous works of fiction,—highly esteemed both in this country and in England,—we may mention *The Rifle Rangers*; *The Scalp Hunters*; *The White Chief*; *The Quadroon*; *Occola*; *The War Trail*; *The Wild Huntress*; *The Headless Horseman*, &c. Capt. *R.* has also written numerous books of adventure for boys, besides a standard manual on the game of "Croquet." In 1871, Capt. *R.*, after a protracted sojourn in the U. S., took up his residence in England. *D.* 1883.

Reid, THOMAS, a celebrated Scottish divine and metaphysician, was b. in 1709 at Strachan, in Kincardineshire, and educated at Marischal College, Aberdeen. In 1764 he succeeded Adam Smith as Professor of Moral Philosophy at Glasgow University, and d. 1796. His principal works are, *An Inquiry into the Human Mind*, and *Essays on the Intellectual and Active Powers of Man*. Dr. *R.* was the first writer in Scotland who attacked the scepticism of Hume, and who endeavored to refute his theory by an appeal to what he called "Common Sense."

Reid, in Ohio, a township of Seneca co.

Reidsburg, in Pennsylvania, a post-village of Clarion co., abt. 5 m. S. of Clarion.

Reidsville, in Georgia, a post-village, cap. of Tatnall co., about 65 m. W. of Savannah.

Reidsville, in North Carolina, a post-town of Rockingham co., about 18 m. N. by E. of Greensborough.

Reigate, (*ri'gait*), a town of England, co. of Surrey, on the Mole, 6 m. E. of Dorking; pop. 5,000.

Reigle, (*re'gl*), *n.* A hollow channel for conducting anything; as, the *reigle* of a side-post for a flood-gate.

Reiglesville, or RIEGLESVILLE, in Pennsylvania, a post-village of Bucks co., abt. 8 m. S. of Easton.

Reign, (*rân*), *v. n.* [Fr. *régner*; Lat. *regnare*.] To have royal, sovereign, or supreme power; to be king; to rule; to govern; to possess or exercise monarchical power or authority; to exercise government, as a king or emperor; as, though the king *reigns*, his minister governs. —To have absolute or uncontrolled dominion. —To prevail; to be predominant; as, dissatisfaction *reigns* throughout the country.

—*n.* [Fr. *règne*; Lat. *regnum*.] Kingly government; royal authority; sovereignty; dominion; supreme power. "The reign of Chaos and old Night." —Milton.

—The time during which a monarch or sovereign exercises the regal or supreme authority; as, in the *reign* of Queen Elizabeth.

Reiley, in Ohio, a post-township of Butler county.

Reillum', *v. a.* To cause to shine anew, or become luminous again; to relight.

Reilluminate, *v. a.* To reilluminate; to enkindle with light again.

Reilly, in Pennsylvania, a township of Schuylkill county.

Reim, Ream, *n.* In S. Africa, a thong of untanned ox-hide.

Reimbark', *v. a.* and *n.* Same as REEMBARK, *q. v.*

Reimbod'y, *v. n.* Same as REEMBODY, *q. v.*

Reimbursable, *a.* [Fr. *remboursable*.] That may be, or is intended to be, repaid or refunded; as, a *reimbursable* loan.

Reimburse, *v. a.* [Fr. *rembourser*; It. *rimborsare*.] To pay back; to restore; to refund; to replace in a treasury, or in a private coffer, an equivalent to the sum taken from it, or lost, or expended. —To make restitution or payment of an equivalent to; to indemnify; to pay back to; as, to *reimburse* a money-lender.

Reimbursement, *n.* [Fr. *remboursement*.] Act of reimbursing, or of repaying, or refunding; repayment; as, the *reimbursement* of money advanced as a loan.

Reimburs'er, *n.* One who reimburses, repays, or refunds.

Reimersburg, or RIMERSBURG, in Pennsylvania, a post-village of Clarion co., abt. 20 m. N. of Kittanning.

Reimersville, in Ohio, a village of Morgan co., abt. 25 m. N.N.W. of Marietta.

Reimmerge, (*-merj*), *v. a.* To immerge anew; to plunge a second time.

Reimplant, *v. a.* To implant afresh.

Reimport, *v. a.* To import again; to convey or carry back; as, *reimported* goods.

Reimportation, *n.* Act of importing what has been previously exported.

Reimportune, *v. a.* To importune afresh.

Reimpose, (*-pôz'*), *v. a.* To impose a second time, as a tax.

Reimpregnate, *v. a.* To impregnate over again.

Reimpress, *v. a.* To impress anew.

Reimpression, *n.* A second or repeated impression.

Reimprint, *v. a.* To imprint anew.

Reimpris'on, *v. a.* To imprison a second time, either for the same offence, or after a release from prison.

Reims, or RHEIMS, (*reemz*), a city of France, dep. Marne, of which, though not the cap., it is by far the largest town, in a plain near the Vesle, a tributary of the Aisne, 27 m. N.N.W. of Chalons, and 95 m. E. by N. of Paris.

It is tolerably well laid out, its streets wide, straight, and generally clean; it has several good squares, but the houses are small, and constructed with monotonous uniformity. The cathedral (Figure 2236), one of the largest and most magnificent in Europe, is that in which the coronation of the Bonaparte kings of France has taken place, with few exceptions, from the æra of Philip Augustus. This edifice was chiefly constructed between 1212 and 1242. It is 479 feet in length, 99 feet

in breadth, and 144 feet in height, and has a noble front, flanked with two square towers, 262½ feet in height. Reims is the seat of an archbishop, and has a library of 24,000 volumes, and a botanical garden. Its manufactures of woollens occupy 50,000 hands, of whom 12,000 live in Reims. It produces soap, candles, biscuits, and is the center of champagne trade. Pop. (1897) 106,640.

Rein (*rân*), *n.* [Fr. *rène*, from O. Fr. *risne*; It. *redina*,

contracted from Lat. *retinaculum*, from *retineo*—*re*, and *tineo*, to hold.] The strap of a bridle by which the rider, or driver, of a horse restrains, governs, or guides him. —Hence, by analogy, that which curbs, restrains, or rules; government. —To give the reins to, to allow to act without restraint; to give license to; as, to give the reins to one's passions. —To take the reins, to take the guidance, control, or government. —Without rein, without control or restraint.

—*v. a.* To guide or govern by a bridle; as, to *rein* a horse. —To check; to restrain; to control.

"He cannot be reined again to temperance." —Shaks.

—*v. n.* To bear the reins. (R.)

Reinanc'urate, *v. a.* To inaugurate anew or afresh.

Reincense, (*-in-sens'*), *v. a.* To incense again.

Reincite, (*-in-sit'*), *v. a.* To incite again, or a second time.

Reincorporate, *v. a.* To embody again; to increase anew.

Reincur, *v. a.* To incur a second time, as a penalty.

Reindeer, RAINDEER, *n.* [A. S. *hranas-deor*; Icel. *hreindyr*.] This quadruped, forming the genus *Rangifer*, in the family *Cervide*, is indiscriminately called Reindeer, Caribou, and Greenland Buck. The Woodland caribou, or American Reindeer, *R. caribou*, of Maine and New Brunswick, and westward to Lake Superior, (Fig. 2237), believed by some to be identical with the N. European species, *R. tarandus*, is about 4½ feet long, and 3 feet high. It has the horns elongated, sub-cylindrical, with the basal branches and tip dilated and palmated. In the N. of Europe the *R.* is domesticated, and its services are invaluable.

With it, the Laplander can dispense with the services of horses, sheep, and oxen; for it will carry him in his sledge over the snow 30, 40, or 50 m. a day. Its milk provides him with cheese; its flesh supplies him with food; and its skin furnishes him not only with clothing, but with tents and bedding. In winter, the hair of the *R.* is long, thick, gray-brown; neck, rump, belly, ring round the hoof, and end of nose, white. In summer, the same animal has short, dark, sooty-brown hair, with the parts which are white in winter being rather paler gray-brown. The hair of the body is so thick that the skin cannot be seen when it is put aside; for it stands erect, as in other animals of the same genus, but is much thicker. The *R.*, when wild, travel in herds, varying in number from eight or ten to two or three hundred, their daily excursions being generally towards the quarter from which the wind blows. The Indians kill them with bows and arrows. They also take the *R.* in snares, or spear them as they are crossing rivers or lakes. The Esquimaux take them in traps ingeniously formed of ice and snow.

Reindeer, in Missouri, a post-village of Nodaway co., abt. 40 m. N. of St. Joseph.

Reindeer Moss, *n.* (Bot.) See CLADONIA.

Reinduce, *v. a.* To induce again, or a second time.

Reinfect, *v. a.* To infect again, or afresh.

Reinfections, (*-fêk'shus*), *a.* That may communicate infection again.

Reinforce, *v. a.* To give new force to; to strengthen by new assistance or support; to reinforce; as, to *reinforce* an army corps.

—*n.* (Ord.) That part of a heavy gun or piece of ordnance which, near the breech, is made of an additional thickness of metal to strengthen it. A smooth-bored cast-iron or bronze gun is divided, for purposes of nomenclature, into parts. That portion of the piece between the base ring and the ring nearest to the trunnions is divided into two parts, called respectively *first* and *second reinforcement*.

Reinforcement, *n.* Act of reinforcing; new force added; fresh supplies of strength; —particularly, additional troops or ships; as, *reinforcements* were at once sent.

Reinform, *v. a.* To inform afresh.

Reinfuse, (*-fûz'*), *v. a.* To infuse again, or a second time.

Reingratiate, (*-grâ'shî-ât*), *v. a.* To ingratiate anew. To curry favor again with.

Reinhabit, *v. a.* To inhabit again, or a second time.

Reinholdsville, in Pennsylvania, a post-village of Lancaster co., abt. 41 m. E.S.E. of Harrisburg.

Reinless, (*rân'les*), *a.* Without rein; unrestrained; uncontrolled.

Reinquire, (*-kwîr'*), *v. a.* To inquire afresh, or again.

Reins, (*rânz*), *n. pl.* [Fr. *rein*, *rognon*; Lat. *ren*, *pl. renes*.] The kidneys. —The lower part of the back, over the kidneys. —Hence, the heart, or seat of the affections or passions; —so called because formerly supposed to be seated in that part of the body.

"I am he which searcheth the reins and hearts." —Rev. II. 23.

Reins of a vault, (Arch.) The sides that sustain the arch.

Reinsert, *v. a.* To insert a second time.

Reinsertion, (*-ser'shun*), *n.* A second insertion.

Reinspire, *v. a.* To inspire anew, or afresh.

Reinstall, *v. a.* To install again, or a second time.

Reinstalment, *n.* A second instalment.

Reinstate, *v. a.* To instate or invest anew; to place again in possession of, or in a former state.

Reinstate'ment, *n.* Act of restoring to a former state; reestablishment.

Reinstation, (*-stâ'shun*), *n.* Act of reinstating; reinstatement.

Reinstruct, *v. a.* To instruct anew, or again.

Reinsurance, *n.* Insurance effected by an underwriter upon a subject against certain risks with another underwriter, on the same subject, against all or a part of the same risks, not exceeding the same amount. In the original insurance, he is the *insurer*; in the second, the *assured*. His object in reinsurance is to protect himself against the risks which he had assumed. There is no privity of contract between the original assured and the reinsurer, and the reinsurer is under no liability to such original assured.

Reinsure, *v. a.* To insure a second time.

Reintegrate, *v. a.* To restore; to renew with reference to any state or quality.

Reintegration, *n.* A renewing, restoring, or making whole again.

Reinter, *v. a.* To inter a second time.

Reinterrogate, *v. a.* To interrogate afresh; to question repeatedly.

Reintroduce, *v. a.* To introduce a second time.

Reintroduction, (*dûk'shun*), *n.* A second, or renewed introduction.

Reinundate, *v. a.* To inundate again.

Reinvest, *v. a.* To invest anew.

Reinvestigate, *v. a.* To investigate again, or a second time.

Reinvestigation, (*-gâ'shun*), *n.* A second investigation.

Reinvestment, *n.* Act of investing again, or anew.

Reinvigorate, *v. a.* To reanimate; to infuse vigor into afresh.

Reinvolve, *v. a.* To involve anew.

Reis-efendi, (*rêz-ef-fên'de*), *n.* [Ar. *reis*, head, chief, and *efendi*, *q. v.*] In Turkey, the minister, or secretary of state, for foreign affairs.

Reissuable, (*rê-îsh'shu-a-bl*), *a.* That may be reissued.

Reis'sue, *v. a.* To issue again, or a second time.

—*n.* A second, or repeated issue.

Reis'terstown, in Maryland, a post-village of Baltimore co., abt. 17 m. N.W. of Baltimore.

Reiter, (*rî'ter*), *n.* [Ger., a rider.] One of the German *lanzknechts*, or cavalry, of the 14th and 15th centuries.

Reiterate, *v. a.* [Fr. *réitérer*.] To repeat time after time; to say or do again and again, or repeatedly; as, to *reiterate* a promise.

—*a.* Reiterated; repeated. (R.)

Reiteratedly, *adv.* Repeatedly.

Reiteration, (*-â'shun*), *n.* [Fr. *réitération*.] Repetition.

Reiterative, *n.* (Gram.) A word signifying renewed or reiterated action. —A word formed from another, or employed to form another, by repetition; as, *riff-raff*.

Reject, *v. a.* [Lat. *reicio*—*re*, and *jacio*, to throw; Fr. *rejeter*.] To throw away, as anything useless or vile; to cast off; to discard; as, a *rejected* plan, a *rejected* suitor. —To repudiate; to refuse to receive or accept; to decline with haughty or incivility; to slight. —To refuse to grant or accede to; as, to *reject* a petition.

Rejectable, *a.* That may be rejected.

Reject'er, *n.* One who rejects, discards, or refuses.

Rejection, (*-re-jêk'shon*), *n.* [Lat. *rejection*.] Act of rejecting or throwing away; act of casting off or forsaking; refusal to accept a grant.

Rejective, *a.* Serving to reject.

Rejoice, *v. n.* [Fr. *réjoir*, *rejoissant*, from Lat. *re*, and *gaudere*, to rejoice.] To experience joy or gladness in a high degree; to be exhilarated with lively and pleasurable emotions or sensations; to delight; to be joyful or glad; to exult.

—*v. a.* To make joyful or glad; to animate with lively, or pleasurable emotions or sensations; to gladden; to cheer; to exhilarate; to delight; to please.

Rejoicer, *n.* One who rejoices, or makes rejoicing.

Rejoicing, (*-sing*), *n.* Act of expressing joy or gladness. —Subject or occasion of joy or gladness; cause of rejoicing or delight.

Rejoicingly, *adv.* With joy, gladness, or exultation.

Rejoin, *v. a.* [Fr. *rejoindre*, from Lat. *jungere*, to put under the same yoke.] To unite or fall in with after separation; to meet or attach one's self to again.

—*v. n.* To join something on. —To answer to a reply.

(Law.) To reply, as the defendant to the plaintiff's replication.

Rejoinder, *n.* [From Fr. *rejoindre*.] An answer to a reply; or, generally, an answer.

(Law.) The answer of the defendant to the plaintiff's replication. See PLEADINGS.

Rejoin't, *v. a.* To joint anew; to reunite the joints of. —Specifically, to fill up the joints of with cement or mortar, as the interstices between the stones of buildings.

Rejudge, (*jûj'*), *v. a.* To judge again, or a second time; to review or reexamine; as, to *rejudge* a cause.

Rejuvenate, *v. a.* [O. Fr. *rejuvenir*.] To make young again.

Rejuvenescence, **Rejuvenescency**, (*-es'sens*, *-es'sen-si*), *n.* A renewing of youth; state of being or becoming young again.

Rejuvenescent, *a.* Becoming, or causing to become, rejuvenated.

Rejuvenize, *v. a.* To make young again.

Rekindle, (*-kin'dl*), *v. a.* To kindle again.

Relade, *v. a.* To lade, or load, again.

Relaid, (*-lâd*), *imp.* and *pp.* of RELAY, *q. v.*

Relais, (*rêl-lâ*), *n.* (Fortif.) A narrow path on the exterior of the rampart, to receive the earth that may be washed down, and prevent its falling into the ditch.

Reland, *v. a.* and *v. n.* To go on shore after embarkation.

Relapse, (*-lâps*), *v. n.* [Lat. *relabor*, *relapsus*, to slide or glide down.] To slip or slide back; to return. —To

Fig. 2236.—CATHEDRAL OF REIMS.

Fig. 2237.—REINDEER.

fall or go back; to backslide; to return to a former state, as of vice or error; to fall back from recovery, or a convalescent state.

—*n.* A sliding or falling back, particularly into a former bad state, either of body or morals.

Relaps'er, n. One who relapses into vice or error.

Relate', v. a. [Fr. *relater*.] To report; to recount; to recite; to rehearse; to give orally or in writing, as the particulars of an event; as, to *relate* a story. — To ally by connection or kindred.

"To whom *related*, or by whom begot." — *Pope*.

—*v. n.* To refer; to pertain; to have bearing, relation, or concern; — preceding *to*.

Related', p. a. Allied by kindred; connected by ties of blood or alliance, particularly by consanguinity; as, a person *related* in the third degree. — Being in connection or relation; as, electricity and galvanism are nearly *related*.

(*Mus.*) Same as RELATIVE, *q. v.*

Relater', n. One who relates, narrates, or recites.

Relation, (-la'shun,) *n.* [Fr. from Lat. *relatio*.] Act of relating, or of telling or going over particulars; that which is told or related; narration; recital; account; narrative of facts; as, a concise historical *relation*. — Respect; reference; regard; connection between things; state of being related or of referring; direct conformity of parts to a whole and to each other; analogy; ratio; proportion; as, art viewed in *relation* to poetry. — Affinity; consanguinity; kindred; connection by birth or marriage; family ties; relationship; as, the *relation* of parents and offspring. — A relative; a kinsman or kinswoman; a person connected by consanguinity or affinity; as, he was discarded by his rich *relations*.

Relational, a. Having relation, kindred, or affinity. — Denoting or specifying some relation, as a phrase.

Relationship, n. State of being related by consanguinity, kindred, affinity, or other alliance.

Relative, a. [Fr. *relatif*.] Having relation or reference respecting; standing in connection; pertaining; as, to use arguments not *relative* to the point at issue. — Not absolute or existing by itself; having close or obvious connection, relation, or affinity; considered as belonging to or respecting something else.

* Wholesome and unwholesome are *relative*, not real, qualities." — *Arbuthnot*.

(*Gram.*) Referring to an antecedent; expressing or implying relation. — *R. pronouns.* They differ from personal and other pronouns in this, that, besides standing for nouns, they at the same time have the power of conjunctions. They join sentences or clauses by *relating*, or referring back directly, to something just named. The relatives in English are *who*, *which*, and *that*. *What* is used for *that which*, thus embracing both relative and antecedent. *Who* is employed when the reference is to persons, and *which* when it is to inferior animals or things. *That* is applied to both persons and things; but it does not follow that it may be used at pleasure instead of *who* or *which*. It is only when the purpose of the relative clause is to limit or define the thing meant, that *that* is ever applied; and for this purpose, its use is in general preferable to that of *who* or *which*. It is easier and more idiomatic to say: "All the men *that* had blue eyes," than, "All the men *who*," &c.; and who would think of saying: "This is the house *which* Jack built?" Besides *that* so employed often avoids ambiguities that would attend *who* or *which*. *Ex.* — "His conduct surprised his English friends, *who* had not known him long." This may mean either that his English friends generally were surprised, for the reason that they had not known him long; or that only a portion of them — those, namely, that had not known him long — were offended. If the latter is the meaning intended, it would remove all ambiguity to write: "His English friends *that* had not known him long."

(*Mus.*) Characterizing, or pertaining to, chords, which, by reason of the identity of some of their tones, admit of a natural transition from one to the other. (*Moore*). — *Relative keys.* Keys which have all their tones but one in common; a minor mode or key is also said to be the *relative* of the major key possessing the same signature.

Relative terms. Terms which denote relation, as husband and wife, parent and child, &c.

Relative, n. A person related or connected by blood or affinity; — strictly, one allied by consanguinity; a relation; a kinsman or kinswoman. — That which has relation to something else.

(*Gram.*) A word which relates to or represents another word, called its *antecedent*, or which refers back to a sentence or member of a sentence; as, a *relative* pronoun.

Relatively, adv. In a relative sense or manner; in relation or respect to something else; not absolutely.

Relativeness, Relativity, n. State of being relative.

Relat'or, n. [Fr. *relateur*; Lat., from *referre*.] A narrator; a reciter.

(*Law*.) A rehearser or teller; one who, by leave of court, brings an information in the nature of a *quo warranto*.

Rela'trix, n. (*Law*.) A female relator.

Relax', v. a. [Lat. *relaxare*; Fr. *relaxer*.] To make lax or loose; to slacken; to loosen; to make less close, firm, tense, or rigid; as, to *relax* a cord or a muscle. — To remit; to lessen or lower the stringency or rigor of; to make less severe, strenuous, or forcible; as, to *relax* a law, sentence, or penalty. — To ease; to divert; to unbend from constraint or attention; to prosecute less assiduously or laboriously, as efforts; as, recreation *relaxes* the mind. — To open; to loosen; to relieve from constipation or costiveness; as, diuretic medicines *relax* the bowels.

Relax', v. n. To be made lax or slack; to become loosened or feeble. — To become lessened in severity or rigor; to abate in force. — To unbend; to take diversion or recreation; to remit in close effort or attention.

Relax'able, a. That may be relaxed or remitted.

Relax'ant, n. (*Med.*) A medicine that relaxes the bowels.

Relaxation, n. [Fr., from Lat. *relaxatio*.] Act of relaxing, or state of being relaxed or loosened; remission or slackening of closeness, tension, firmness, rigor, effort, or costiveness; diminution of the healthy and natural tone of parts; as, *relaxation* of the sinews, *relaxation* of the bowels, *relaxation* of a rule, law, or system, &c. — Remission from application, effort, or attention; indulgence in recreation, diversion, or amusement; as, *relaxation* from toil or business.

Relax'ative, a. [O. Fr. *relaxatif*.] Laxative; that may relax.

—*n.* A laxative; a medicine that relaxes the bowels.

Relay', n. [Fr. *relais*, from *relayer*, to change horses.] A supply of horses placed on the road, to be in readiness to relieve others, in order that the traveller may proceed without delay. — A supply of hounds or sporting dogs kept in readiness at certain places to pursue the game.

—*v. a.* To lay again; as, to *relay* a floor.

Releasable, (-lēs'a-bl,) *a.* That may be released.

Release', v. a. [Fr. *relâcher*.] To set free; to liberate; to disengage or let go from restraint of any kind; to discharge from custody; as, to *release* a prisoner. — To relieve from anything that constrains, confines, or oppresses; as, death *released* him from his sufferings. — To let go, as a legal claim or obligation; to relinquish; to quit; to give up. — To lease over again; to grant a new lease of; as, to *release* a house or land.

—*n.* Act of setting free or at liberty; state of being freed or liberated; deliverance or discharge from restraint of any kind, as from durance, confinement, or bondage. — Relief from care, pain, oppression, or any burden. — Acquittance; discharge from obligation or responsibility.

(*Law*.) The giving up or abandoning a claim or right to the person against whom the claim exists, or the right is to be exercised or enforced. — The conveyance of a man's interest or right which he hath, unto a thing to another that hath the possession thereof, or some estate therein. — The relinquishment of some right or benefit to a person who has already some interest in the teneament, and such interest as qualifies him for receiving or availing himself of the right or benefit so relinquished.

Releasee', n. The receiver, or grantee, of a release.

Release'ment, n. Act of releasing from confinement, pain, penalty, or obligation.

Releas'er, n. One who gives release.

Rel'egate, v. a. [Fr. *reléguer*.] To consign; to dispatch; to remand; to transfer; — specifically, to banish; to exile; to cause to depart.

Relegation, n. [Fr.; Lat. *relegatio*.] Act of relegating; deportation; consignment; exile; banishment.

Relent', v. n. [Fr. *relentir*, from Lat. *re*, and *lentesco*, to become soft or pliant.] To soften in temper; to become more mild, lenient, or tender; to feel compassion; to become less harsh, inflexible, or cruel. — To become less intense. (*R.*)

"He will *relent*, and turn from his displeasure." — *Milton*.

Relent'less, a. Unrelenting; un pitying; unmerciful; unmoved by compassion; insensible to the distresses of others; destitute of tenderness; implacable; unforgiving; cruel; as, *relentless* despotism.

Relent'lessly, adv. In a relentless manner; implacably; without mercy or pity.

Relentless'ness, n. Quality of being relentless, or of being unmoved by pity.

Relessee', n. (*Law*.) The person to whom a release is executed.

Relesson', n. (*Law*.) One who executes a release.

Relet', v. a. To let again, or anew, as a house.

Rel'evance, Rel'evancy, n. State of being relevant.

Rel'evant, a. [Fr. *relever*, ppr. *relevant*, from Lat. *re*, and *levo*, *levatus*, to raise.] Relieving; affording aid or support. (*R.*) — Having applicableness or pertinence, as an argument or illustration; appropriate; suitable; as, a quotation *relevant* to the case.

Reliability, n. Reliability.

Reli'able, a. That may be trusted or relied on; worthy of trust, dependence, or reliance; as, a *reliable* witness, a *reliable* piece of intelligence.

Reli'ableness, n. State or quality of being reliable.

Reli'ably, adv. In a reliable or trustworthy manner.

Reliance, n. [From *rely*.] A relying; act of relying, or condition or quality of being reliant; rest or repose of mind, resulting from a full belief of the veracity, integrity, or trustworthiness of a person, or the certainty or actuality of a fact; trust; confidence; dependence; as, place no *reliance* on promises. — That on which one relies; basis of dependence; ground of trust or confidence.

Reli'ant, a. Having or feeling reliance; trusting; possessing confidence in.

Rel'ic, n. (Formerly spelled RELIQUE.) [Fr. *relique*; Lat. *reliquia*.] That which remains, or which is left after the loss or decay of the rest; — generally in the plural.

"Go gather up the *reliques* of thy race." — *Shaks*

(*Ech.*) In the Roman Catholic and Eastern churches, the name given to objects which derive their value from their connection with our Lord and with the saints; as, for example, fragments of our Lord's cross or crown of thorns, portions of the dust, the bones, the blood, the instruments of torture, the chains, &c., of the martyrs, the mortal remains, the clothes, the books, and other objects of personal use of the other saints, and even

objects to which a certain indirect sacred interest is given by their being brought into contact with the direct memorials of the distinguished dead, as by their being placed on the tombs of the martyrs, touched with the relics, or blessed at the shrine or sanctuary of the saints, &c. In all such cases, the motive of religious honor, however differently it arises, is precisely the same, viz., the association of the object which is honored with the personage whose virtues or services are the subject of grateful veneration. The merits of relics, in their theological aspect, are beyond the scope of this publication.

— Hence, by implication, a memento; a memorial; a souvenir; anything preserved in remembrance.

"Fair Greece! sad *relic* of departed worth." — *Byron*.

Rel'ict, n. [Lat. *relictus*, *relictus*, from *relinquo*.] A widow; a woman whose husband is deceased.

Rel'iction, (-lik'shun,) *n.* [Lat. *relictio*.] (*Law*.) An increase of land by the retreat or recession of the sea or a river.

Relief, (-leef,) *n.* [Fr., from *relever*; Lat. *relevo*.] Act of relieving, or state or condition of being relieved; the removal, in whole or in part, of any evil that afflicts the body or mind, or of anything oppressive or burdensome, by which some ease is obtained; alleviation; mitigation; help; aid; succor; remedy; redress; indemnification. — That which mitigates or removes pain, or other evil or burden; as, death would be a *relief* to him. — The release, as of sentinels, or others, from some post or duty, and the substitution of others; also, the person or persons thus substituted; as, he must stay till his *relief* comes.

(*Fortif.*) The vertical distance of any point in a fortified work, from a horizontal plane coincident with the base of its scarp. The *relief* of a work implies the *relief* of the parapet, i. e., its height above the base of the scarp.

(*Sculp.*) See RELIEVO.

(*Paint.*) The degree of prominence or boldness which a figure presents to the eye at a distance; as, the horse is painted in strong *relief*.

(*Arch.*) The projection of a figure or ornament from the ground or plane on which it is sculptured.

(*Phys. Geog.*) The elevation of the surface of a country.

Relief-valve, (-valv,) (*Mach.*) A valve belonging to the feeding apparatus of a marine engine, through which the water escapes into the hot-well when it is shut off from the boiler.

Reliefless, a. Lacking relief; without relief or remedy.

Reli'er, n. One who relies; one who places confidence in.

Reliev'able, a. That may be relieved.

Relieve, (-re-lēv,) *v. a.* [Fr. *relever*; Lat. *relevo*.] To lift or raise up; to cause to rise; to set off by contrast; to give prominence, projection, or salience to. — To lighten; to lessen; to abate; to mitigate; to alleviate; to assuage; to ease; to set free, wholly or partially, from anything that is considered to be an evil or a burden; as, to *relieve* the wants or distresses of others. — To set free from anything that pains the body or afflicts the mind; to give ease, comfort, help, or consolation to. — To release from a post or station, or from duty, as sentinels, a guard, a body of troops, or ships, and station others in their stead. — To right; to redress; to remove from, or ease of, as any grievance, burden, wrong, or oppression, by judicial or legislative interposition; to make good by indemnification.

Reliev'ment, n. Act of relieving, or state of being relieved; relief; release; liberation.

Reliever, n. One who, or that which, relieves, or gives ease or comfort.

(*Ord.*) An iron ring fixed to a handle, and serving to disengage the searcher of a gun when one of its points is retained in a hole.

Relieving, (-leev-), p. a. Serving to relieve.

Relieving arch, (-Arch.) See DISCHARGE. — **Relieving-tackle, (-Naut.)** Temporary tackle attached to the end of the tiller, in bad weather, to assist the helmsman, and in case of accident happening to the tiller-ropes or wheel.

— **pl. (Shipbuilding.)** Two strong tackles used to prevent a ship's overturning on the careen, and afterwards to assist in setting her upright.

Relievo, (-re-lēvo,) *n.* [It. *rilievo*.] (*Sculp.*) That species of work which is raised above a surface with which it is connected. There are three gradations of *relievo*: — *Basso-relievo*, in which the figures project only slightly from the ground on which they are sculptured; *mezzo-relievo*, in which the figures stand out about half their natural proportions, the other half appearing immersed in the ground-work; and finally, *alto-relievo*, in which the figures stand completely out from the ground, being attached to it only here and there, while in most places it is worked entirely round, as in single statues.

Relight, (-lit,) *v. a.* To light, or set on fire, again.

Religion, (-li-jun,) *n.* [Fr., from Lat. *religio*, from *religare*, to bind fast.] That bond or obligation and sense of duty which we feel from the relation in which we stand to some superior power; — specifically, an acknowledgment of our obligation to God as our Creator, Preserver, and Redeemer, accompanied by a feeling of reverence and love, and a consequent return of duty and obedience to him; duty to God and to his creatures; practical piety; godliness; devotion; with the practice of all moral duties and obligations. — Any system of faith and worship. The varieties of religions in the world are almost innumerable; but they may be reduced to four great classes, — the Jewish, Christian, Mohammedan, and Pagan.

Religionism, (-li-jun-izm,) *n.* Practice of, or adherence to, religion. — Pretended or assumed religion.

Religionist, n. A bigoted or pretended devotee to religion; one deeply and firmly attached to a religion.

Religios'ity, *n.* [Lat. *religiositas*.] Religionsness. (*n.*)
Religious, (*-lĭ'jus*), *a.* [Fr. *religieux*; Lat. *religiosus*.] Pertaining or relating to religion; teaching religion; containing religious subjects, as the doctrines and precepts of religion; devotional; appropriated to the performance of sacred or religious duties; concerned with religion; as, a *religious* sect, a *religious* book, a *religious* house, a *religious* order, &c. — Pious; godly; devout; holy; reverential; loving and reverencing the Supreme Being, and obeying his precepts; devoted to the practice of religion; as, a *religious* man, a *religious* life. — Characterized by strictness or exactness, such as religion requires; conscientious; dutiful; scrupulously faithful. — Engaged by vows to a monastic life. — Appropriate to the performance of sacred or religious duties.

Religiously, (*rĕ-lĭ'jus-lĭ*), *adv.* In a religious manner; piously; with love and reverence to the Supreme Being; in obedience to the divine commands; according to the rights of religion; reverently; with veneration; also, exactly; strictly; conscientiously.

Relig'iousness, *n.* State or quality of being religious.

Relin'quant, *n.* One who relinquishes.

Relinquish, (*re-lĭnk'wĭsh*), *v. a.* [Lat. *relinquere*, to leave behind, from *re*, and *linquo*, to leave.] To depart or withdraw from; to leave; to quit; to forsake. — To give up; to resign; to renounce.

To relinquish back or to, to give up; to release.

Relin'quisher, *n.* A person who relinquishes.

Relin'quishment, *n.* Act of leaving or quitting; a forsaking; the renouncing a claim to; abandonment.

Reliquary, *n.* [Fr. *reliquaire*; L. Lat. *reliquarium*.] A small chest, box, or casket in which relics are kept.

Relique, (*re-lĭk'*), *n.* A relic.

Reliquie, (*-lĭk-wĭ-e'*), *n. pl.* [Lat., from *relinquere*, to leave behind.] (Geol.) Fossil remains of plants and animals found in the sedimentary deposits.

(Bot.) The withered remains of leaves which, not being articulated with the stem, cannot fall off, but decay upon it.

Reliqu'itate, *v. a.* To liquidate again, or a second time.

Reliquida'tion, *n.* A renewed liquidation, or adjustment.

Rel'ish, *v. a.* [O. Fr. *relĕcher*, from Lat. *lingere*.] To be gratified with the enjoyment or use of; to like or enjoy the taste of; to have a taste or liking for. — To give an agreeable taste to.

— *v. n.* To have a pleasing taste; to give pleasure. — To have a flavor.

— *n.* A pleasing taste; that which gratifies the palate. — That which gives pleasure or delight; power of pleasing. — Taste; flavor; savor; gusto; zest. — Liking; fondness; delight; appetite. — A taste; a small quantity just perceptible. — Something taken with food to increase the pleasure of eating.

Rel'ishable, *a.* Having a taste.

Relive, (*re-lĭv'*), *v. n.* To revive; to live anew.

Reload, *v. a.* To load again, as a gun.

Reloan, *v. a.* To loan again; to lend a second time.

— *n.* A second lending, or loan, of the same thing.

Relocate, *v. a.* To locate anew, or a second time.

Relocation, (*-kă'shun*), *n.* A second, or renewed, location.

(Law.) Renewal of a lease.

Relodge, (*-lăj'*), *v. a.* To lodge again, or afresh.

Reluc'ent, (*-lū'sent*), *a.* [From Lat. *relucere*, to shine.] Shining; pellucid; transparent; clear; bright; as, *reluc'ent* waters.

Reluct', *v. n.* [Fr. *relucter*.] To strive or struggle against anything; to make or manifest resistance, reluctance, or repugnance.

Reluc'tance, **Reluc'tancy**, *n.* [Sp. *reluctancia*.] State or quality of being reluctant; repugnance; opposition or aversion of mind; unwillingness; — frequently with *to* or *against* before the object; as, "it favors *reluctance* against God." — Milton.

Reluc'tant, *a.* [Lat. *reluctans*.] Struggling or striving against; much averse in heart; unwilling; repugnant; loth; as, a *reluctant* witness. — Backward; acting with, or proceeding from, some degree of repugnance or unwillingness; given or granted with reluctance; as, *reluctant* admissions of the truth.

Reluc'tantly, *adv.* In a reluctant manner; with reluctance, resistance, or repugnance; with opposition of heart; unwillingly.

Relume, *v. a.* [Fr. *rallumer*.] To rekindle; to relight.

Relu'mine, *v. a.* To rekindle; to relume. — To illuminate over again.

Rely, (*re-lĭ'*), *v. n.* (*imp.* and *pp.* RELIED, (*re-lĭd'*)) [Prefix *re*, and *lie*.] To lie, rest, or repose on something, as the mind when satisfied of the veracity, integrity, or ability of persons, or of the certainty of facts, or of evidence; to confide; to depend; to trust; to have confidence.

Remade, *imp.* and *pp.* of REMAKE, *q. v.*

Remain, *v. n.* [Lat. *remaneo*; Ger. *menō*, to stay.] To stay behind after the withdrawal of others; to continue in the same place when others remove, or are lost, destroyed, or taken away; to be left after any event; to be left after a part, or others, have passed; to be left, as not included or comprised. — To continue in a place for a time indefinite; to continue; to abide; to stay; to tarry; to continue unchanged, or in a particular state; to last or endure.

— *v. a.* To await; to be left to.

"The easier conquest now remains thee." — Milton.

— *n.* Relic; reliquary; reminder; memorial; that which is left; — mostly used in the plural; as, "their small *remains* of life." (Pope.) — Specifically, that which is left

of a human body after death; a corpse; — always employed in the plural.

"Fowls obscene dismember'd his remains." — Pope.

— Posthumous writings; literary works, &c., left by a deceased author; as, Paley's *Life and Remains*.

Remain'der, *n.* That which remains, or is left; anything left after the separation and removal of a part; the rest; the residue. — Relics; remains; the corpse of a human being.

(Math.) The quantity that is left after subtraction, or after any deduction; — called in algebra the *difference*.

(Law.) An estate in *R.* is defined to be "an estate limited to take effect and be enjoyed after another estate is determined." Thus, if a man seized in fee-simple grants lands to A for twenty years, and after the determination of the said term then to B and his heirs forever, here A is tenant for years, and the *R.* falls to B. A *remainder* differs from a *version*, in that the former is created by the act of parties, the latter by act of law. The estate which precedes the estate in *R.* is called the *particular estate*, as being a *particula* or portion; the two being equal only to one estate in fee. There must first necessarily be some particular estate precedent to the estate in *R.*, in order, as is said, to support it. The *R.* must also commence or pass out of the grantor at the time of the creation of the particular estate, and must be limited to take effect in possession immediately upon the determination of the particular estate, and neither sooner nor later. *R.* are of two kinds, — *vested* or *executed*, and *contingent* or *executory*. Vested *R.* are where the estate is invariably fixed to remain to a determinate person after the particular estate is spent; contingent *R.*, on the other hand, are limited either to an uncertain person, or upon an uncertain event; i. e., to a person not *in esse*, or not ascertained, or upon an event which may not happen at all, or not happen until after the particular estate is determined. The common law on the doctrine of *R.* is followed, almost unchanged, in most of the States.

Remain'der-man, *n.*; *pl.* REMAINDER-MEN. (Law.) One who has an estate after a particular estate has been determined.

Remake, *v. a.* To make anew, or afresh.

Remand, *v. a.* [Fr. *remander*, from Lat. *re*, and *mando*, to commit to one's charge.] To call or send back, as one who, or that which, is ordered to a place; to send, as an accused party back to custody.

(Law.) When it is necessary to postpone the preliminary examination of a criminal case of a serious character on account of absence of witnesses or other motives, the judge recommits, or *remands*, to prison the person charged with the offence.

Remand'ment, *n.* Act of remanding or sending back.

Rem'anence, **Rem'anency**, *n.* State or quality of being remanent. (*R.*)

Remark, *n.* [Fr. *remarque* — *re*, and *marque*, from Ger. *mark*, a limit, boundary.] Act of remarking or attentively viewing; notice or observation. — Notice or observation expressed in words or writing; note; comment; — also, a casual observation; as, to offer a *remark*.

— *v. a.* [Fr. *remarquer*.] To mark in an express or notable manner; to point out clearly or obviously. (*R.*) — To observe; to notice; to heed; to regard; to take notice of in the mind without expression; as, to *remark* what is passing. — To express in words or writing, as what one thinks or sees; to utter, as observations; to call attention to; to bring to notice; as, I agree with what my friend has *remarked*. — To mark anew, again, or a second time; as, to *remark* a bale of goods.

— *v. n.* To observe; to say; to make observations; as, allow me to *remark*.

Remark'able, *a.* [Fr. *remarquable*.] Worthy of remark or notice; that deserves particular notice, or that may excite admiration or wonder; extraordinary; notable; distinguished; eminent; uncommon; as, a *remark'able* man, a *remark'able* event or circumstance.

Remark'ableness, *n.* State of being noteworthy.

Remark'ably, *adv.* In a manner or degree worthy of notice; in an extraordinary or notable manner.

Remark'er, *n.* One who remarks; an observer.

Remar'riage, *n.* A second, or renewed marriage.

Remar'ry, *v. a.* To marry again, or a second time.

— *v. n.* To be married again, or a second time.

Remast, *v. a.* To supply with a second mast, or set of masts, as a ship.

Remas'ticate, *v. a.* To masticate again, or repeatedly.

Remastication, *n.* Act of masticating again or repeatedly; a chewing over again, as of the cud.

Rem'bang, a town of Java, cap. of a Dutch residency, on the N. coast, 40 m. N.W. of Samarang; Lat. 6° 40' 30" S., Lon. 111° 17' E.; pop. 11,000.

Remblai, (*rōng'blā*), *n.* [Fr., from *remblayer*, to embank.] (Engineering.) The earthwork that is carried to bank, in the case of a railway or canal traversing a natural depression of the surface.

(Fort.) The earth or materials used to form the whole mass of rampart and parapet. It may contain more than the *déblai* from the ditch.

Rem'brandt, VAN RYN, one of the most celebrated painters and engravers of the Dutch school, b. 1606, at Leyden. He acquired his art from several masters at Amsterdam, and early in life grew famous. *R.* was master of all that relates to coloring, distribution of light and shade, and composition, and though deficient in other requisites of a true artist, it cannot be denied that his pencil is masterly and unique, possessing an energy and effect belonging to no other painter. His etchings have wonderful freedom, facility, and boldness. *R.* was twice married, resided during the greater part of his life at Amsterdam, and acquired a large fortune. D. 1669.

Re'meant, *a.* [From Lat. *remeare*, to go or come back.] Coming back; returning; retrograding; as, "the *re'meant* sun." — C. Kingsley.

Remeasure, (*-mĕzh'yūr*), *v. a.* To measure again.

Reme'diable, *a.* [From *remedy*.] That may be remedied or cured; salable; curable.

Reme'diably, *adv.* In a manner susceptible of remedy.

Reme'dial, *a.* Affording, or admitting, a remedy.

Reme'dially, *adv.* In a remedial manner.

Reme'diless, *a.* Not admitting a remedy, as disease, incurable; irretrievable; desperate; hopeless.

Reme'dilessly, *adv.* In a manner or degree preclusive of a remedy.

Rem'e'dy, *n.* [Fr. *remède*; Lat. *remedium* — *re*, and *medeor*, to heal, to relieve.] That which heals or cures a disease; any medicine or application which puts an end to disease and restores health; a medicine; a restorative; — preceding *for*; as, a *remedy* for the gout. — That which counteracts an evil of any kind; that which repairs or retrieves loss or disaster; reparation; relief; cure or corrective.

(Law.) The legal means to recover a right, or to obtain redress for a wrong.

— *v. a.* [Fr. *remédier*.] To cure; to heal; to remove, as an evil; to repair; to redress; to remove mischief; as, to *remedy* a wrong.

Remelt, *v. a.* To melt anew, or a second time.

Remem'ber, *v. a.* [O. Fr. *remember*; It. *rammemorare*.] To bring or recall to the memory; to recollect; to think of again; to have in the mind, as a former idea which recurs to the mind without effort. — To bear or keep in mind; to attend to; to observe; to cherish the memory of; to preserve from being forgotten; to think of with affection, respect, esteem, or gratitude.

"Dear as remembered kisses after death." — Tennyson.

Remem'berable, *a.* That may be remembered.

Remem'berably, *adv.* So as to be remembered.

Remem'brance, *n.* Act of remembering; the retaining in mind or bringing to recollection. — State of being remembered; retention in the mind or memory; recollection; reminiscence; revival in the mind or memory; as, "this ever grateful in *remembrance* bear." (Pope.) — A token by which a person or thing is kept in memory; a memorial; a memento; a keepsake; a souvenir; a memorandum; an account preserved. — Power of remembering; faculty by which past ideas, acts, persons, or events are called to mind; also, period over which such faculty extends; duration of memory.

Remem'brancer, *n.* One who reminds, or revives, the remembrance of anything; something that reminds or recalls to remembrance, as a gift.

Remem'orative, *a.* That reminds; that recalls to mind.

Remi', (*St.*) or **Remi'gus**, the name of two saints of the Roman calendar: — 1. An apostle of the Franks who baptized Clovis, and became archbishop of Rheims, died 533. 2. An archbishop of Lyons, who was of Gaulish origin, and wrote against Godeschalus, presided at the council of Valence 855, died 875. — A third of the name, called REMI, or REMIGIUS of AUXERRE, was a Benedictine monk and commentator, died 980.

Rem'iform, *a.* [Lat. *remus*, an oar, and *forma*, a form.] Formed or shaped like an oar.

Rem'iges, *n. pl.* [Lat. *remex*, a rower; *pl. remiges*.] (Zool.) The quill-feathers of the wings of a bird, which, like oars, propel it through the air.

Remi'grate, *v. n.* [Lat. *remigro*, from *re*, again, back, and *migro*, to remove.] To remove back again; to return.

Remind', *v. a.* To cause to remember; to bring to the remembrance of.

Remind'er, *n.* A person who, or that which, reminds.

Remind'ful, *a.* Careful to recall to mind; calling to mind.

Rem'ington, in Indiana, a post-town of Jasper co., about 40 m. W. of Logansport.

Remington Rifle, (*Gun*.) The Remington system of breech-loading, so called from the name of its American inventor, demands attention from its important position in the development of modern small arms. The arm of the gun is very simple, the mechanism being composed of very few, simple parts, all securely protected in the frame, the weakest point, the neck, being guarded by the upper and lower extension of the frame. At the moment of discharge, the breech-piece is supported by the front part of the hammer, which forms a shoulder to receive the recoil, and the entire strain upon the axis of the breech-piece comes on that part in the rear of the forward pin, as has been demonstrated by experiments, in which the arm has been successfully fired after having the front portion of the axis of its breech-piece removed by filing. The breech-piece and the hammer are of considerable weight and thickness, and of the best solid steel. They, in turn, are supported by solid steel pins, nearly half an inch in thickness,

Fig. 2238. — REMINGTON RIFLE.

which passes through the strong iron frame from side to side. The metal in all these parts is so located as to equalize their capacity to resist the action of recoil. In

consequence of the peculiar interlocking and bracing of the hammer and breech-piece, the hammer is locked securely by the recoil, and the more securely the greater the recoil. Fig. 2238 represents a longitudinal section through the breech of the Remington rifle when open and ready for loading. The barrel is screwed into the breech-piece, through which pass two strong bolts, *C* and *c*, upon which the breech-block, *B*, and the hammer, *G*, hinge. In order to remove the empty cartridge-cases out of the chamber, which is in the rear end of the barrel, the hammer must first be locked, the breech-block is then drawn backwards, and assumes the position shown in the accompanying Fig. (2238.) By this movement of the breech-block, an extractor, situated in the inside of the chamber, is operated, which draws the cartridge slightly, whereupon it may easily be removed with the fingers. The following cartridges may then be inserted, and the breech-block pushed forward to its original position. To hold it in this position, the lever, *D*, acting upon the pin, *d*, and held in its turn by the spring, *e*, is applied, and falls into a notch in the breech-piece. In the breech-block itself, is the pin upon which the hammer strikes for exploding the cartridge, and the hammer is operated by the main-spring, as shown in the wood-cut. As the hammer descends, its forward surface, from its peculiar circular construction, collides with the rear surface of the breech-piece, and it also acts as a support in resisting the reaction of the discharge. Introduced to public attention in 1866, the *R.* system was widely accepted both in the United States and Europe, and in 1870 was adopted for the breech part of the rifles in the United States navy. Since this date, however, there has been a great activity in the invention of improved small arms, and a number of more efficient weapons have come into use.

Reminis'cence, Reminis'cence, n. [Fr., from Lat. *remiscentie*, from *remiscentis*, to recall to mind.] That faculty of the mind by which ideas formerly received into it, but forgotten, are recalled or revived in the memory; recollection; remembrance. In the theory of Plato, knowledge was only a reminiscence or recovery of truth which the soul had possessed in a former state of existence, but which it had forgotten since it began its sojourn on earth.

Reminis'cent, n. A person who recalls to mind past events.

Reminiscent'ial, a. Relating to reminiscence.

Remiremont, (rem'eer-mawnt.) a town of France, dept. of Vosges, on the Moselle, 14 m. S.E. of Epinal; pop. 5,500.

Remise', n. [Fr. *remettre*; from Lat. *remitto*, to send back, to deliver.] (Law.) A surrender, or return, as of a debt or duty.

—*v. a.* [Fr. *remiser*.] (Law.) To give, or grant, back; to release, as a claim or a debt.

Remiss', a. [Lat. *remissus*, from *remitto*.] Backward; careless; negligent; not performing duty or business; heedless. — Slow; languid; not vigorous, as motion.

Remiss'ful, a. Lenient; that forgives.

Remissibility, n. State or quality of being remissible.

Remis'sible, a. Capable of being remitted or forgiven.

Remission, (re-mish'un.) n. [Lat. *remissio*, from *remitto*.] The act of remitting; abatement; relaxation; moderation. — Release; discharge or relinquishment of a claim or right. — Forgiveness; pardon; as, the remission of sins.

(Med.) A temporary diminution of the symptoms of a disease, either acute or chronic; diminution in the febrile symptoms, such as occurs in a remittent fever between the exacerbations.

(Com.) The sending of money to a distant place.

Remis'sive, a. [Lat. *remissivus*, relaxing.] Remitting.

Remiss'ly, adv. In a remiss manner; slackly; carelessly; negligently.

Remis'sness, n. The state or quality of being remiss; slackness; slowness; want of ardor or vigor.

Remis'sory, a. Relating to forgiveness or remission.

Remit', v. a. [Fr. *remettre*; Lat. *remitto*, from *re*, and *mitto*, to send.] To relax; to make less tense or violent, as anger. — To pardon; to absolve. — To return; to send back. — To give up; to resign. — To restore; to replace. — To defer; to refer.

(Com.) To transmit, as money, bills, &c., to some person at a distance.

—*v. n.* To slacken; to become less intense or vigorous.

(Med.) To grow by intervals less violent, though not wholly intermitting.

Remitment, n. The act of remitting to custody; remittance.

Remit'tal, n. A remitting; a giving up; surrender.

Remit'tance, n. The act of remitting. — The act of transmitting money, bills, or the like, to a distant place; also, the sum or thing remitted.

Remit tent, a. (Med.) Noting a fever which strikingly exacerbates and remits, but without intermission.

Remit'ter, n. One who remits, or makes remittance. — One who forgives.

(Law.) There is a remitter where he who has the right of entry in land, but is out of possession, obtains afterwards the possession of the land by some subsequent or defective title; in which case he is *remitted* or sent back, by operation of law, to his own preferable title.

Remit'tor, n. (Law.) One who makes a remittance; a remitter.

Remix', v. a. To mix anew.

Remnant, n. [Contracted from *remanent*.] Residue; that which is left after the separation, removal, or destruction of a part.

—*pl.* The ends of fabrics, as cloth, linen, &c.

Rem'nant, a. Remaining; yet left.

Re'mo, (St.), a seaport-town of Italy, in Piedmont, on the Mediterranean, 14 m. S.E. of Oneglia; pop. 7,500.

Remod'el, v. a. To model or fashion anew.

Rem'olinite, n. (Min.) Atacamite from Los Remolinos, Chili.

Remol'lient, a. [Fr.] Mollifying; softening.

Remolten, (re-mol'tn.) a. Melted again.

Remon'strance, Remonstrat'ion, n. [Fr. *remonstrance*.] Strong representation of reasons against a measure; pressing suggestions or expostulations in opposition to a measure or act.

Remon'strant, n. One who remonstrates.

—*pl.* (Ecd. Hist.) See ARMINIANISM.

—*a.* Expostulatory.

Remon'strate, v. n. [Lat. *remonstrare*, from *re*, again, and *monstro*, to show.] To exhibit or present strong reasons against an act, measure, or any course of proceedings; to expostulate.

—*v. a.* To show by a strong representation. (R.)

Remon'strator, n. A remonstrant.

Rem'ora, n. [Lat.] An obstacle; a hindrance.

(Surg.) An instrument intended to retain parts in situ. — *Dunglison*.

(Zool.) The common name of the *Echeneidæ*, a family of malacopterygious fishes, in which the dorsal fin is so modified as to become a flattened disc covering the top of the head, composed of movable cartilaginous plates directed obliquely backwards. The fish attaches itself

Fig. 2239. — WHITE-TAILED REMORA.

to a foreign body by its structure, and from this well-ascertained fact many fables have been invented regarding the genus; among others, one which asserts that the fish possesses the power of arresting the course of any ship to which it may have attached itself. The species are from 12 to 20 inches long.

Remorse, (re-mors') n. The keen pain or anguish excited by a sense of guilt; compunction of conscience for a crime committed.

Remorse'ful, a. Full of remorse.

Remorse'fully, adv. With remorse of conscience.

Remorse'less, a. Without remorse; having no pity or compassion on distress; ruthless; relentless.

Remorse'lessly, adv. Without remorse.

Remorse'lessness, n. The quality of being remorseless, or devoid of pity.

Remote', a. [Lat. *remotus*.] Distant in time, place, or connection; far; not near. — Alien; foreign; not agreeing with; not related.

Remote'ly, adv. At a distance in space or time; not nearly; at a distance in consanguinity or affinity.

Remote'ness, n. State of being remote.

Remot'ion, n. The act of removing; the state of being removed. (R.)

Remould', v. a. To mould or shape anew.

Remount', v. n. [Fr. *remonter*.] To mount again; to reascend.

—*v. a.* To mount again.

—*n.* (Mil.) A supply of good horses for the service of the cavalry.

Removability, n. The capacity of being removable from an office or station; power of being displaced.

Remov'able, a. That may be removed from an office or station; that may be removed from one place to another.

Remov'al, n. The act of moving from one place to another for residence. — The act of displacing from an office or post. — State of being removed; change of place.

Remove, (re-moor') v. a. [Sp. *remover*; Lat. *removeo* — *re*, and *moveo*, to move.] To move from its place; to withdraw; to cause to change place; to displace; as, to remove one's residence. — To cause to leave a person or thing; to take or put away in any manner; — hence, to banish; to destroy; to take from the present state of being; as, to remove an obstruction. — To carry from one court to another; as, to remove a suit by appeal.

—*v. n.* To be moved from its place; to change place or position in any manner; to go from one place to another; to change the place of residence.

—*n.* Act of removing; removal; change of place. — State of being removed; a going away; departure. — That which is removed, as a dish to be changed at table while the rest of the course remains. — Act of putting a horse's shoes upon different feet. — A step in any scale of gradation. — Distance or space through which anything is removed; interval.

Removed, (-mōōrd.) a. Remote; apart or separate from others; as, "so removed a dwelling." — *Shaks.*

Removed'ness, n. State of being removed; remoteness.

Remover', n. One who removes.

Rem'phan. (Script.) A deity which is said to have been worshipped by the Israelites while in the wilderness. The passage in Acts vii, which speaks of them taking up the tabernacle of Moloch and the star of their god Remphan, is supposed to refer to the words of Amos, "Ye have borne the tabernacle of your Moloch and Chiun, your images." Chiun and Remphan would on this hypothesis be the same, and both are thought to denote Sirius, the dog-star.

Remscheid, (rem'shide.) a town of Rhenish Prussia, 18 m. E.S.E. of Dusseldorf. *Manuf.* Principally iron-ware.

Rem'sen, in New York, a post-village and township of Oneida co., abt. 18 m. N. by E. of Utica.

Remugient, (-mū'ji-ent.) a. [Lat. *re*, and *mugire*, to bellow.] Rebellowing.

Remunerability, n. Ability of being remunerated or recompensed.

Remun'erable, a. That may be remunerated or rewarded; fit or proper to be recompensed.

Remun'erate, v. a. [Fr. *rémunérer*; Lat. *remunero*, *remuneratus*.] To render a service back to; to reward for service; to repay; to requite; to recompense; as, to remunerate a man for his trouble.

Remunera'tion, n. [Fr.; Lat. *remuneratio*.] Act of remunerating, or of paying an equivalent for services, loss, or sacrifice. — That which remunerates; the equivalent given for services, loss, or sufferings; reward; repayment; recompense; compensation.

Remun'orative, a. Affording remuneration, reward, or recompense; profitable; yielding an adequate return; as, a remunerative business.

Remun'eratory, a. Tending to remunerate or reward.

Remun'mur, v. a. To return or throw back in murmurs.

—*v. n.* To return, echo, or murmur back.

"The realms of Mars *remurmur'd* all around." — *Dryden*.

Remun'sat, JEAN PIERRE ABEL, an eminent orientalist, was b. at Paris, in 1788. He was Professor of the Chinese and Tartar languages at the Collège de France; was admitted into the Academy of Inscriptions in 1816; and, after Visconti's death, in 1818, he was appointed editor of the *Journal des Savans*. His principal works are, *Essai sur la Langue et la Littérature Chinoises*; *Plan d'un Dictionnaire Chinois*; *Mélanges Asiatiques*; and *Contes Chinois*, 3 vols. D. 1832.

Remy, (St.) (rai'me.) a town of France, dept. of Bouches du Rhône, 42 miles from Marseilles. *Manuf.* Silks and woollens. Pop. 6,740.

Ren, n. [Lat., the rare singular of *renes*, kidneys.] (Anat.) Kidney.

Renaissance, (rūh-nā-sāngs') n. [Fr., from *re*, again, and *naissance*, birth.] A renewal; a restoration.

(Arch.) A term applied to that period of the *Réveil* when the classical began to be again introduced after the mediæval styles. The term is not confined to architecture alone, but is also used in ornamental art and sculpture. The architectural *R.* had its origin in Italy, where the Gothic styles never had had a strong footing. With the revival of old Roman literature, there arose a strong desire for the study of classic art, which was soon followed by an attempt to imitate it; and as early as the 14th century may be observed traces of the imitation of Roman architectural forms. The *R.*, properly so called, however, dates from the early part of the 15th century,

Fig. 2240. — CHÂTEAU DE CHAMBORD, (Renaissance.)

when it began to assume consistency and character: in the following century it attained its full development. Every country had its peculiar *R.*, although each was derived from that of Italy; these were named respectively after the different nations in which they appeared; as French, German, English *R.* The latter style is usually called *Elizabethan architecture*. They all bear a general family likeness, but each exhibits characteristic features of its own. The *R.* in general was founded upon the Roman *antique*; not upon the style of the temples, but upon that of their triumphal arches, baths,

RENAISSANCE ARCHITECTURE.

1. Public Hall (Gewandhaus), Brunswick (Ger.). 2. Entrance to Chateau of Anet (Fr.). 3. House of Francis I., Fontainebleau (Fr.). 4. Chateau at Nantouillet (Fr.). 5. Scuola di St. Marco, Venice (It.). 6. Console of a chimney in the Doge's Palace, Venice (It.). 7. Escutcheon in Church of St. Peter, Caen (Fr.). 8. Capital from House of Francis I. (Fr.). 9, 10. Capitals in the Certosa di Pavia (It.). 11. Town-Hall of Bremen (Ger.). 12. Choir of the Church of St. Peter, Caen (Fr.). 13. Palazzo Vendramin-Calergi, Venice (It.).

and other edifices. Neither the portico nor the continuous colonnade were taken as models, but such buildings as the Coliseum, where several orders are introduced, principally for purposes of decoration. Both in the *R.* and Cinque-cento styles, entire orders are merely used as embellishments. In structures where columns are employed for actual support, it is only in combination with arches in the place of piers. Much of the Italian *R.* is *astylar*, with either a full entablature or a cornice crowning, and proportioned to the rest of the edifice. This broad and simple method of treatment was greatly affected by the Roman and Florentine architects during the period of the Revival, and contrasts strongly with the *R.* in France and other countries, which is characterized by multiplicity of parts and numerous divisions and breaks. In English *R.*, one deviation from the Italian was the frequent employment of coupled columns or pilasters, which was, in some cases, caused by the necessity for wider piers between the windows, which retained their Tudor or English character. In the Italian *R.* generally, the detail is somewhat dry and meagre, the entablatures, even to Corinthian columns, consisting of plain moldings. In France and in England a much more florid style was adopted. These species of the style are marked by a profusion of enrichment and carvings in moldings, panels, and friezes, by arabesque foliage and medallions, which frequently cover considerable surfaces. The carvings generally consist of grotesque animals, foliage, &c., extended into scroll-work, and interlaced curiously and capriciously. A similar kind of sculpture, only purer and more graceful, is to be met with in the Italian style. One of the most characteristic features of the *R.* style is the profusion of minute ornament in building, furniture, and decoration generally. French *R.* dates from the reign of Louis XII., who employed Italian artists and architects. There are several magnificent specimens of this style of architecture in France; among others may be mentioned the interior, at least, of the palace of Fontainebleau, and the châteaux of Chambord (Fig. 2240), and Chenonceaux on the Loire. The *R.* is considered by French writers to have risen to its highest point of excellence under Philibert Delorme, in the reigns of Henry II. and Francis II. The palace of Heidelberg, if completed, would have been the most splendid specimen of the *R.* in Germany. In general, the German *R.* was more extravagant in construction and decoration than even the French. There are many interesting specimens of the *R.* style in Spain, which exhibit much elegance and taste.

Ren'al, *a.* [Fr.; Lat. *renalis*, from *ren*, pl. *renes*, the kidneys.] Pertaining, or relating, to the veins or kidneys; as, the *renal* arteries.

Ren'an, JOSEPH ERNEST, savant and Orientalist, was born at Tréguier, Brittany, Feb. 27, 1823. He was a pupil of the Abbé Dupanloup, and educated for the church, a life purpose which he relinquished in 1845, owing to his increasing skepticism and growing independence of thought. From that time he followed a scholastic and literary life. His work entitled *Etude de la Langue Grecque au Moyen-âge*, published in 1845, was crowned by the Institute. In 1848, he gained the Volney prize for a memoir upon the Semitic languages. In 1849, he was sent to Italy on a literary mission by the Académie des Inscriptions et Belles-Lettres; in 1851 was attached to the department of manuscripts in the Bibliothèque Nationale, and in 1856 was elected a member of the Académie des Inscriptions in place of M. Augustine Thierry. In 1860, he was sent on a mission to Syria. In 1862, he was appointed professor of Hebrew, but did not retain this chair, owing to the objections raised by his radical views; upon the publication of his great work, *Ve de Jésus*, in 1863, he was dismissed from the professorship, and appointed to an office in the Bibliothèque Impériale, which appointment, at his own urgent protest, was revoked June 11, 1864. He was elected a member of the French Academy (June 13, 1878); attended the congress of Orientalists, at Florence (1878); was twice professor of Oriental Languages in the Collège de France. In 1880, he received the cross of the Legion of Honor, becoming grand officer in 1888. His *Life of Jesus* was the first volume of his *Histoire des Origines du Christianisme*, the other volumes being *Les Apôtres* (1866); *Saint Paul* (1867); *L'Antichrist* (1873); *Les Évangiles et la Seconde Génération Chrétienne* (1877); *L'Église Chrétienne* (1878); and *Marc-Aurèle et la Fin du Monde Antique* (1880). Three volumes of his *History of Israel* were issued between 1887 and 1891; a fourth volume completed the author's plan. In addition to these works, he wrote many others on Biblical themes, as well as several works of a purely literary character, memoirs on comparative philology, &c. Died Oct. 2, 1892.

Renascence, **Renascency**, (*nās'sens*) *n.* [Fr. *renaissance*.] State of being renaissant; state of being produced again.

Renasc'cent, *a.* [Lat. *renascens*, from *renascor*—re and *nascor*, to be born.] Reproduced; springing anew into being.—Rejuvenated; apt or likely to be reborn or renewed.

Renascible, (*nās'si-bl*) *a.* That may be reproduced or renewed.

Renant, in Illinois, a post-village of Monroe co., abt. 128 m. S. by W. of Springfield.

Renavigate, *v. a.* To navigate a second time.

Rencon'ter, **Rencon'tre**, *n.* [Fr. *rencontre*—re, en, and *contre*, from Lat. *contra*, against.] A meeting of two persons or bodies in contest or opposition; dash; collision; shock; action or engagement; a casual, sudden contest; an unpremeditated fight, action, or collision, as between two individuals, or small parties.

Rencon'ter, *v. a.* To encounter; to meet unexpectedly, without enmity or hostility.

—*v. n.* To come in collision; to skirmish; to cross an enemy's path unpremeditatedly or unexpectedly.

Rend, *v. a.* [A. S. *rendan*; Ger. *trennen*; Icel. *rændi*.] To force asunder; to tear; to sever or dis sever; to cleave; to rive; to lacerate.

—*v. n.* To separate; to be disunited.

Rend'er, *n.* One who rends; a tearer.

Rend'er, *v. a.* [Fr. *rendre*; from Lat. *reddere*, from *re*, again, and *dare*, to give.] To bring back; to return; to restore; to inflict, as a retribution.—To give on demand; to assign as a reason.—To make or cause to be, by some influence upon a thing, or by some change.—To translate; as, "render it in the English tongue."—Burnet. —To surrender; to yield; to give up.—To afford; to give to be used.—To melt, as suet.

(Arch.) **Rendered**, **floated**, and **set** for paper. A term used to express plastering of three coats; the first being lime and hair upon brickwork; the second, the same compound with the addition of a little more hair, which is brought to a level surface by being floated with a long rule; the third, fine stuff mixed with white hair, laid on with a trowel.—**Floated and set**. Plastering of three coats on brickwork.—**Rendered and set**. A term used to denote the plastering executed in two coats, on naked brick-work or on stone-work. If the work is to be of three coats, the first of these is called the *pricking-up* coat, which is afterwards rendered and set; this is sometimes called *roughing in*. The materials for the pricking-up coat and the rendering coat are identical; the setting coat is, generally speaking, of a finer kind of lime.

—*v. n.* (Naut.) To go or pass freely through any place, as a rope.

—*n.* A giving up; a surrender.—A return; a payment of rent.

(Law.) The state of being rendered; paid.

Renderable, *a.* Capable of being rendered.

Render'er, *n.* One who renders.

Render'ing, *n.* Act of giving up or returning.—Version; translation.

(Masonry.) The first coat of plastering on walls; pargetting.

Rendezvons, (*ren'de-vo*) *n.* [Fr., render yourselves, repair.] A place appointed for the assembling of troops, or the port or place where ships are ordered to join company; a place for enlisting seamen into the naval service.—A place of meeting, or a sign that draws men together.

—*v. n.* To assemble or meet at a particular place, as troops, ships, &c.

—*v. a.* To assemble, or bring together, at a certain place.

Render'ible, *a.* That may be broken asunder.

Rendition, (*ren-dish'un*) *n.* Surrender; the act of yielding.—A translation.

Rends'burg, a town of Prussia, prov. of Schleswig-Holstein, on the Eider, 18 m. from Kiel. *Manuf.* Hosiery, pottery, and tobacco. *Pop.* 12,000.

René, surnamed **THE GOOD**, Duke of Anjou, Count of Provence, and King of Sicily, b. at Angers in 1409. He was son of Louis II., Count of Anjou, married in 1420 Isabella of Lorraine, but was driven from that duchy and kept prisoner by the Duke of Burgundy for several years. He succeeded his brother, Louis III., in 1434, and was chosen successor to the kingdom of Naples by Queen Joanna II. He was liberated in 1436, and was afterwards engaged in war for three years with Alfonso, of Aragon, who, in 1442, finally got possession of Naples. *R.* retired to Provence and devoted himself to the administration of his estates, and to the cultivation of poetry and the fine arts. His daughter Margaret was married, in 1445, to Henry VI. of England. On the seizure of Anjou by Louis XI. of France, in 1473, *R.* retired to Aix, in Provence, where he spent his last years, enjoying the esteem and love of his subjects. His work on tournaments, and some of his poems and paintings, are still extant. D. 1480.

Renégade, *n.* [Sp. *renegado*; Fr. *renégat*; Lat. *re*, and *negare*, to deny.] One who denies or renounces his faith; an apostate.—One who goes over to an enemy; a deserter.

Renerve', *v. a.* To nerve again, or a second time.

Renew', *v. a.* To renovate; to restore to a former state, or to a good state, after a decay or depravation; to rebuild; to repair; to reestablish.—To begin again, as a course; to repeat; to revive.

(Theol.) To transform; to regenerate.

—*v. n.* To grow again; to begin again.

Renewability, *n.* The state or quality of being renewable. (*R.*)

Renewable, *a.* That may be renewed.

Renew'al, *n.* Act of renewing; renovation.—Repetition; act of beginning again, or a second time.

Renew'ed, *a.* Repaired; reestablished; renovated.

Renew'edly, *adv.* Again; anew.

Renew'edness, *n.* State of being renewed.

Renew'er, *n.* A person who renews.

Renew'ing, *n.* Act of making new; renewal.

—*a.* Tending, or adapted, to renovate.

Renfrew, (*ren'frow*) a town of Scotland, cap. of a co. of same name, near the union of the rivers Cart and Clyde, 3 m. from Paisley; *pop.* 4,000.

Ren'frew, a N. E. co. of prov. of Ontario; *area*, about 1,100 sq. m. *Rivers*, Ottawa, Madawasco, and Bonne Cher rivers. *Cap.* Pembroke.—A vill. of the above co., abt. 90 m. N. of Kingston.

Ren'i, (*ren'e*) a town of Prussia, in Bessarabia, at the confluence of the Pruth, and the Danube; *pop.* 7,500.

Ren'itency, **Ren'itence**, *n.* The resistance in solid bodies, when they press upon, or are impelled one

against another, or the resistance that a body makes on account of weight.

Ren'iform, *a.* [Lat. *renes*, the kidneys, and *forma*, form.] (*Bot.*) Broad, rounded at the apex, and hollowed at the base (Fig. 2241); kidney-shaped.

Fig. 2241.
RENIFORM LEAF.

Ren'il'ia, *n.*; pl. **Ren'il'idæ**.

(Zool.) A genus and family of *Alcyonaria*, containing polyps which are arranged symmetrically on the upper surface of a more or less flattened disc, to the lower surface of which there is attached a hollow locomotive organ in the form of a peduncle. *Renilla danae* (Fig. 146) is found on the Atlantic coast of S. America.

Ren'itent, *a.* [Lat. *renitor*, from *re*, back, and *nilor*, to strive.] Acting against any impulse by elastic power.

Rennes, (*ren*), a city of France, cap. of the dept. of Ile-et-Vilaine, at the confluence of the rivers Ile and Vilaine, 60 m. N. of Nantes; Lat. 48° 7' N., Lon. 1° 36' W. It is divided into the Upper and Lower town, the former of which contains many fine squares and public buildings, the most noteworthy of which are the Court-house, formerly the house of assembly for the Parliament of Brittany. *Manuf.* Lace, linen, sail-cloth, thread, &c. *Pop.* 60,000.

Ren'net, **Run'net**, *n.* [A. S. *gerunnen*; Ger. *rinnen*, or *gerinnen*, to coagulate.] The prepared inner membrane of the calf's stomach, which, in consequence of the presence of pepsine, has the property of coagulating the casein of milk and separating it from the whey in the form of curd.

Ren'net, **Ren'neting**, *n.* [Probably from O. Fr. *renette*, little queen.] (*Hort.*) The common name, not only in the English, but, with slight modifications, in the French, German, and other languages, of a class of apples, including many of the most beautiful and pleasant varieties. They are of very regular and nearly globose shape; their skin has generally a rusty tinge, and often a kind of unctuousness to the touch; their flesh is finely granular; and besides being sweet and agreeably acid, they have a peculiar aromatic flavor. They do not keep well. The trees have a very regular habit of growth, and are very suitable for dwarf standards.

Reno, (*rai'no*), a river of Italy, rising in the Apennines of Tuscany, and, after a N. course of 75 m., joining the Po, 14 m. S. of Ferrara.

Re'no, in Pennsylvania, a post-village of Venango co., abt. 3 m. W. of Oil City.

Renounce', *v. a.* [Lat. *renuncio*, from *re*, again, back, and *nuncio*, to declare.] To disown; to disclaim; to cast off; to repudiate; to reject; to deny.—To give up; to relinquish; to abandon; to forsake; to resign; to adjure.

—*v. n.* To declare a renunciation. (A Gallicism.)

(Games.) At cards, not to follow suit when the person has a card of the same sort.

—*n.* The act of renouncing at cards.

Renounce'ment, *n.* Act of renouncing, or of disclaiming or rejecting; renunciation.

Renoun'cer, *n.* One who disowns or disclaims.

Renoun'cing, *n.* Act of disowning, disclaiming, denying, or rejecting.

Ren'ovate, *v. a.* [Lat. *renovo*, *renovalus*.] To renew; to restore to the first state; to reproduce.

Renova'tion, *n.* [Fr.; from Lat. *renovatio*.] Act of renovating or renewing, or state of being renewed; renewal.

Ren'ovator, *n.* One who, or that which, renovates.

Renown', *n.* [Fr. *renommée*; from Lat. *re*, and *nomen*, a name.] Fame; celebrity; exalted reputation, derived from the extensive praise of great achievements or accomplishments.

—*v. a.* [Fr. *renommer*.] To distinguish; to render famous.

Renowned, (*re-nound'*) *a.* Having celebrity for great and heroic achievements, for distinguished qualities, or for grandeur; famous; eminent.

Renown'edly, *adv.* With fame or celebrity.

Renown'less, *a.* Without renown.

Ren'ovo, in Pennsylvania, a post-borough of Clinton co., on the W. branch of the Susquehanna river, 28 m. N.W. of Lock Haven. *Pop.* (1897) 4,450.

Rensselaer (*ren'se-lar*), in Indiana, a post-town, cap. of Jasper co., about 100 m. N.N.W. of Indianapolis.

Rensselaer, in New York, an E. co., adjoining Massachusetts and Vermont; *area*, about 643 sq. m. *Rivers*, Hudson, Kinderhook, and Hoosick rivers. *Surface*, uneven and broken; *soil*, very fertile, producing, besides the usual farm crops, large quantities of potatoes. *Min.* Iron ore, slate, and some Epsom salts. *Cap.* Troy. *Pop.* (1897) 131,150.

—A village of the above county.

Rens'selaer Falls, in New York, a post-village of St. Lawrence co., abt. 12 m. S.E. of Ogdensburg.

Rensselaer'ite, *n.* [After Van Rensselaer.] (*Min.*) A steatitic mineral. It occurs over large areas in Northern New York, and at Grenville in Upper Canada. It is, probably, identical with pyralolite.

Ren'sselaerville, in New York, a post-village and township of Albany county, about 23 m. W. by S. of Albany.

Rent', *n.* A breach; a fissure; an opening produced by rending or violent separation.

—*n.* [A. S. *rent*; Du., Ger., Dan., and Fr. *rente*.] A sum of money, or a certain amount of other valuable thing, issuing yearly from lands or tenements; a compensation or return, in the nature of an acknowledgment, for the possession of a corporeal inheritance; a revenue.

—*v. a.* To hold by paying rent for; to take or hold by lease, as lands or tenements.

—To let or lease to a tenant; to lease.

Rent'able, *a.* Capable of being rented.

Rent'age, *n.* [O. Fr.] Rent.

Rent'al, *n.* [Said to be corrupted from *rent-roll*.] (*Eng. Law*.) A roll, schedule, or account of rents.—The money or amount paid as rent.

Rent'-arrear, *n.* Rent which is due, or unpaid.

Rent'-charge, *n.* (*Law*.) A rent reserved with a power of enforcing its payment by distress.

Rent'-day, *n.* The day appointed for the payment of rent.

Rent'er, *n.* One who holds by paying rent for; a tenant who takes an estate or tenement on rent.—One who leases an estate.

—*v. a.* [*Fr. rentraire*.] To fine-draw; to sew up or together with such nicety that the seam will be scarcely perceptible.—To renew the original pattern of by working in a new warp;—said with reference to tapestry.

Ren'terer, *n.* A fine-drawer.

Rentier, (*ron-tye-ä'*) *n.* [*Fr.*] One whose income is derived from rents, dividends, and the like.

Rent'-roll, *n.* A rental; a list or account of rents, or income from landed property.

Rent'-secla, *n.* (*Law*.) Rent collectable only by action at law in case of non-payment.

Ren'ient, *a.* [*Lat. renuo*, to nod back.] (*Anat.*) Applied to two muscles, one of which serves to throw the head back.

Renumerate, *v. a.* To recount.

Renunciation, (*-she-a'shun*) *n.* [*Fr. renonciation*; *Lat. renunciatio*.] Act of renouncing; disavowal; disclaimer; rejection; abjuration.

Ren'ville, in *Minnesota*, a S.W. central co.; area, about 900 sq. m. *Rivers*, Minnesota and Chippewa rivers. *Surface*, mostly level or undulating; *soil*, fertile. *Cap.* Beaver Falls. *Pop.* (1895) 21,818.

Reobtain', *v. a.* To obtain again, or a second time.

Reobtain'able, *a.* Capable of being obtained.

Reoc'cupy, *v. a.* To occupy again, or a second time.

Reom'eter, *n.* [*Gr. reo*, to flow, and *metron*, a measure.] (*Elect.*) Same as *GALVANOMETER*.

Reopen, *v. a.* To open again, or a second time.

Reoppose, *v. a.* To oppose anew.

Reordain', *v. a.* To ordain again, or a second time.

Reor'der, *v. a.* To order anew, or again.

Reordination, *n.* A second ordination.

Reorganization, *n.* Act of organizing anew; state of being organized again.

Reorganize, *v. a.* To organize again.

Repac'ify, *v. a.* To pacify again.

Repack', *v. a.* To pack again, or a second time.

Repack'er, *n.* A person who repacks.

Repaint', *v. a.* To paint again.

Repair, (*re-pär'*) *v. a.* [*Lat. reparo*, from *re*, again, back, and *parare*, to prepare.] To restore; to bring back to a sound or good state after decay, injury, or partial destruction; to mend; to refit; to retrieve.—To make amends for; to redress.

—*n.* Act of repairing; restoration to a sound or good state after decay, waste, injury, or partial destruction.

—*v. n.* To betake one's self; to resort.

—*n.* Act of betaking one's self to any place; a resorting. (*R.*)

Repair'er, *n.* One who repairs, or makes amends.

Repaud', *a.* (*Bot.*) Applied to leaves which have the margin slightly concave between the projecting veins, as in *Solanum nigrum*.

Repaud's, *a.* Bent upwards or backwards.

Repa'able, *a.* [*Fr. réparable*.] That may be repaired.

Repa'ably, *adv.* So as to be repairable.

Reparation, *n.* [*Fr. réparation*.] The act of repairing; restoration.—Supply of what is wasted.—Recompense for any injury; amends.

Reparative, *n.* Whatever makes amends for loss or injury.

—*a.* That tends to repair.

Repartee, *n.* [*Fr. repartie*.] A smart or witty reply.

—*n. n.* To make smart replies; to retort.

Repartition, *n.* A division into smaller parts.

Repass', *v. a.* To pass back or again; to pass a second time; to travel back; as, to *repass* a river.

—*v. n.* To move, pass, or go back; as, shall you *repass* this way?

Repass'age, *n.* Act of repassing, or of passing back.

Repast', *n.* [*Fr. repas*, from *repaire*; *Lat. re*, and *pasco*, *pastum*, to feed.] Act of taking food.—Food taken; a meal; victuals; refreshment; a collation.

"Go, and get me some *repast*."—*Shaks.*

Repa'triate, *v. n.* [*Lat. repatriare*—*atrium*, to return home.] To restore to one's own country. (*R.*)

Repatriation, *n.* Restoration to one's own country;—opposed to *expatriation*.

Repay', *v. a.* (*imp.* and *pp.* *REPAID*.) [*Fr. repayer*.] To pay back; to refund; to reimburse; as, to *repay* money advanced or lent.—To recompense; to compensate; to requite; to remunerate; to make requital or return for.—To pay again, or a second time, as a debt.

Repay'able, *a.* That may be, or is to be, repaid or refunded; as, money lent, *repayable* by instalments.

Repay'ment, *n.* Act of paying back; reimbursement.—The money or other thing repaid.

Repeal', *v. a.* [*Fr. rappeler*—*re*, and *appeler*; *Lat. appello*, to accost, address.] To recall; to revoke; to annul; to abrogate; to abolish; to make void by an authoritative act, or by the same power that made or enacted, as a deed, will, law, or statute.

—*n.* Act of repealing or of annulling; revocation; abrogation; as, the *repeal* of a law.

Repeal'ability, **Repeal'ableness**, *n.* State or quality of being repealable.

Repeal'able, *a.* Capable of being repealed, abrogated, or revoked by the same power that enacted.

Repeal'er, *n.* One who repeals, or who seeks to repeal;—specifically, one who advocates the repeal of the Articles of Union between Great Britain and Ireland.

Repeat, (*-pet'*) *v. a.* [*Fr. répéter*, from *Lat. repeto*—*re*, and *peto*, to seek.] To do, make, attempt, or utter again; to iterate; to recite; to rehearse; to go over a second time; to recapitulate; to quote or say from memory; to try or incur again; as, to *repeat* an experiment, to *repeat* some lines from Byron, &c.—To do or say what has been already done or said;—used reflexively before *self*; as, history *repeats itself*.

To *repeat signals*, to make signals again, or anew.

—*n.* Act of repeating; a repetition.—That which requires to be repeated; as, the *repeat* of a pattern.

(*Mus.*) A character written thus, \S , denoting the repetition of the part which it bounds. It is sometimes expressed by dots against the bar, and sometimes by the words *dal segno*.

Repeat'edly, *adv.* More than once; again and again, indefinitely; as, I have *repeatedly* spoken of it.

Repeat'er, *n.* One who, or that which, repeats;—specifically, one who recites or rehearses.

(*Horology*.) See *HYROLOGY*.

(*Gun*.) See *REVOLVER*.

Repeating, *p. a.* Doing the same thing over again, or many times in succession; as, a *repeating* watch, a *repeating* instrument.

R-circle, (*Astron.*) One of the most complicated and ingenious of modern astronomical instruments. It was invented by the Chevalier de Borda in 1787, and obtained an immense reputation through having been the only instrument employed in the geodesical and astronomical observations of the great measurement of an arc of the meridian, on which the modern French system of measures, weights, and money, is founded. The prime objects of the repeating-circle are to diminish the effect of errors of graduation, and to obtain very correct measurements by means of comparatively small instruments. The principle of repetition consists in moving the telescope successively over portions of the graduated limb, corresponding to the angle to be measured, and reading only the multiple arcs.

R-decimal, (*Math.*) A decimal in which the same figures occur in the same order at successive and equal intervals.

Repel', *v. a.* [*Sp. repeler*; *Lat. repello*—*re*, and *pello*, to drive.] To drive or thrust back; to repulse; to force to return; to check the advance of; as, to *repel* an assailant.—To resist; to withstand; to reject; to rebut; to refuse; as, to *repel* an argument.

—*v. n.* To act with force in opposition to force impressed; to check; as, *repelling* power.

Repel'lence, **Repel'lency**, *n.* Quality or capacity of repelling; repulsion.

Repel'lent, *a.* [*From Lat. repellere*.] Capable, or tending to repel; as, a *repellent* manner.

—*n.* That which repels.

(*Med.*) One of a class of remedies, as astringents, cold water, ice, &c., which, when applied to a tumefied part, causes the fluids that render it tumid to recede, as it were, from it.

Repeller, *n.* One who, or that which, repels; a repellent.

Re'pent, *a.* [*Lat. repeno*, from *repere*, to creep.] Creeping; as, a *repent* animal.

(*Bot.*) Applied to stems which lie flat upon the ground, and emit roots from their under-surface.

Repent', *v. n.* [*Fr. repentir*, from *Lat. re*, and *pœnitio*, to make to repent; usually connected with *pœna*, expiation.] To feel pain, sorrow, or regret for something done or spoken, or for what one has omitted to do or speak; to express sorrow or compunction for something past.—To change the mind or course of behavior in consequence of the inconvenience or injury done by past conduct.

(*Theol.*) To sorrow or be pained for sin committed, or duty omitted; to be penitent; to have such sorrow for evil as produces amendment of life.

"Nineveh *repented* at the preaching of Jonas."—*Matt. xii. 41.*

—*v. a.* To remember with pain or sorrow; to feel pain or compunction concerning.

Repent'ance, *n.* [*Fr.*] Act of repenting, or state of being penitent; sorrow for anything done, said, or omitted to be done or said; the pain or grief which one experiences in consequence of the injury, inconvenience, or dissatisfaction produced by one's own conduct; penitence; contrition; that sorrow for sin which issues in reformation.

Repent'ant, *a.* [*Fr.*] Repenting; disposed to feel sorrowful for what has been done, or for what has been left undone; penitent for sin.—Expressing or manifesting sorrow for sin.

—*n.* One who repents of a sin committed; a penitent.

Repent'antly, *adv.* In a repentant or penitent manner.

Repent'ry, *n.* One who repents; a repentant.

Repent'igny, a village of Leinster co., Lower Canada, abt. 17 m. N.E. of Montreal.

Repent'ingly, *adv.* With repentance or contrition.

Repent'less, *a.* Unrepentant; without repentance.

Repeople, (*-pépl'*) *v. a.* To people again or anew; to perform the act of repopulation.

Repercuss', *v. a.* [*From Lat. re*, and *percutire*, to strike through and through.] To drive or beat back; as, *repercussed* air. (*R.*)

Repercussion, (*-kúsh'un*) *n.* [*Fr.*] Act of driving or beating back; as, the *repercussion* of echoes.

(*Mus.*) Frequent repetition of the same sound.

Repercussive, *a.* [*Fr. répercutif*.] Driving back; having the power of sending back; causing to reverberate.—Driven back; reverberated; as, the *repercussive* roar of thunder.

Rep'ertory, *n.* [*Fr. répertoire*, from *Lat. reperlorium*—*re*, and *pario*, to bring to light.] A repository; a place in which things are deposited in an orderly manner, so they can easily be found, as the index of a book, &c.—A treasury; a magazine.

Reperus'al, *n.* A second, or renewed perusal.

Reperuse, (*-rüz'*) *v. a.* To read over again; to peruse a second time.

Repetend', *n.* [*Lat. repetendus*, from *repetere*, to repeat.] (*Arith.*) A term sometimes used to denote the part of a circulating decimal which is continually repeated.

Repetition, (*-tish'un*) *n.* [*Fr.*, from *Lat. repetitio*—*re*, and *peto*.] Act of repeating, or of doing or uttering a second time; iteration of the same act, or of the same words or sounds.

—Act of reciting, rehearsing, or reading over; recital from memory; rehearsal.

(*Mus.*) Act of repeating, playing, or singing the same part a second time.

(*Rhet.*) Reiteration of a word, or words.

Repetitional, **Repeti'tionary**, *a.* Containing or conveying repetitions. (*R.*)

Repetitious, (*-tish'us*) *a.* Repeating; making repetition. (*American*.)

Repetitionsness, *n.* State or quality of being repetitious; habit or practice of making repetitions.

Rep'etitive, *a.* Repeating; containing or conveying repetition.

Rep'etitor, *n.* [*Lat.*] In German universities, a private instructor or teacher.

Repine', *v. a.* [*A. S. pinan*, to languish.] To torture or fret one's self; to be discontented; to feel inward dissatisfaction, which preys on the spirits; to complain discontentedly; to murmur; to continue pining; to indulge in envy; as, *repining* age.

Repin'er, *n.* One who repines or murmurs.

Repin'ingly, *adv.* In a repining manner; with murmuring or complaint.

Replace, *v. a.* [*Fr. remplacer*.] To put again in the former place; to put in a new place; to restore to a former state, condition, or position; as, the government was *replaced* in office.—To refund; to repay; to restore in a place that was vacated; as, to *replace* a sum of money lost.—To put, as a competent substitute in the place of another displaced, or of something lost; to supply an equivalent for; as, to *replace* an employé.—To take the place of; to supply the need of; to fulfil the end or office of; as, intention does not *replace* the effect of action.

Replaced crystal, (*Crystallog.*) A crystal possessing one or more planes in the place of its edges or angles.

Replacement, *n.* Act of replacing.

(*Crystallog.*) Removal of an edge or angle by one or more planes.

Replait', *v. a.* To plait or fold again.

Replant', *v. a.* To plant anew.

Replant'able, *a.* That may be planted a second time.

Replanta'tion, *n.* Act of replanting.

Replead', *v. a.* or *n.* To plead again, or afresh.

Replead'er, *n.* (*Law*.) A second pleading, or course of pleadings; also, the right of pleading a second time.

Replen'ish, *v. a.* [*From Lat. repleo*, *repletus*—*re*, again, and *obol. pleo*, to fill.] To fill; to fill up, or again; to stock with numbers or abundance; to plenish anew; as, to *replenish* one's purse.

Replen'isher, *n.* One who replenishes.

Replen'ishment, *n.* Act of replenishing, or state of being replenished.—Supply; that which serves to replenish.

Replete', *a.* [*Fr. replet*; *Lat. repletus*, from *repleo*.] Filled up; full; completely filled; as, his mind is *replete* with wisdom.

Replete'ness, *n.* Quality or state of being replete; repletion.

Repletion, (*-pié'shun*) *n.* [*Fr.*; *Lat. repletio*.] State of being replete or completely filled; superabundant fullness.

(*Med.*) Plethora; fullness of blood.

Reple'tive, *a.* Serving to make replete; replenishing.

Reple'tively, *adv.* In a repletive manner.

Replev'able, *a.* (*Law*.) That may be replevied.

Replev'in, *n.* [*L. Lat. replevina*, surety] (*Law*.) The redelivery of the pledge or thing taken, and is a remedy granted on a distress, by which the first possessor has his goods restored to him again, on his giving security to the sheriff that he will try the right of the distress, and restore it if the right be adjudged against him. In a replevin, the person distrained becomes the *plaintiff*, and the person distraining the *defendant* or *avowant*, and his justification an *avowry*.

—*v. a.* (*Law*.) To replevy.

Replev'y, *v. a.* [*From L. Lat. plegiare*, to give bail, surety—*plegium*, bail, security.] (*Law*.) To take back or reclaim, as cattle or goods, upon pledges or security being given to try the right of ownership at law.—To bail; to give security for.

Rep'lica, *n.* [*It.*] (*Painting*.) A copy of an original picture done by the hand of the same master; copies by pupils are, however, generally palmed on picture-buyers as *replicas*.

Replicant, *n.* One who replies.

Replicate, *a.* [*From Lat. replicare*.] Folded back.

Replicate, *n.* (*Mus.*) A repetition.

Replication, (*ká'shun*) *n.* [*Lat. replicatio*] A return, rejoinder, answer, or reply, as to a statement.—Echo or repercussion of sound. (*R.*)

(*Law*.) The third stage in the pleadings. See *PLEADINGS*.

Repli'er, *n.* One who replies or answers; one who speaks or writes in return to something spoken or written.

Reprimand, *n.* [Lat., door-case.] (*Bot.*) A term applied to the frame left in certain fruits by the falling away of the valves, as in the siliques and silicles of the *Brassicaceae*.

Replunge, (*-plünj*.) *v. a.* To plunge anew; to immerse again, or afresh.

Reply, *v. n.* (*imp.* and *pp.* **REPLIED**.) (*re-plid'*.) [Fr. *replique*; Lat. *replico*.] To make a return in words or writing to something said or written by another; to answer; to respond; to rejoin.

(*Law.*) The answer; the plea of a defendant.

v. a. To return for an answer; as, what did he *reply*?

n. [Fr. *réplique*.] An answer; a return to a question; that which is said or written in answer to what is said or written by another; a rejoinder; a response; a book or pamphlet written in answer to another.

Repos, *v. a.* To poison afresh.

Repolish, *v. a.* To polish over again.

Repone, *v. a.* [Lat. *re*, and *ponere*, to place.] To replace.

Repopulation, *n.* Act of populating again; act of supplying with a population anew.

Report, *v. a.* [Fr. *rapporter*, from Lat. *raporto*—*re*, and *porto*, to carry.] To bear, carry, or bring back, as an answer; or to give, as a statement of what has been discovered by a person sent to examine, explore, or investigate; as, the tellers *reported* the majority as being fifty.—To tell; to relate; to narrate; to give an account of; to carry, as a statement or report from one to another; to circulate publicly, as a story; it is *reported* that the lady is encephalic.—To give an official account or statement of; to give, as an account or statement of cases and decisions in a court of law or chancery, or of the proceedings, debates, &c., of a legislative body, a meeting, &c.; as, the honorable member's speech was well *reported*.

To be reported, or, generally, to be reported of, to be well or ill spoken of.

"A widow well reported of for good works."—1 Tim.

To report one's self, to wait upon a superior, or one to whom service is due, and be in readiness to receive his orders or instructions; as, he *reported himself* at headquarters.

v. n. To make a statement of facts that is looked for; as, the secretary will *report* from the minutes of the proceedings.—To discharge the office of a reporter for the newspaper press.—To wait upon a superior, or one to whom service is due, and be in readiness to receive his orders or instructions; as, the officer *reported* for duty.

n. An account, statement, or relation returned; an account of facts received; as, to prepare a *report* of ways and means.—Common fame; rumor; hearsay; repute; reputation; statement circulated; as, through good or ill *report*.—Sound; noise; detonation; repercussion; discharge; as, the *report* of a gun or fire-arm.—A statement of a judicial opinion or decision, or of a cause argued and determined in a court of law, chancery, &c.; also, the book containing such statement.

An official statement of facts, verbal or written;—particularly, a statement made by a legislative committee of facts into which they were charged to inquire; as, the *report* of a committee on a bill before the house.—An account or statement of the proceedings, debates, &c., of a legislative body, a meeting, or a court; as, a *verbatim report*.

Reporter, *n.* One who reports;—specifically, one who gives an account, verbal or written, official or unofficial, a person who makes statements of law proceedings and decisions, of legislative debates, or of public occurrences for the newspapers.

Reportingly, *adv.* By report, rumor, or hearsay.

Reportorial, *a.* Pertaining, or relating, to a reporter, or reporters; as, the *reportorial* staff of a newspaper.

Repos, (*-pōz'*.) *n.* Act of resting or reposing; as, a *repos* of trust or confidence.

Repose, (*re-pōz'*.) *v. a.* [Fr. *reposer*; Lat. *repono*, *repositus*—*re*, and *pono*, to place.] To lay at rest; to compose; to cause to be calm, quiet, or tranquil.—To lay or put the mind at rest in, as confidence or trust; as, to *repose* in reliance upon one's good faith.

v. n. To lie; to recline; to be at rest, as in a bed; to sleep.—To lodge; to lie; to rest; to be supported; as, trap *reposing* on sand.—To trust in confidence and reliance;—before on or upon.

n. [Fr. *repos*.] A lying at rest; a state of sleep, as in bed; rest; quiet; ease; as, to enjoy a good night's *repose*.—Rest of mind; peace; tranquillity; calm of the mind or spirits; freedom from unrest or uneasiness.

(*Pros.*) In poetry, a rest; a pause.

(*Fine Arts.*) That harmony or evenness which affords rest for the eye; or, the absence of that agitation which is induced by the scattering and division of a subject into too many unconnected parts.

Reposedness, *n.* State of being at repose.

Reposeful, *a.* Affording repose or rest; quiet; peaceful; calm.

Reposer, (*-pōz'*.) *n.* One who reposes.

Reposit, *v. a.* [Lat. *repositus*, placed or laid back.] To lay up; to lodge or deposit, as for safety or preservation.

Reposition, (*re-po-zish'un*.) *n.* [Lat. *reposito*.] Act of repositing.

Repository, *n.* [Sp. *repositorio*; Lat. *repositorium*.] A place where things are, or may be deposited; a place where articles are kept for sale; a depository.

Repossess, *v. a.* To possess again.

Repossession, (*-pōzesh'un*.) *n.* Possessing again.

Reposure, (*-pōzhur'*.) *n.* Rest; quiet; repose. (*κ*.)

Repour, (*-pōr*.) *v. a.* To pour afresh.

Reposse, see SECTION II.

Reprehend, *v. a.* [Fr. *repréhendre*; Lat. *reprehendo*—*re*, and *prehendo*, to lay hold of.] To administer reproof

or censure to; to rebuke; to chide; to reproach; to blame; to reprove or cast censure upon, as actions.

Reprehend'er, *n.* One who reprehends, or blames.

Reprehensible, *a.* [Fr., from Lat. *re*, and *prehendo*.] Deserving reproof or blame; culpable; censurable; reprovable; blamable; as, *reprehensible* acts or practices.

Reprehensibleness, *n.* Quality or state of being reprehensible.

Reprehensibly, *adv.* In a reprehensible manner; culpably; in a manner to deserve censure or reproach.

Reprehension, (*-shēn'shun*.) *n.* [Fr., from Lat. *reprehensio*.] Act of reprehending; reproof; censure; open blame.

Reprehen'sive, **Reprehen'sory**, *a.* Containing, or conveying, reproof or blame.

Represent, *v. a.* [Fr. *représenter*; Lat. *repræsentare*—*re*, and *præsentare*, to place before.] To show or exhibit by resemblance; to present again, as the image or counterpart of.

"Seven lamps . . . representing the heavenly fires."—Milton.

—To describe; to exhibit or portray to the mind in words; to show by arguments, reasoning, or statement of facts; to give one's own impressions or judgment of; as, he is *represented* as a good sort of man.—To personate; to act the character, or to fill the place in a play; to portray by mimicry or action of any kind; as, to *represent* Othello.—To supply the place of; to act vicariously, or as a substitute for another; to speak and act with authority on behalf of; as, Congress *represents* the people, his attorney *represents* him in court.—To stand in the place of, in the right of inheritance.—To bring into mental view; to offer to the mind as an object for consideration; as, "a faculty of *representing* in consciousness." (*Sir W. Hamilton*).—To image or picture sensationally.—To serve as a sign, symbol, or emblem of; as, words *represent* ideas or things.

Represent'able, *a.* That may be represented.

Represent'ant, *a.* Representing; appearing or acting in behalf of another.

Representa'tion, *n.* [Fr.] Act of representing, showing, or describing.—That which represents; delineation; show; that which describes or exhibits;—especially, a likeness; an image; a resemblance, model, map, plan; a fac-simile; anything which depicts or exhibits by resemblance; as, a *representation* of the human figure.—A performance, as of a stage-play; theatrical performance of a character in a play; as, a dramatic *representation*, a *representation* of Claude Melnotte.—Verbal description; a setting forth of arguments or facts, as in conversation, declamation, literary composition, &c.; as, the *representation* of a historian, an advocate, &c.—Duty or business of acting vicariously, or as a substitute for another.—Act of setting forth publicly.—The standing in the place of another, as an heir, or in the right of taking by inheritance.

pl. Representatives of the people, as a collective body; as, the *representation* of a State in Congress, or of counties, districts, &c., in a State legislature. See also REFERENDUM, in SECTION II.

Representa'tive, *a.* [Fr. *représentatif*, from L. Lat. *representativus*.] Representing something; suited to represent; exhibiting a similitude; as, rumor is often *representative* of credulity.—Bearing the character or power of another; vicarious; conducted by the agency of delegates; as, a *representative* of the people in Congress.

(*Nat. Hist.*) That presents the characteristics of the type of a group; as, a *representative* genus in a family.

(*Philos.*) Denoting, or existing as, a transcript of what was primarily presentative knowledge; as, *representative* faculties.

n. One who, or that which, represents, or exhibits the semblance of another.—An agent, deputy, or substitute, who supplies the place of another or others, being vicariously qualified with his or their authority; as, the *representative* of a commercial firm abroad.

(*Law.*) One who stands in the place of another as heir, or in the right of succeeding to an estate of inheritance, as of a crown.—That by which anything is exhibited or shown; a representation.

(*Amer. Pol.*) A member of the lower house in a State legislature, or in the National Congress.

(*Nat. Hist.*) That which presents the characteristics of the type of a group.

Represent'atively, *adv.* In a manner to represent; in a vicarious character; by a representative; by delegation of power.

Represent'ativeness, *n.* Quality or state of being representative.

Represent'er, *n.* One who shows, exhibits, depicts, or describes.—One who acts by deputation or delegation; as, a *representer* of the nation. (*R.*)

Repress, *v. a.* [Lat. *repressus*, pressed back, from *reprimere*—*re*, back, and *primere*, to press.] To press or keep back efficiently, or a second time; to put down or keep from rising to excess, as insubordination or mutiny; to quell; to subdue; to crush; as, to *repress* sedition or tumults;—hence, implicitly, to check, curb, or restrain; as, to *repress* desire.

Repress'er, *n.* One who uses repression.

Repression, (*-prēsh'un*.) *n.* [Fr.] Act of repressing or of subduing; as, the *repression* of tumults.—That which represses; check; curb; restraint.

Repress'ive, *a.* [Fr. *répressif*.] Having power to repress or crush; tending or serving to check, curb, restrain, or subdue; as, *repressive* measures.

Repress'ively, *adv.* In a manner to repress.

Reprieve, (*-prēv'*.) *v. a.* [Fr. *repréhendre*, *repris*; Lat. *reprehendo*.] To take back or withdraw, as a sentence, for a certain time; to respite after sentence of death; to suspend or delay the execution of for a time; to

grant a respite to; as, a *reprieved* criminal.—To relieve for a time from any suffering.

"Company may *reprieve* a man from melancholy."—South.

n. (*Law.*) The withdrawing of a criminal's sentence for an interval of time, by which means the execution is suspended. It may take place: 1, at the will of the executive of the state; 2, at the pleasure of the judge.—For every court which has power to award execution has also power, either before or after judgment, to grant a reprieve; 3, of legal necessity (*ex necessitate legis*), as where a woman is capably convicted and pleads her pregnancy; 4, if the criminal become *non compos mentis*. The cases in which a judge usually grants a reprieve are where he is not satisfied with the verdict, or the evidence is suspicious, or the indictment insufficient, or if any favorable circumstances appear in the criminal's character, in order to give time to apply to the state for either an absolute or a conditional pardon.

Rep'rimand, *v. a.* [Fr. *reprimer*, from *reprimer*, from Lat. *reprimere*—*re*, and *primere*, to press.] To administer severe reproof or rebuke to, as for a fault; to reprove; to chide; to reprehend; to censure; to admonish; as, to *reprime* a servant.—To administer reproof to publicly or officially, in pursuance of a sentence; as, the police-officer was severely *reprimanded*.

n. Severe reproof, as for a fault; reprehension, private or public.

Reprint, *v. a.* To print again; to print, as a second, or any new edition of.—To renew the impression of.

"The business of redemption is to *reprint* God's image upon the soul."—South.

n. A second, or a new edition of a book;—specifically, the publication in one country of a work previously published in another; as, an English *reprint* of an American novel.

Reprisal, (*-priz'al*.) *n.* [Fr. *représaille*, from L. Lat. *reprisalia*—*reprisa*, from Lat. *re*, and *prehendo*.] A taking back again; a taking or seizing in return;—especially, the seizure or forcible taking of anything from an enemy by way of retaliation or indemnification; recapture.—That which is taken from an enemy by way of retaliation or indemnity.—Act of retorting on an enemy by inflicting suffering or death on a prisoner taken from him, in retaliation for an act of inhumanity committed by him.

Letters of marque and reprisal. (*Law.*) See MARQUE.

pl. (*Law.*) Deductions or payments out of the value of lands, such as rent-charges or annuities. (Also written *reprizes*.)

Reproach, (*-prōch'*.) *v. a.* [Fr. *reprocher*; It. *rimprocciare*.] To pass censure upon in terms of opprobrium or contempt; to charge with a fault in severe language; to upbraid; to censure; to blame; to condemn; to rebuke; to revile; to vilify.

n. Act of reproaching; censure mingled with contempt or derision; reproof; rebuke; upbraiding; blame attached; condemnation; contumelious or opprobrious language employed toward any one; abusive reflections or remarks; as, she loaded him with bitter *reproaches*.—Dishonorable or shameful occasion, condition, or treatment; obloquy; opprobrium; infamy; odium; shame; disgrace; as, he became an object of common *reproach*.—Object of contempt, scorn, censure, blame, derision, or obloquy; as, political corruption is a national *reproach*.

Reproach'able, *a.* [Fr. *reprochable*.] Meriting reproach; open to censure.—Opprobrious; scurrilous; exciting odium.

Reproach'ableness, *n.* State or quality of being reproachable.

Reproach'ably, *adv.* In a reproachable manner.

Reproach'er, *n.* One who utters reproaches; a censor.

Reproach'ful, *a.* Containing or expressing reproach or censure with contempt; abusive; upbraiding; opprobrious; scurrilous.—Bringing or casting reproach; causing or meriting reproach; shameful; disgraceful; infamous; odious; base; vile; as, a *reproachful* life or career.

Reproach'fully, *adv.* In a reproachful manner; in terms of censure or reproach; opprobriously; scurrilously; shamefully; disgracefully; contemptuously; as, to be used *reproachfully*, to speak *reproachfully*, &c.

Reproach'fulness, *n.* Quality of being reproachful.

Reproach'less, *a.* Without reproach; faultless.

Reprobate, *v. a.* [Lat. *reprobo*—*re*, denoting the opposite of the action betokened by the simple verb, and *probo*, to approve.] To disallow; to reject; to disallow; to condemn; to censure; to disapprove with detestation, or marks of vehement or intense dislike.—To give up to his, or her, sentence without hope of pardon; to abandon to wickedness and eternal perdition; as, a *reprobated* exile, a *reprobated* sinner.

a. Wholly given up to sin; lost to virtue or grace; depraved; abandoned; wholly given up to error, or sunk in apostasy; morally abandoned and lost; as, a *reprobate* person, or condition.

n. A person abandoned to sin or evil courses; one lost to virtue, grace, or religion; as, a confirmed *reprobate*.

Reprobateness, *n.* State or quality of being a reprobate.

Reprobater, *n.* One who reprobates.

Reprobation, (*bā'shun*.) *n.* [Fr., from Lat. *reprobatio*.] Act of reprobating or disallowing with detestation, or of expressing extreme dislike; act of abandoning morally; as, to speak of with *reprobation*.—State of being reprobated or morally abandoned; rejection.

"Set a brand of *reprobation* on false coin."—Dryden.

Election or degree of reprobation. (*Theol.*) A term commonly applied to the supralapsarian tenet of the consignment of all mankind to eternal punishment,

with the exception of those whom God has arbitrarily selected for eternal happiness. — See ELECTION, PRE-DESTINATION.

Reprobator, *n.* (*Theol.*) One who favors the doctrine of election. See SUPRA.

Reprobative, Reprobatory, *a.* Reproving; condemning; pertaining or relating to, or expressing, reprobation.

Reproduce, *v. a.* To produce again, or a second time; to bring to the recollection or imagination; as, to reproduce an idea. — To renew the production of a thing lost or destroyed; as, polyps are reproduced from cuttings.

Reproduce, *n.* One who, or that which, reproduces.

Reproduction, (*-dük'shun*), *n.* (*Physiol.*) A term sometimes used to signify generation, but more especially employed to denote those processes in organic beings by which the individual being is produced, developed, and maintained. In this way it has been employed to denote several processes which are functionally distinct, or have very different ends in the economy of nature. The result of the ordinary processes of nutrition is the constant *R.* of the same tissue in the same parts, and is therefore the means by which the form of a being is maintained during life. Through the whole of the animal and vegetable kingdoms, this function is carried on until the death of the whole or part of the being. However, this power of reproducing the same tissues varies in different beings, and while a lost limb can be restored to the lower animals, no such power belongs to the more highly-organized animals or plants. The origination of the germ from which individual animals and plants grow is sometimes called *R.* In this way, the production of cells, by which the life of the individual is maintained, is called *R.*; while the arrangement by which its existence as an individual is insured is called *generation*. In the ordinary *R.* of the tissues of animals and plants, each cell has the power of producing other cells, or a large number of the same kind of cells are produced simultaneously; in generation, on the contrary, it is necessary that two cells should take part. The two cells thus engaged have been termed the *germ-cell* and the *sperm-cell*. The former is that in which the process of growth of the new being commences, while the latter is that which communicates the growing tendency to the former. In the animal and vegetable kingdoms, these cells are of different sizes and forms, and placed in various positions relative to other organs; the means also by which they are brought together vary, but they perform the same fundamental functions in all cases. The most profound mystery in the generation of animals and plants is the reason why the same apparent combination of elements should assume a particular form. Between the cells of the flowers of the oak and the apple no difference can be discerned; nevertheless, one always produces oak-trees and the other apple-trees. In animal life it is the same; there is no appreciable external difference in the cells; but one set will produce one species of animal form, and another set another species. This fact has led some physiologists to assume the existence of a *vital principle*; that is, of a distinct and independent essence, giving to each species its definite form and character. Three conditions must be regarded in studying the phenomena of *R.* and generation. First, the *formative force*, which is peculiar in every species, and similar in all the generative cells produced in that species. Secondly, the *physical conditions* in which the generative cells are placed; these are more especially heat and light, and the condition of the membranes of the cell, through which absorption goes on. Thirdly, the *elements* which are supplied for the nourishment of the new being, and which, by their chemical properties, are capable of exercising an influence on the form and development of the animal or plant.

Reproductive, Reproductive, *a.* Pertaining or relating to, or used in, reproduction.

Repromulgate, *v. a.* To promulgate again, or afresh.

Repromulgation, *n.* A second promulgation.

Reproof, *n.* [*From reprove.*] A reproving; a charge of misconduct, or imputation of fault, expressed openly; reprehension; rebuke; censure; reprimand; reproach.

Reprovable, (*re-prōv'a-bl*), *a.* [*Fr. réprovable.*] Deserving of reproof; meriting, or worthy of, censure; blamable; reprehensible; censurable; culpable.

Reprovable, *n.* State of being reprovable; culpableness.

Reprovable, *adv.* In a reprovable manner.

Reproval, (*-prōv'*), *a.* Act of reproving; a reproof.

Reprove, (*-prōv'*) *v. a.* [*Fr. réprover*; *Lat. reprobo.*] To refute; to disprove; to reject. (*R.*) — To blame openly to the face; to chide; to censure; to reprimand; to reprehend; to rebuke; to accuse as guilty.

Reprover, *n.* One who, or that which, reproves.

Reprovingly, *adv.* In a manner conveying or implying reproof.

Reprune, *v. a.* To prune afresh, or a second time.

Reptation, (*-tū'shun*), *n.* [*Fr., from Lat. reptatio.*] Act of creeping or crawling; — specifically, a mode of progression by advancing successively parts of the trunk, which occupy the place of the anterior parts which are carried forwards, as in serpents. The term is also employed with reference to the slow progression of those animals whose extremities are so short that the body touches the ground.

Reptatory, *a.* Creeping; crawling; as, reptatory animals.

Reptile, *n.* [*Fr., from Lat. reptilis, from repo, reptum = Gr. herpō, to creep.*] Creeping; crawling; moving on the belly, or by means of many small extremi-

ties, as snakes, lizards, &c. — Hence, analogically, grovelling; low; mean; vulgar; as, a reptile race, a reptile vice, reptile souls.

n. (*Zoöl.*) One of the REPTILIA, *q. v.*

Reptilia, *n. pl.* (*Zoöl.*) A genus of cold-blooded vertebrated animals, whose movements are usually confined to crawling and swimming, and whose respiration is aerial and incomplete. They have the heart so constructed that at each contraction a portion only of the blood received from the various parts of the system is sent into the lungs, the remainder of this fluid returning into the general circulation without having passed through the lungs, and consequently without having been subjected there to respiration. Hence it results that the action of oxygen upon the blood is less than in the mammalia; and though several of them leap and run with celerity on certain occasions, their habits are generally sluggish, their digestion excessively slow, their sensations obtuse, and in cold or temperate climates, they pass nearly the whole winter in a state of lethargy. In their general form, *R.* approach mammalia nearer than birds; but they offer in this respect many variations, as may be seen by comparing together a tortoise, a crocodile, and a serpent. Their head is almost always small, and their body very much lengthened out; some, as serpents, are entirely destitute of members, or have only traces of them; but the greater number of these animals, the lizard and turtle, for instance, have four limbs, formed so as to serve for walking or swimming. The skeleton in this class presents much greater variations in its structure than in warm blooded vertebrata. All the parts of which it is composed are wanting in one or another group, excepting the head and the vertebral column. Their brain, which is proportionally very small, seems less essential to the exercise of the vital functions than in the mammalia, since many of them are capable of displaying reflex motions for a considerable time after being deprived of the brain and even after loss of the head; their muscles also preserve their irritability for a considerable period after being removed from the body, and the heart may continue to pulsate for hours under similar conditions. Reptiles can remain under water for a longer time than birds or mammals, the process of respiration being capable of suspension for a much longer time without arresting the circulation of the blood, whose temperature is little above that of the surrounding atmosphere. The great majority of the *R.* are oviparous, though in some cases the eggs are hatched within the mother. In those that lay eggs, the young is formed and somewhat advanced within the egg before the parent deposits it, and the eggs are left to the warmth of the sun to complete the process, being usually covered for concealment. The *R.* possess the same organs of sense as the mammalia, but not in equal perfection. In the serpents the eyes are immovable, destitute of eyelids, and covered with a corneous substance. Their nostrils are small, and their sense of

Fig. 2242.—SNAPPING-TURTLE.

smell probably weak, and they seem to lack delicacy of taste, nearly all of them swallowing their food entire. None of them have true fleshy lips, and some, as the tortoises, have a horny beak, like that of a parrot; others have teeth of various forms, which are frequently, however, as in the case of the serpents, used only to assist in holding their prey. The *R.* occupy a central position in the vertebrate series; beneath them are the amphibians and fishes, above them the mammals and birds, with the latter of which they seem most closely related. Huxley, in fact, has united them with birds as a single class, named by him *Sauropsida*, as contrasted with the *Mammalia* and the *Ichthyopsida* (amphibians and fishes). The classification of the living reptiles is as follows: Order 1, *Chelonii*: turtles and tortoises. 2, *Rhynchocephalia*: the New Zealand lizard (sphenodon). 3, *Lacertilia*: the lizards. 4, *Ophidia*: the serpents. 5, *Crocodylia*: the crocodiles and alligators. For these see the separate titles. During the Secondary age of geology the *R.* were very numerous, and often of huge dimensions, they being then the dominant animal type. The extinct *R.* are variously classified, the generally recognized orders being the *Anomodontia*, *Sauropterygia*, *Ichthyopterygia*, *Dinosauria*, and *Ornithosauria*. Many of the large forms, as *Plesiosaurus*, *Ichthyosaurus*, &c., were swimming reptiles. The *Dinosauria* had marked affinities with birds, while the *Ornithosauria* possessed powers of flight. See CHELONIA, SAURIA, SERPENTS.

Republie, *n.* [*Fr. république*; *Lat. respublica.*] A form of government in which the supreme power is vested in the people. A *R.* may be either an *aristocracy* or a *democracy*; the supreme power, in the former, being consigned to the nobles, or a few privileged individuals, as was formerly the case in Venice and Genoa; while in the latter, it is placed in the hands of rulers chosen by and from the whole body of the people, or by their representatives assembled in a congress or national assembly. The free cities of the Continent of Europe, viz.,

Hamburg, Frankfort, Lübeck, and Bremen (see HANSE), are instances of this latter form of government, as is also the United States, the most perfect and successful of all democracies in ancient or modern times. France has twice declared itself a *R.*, and each time the *R.* has been displaced by an empire. In 1870 a third *R.* was inaugurated. The *R.* of Switzerland is the oldest now in existence, having grown from a confederation of 3 cantons in the 13th century to one of 22 in the 19th.

Republie, in *Missouri*, a village of Sullivan co., abt. 46 m. N. of La Clede.

Republie, in *Ohio*, a post-village of Seneca co., abt. 29 m. S.W. of Sandusky.

Republiean, *a.* [*Fr. républicain*; *Sp. republicano.*] Pertaining or relating to a republic; as, a *republican* form of government. — In accordance with the principles of a republic; as *republican* opinions, sentiments, or manners.

n. One who prefers, advocates, or upholds a republican form of government; a democrat. — In American politics, a member of the party opposed to the *Democratic party*. (*Zoöl.*) See PLOCEUS.

Republiean, in *Indiana*, a township of Jefferson county.

Republiean Fork, a river which rises in Arapahoe co., Colorado, and flowing a general N.E. course through the N.W. extremity of Kansas into Nebraska, it turns to the E. and S.E., and entering Kansas again, joins the Kansas river (of which it is the largest branch) from Geary co. Length, about 500 m.

Republieanism, *n.* [*Fr. républicanisme.*] A republican form or system of government. — Attachment to a republican form of government; republicanism principles.

Republieanize, *v. a.* [*Fr. républicaniser.*] To make republican; to convert to republican principles; as, to *republicanize* a state.

Republieation, *n.* A second or renewed publication of a printed work; a second publication; a reprint; — specifically, the publication in one country of a work first issued in another.

Republieish, *n.* One who republishes.

Republieable, *a.* That may be repudiated or discarded; fit or suitable to be put away.

Republieate, *v. a.* [*Fr. repudier*; *Lat. repudio*, to cast off, divorce, from *repudium*, a divorce — *re*, and *pudor*, shame.] To cast off and disavow; to reject; to discard; to disclaim; to renounce; as, he *repudiated* the idea with scorn. — To put away; to divorce, as a husband or wife. — To disclaim; to ignore; to refuse to acknowledge, admit, or pay; as, to *repudiate* an offending child; the state has *repudiated* its debts.

Republieation, *n.* [*Fr.*] The act of repudiating.

(*Law.*) A determination to have nothing to do with a particular thing; as, the *repudiation* of a legacy, which means the abandonment of such legacy, and a renunciation of all right to it.

(*Civil law.*) The putting away of a wife, or a woman betrothed.

Republieator, *n.* [*L. Lat.*] One who repudiates, disavows, or ignores.

Republieable, (*-pūn'a-bl*), *a.* That may be opposed or resisted. (*R.*)

Republieance, Republieaney, *n.* [*Fr. répugnance*; *Lat. repugnatio*, from *repugno*, to fight against.] State or quality of being repugnant; opposition of mind; antagonism or struggle of passions; resistance; contest; contrariety of principles or qualities; inconsistency; evasion; unwillingness; reluctance; antipathy; dislike.

Republieant, *a.* [*Fr.*; *Lat. repugnans.*] Fighting against; antagonistic to; characterized by opposition or contrariety; contrary; opposed; opposite; adverse; inconsistent; hostile; inimical: — preceding *to*, and, but rarely, *with*; as, the thing is *repugnant to* my thoughts.

Republieantly, *adv.* In a repugnant manner; with opposition or antagonism; in contradiction.

Republieulate, *v. n.* [*Lat. repululare.*] To bud afresh.

Republieulation, *n.* Act of budding again.

Republie, *n.* [*Lat. repulsa* — *re*, back, and *pello*, to drive.] Act of repelling or driving back. — A being checked in advancing, or driven back by force; repulsion. — Refusal; denial; rejection; as, his request met with a *repulse*.

v. a. To repel; to beat or drive back; as the enemy was *repulsed* at all points; the lady *repulsed* his advances, &c.

Republie Bay, an inlet of Welcome Gulf, on the S. coast of Melville Peninsula, British N. America; *Lat.* 66° N., *Lon.* 86°.

Republieer, *n.* One who repulses, repels, or drives back.

Republieion, (*-pūl'shun*), *n.* [*Fr.*] Act of repelling or driving back; act of repulsing, or the state of being repulsed.

(*Phys.*) A term sometimes applied to the force or agency which prevents particles of matter from coming into contact. That such particles are not in absolute contact is proved by many experiments. Thus, Newton strongly pressed a spherical mass of glass on the flat surface of a mirror, and proved that even then the two were not in contact, and that the distance between them was not less than the eighty-nine thousandth of an inch.

Republieive, *a.* [*Fr. répulsif.*] That repels or repulses; repelling; driving off or keeping from approach; as, a *repulsive* force. — Cold; reserved; forbidding; austere; difficult of approach; inimical to association; as, a *repulsive* manner, a *repulsive* person.

Republieively, *adv.* In a repulsive manner; by repulsion.

Republieiveness, *n.* Quality of being repulsive or forbidding.

Repul'sory, *a.* [Lat. *repulsorius*.] Repulsive; repelling; driving back.

Repur'chase, *v. a.* To purchase or buy again, or a second time; to buy back; to regain by purchase or expense.

—*n.* Act of buying anew, or again; the purchase again of what has been once sold.

Repu'rif, *v. a.* To purify afresh, or a second time.

Reputable, *a.* (See **REPUTE**.) Being in good repute; held in esteem or favorable reputation; honorable; estimable; respectable; creditable; as, a *reputable* individual. — Consistent with good reputation; not mean or disgraceful; as, a *reputable* transaction, *reputable* behavior.

Reputableness, *n.* Quality or state of being reputable.

Reputably, *adv.* With reputation or credit: in a reputable manner; as, to fill an official position *reputably*.

Reputation, (*-tū'shun*), *n.* [Fr.; Lat. *reputatio*.] The character attributed to a person, thing, or action; estimation in which a person, thing, or action is held; character or credit derived from a favorable public opinion. — Character by report; credit; repute; public esteem; favorable regard; good name; honor; fame.

Reputatively, *By repute; reputedly.*

Repute', *v. a.* [Fr. *réputer*; from Lat. *reputo*, to count over — *re*, and *puto*, to reckon, to estimate.] To hold in thought or consideration; to estimate; to think; to account; to reckon.

"I know of those that only are *reputed* wise for saying nothing." — *Shaks.*

—To attribute.

—*n.* Established opinion; general estimation; character reputed, whether good or bad. — Reputation; good name or character: credit or honor derived from common report or public opinion; as, a man of high *repute*.

Reput'edly, *adv.* In common opinion or estimation; by repute.

Repute'less, *a.* Lacking good repute; disreputable. (R.)

Requa Bat'teries, *n. pl.* (Gun.) An arrangement of 25 rifle barrels, each 24 inches long, arranged upon a horizontal plane, and held in position upon a light field-carriage by an iron plane. They were much used in the attack upon Charleston by the National troops under Gen. Gilmore in 1863, but are now superseded by the *mitrailleuses* and other similar inventions.

Requena, (*rai-ka'na*), a town of Spain, prov. of Cuenca, 80 m. E.S.E. of Cuenca. *Manuf.* Woollen, cotton, and silk fabrics. *Pop.* 11,200.

Request, (*-kwēst'*), *n.* [O. Fr. *requeste*; Fr. *requête*; Lat. *requisitum*.] Act of asking for something desired or wished for; expression of desire to some person for something to be granted or done; — hence, solicitation; petition; entreaty; prayer. — Something asked for or solicited; the thing desired and requested; need; requirement; a want. — State of being desired, or held in such estimation as to be sought after or pursued; as, wealth is always in *request*.

In request, in demand; in credit or esteem.

"Coriolanus being now in no *request* of his country." — *Shaks.*

—In demand by buyers; sought after by purchasers; as, saltpetre is in good *request*.

—*v. a.* [Lat. *requiro*, *requisitus*.] To ask for with earnestness; to express desire for; to solicit; to entreat; to beseech; to address with a request; as, an answer is *requested*.

Requester', *n.* One who makes request; a petitioner; one who addresses in solicitation.

Quicken, (*-kwik'ēn*), *v. a.* To quicken again or anew; to give new life to; to reanimate; to infuse new vigor into.

Requiem, (*rē'kwī-em*), *n.* [Fr., from Lat. *requies* — *re*, and *quies*, rest, repose.] (*Ecdl.*) In the Roman Catholic Church, a hymn or mass sung for the dead, for the rest of his, or her, soul; — so called from the prayer commencing *Requiem aeternam dona eis, Domine*. — A grand musical composition performed on solemn occasions in honor of deceased civil and ecclesiastical dignitaries. The *Requiem*s composed by Mozart, Jomelli, Cherubini, and Rossini, are well known.

Requin, (*-kwīn*), *n.* [Fr., from Lat. *requiem*.] (*Zoöl.*) See **SQUALIDE**.

Requirable, (*-kwīr'a-bl*), *a.* That may be required; fit or proper to be asked for or demanded.

Require, (*rē'kwīr*), *v. a.* [Fr. *requérir*; Lat. *requiro*.] To ask, as of right and by authority; to demand; to claim; to exact; to call for; to insist upon having. — To request; to solicit; to ask, as a boon or favor. — To need; to make necessary; to want; to claim as indispensable.

"God gives us what he knows our wants *require*." — *Dryden*.

Require'ment, *n.* Act of requiring; requisition; demand; claim. — That which is required; an imperative or authoritative command; a necessary or essential condition.

Requirer, *n.* One who requires.

Requisite, (*rē'kwī-zīt*), *n.* [Sp. *requisito*; Lat. *requisitus*.] Required by the nature of things, or by circumstances; not to be dispensed with; absolutely necessary or useful; essential; indispensable; as, it is *requisite* to call upon him.

Requisitely, *adv.* In a requisite manner; necessarily; essentially.

Requisiteness, *n.* The state of being requisite or indispensable; necessity.

Requisition, (*rē'kwī-zīsh'un*), *n.* [Fr., from Lat. *requisitio*.] Act of requiring. — Demand; application made authoritatively, or as of right. — In England, a formal summons; a written call or invitation; as, a *requisition* to one to become a candidate for parliamen-

tary honors. — A formal demand made by one state, power, or government upon another, for the extradition of a fugitive from justice, or of a political refugee. — That which is exacted magisterially or arbitrarily; — particularly, a quota of provisions, money, or necessities; as, to make *requisitions* in an enemy's country.

Requisitionist, *n.* One who makes a requisition.

Requisitive, (*kwī'sh-tiv*), *a.* Making or implying demand. (R.)

—*n.* One who, or that which, makes requisition.

Requisitor, *n.* One authorized to investigate facts by requisition.

Requisitory, *a.* Sought for; demanded; exacted. (R.)

Requit, (*-kwīt'*), *n.* [From *requite*.] Act of requiting; that which requites, compensates, or repays; return for any treatment, good or bad; — in a good sense, recompense; reward; satisfaction; as, the *requit* of honesty; — in a bad sense, retaliation; penalty; punishment; as, the *requit* of treachery.

Requite', *v. a.* To repay; — in a good sense, to reward; to compensate; to recompense; to return an equivalent in good; — in a bad sense, to retaliate; to avenge; to punish.

"Unhappy Wallace, ill-*requited* chief." — *Thomson*.

Requirer, *n.* One who renders requital.

Reretine', *v. a.* To refine again, or a second time.

Rereign, (*-rān'*), *v. a.* To reign anew.

Reresolve, (*-zōlv'*), *v. a.* To resolve afresh, or a second time.

Rere'ward, *n.* [rear and *ward*.] The rear-guard; that part of an army which marches in the rear.

Rering', *v. n.* To ring back; to reverberate; to reecho.

Resa'ea, in Georgia, a post-village of Gordon co., abt. 84 m. N.W. of Atlanta. Here, on May 15, 1864, the Confederate army under Gen. Johnston was attacked by Gen. Sherman. A severe and obstinate battle ensued, lasting until night, when Johnston withdrew under cover of darkness. The loss was severe on both sides.

Resaca, in Pennsylvania, a village of Monroe co., abt. 132 m. N.E. of Harrisburg.

Resa'ea de la Pa'lma, in Texas, a locality of Cameron co., abt. 10 m. N. by E. of Brownsville. Here, on May 9, 1846, Gen. Taylor, with about 2,000 Americans, attacked and totally defeated upwards of 6,000 Mexicans under Gen. Arista.

Resail', *v. a. or n.* To sail back.

Resale', *n.* A second sale; a sale at second-hand; a sale of what was before sold.

Resalute', *v. a.* To salute afresh; to greet anew. — To greet with a reciprocal salutation.

Rescind, (*re-sind'*), *v. a.* [Fr. *rescindere*; Lat. *rescindere*.] To abrogate; to annul; to repeal; to revoke; to cut off; — specifically, to render null, or make void, as an act, edict, or decree, by the enacting or by superior authority; as, to *rescind* a judgment.

Rescind'able, *a.* That may be rescinded.

Rescind'ment, *n.* Act of rescinding; rescission.

Rescission, (*re-sizh'un*), *n.* [Fr. *rescision*; Lat. *rescissio*, from *rescindere*.] Act of rescinding, abrogating, annulling, revoking, or vacating; as, the *rescission* of an edict, decree, or law.

Rescissory, (*re-siz'o-ry*), *a.* [Fr. *résicsoire*; Lat. *rescissorius*.] Serving to rescind or annul; tending or having power to cut off, abrogate, or vacate; as, a *rescissory* act.

Reseribe', *v. a.* [Lat. *re*, and *scribero*, to write.] To write back, or in reply. — To write over again, or a second time.

Reserib'endary, *n.* An officer of the Papal court, who assesses indulgences and applications.

Rescript, *n.* [Fr. *rescrit*; Lat. *rescriptum*, from *re-scribo* — *re*, and *scribo*, to write.] (*Civil Law*.) An answer, or decretal epistle, issued by a pope or emperor, to a question or questions in jurisprudence, propounded to them officially; those of the Roman emperors constitute one of the authoritative sources of the civil law; — hence, an edict, a decree. — A counterpart.

Rescription, (*-skrip'shun*), *n.* [Fr.; Lat. *rescriptio*.] The reply to a letter; a writing or answering back.

Rescriptive, *a.* Relating or pertaining to, or serving the purpose of, a rescript; deciding; determining; settling.

Rescriptively, *adv.* By rescript. (R.)

Rescuable, *a.* Admitting of rescue.

Rescue, *v. a.* (*imp. and pp.* **RESCUED**.) (*res'cūd*.) [Norm. *rescure*, to rescue; It. *riscozza*, recovery; Fr. *recousse*, from Lat. *re-secutore*, to shake off again.] To set or render free from any violence, duress, or danger; to retake; to recapture; to save; to deliver; to liberate; to restore to liberty after suffering from restraint or exposure to harm or evil; to set at liberty illegally; as, to *rescue* a prisoner from a guard; to *rescue* a person from drowning, &c.

"*Rescue* thy mistress, if thou be a man." — *Shaks.*

—*n.* Deliverance from restraint, violence, or danger, by force, or by the intervention of other agency; liberation; release.

(*Law*.) A species of resistance against lawful authority; as the delivery of one arrested out of the hands of those who have the legal custody of him; or the taking away and setting at liberty against law a distress effected. When a distress is taken without cause, or contrary to law, the tenant may lawfully make rescue before it is impounded, for then it is not deemed to be in the custody of the law. A rescue of one apprehended for felony is *felony*, for treason is *treason*, and for a misdemeanor is a *misdemeanor*.

Rescueless, *a.* Without rescue or liberation.

Rescuer, *n.* One who rescues or takes.

Rescusee', *n.* (*Law*.) The person who is rescued illegally.

Rescus'sor, *n.* A rescuer.

Research, (*-surch'*), *n.* [Fr. *recherche*.] A diligent and protracted seeking of facts or principles; laborious or continued search after truth; investigation; examination; inquiry; scrutiny.

—*v. a.* To seek diligently and patiently; to search or investigate with continued and earnest care. — To search a second time; to examine or scrutinize anew.

Research'er, *n.* One who researches, or investigates.

Research'ful, *a.* Inquisitive; making researches.

Reseat', *v. a.* To set or seat afresh; as, he was *reseated* on the throne.

Resect', *v. a.* To cut, or pare off.

Resection, (*-sēk'shun*), *n.* [Fr.; Lat. *resectio*.] Act of cutting or paring off.

(*Surg.*) An operation in which the carious extremities of long bones, or the unconsolidated extremities of fractured bones forming irregular joints, are removed with the saw.

Reseda, *n.* [Lat. *reseda*, to assuage.] (*Bot.*) The typical genus of the natural order *Resedaceae*. *R. odorata* is the Mignonette plant, which is so much cultivated in

Fig. 2243. — MIGNONETTE, (*Reseda odorata*.)

gardens and window-boxes for the delicious fragrance of its inconspicuous flowers. *R. luteola*, usually known under the name of Dyer's Weed, and nearly naturalized in W. New York, yields a yellow dye, and also the paint called *Dutch-pink*.

Reseda'cea, *n.* (*Bot.*) The Mignonette, Weld-wort, or Resedad family, an order of plants, alliance *Cistales*. **DIAG.** Definite not tetradynamous stamens, not tetramerous flowers, exalbuminous seeds, and fruit usually open at the point. They are soft, herbaceous plants, or sometimes small shrubs, with alternate entire or pinnately divided leaves, and minute gland-like stipules; disk large, hypogynous, one-sided; ovary sessile, 1-celled; placentas 3-6, parietal; stigmas 3, sessile; flowers in racemes or spikes; fruit usually opening at its apex long before the seeds are ripe. Seeds usually numerous, reniform. The plants are chiefly natives of Europe and the adjoining parts of Africa and Asia. The order contains 6 genera and 41 species. See **RESEDA**.

Reseek', *v. a.* (*imp. and pp.* **RESOUGHT**.) To seek again or afresh.

Reseize, (*-sēz'*), *v. a.* To seize again, or a second time. (*Law*.) To take possession of disseized lands or tenements.

Reseiz'er, *n.* One who seizes anew.

Reseizure, (*-sēzh'yur*), *n.* Act of seizing again.

Resell', *v. a.* (*imp. and pp.* **RESOLD**.) To sell again; to sell at second-hand; to sell what has been bought or sold.

Resemblance, (*-zēm'blāns*), *n.* [Fr. *ressemblance*.] State or quality of resembling, or being alike, or of having similar external form or qualities; similitude. — That which resembles; something similar; likeness; representation; semblance; image.

"Fairer resemblance of thy Maker fair." — *Milton*.

Resem'blant, *a.* Exhibiting resemblance; resembling. (R.)

Resemble, (*-zēm'bl*), *v. a.* [Fr. *ressembler*, from Lat. *similis*, like.] To be like to; to have the likeness of; to bear the similitude of, either in form, figure, or qualities; to be alike or similar to. — To liken; to compare; to represent, as like or similar to something else; as, "the torrid parts of Africa are *resembled* to a leopard's skin."

—To cause to imitate, copy, or be like. (R.)

Resem'bler, *n.* One who resembles.

Resem'blingly, *adv.* So as to resemble; with resemblance.

Resent, (*re-zēnt'*), *v. a.* [Fr. *ressentir*, from Lat. *re*, and *sentio*, to perceive by the senses.] To take ill; to consider as an injury or affront; to be in some degree angry or provoked at; to be indignant at; — in a bad sense. — To express resentment by speech or action.

"Thou with scorn would'st *resent* the offered wrong." — *Milton*.

—*v. n.* To be angry; to feel or cherish resentment.

Resent'er, *n.* One who resents.

Resent'ful, *a.* Disposed to resent; easily provoked to anger or indignation; of an irritable or irascible temper; resentive; as, a *resentful* man.

Resent'fully, *adv.* In a resentful manner.

Resent'ive, *a.* Same as **RESENTFUL**, *q. v.* (R.)

Resent'ment, *n.* [Fr. *ressentiment*; It. *risentimento*,

Act of resenting; anger; indignation; displeasure; the excitement of passion which proceeds from a sense of wrong offered to ourselves, or to those who are connected with us, or in whom we feel an interest; deep sense of injury entertained; irritation; grudge; wrath; rage; fury; — always in a bad sense.

Reserv'ance, n. Reservation. (R.)

Reservation, (rèz-er-vā'shun.) n. [Fr., from Lat. *reservo*.] Act of reserving or keeping back, as in the mind; reserve; concealment, or withholding from disclosure. — Something withheld, either not expressed or disclosed, or not given up or brought forward. — Custody; state of being treasured up or kept in reserve.

—In the U. States, a tract of public land reserved for some specific purpose; a reserve; as, a school *reservation*, an Indian *reservation*.

(Law.) A clause in a legal instrument which reserves some new thing out of the thing granted, and not *in esse* before; — also, a proviso; an exception.

Mental reservation, the failing to disclose something having power to affect a statement, promise, &c., and which, if disclosed, would materially change or modify its import.

Reserv'ative, a. Reserving; keeping back; withholding; having a tendency to reserve or keep.

Reserv'atory, n. [From Lat. *reservare*.] A place in which anything is reserved or kept; a depository.

Reserve, (re-sèrv') v. a. [Fr. *réserver*; Lat. *reservo* — *re*, back, and *servo*, to save, to keep.] To keep by, or keep back; to save up for future use; to keep in store for future need or emergency; to withhold from present use for another or after purpose; to keep; to hold; to retain; to lay up and keep for a future time or occasion.

"Take each man's censure, but *reserve* thy judgment." — *Shaks.*

—To except; to make an exception. (R.)

—*n.* Act of reserving, withholding, or keeping back.

—Something reserved for other or future use; that which is retained from present use or disposal. — Reservation; retention; something in the mind withheld from disclosure; as, to concur in agreement, with certain *reserves*. — Exception in favor of, or against.

"Each has some darling lust, which pleads for a *reserve*." — *Rogers.*

—Restraint of freedom in words or deeds; caution or circumspection in general behavior; backwardness; closeness; coldness; reticence; shyness; modesty; as, his manner was characterized by extreme *reserve*.

—In U. S., a tract of land reserved for specific purposes; Indian *reserves*, &c.

(Life Ins.) A sum deducted from paid premiums, and set apart for the payment of policies.

(Mil.) A body of troops kept back in action, to give support when needed, or to be rallied on, in case of emergency.

(Theol.) A system according to which only that portion of the truth is set before the people, which they are regarded as able to comprehend or to receive with benefit.

(Banking.) That portion of a banker's capital which he retains in order to meet his average liabilities, and which he, therefore, does not employ in discounts or temporary loans.

(Mining.) A part of a lode laid bare by the exploring and regular work of a mine, from which the ore can be at any time removed.

In *reserve*, in store; kept back for other or future use; as, he had plenty of arguments *in reserve*.

Reserv'e, in Indiana, a township of Parke county.

Reserve, in Pennsylvania, a prosperous township of Allegheny co.

Reserved, (-zèrvd'), p. a. Not free or frank in words, actions, or social intercourse; not communicative; reticent; taciturn; restrained; cautious; close; cold; diffident; shy; modest.

"To all obliging, yet *reserved* to all." — *Walsh.*

Reserv'edly, adv. With reserve; with backwardness; not with openness, frankness, or impulsiveness; scrupulously; coldly; cautiously; reticently; diffidently.

Reservedness, (-zèrvd'nes.) n. Quality or state of being reserved; closeness; reticence; diffidence; want of frankness, openness, or freedom.

Reserv'er, n. One who reserves.

Reservoir, (rèz-er-vwôr.) n. [Fr.] A pond or tank in which water is collected and preserved, in order to be conveyed through proper canals for the supply of a town. The term is also applied to any place where water is collected and preserved for the regular supply of a fountain or drinking-trough, in situations where water is not naturally abundant.

Reset', v. a. (imp. and pp. RESET.) To furnish with a setting or border; as, to *reset* a gem.

(Print.) To set over again, as a page of printed matter.

—*n.* Act of resetting, as of a diamond.

(Print.) Matter reset, or set up a second time.

Reset'ter, n. One who resets; as, a *resetter* of types.

Reset'tle, v. a. To settle anew, or again. — To collate or install again, as a minister of the gospel.

—*v. n.* To be installed or collated anew, as a minister of the gospel.

Reset'tlement, n. Act of setting or composing a second time. — Act of setting or subsiding afresh; as, the *resettlement* of the lees of wine. — A second settlement, collation, or installation in the gospel ministry. — Act of settling or establishing, or the state of being settled; a second or new settlement.

Reshape', v. a. To shape anew.

Resht, or Reshd, a town of Persia, cap. of the prov. of Ghilan, 16 m. S.E. of Euzillee, on the Caspian Sea. It is one of the most industrious and extensively commercial towns in Persia. Pop. estimated at 50,000.

Reship', v. a. (imp. and pp. RESHIPPED.) (*re-shīp't'*) To ship again, or a second time; to ship, as anything which has been conveyed by inland navigation or imported by sea; as, cotton in transit *reshipped* at New York for Liverpool.

Reship'ment, n. Act of reshipping, or placing on shipboard a second time; the shipping for exportation what has been conveyed by inland water-carriage, or imported. — That which is reshipped; as, a *reshipment* of specie.

Reside, (re-zid') v. a. [Fr. *résider*; Lat. *resideo*.] To settle anywhere; to continue in a place as an inhabitant, permanently, or for a length of time; to have one's home or dwelling; to remain; to abide continuously; to have a settled domicile for a time; to dwell; to live. — To inhere; to have a seat, settlement, or fixed position; to lie, or be as an essential, attribute, or element; as, contentedness *resides* in his nature.

Residence, Residency, n. [Fr. *residence*.] Act or state of residing, or of abiding or dwelling in a place for a length of time, but not definite; stay; sojourn; as, a temporary *residence* in Europe. — The place where one resides; abode; home; dwelling; habitation; domicile; — hence, by analogy, place of permanent rest or settlement.

"The highest court and *residence* of regal power." — *Bacon.*

(Ecc. Law.) The abode of a parson or incumbent on his living or benefice; — in contradistinction to *non-residence*; as, a canon in *residence*.

Resident, (rèz'-.) a. [Fr., from Lat. *residens* — *re*, and *sedeo*.] Residing, dwelling, or abiding in a place for a length of time, but not definite; residing; as, *resident* in the country.

—*n.* One who resides or dwells in a place for some time; an inhabitant; a sojourner. — A diplomatic agent or envoy who resides at a foreign court, and who is beneath the rank of *ambassador*.

Residential, (rèz-i-den'shal,) a. Residing; residentiary. (R.)

Residentiary, (rèz-i-den'shi-a-ry,) a. Having residence.

—*n.* One who is resident; — specifically, an ecclesiastical dignitary who resides for a certain length of time on his benefice; as, a canon-*residentiary*.

Res'identship, n. Station or condition of a resident.

Resid'er, n. One who is resident in a particular place.

Residual, (-zid'-.) a. [Lat. *residuus*, from *resideo*.]

That remains over and above; remaining after a part is taken.

R. analysis. (Math.) A method which proceeds by taking the difference of a function in two different states, and then expressing the relation between this difference and the difference of the corresponding states of the variable. (Math. Dict.) — *R. figure.* (Geom.) The figure left after a less figure has been subtracted from a greater. — *R. root.* (Math.) A root composed of two parts or members, connected together by the sign minus; as, $a - b$, or $5 - 3$.

Resid'uary, a. [Lat. *residuus*.] Pertaining to the residue or part remaining; entitled to the residue; as, a *residuary* legatee.

R. clause. (Law.) That part of the will of the testator wherein the residue of his estate is bequeathed. — *R. legatee.* One to whom the residue of personal estate is bequeathed.

Residue, (rèz'e-dū.) n. [Fr. *résidu*; Lat. *residuum*.] That which remains after a part is taken, separated, removed, or designated. — The remainder; the balance; that which remains due of a debt or account; as, I will pay the *residue* another time.

(Law.) The remainder of a testator's estate after payment of debts and legacies.

Resid'nus, a. Residual; remaining.

Resid'num, n. [Lat.] Residue; that which is left after any process of separation, purification, or reduction has been made.

Resign, (re-zin') v. a. [Fr. *résigner*; Lat. *resigno*.] To sign back, or return by a formal act or process; to give up or yield into the hands of another to surrender; to relinquish; — said, particularly, of official position or emolument; hence, to give up, to yield, to submit; — said of the will or inclination, or of something valued; — also, frequently employed reflexively. — To renounce or withdraw, as a claim; as, "he soon *resigned* his former suit." — *Spenser.*

(re-sin') *v. a.* To affix one's signature to a second time; as, to *resign* a document.

Resignation, (rèz-ig-nā'shun,) n. [Fr.] Act of resigning, yielding, or giving up; surrender; relinquishment; as, the *resignation* of an office or a commission. — State of being resigned; submission; acquiescence; endurance; patience; — particularly, habitual submission to the will of Providence without resistance or complaint.

Resigned, (re-zind') p. a. Submissive; yielding; enduring; not disposed to murmur; as, to be *resigned* to one's fate.

Resigned'ly, adv. In a resigned manner; with submission.

Resignee, (rèz-i-nè'), n. One in whose favor anything is resigned.

Resigner, (re-zin'er,) n. One who resigns or relinquishes.

Resignment, (-zin'-.) n. Act of resigning.

Resilience, Resiliency, (-zil'i-ent, -zil'i-en-sy,) n. [From *resiliens*.] Act of resiling, or leaping or springing back; act of rebounding; as, the *resilience* of a ball.

Resilient, (-zil'-.) a. [Lat. *resiliens*, from *resilio* — *re*, back, and *salio*, to leap.] Leaping or starting back; rebounding.

Resilition, (rèz-i-lish'un,) n. Resilience. (R.)

Resin, (rèz'in,) n. [Fr. *résine*; Lat. *resina*; Gr. *ῥέτι-νε*, from *ῥηῖν*, to flow or run.] (Chem.) An important class of vegetable substances, extensively used in manufactures, obtained from various trees by making incisions in their bark, from which they exude in the form of a viscid liquid, consisting of the essential oil of the plant holding the resin in solution. They are mostly formed by the exudation of the essential oils contained in the trees. They are generally insoluble in water, but dissolve readily in alcohol, forming varnishes. They chiefly consist of one or more acid resins, which form, with potash and the other alkalies, solutions similar to soaps. Physically, they are transparent or translucent brittle solids. They are insulators of electricity, and become electrical by friction. They fuse at a moderate temperature, are very inflammable, but burn with a dense, smoky flame. Heated in close vessels, they undergo decomposition, and furnish various forms of hydrocarbon. The resins most extensively employed in the formation of varnishes are *copal*, *mastic*, *sandarac*, *eleine*, *lac*, *anime*, and some few others. The principal solvents employed are oil of turpentine, wood naphthas, methylated spirits, and spirits of wine. When varnish is spread over any surface, the spirit evaporates, leaving the resin behind as a hard, transparent layer. The common resin, or *rosin*, of commerce exudes in a semi-fluid state from several species of pine, especially *Pinus tæda*, *P. mitis*, *P. palustris*, and *P. rigida*, of N. America. The process of collecting it is very simple. A longitudinal slice of the bark and wood (A, Fig. 224) about a foot in length is taken off by means of an axe with a curved blade; and at the bottom of the groove thus made, a small piece of bent wood or thin metal, as tin or zinc, is driven into a curved cut made by one blow of the axe (B, Fig. 224). This forms a sort of spout, which catches the liquid resin as it runs from the wound, and guides it into a small pot, made of common clay burned. At certain periods, these pots are emptied, and their contents put into casks for transport to the distilleries, where the volatile essential oil is removed from the resin. The resin thus procured

is used in the manufacture of yellow soap, in which it is present in the form of pinate and sylvate of potash. It is considered by many to be an adulteration: but it seems to increase the lathering quality of the soap. — The other resins most generally known and used in this country are ANIME, COPAL, DAMAR, MASTIC, SANDARAC, FRANKINCENSE, and LAC.

Gum-resins are the milky juices of certain plants solidified by exposure to the air. They consist of a mixture of resins and essential oils with a considerable proportion of gum; and on this account, when rubbed up with water, they yield a turbid or milky fluid from the dissolved gum, retaining the resin and oil in suspension, and are only partly soluble in alcohol. Some of them, as ammoniacum, assafoetida, euphorbium, galbanum, gamboge, myrrh, olibanum, &c., are valuable medicinal agents; while others, as caoutchouc (or India-rubber) and gutta-percha, are of great value in the arts and in manufactures.

Resina, (rai-sè'na,) a town of S. Italy, prov. of Naples, on the site of the ancient Ilerculaneum, at the foot of Vesuvius, 5 m. S.E. of Naples.

Resinaceous, (rèz'in-ā'shus,) a. Having the quality of resin.

Resinifer'ous, a. Producing resin.

Resin'iform, a. Possessing the form of resin.

Res'ino-elec'tric, a. Having, or exhibiting, that kind of negative electricity which is caused by the friction of resinous substances.

Resinous, (rèz'in-us,) a. [Fr. *résineux*.] Like resin; partaking of the qualities of, or obtained from, resin; as, a *resinous* gum.

Resinous or negative electricity. (Phys.) See ELECTRICITY.

Res'inously, adv. By means of resin.

Res'inousness, n. Quality or state of being resinous.

Res'iny, a. Resinous.

Resipiscence, (rèz'i-pis'sens,) n. [Fr., from Lat. *resipiscere*, to regain one's senses.] Wisdom resulting from practical experience; hence, repentance. (R.)

Resist, (re-zist') v. a. [Fr. *résister*, from Lat. *resisto*, to withstand.] To set, put, or place one's self against; to withstand. — To confront; to oppose; to strive or act against; to encounter with effectual opposition. — To counteract, as a force, by inertia, or reaction.

—*v. n.* To make opposition.

Resist, (-zist') n. (Calico Printing.) A substance which prevents the stuff from taking the color in those parts which have been impregnated with it. For example, if a pattern be printed with thickened tartaric or citric acid, and the stuff be then passed through an aluminous mordant, the pattern will refuse to take up the alumina, and subsequently the color from the dye-bath.

Resistance, (re-zist'ans,) n. [Fr.] Act of resisting; antagonism; opposition; check; as, to offer effectual *resistance*. — Quality of not yielding to force or external impression; that power by which motion or tendency to action in any body is impeded or prevented.

(Mech.) A force acting in opposition to another force, so as to destroy it or diminish its effect. Resistance is

Fig. 224.

sometimes considered as of two kinds, *active* and *passive*; the active resistance being that which corresponds to the useful effect produced by a machine, and the passive that which belongs to the inertia of the machine. Thus, in raising water from a well, the active resistance to the force employed is measured by the quantity of water which is raised; and the passive resistance by the force required to overcome the weight of the bucket and the rope, the friction of the pulley on its axle, &c.

R. of fluids. (*Hydro-dynamics.*) The force with which a solid body moving through a fluid is resisted or retarded. For many years the resistance experienced by a solid moving through a fluid, such as a ship sailing in the sea, was thought to be determinable only by certain reconde principles of hydro-dynamics which theory could hardly reach; but it has of late been conclusively shown that nearly nine-tenths of the resistance of well-formed ships is made up of friction. This doctrine has been reduced to definite rules, of easy application, by R. Rankine, in his *Treatise on Ship-building* (1866-67).

Solid of least R. (*Mech.*) The solid whose figure is such that in its motion through a fluid it sustains the least resistance of all others having the same length and base; or, on the other hand, being stationary in a current of fluid, offers the least interruption to the progress of that fluid. In the former case, it has been considered the best form for the stem of a ship; in the latter, the proper form for the pier of a bridge.

Resistant, *n.* [Fr., from Lat. *resistens*.] The person who, or thing which, resists.

—*a.* Resisting; offering or making resistance.

Resister, *n.* One who resists or withstands; a resistant.

Resistful, *a.* Resisting, or making much opposition.

Resistibility, *n.* Quality of being resistible; resistibility.

Resistible, (*-zist'eb'l*), *a.* [Sp.] That may be resisted; having power to resist; as, a *resistible* force, a *resistible* will.

Resistibleness, *n.* Quality of being resistible; resistibility.

Resistibly, *adv.* In a resistible manner; so as to oppose or withstand.

Resistingly, *adv.* With opposition; so as to offer resistance.

Resistive, *a.* Resistible; having power to resist.

Resistless, *a.* Irresistible; that cannot be resisted; as, *resistless* eloquence.

Resistlessly, *adv.* In a resistless manner; irresistibly; so as not to be opposed or denied.

Resistlessness, *n.* State or quality of being resistless; irresistibility.

Resoluble, (*rez'o-lū-bl*), *a.* [Fr.; Lat. *resolubilis*.] That may be resolved or melted; as, bodies *resoluble* by fire.

Resolubleness, *n.* Quality of being resolvable; resolvability.

Resolute, (*rez'o-lū'*), *a.* [Fr. *résolu*; It. *resoluto*, from Lat. *resolvo*, *resolutus*.] Having resolution or fixedness of will or purpose; characterized by firmness and constancy in pursuing an aim or end; decided; determined; inflexible; firm; staunch; unwavering; undaunted; unshaken; as, a *resolute* adversary, a *resolute* mind, &c.

—*n.* One who possesses the quality of being resolute; an inflexible, determined person.

Resolutely, *adv.* With fixed purpose; steadily; with constant perseverance; boldly; firmly; unwaveringly.

Resoluteness, *n.* Quality or state of being resolute; fixed purpose; firm determination; unshaken stability of will or purpose.

Resolution, (*rez'o-lū'shun*), *n.* [Fr.; Sp. *resolucion*; Lat. *resolutio*.] Act, operation, or process of separating the parts which compose a complex idea or a mixed body; analysis; decomposition; dissolution; act of reducing any compound or combination to its constituent or component parts; act or process of unravelling or disentangling perplexities or problems, or of dissipating obscurity in moral subjects; explication. — Act of resolving; state of being resolved; fixed purpose or determination of mind; resoluteness; firmness; decision; steadiness; constancy; inflexibility; boldness; resolve. — That which is resolved or decided upon. — Formal declaration or determination of a meeting, association, or assembly; decision of a court; as, a judicial, legislative, or popular *resolution*.

(*Math.*) A term usually synonymous with *solution*; thus, the *resolution of an equation* is the procedure which leads ultimately to the discovery of its roots. The term is also frequently used as the opposite of *composition*; thus we speak of the *resolution of a number* into its prime factors, and of a *force* into its components.

(*Mus.*) The writing out of a canon or fugue in partition from a single line.

(*Med. and Surg.*) The cessation or dispersion of inflammatory action without the formation of an abscess, tumor, or mortification.

R. of a motion. (*Mech.*) The partition of a single force or motion into two or more which have different courses, and, taken collectively, form an equivalent for the single one; — correlative to *composition*.

R. of a discord. (*Mus.*) The descent by a tone or semitone, according as the mode may require, of a discord which has been heard in the preceding harmony.

R. of a nebula. (*Astron.*) The demonstration of a nebula to the eye by a telescope of sufficient power to show it to be constituted of small stars.

Resolution, an island of British N. America, at the entrance of Hudson's Strait; Lat. 61° 30' N., Lon. 65° W. Area, abt. 160 sq. m.

Resolutioner, Resolutionist, *n.* One who makes a resolution; one who conjoins in the declaration of others. (R.)

Resolvability, *n.* Power of being separated into parts; resolvableness.

Resolvable, (*rez-olv'a-bl*), *a.* That may be resolved or reduced to first principles; admitting of partition, or of appearing to be separated; as, *resolvable* nebulae.

Resolvableness, *n.* Resolvability; quality or state of being resolvable.

Resolve, (*rez-olv'*), *v. a.* [Fr. *résoudre*; Sp. *resolver*; Lat. *resolvo* — *re*, back, and *solveo*, to loose.] To separate, as the component parts of a compound substance; to reduce to first principles or constituent elements; to decompose; to analyze; — hence, sometimes, to melt.

"Immortal souls resolved to elements again." — Dryden.

— To reduce to simple parts; to separate, as the parts of a complicated question; to free from ambiguities or perplexities; to remove obscurity from by analysis; to clear of difficulties; to solve; to explain; to interpret; to free from doubt; to disentangle; to unfold; to unravel; as, to *resolve* a conundrum.

"Examine, sift, and resolve their alleged proofs." — Hooker.

— To dissolve and reduce to another form; as, the house *resolved* itself into a committee of Ways and Means. — To cause to perceive or understand; to inform; to acquaint; to assure; to convince; to settle in opinion; to fix in purpose or determination. — To express, as an opinion, decision, or determination, by resolution or vote; as, it was *resolved* by the meeting *nem. con.*

(*Math.*) To solve or elucidate, as a problem, by enumerating in order the several things to be done; to obtain what is required; to find the answer to, or the result of; as, to *resolve* an equation.

(*Mus.*) To allow the tones, as of a discord, to pursue their several tendencies, resulting in a concord.

(*Med.*) To disperse, scatter, or cause to cease, as an inflammation or abscess, or a tumor.

To resolve a nebula. (*Astron.*) To cause a nebula to appear to the eye as consisting of distinct stars.

— *v. n.* To be separated into elementary or component parts, or first principles; to be decomposed. — To melt; to dissolve; to become fluid, as the blood under certain conditions. — To be settled in opinion; to be convinced. — To determine in one's own mind; to form a resolution; to purpose. — To make a declaration by resolution or vote.

— *n.* Act of resolving or making plain; solution; resolution.

"To give a full resolve of that which is so much controverted." — Milton.

— That which has been resolved on or determined; fixed purpose of mind; settled decision or conclusion; — also, legal or official determination; legislative act, declaration, or determination.

Resolv'dly, *adv.* In a manner to resolve problems or difficulties. — In a resolved or determined manner; with firmness or inflexibility of purpose; decidedly; resolutely.

Resolv'dness, *n.* State of being resolved; fixedness of purpose; firmness; resolution.

Resolvend, (*rez-olv'end*), *n.* [From Lat. *resolvere*, to resolve.] (*Arith.*) In the square or cube-root, the number which arises from increasing the remainder after subtraction.

Resolv'ent, *a.* [Fr.; Lat. *resolvens*.] Having power to resolve or dissolve.

— *n.* That which has the power of resolving or dissolving.

(*Med.*) A discutient.

(*Math.*) In algebra, an equation upon whose solution that of a given equation depends.

Resolver, *n.* One who resolves or determines in purpose.

Resonance, (*rez'-*) *n.* [Fr.; L. Lat. *resonantia*, from Lat. *re*, back, and *sono*, to sound.] Act of resounding, or state of being resonant.

(*Acoustics.*) A reverberation of a sound, or of sounds; the returning of sound by the air acting on the bodies of stringed musical instruments.

Resonant, *a.* [Fr. *resonnant*; Lat. *resonans*.] Resounding; reverberating; returning sound; echoing back; fitted to resound; as, a *resonant* fugue.

Resorb, *v. a.* [Lat. *resorbere*.] To swallow up.

Resorb'ent, *a.* [Lat. *resorbens*.] Swallowing up.

Resorption, (*-shun*), *n.* Act of resorbing; also, resorption.

Resort, (*rez-ört'*), *v. n.* [Fr. *ressortir*, from Lat. *sortior*, *sortitus*, to draw or cast lots for.] To betake one's self; to go; to repair. — To have recourse; to apply; to betake one's self for aid, relief, or advantage; to appeal, as from a lower court to a higher; as, he was obliged to *resort* to the law for redress.

— *n.* Act of resorting; act of going to or making application; a betaking one's self; act of visiting or seeking. — The place to which one customarily betakes one's self; place of frequent meeting or habitual assembly; a haunt; as, his *resort* is generally his club.

Last resort, that from which there is no appeal; final step.

Resort'er, *n.* One who resorts or frequents.

Resound, (*-zound'*), *v. a.* [Fr. *résonner*, from Lat. *re*, back, and *sonare*, to sound.] To give or send back the sound of; to echo; to reëcho; to reverberate. — To praise or extol with sounds; to praise or celebrate with the voice, or the sound of instruments; to spread the fame of.

— *v. n.* To sound loudly; as, his voice *resounded* far. — To be echoed or sent back, as sound. — To be much and loudly mentioned. — To reverberate or echo; as, *resounding* praise.

— *v. a.* To sound again, as a note on a bugle.

— *n.* Echo; reverberation; return of sound.

Resource, (*rez-sōrs'*), *n.* [Fr. *ressource*.] Any source of aid or support; any object to which a person may resort for assistance, safety, or supply; expedient; means; contrivance; device; dependence.

— *pl.* Pecuniary means; funds; means of raising money or supplies; capabilities of producing wealth, or of supplying necessary wants; as, a man of ample *resources*.

Resourceless, *a.* Lacking resources. (R.)

Resow, (*rez'sō'*), *v. a.* (*imp.* *RESOWED*, (*rez-sōd'*); *pp.* *RESOWNED* or *RESOWN*, (*rez'sōn'*).) To sow again, or a second time.

Respeak, *v. n.* (*imp.* *RESPOKED*; *pp.* *RESPOKEN*, *RESPOKED*.) To reply; to speak in return; to answer.

— *v. a.* To repeat; to speak or utter afresh.

Respect, *v. a.* [Fr. *respecter*, from Lat. *respicio*, *respec-tus*, to look back.] To look back upon; to look on or notice with special attention; to regard as deserving of particular notice; — hence, to honor; to view or consider with a degree of reverence; to have esteem for, as possessed of real worth; to venerate; as, a person highly *respected* in society. — To regard; to have regard to, in relation or connection; to relate to; as, a conversation *respecting* business.

To respect the person, to permit the opinion or judgment to be governed or biased by a regard to the external or superficial circumstances of an individual, to the prejudice of right and equity.

— *n.* Act of respecting, or looking about, or noticing with attention; observation. — That estimation or honor in which men hold the distinguished worth or substantial good qualities of others; that deportment or course of action which proceeds from esteem; consideration; regard; deference; good-will; reverence; as, I have a sincere *respect* for her.

— *pl.* An expression of respect, deference, regard, or good-will; as, to pay one's *respects* to the President.

— That which respects, belongs, or has reference to any person or thing. — Partial regard, under bias, to the prejudice of right or justice; as, the law suffers no *respect* of persons. — Motive in reference to something; consideration; interest; as, he is a good fellow in some *respects*. — Reference; relation; as, with *respect* to business.

In respect of, in reference to; in comparison with.

Respectability, *n.* State or quality of being respectable; the state or qualities which merit or command respect.

Respect'able, *a.* [Fr., from L. Lat. *respectabilis*.] Worthy of, or commanding respect; possessing the worth or qualities which deserve or excite respect; deserving of esteem, honor, or regard. — Moderately good or excellent; passable in quality or number; tolerable; not despicable; as, a *respectable* audience, a *respectable* dinner, a *respectable* sermon.

Respect'ableness, *n.* Respectability.

Respect'ably, *adv.* In a respectable manner; in a manner to awaken or merit respect or esteem; with respect; — also, moderately, but in a manner not to be despised; as, the house was *respectably* filled.

Respect'ant, *a.* [Fr., from *respecter*.] (*Her.*) Placed face to face; — said of animals; as, two lions *respectant*.

Respect'er, *n.* One who, or that which, respects; as, the law is no *respector* of persons.

Respect'ful, *a.* Having or exhibiting respect, regard, or esteem; marked or characterized by respect or deference; civil; courteous; complaisant; dutiful; as, a *respectful* manner.

Respect'fully, *adv.* In a respectful manner; with respect or deference; in a manner comporting with due estimation.

Respect'fulness, *n.* Quality of being respectful.

Respect'ing, *pp. p.* Having respect or regard to; regarding; concerning; relating to; as, *respecting* the book there can be but one opinion.

Respective, *a.* [Fr. *respectif*, from L. Lat. *respectivus*.] Noticing attentively; — hence, circumspect; wary; careful; cautious. — Having respect or reference to; relative; not absolute. — Particular; relating to a particular person or thing; each to each; belonging to each; as, they retired to their *respective* beds.

Respect'ively, *adv.* As relating to each; particularly; as each pertains to each; as, they were told *respectively* what each must do.

Respect'less, *a.* Without respect or regard; lacking reference. (R.)

Respect'lessness, *n.* State of being regardless; regardlessness. (R.)

Respell, *v. a.* To spell over again, or anew.

Respirability, *n.* Quality of being respirable.

Respir'able, *a.* [Fr.] That may be respired or breathed; fit for respiration, or the support of animal life, as air.

Respir'ableness, *n.* State or quality of being respirable; respirability.

Respiration, *n.* [Fr., from Lat. *re*, and *spiro*, to breathe.] (*Physiol.*) The alternate inspiration and expiration of atmospheric air. The blood which circulates through the system requires, for its purification and the restoration of its vital qualities, to be brought into contact with the atmospheric air; and this is effected in the lungs. The constituents of the air brought into contact with the blood are separated, its oxygen uniting with the blood, while its nitrogen is returned, by expiration, with a quantity of carbonic-acid gas. The mechanical part of the function of respiration is effected by the action of the ribs and diaphragm. In man, about twenty respirations take place in a minute, and from thirty to forty cubic inches of air are inhaled at each inspiration. (See AIR-CELLS and LUNGS.) Respiration goes on in plants as well as in animals, the leaves and foliage of plants and trees being the lungs or branchiae of vegetable life. See BOTANY.

Respir'ational, *a.* Pertaining, or relating, to respiration.

Respirator, *n.* [Fr. *respirateur*.] A contrivance

for covering the month, and which serves to temper cold air inhaled into the lungs.

Respiratory, *a.* [Fr. *respiratoire*.] Serving for respiration; pertaining, or relating, to the act of breathing.

Respire, *v. n.* [Fr. *respirer*; Lat. *respiro* — *re*, and *spiro*, to breathe.] To blow or breathe out; to take breath again; — hence, to rest; to take rest from toil.

—*Te breathe*; to inhale air into the lungs, and exhale it.

—*v. a.* To breathe out, or in and out; to inspire or expire, as air; to emit in exhalations.

Respite, (*rêspit*), *n.* [Fr. *répit*; O. Fr. *respit*, from Lat. *respectus*, a looking back.] Temporary intermission of labor, or of any process or operation; limited time of rest; pause. — Forbearance; postponement; delay; prolongation of time for the payment of a debt beyond the legal time.

(*Law*.) Temporary suspension of the execution of a capital offender; a reprieve; — also, delay of appearance at court which is granted to a jury beyond the proper term.

—*v. a.* [O. Fr. *respiere*.] To relieve by a pause or interval of rest; to delay for a time; to suspend, as the execution of a criminal beyond the time limited by the sentence; to reprieve.

Respiteless, *a.* Without respite, relief, or reprieve.

Resplendence, **Resplendencey**, *n.* [L. Lat. *resplendens*.] Quality of being resplendent; brilliant lustre; vivid brightness; splendor; effulgence.

Resplendent, *a.* [Lat. *resplendens* — *re*, and *splendo*, to shine.] Shining or sparkling with brilliant lustre; very bright or luminous; effulgent; as, *resplendent gold*.

Resplendently, *adv.* With brilliant lustre; effulgently.

Resplit, *v. a.* To split afresh, or again.

—*v. n.* To resplit, rend, or divide a second time.

Respond, *v. n.* [Fr. *répondre*; Lat. *respondeo*.] To answer or reply; to give response or rejoinder; as, her heart *responded* to his voice. — To suit; to correspond. — To make payment; to render satisfaction or indemnification; as, to be held to *respond* in damages, as a defendant in a suit.

—*v. a.* To accord with; to correspond to, or agree with. (R.) — To satisfy or make good by payment, as the judgment of a court.

—*n.* A short anthem interrupting the reading of a chapter, which is not to proceed till the anthem be ended. — *Wheatley*.

(*Arch.*) In Gothic buildings, a half-pillar, or pier, attached to a wall to support an arch, &c.; it constitutes, in fact, a continuation of the line of the arch in the vertical part of the wall, and appears to be introduced for the purpose of supporting it.

Respondence, **Respondency**, *n.* Act of responding or answering.

Respondent, *a.* [Lat. *respondens*.] Answering; that answers or responds to demand or expectation; according.

—*n.* [Fr. *respondant*.] One who responds; especially —

(*Law*.) One who makes answer in certain suits and proceedings at law, as in equity, and admiralty or divorce causes, &c.

(*Rhet.*) One who upholds a thesis in reply, and whose province it is to refute objections.

Respondentia, (*dên-shi-a*), *n.* [Lat., from *respondeo*, to promise to return.] (*Mar. Law*.) A species of mortgage in the nature of bottomry, but differing from it in that the loan is effected on the security of the freight, and not on that of the ship itself.

Response, *n.* [Fr. *réponse*; O. Fr. *response*; Lat. *responsum* — *respondeo*.] Act of responding. — An answer; a reply; — particularly, an answer to the priest in the Litany and other parts of divine service.

(*Rhet.*) Answer to an objection in a formal disputation. (*Ecol.*) In the services of the Roman Catholic Church, a kind of anthem sung after the lessons of matins.

(*Mus.*) In a fugue, a repetition of the given subject by another part.

Responsibility, *n.* [Fr. *responsabilité*.] State of being responsible, accountable, or answerable, as for a trust or office, or for a debt. — That for which one is accountable or responsible. — Ability to answer in payment; means of discharging or liquidating contracts.

Responsible, *a.* [Fr.] Answerable; accountable; amenable; liable to respond, or be called upon to make account; as, a husband is *responsible* for his wife's debts during coverture. — Able to discharge an obligation or contract, or having estate adequate to the payment of a debt or debts; as, a *responsible* party became his bail.

Responsibleness, *n.* Responsibility.

Responsibly, *adv.* In a responsible manner.

Responsive, *a.* [O. Fr. *responsif*.] Answering; making reply; able, ready, or disposed to respond; as, a

responsive letter. — Correspondent; suited to something else.

“The vocal lay, *responsive* to the strings.” — *Pope*.

Responsively, *adv.* By way of response; in a responsive manner.

Responsiveness, *n.* State of being responsive.

Responsory, *a.* Containing or conveying answers.

—*n.* Answer or response of the congregation to the priest in divine service. (R.)

Rest, *n.* [A. S. *ræst*; D. *rust*; Ger. *rast*.] A ceasing from motion or action of any kind, and applicable to any body or being; a state free from motion or labor; quiet; repose; quiescence; tranquillity; as, *rest* of body or mind. — Hence, by implication, freedom from worry, annoyance, cares, or disturbance; peace; security; as, his wife's tongue gives him but little *rest*.

—*Sleep*; hence, in political parlance, death; as, he has gone to his last *rest*. — That on which anything leans or lies for support; — specifically, in a lathe, a piece of iron to hold the turning tool upon, fixed at the end of a slide by a set-screw. — A resting-place; a permanent habitation; as, “in dust our final *rest*.” — *Milton*.

(*Hygiene*.) Rest is as necessary to the health of the body as food, light, and air. How much absolute rest of body and mind, such as only sleep can give, is necessary for the recovery of muscular elasticity and nervous energy, must depend greatly on the age of the person, and the amount of labor taken. Some men are as refreshed after four hours' sleep as others with six or seven; in such cases, temperament has much to do with the benefit derived from the shorter term. As a general rule, the time devoted to repose should not be less than five hours, and need seldom exceed seven. The man who retires to rest before midnight will require less repose than he who makes it dawn before he seeks his bed. The hours of rest, like the hours set apart for meals, should be punctually adhered to. Much of the boasted health of a country life depends upon the regularity, not only in the hours of labor and reflection, but of repose also.

(*Archæol.*) Anciently, a projection from the right side of a coat of mail, serving to support the butt of a lance.

(*Lit.*) A caesura; a short pause of the voice in reading.

(*Mus.*) One of the characters of silence, each of which denotes a cessation of the sound, equal in duration to the note which it immediately succeeds and after which it is named: thus a *semibreve rest* is equal in length to a semibreve, a *minim rest* to a minim, a *crotchet rest* to a crotchet; and so on through all the different characters of notation.

—*v. n.* [A. S. *restan*.] To stop; to cease from motion or action of whatsoever kind; to cease from labor, work, or performance. — To be quiet or still; to be undisturbed; to be tranquil, or at peace; to be quiet or tranquil, as the mind; not to be agitated by fear, anxiety, worry, or other emotion of passion. — To lie; to recline; to repose, as on a bed. — To be in a state of sleep or slumber; as, when tired one *rests* well. — To lean or stand on; to be supported by, as, a house *rests* on the ground. — To sleep the last sleep; to die, or be dead. — To acquiesce; to be satisfied; as, “to *rest* in heaven's determination.” (*Addison*.) — To trust, confide, or rely; to place dependence; as, to *rest* on a man's word or promise.

To *rest with*, to be in the power of; to be determined by; as, the matter *rests with* him to decide.

—*v. a.* To cause to rest; to lay or place at rest; to quiet. — To place, as on a support.

“Her weary head upon your bosom *rest*.” — *Waller*.

Rest, *n.* [Fr. *reste*, from Lat. *re*, back, and *sto*, to stand.] That which is left, or which remains after the separation, either in fact or in contemplation; remainder; overplus; remnant; residue. — Others; those not included in a proposition or description; as, Byron and the *rest* of the modern poets.

—*v. n.* [Fr. *rester*.] To remain; to be left; as, there the affair *rests*.

Restant, *a.* [Fr.; Lat. *restans*, from *restare*, to remain.] (*Bot.*) Not falling off, as the calyx of the rose and apple, which remain upon the germ after the corolla has fallen; persistent.

Restate, *v. a.* To state again, or a second time.

Restaurant, (*res'to-rant*), *n.* [Fr. *restaure*.] An eating-house or saloon.

Restaurateur, (*res'tor-a-tur'*), *n.* [Fr.] One who keeps a restaurant, or eating-house.

Restem, *v. a.* To force back against the current; to stem against.

Restful, *a.* Quiet; being at rest; giving rest.

Restfully, *adv.* In a restful manner; in a state of rest.

Restfulness, *n.* The state or quality of being restful.

Rest-harrow, *n.* (*Bot.*) See *ONONIS*.

Restiacea, *n.* [Lat. *restis*, a cord.] (*Bot.*) An order of plants, alliance *Glumales*. *DIAG.* A 1-3-celled ovary, a pendulous ovule, 2-3 stamens, 1-celled anthers, and terminal embryo. They are herbs or under-shrubs, chiefly native of S. America, S. Africa, and Australia. Their properties are unimportant. The wiry stems of some species have been used for basket-making, thatching, rope, &c. The order includes 23 genera and 171 species.

Restiform, *a.* [Lat. *restis*, a rope, and *forma*, form.] A term applied to certain rope-like columns or tracts, behind the *lateral tracts* of the medulla oblongata. The *R. tract* is continuous below with the posterior columns of the myelon; while above, its fibres may be traced transversely through the pons into the cerebellum. If the *R. tracts* be irritated, the most acute suffering is produced.

Restipulate, *v. n.* To stipulate again, or anew.

Restipulation, *n.* A renewed stipulation.

Restitute, *v. a.* [Lat. *restituere*, from *re*, and *statuere*, to put, to place.] To restore what is lost or taken away. (R.)

—*n.* Anything restored or replaced. (R.)

Restitution, *n.* [Lat. *restitutio*, from *restituere*, to restore.] Act of restoring to a former state.

—Act of making good, or of giving an equivalent for any loss, damage, or injury; indemnification; reparation; compensation.

—Act of recovering a former state or posture. (R.)

Motion of R. (Physics.) The returning of elastic bodies, forcibly bent or compressed, to their natural state.

Restitutor, *n.* [Lat.; Fr. *restituteur*.] A person who makes restitution. (R.)

Restive, **Restiff**, *a.* [O. Fr. *restif*; Fr. *rétif*, from Lat. *resto*, from *re*, and *stare*, to stand.] Unwilling to go, or only running back; obstinate in refusing to move forward; stubborn. — Impatient; unquiet; uneasy.

Restiveness, **Restiffness**, *n.* Obstinate reluctance or indisposition to move forward. — Obstinate unwillingness.

Restless, *a.* Continually moving; unquiet; not still. — Sleepless; disturbed; uneasy. — Being without sleep; passed in unquietness. — Not affording rest. — Not satisfied to be at rest or in peace. — Not remaining at rest; turbulent, as a mob. — Disposed to wander or to change place or condition; unsettled; roving.

Restlessly, *adv.* Without rest; unquietly.

Restlessness, *n.* State or quality of being restless; uneasiness; agitation.

Restorable, *a.* Capable of being restored.

Restorableness, *n.* The state or quality of being restorable.

Restoration, *n.* [Fr. *restauration*, from Lat. *restauratio*.] Act of restoring, or of replacing in a former state; renewal; revival; reestablishment; renovation. — The recovery or bringing back to health and soundness; recovery. — That which is restored.

(*Eng. Hist.*) A term applied to the accession of King Charles II., in 1660, after the Civil War, to the throne of England, after an interregnum of eleven years and four months, from January 30th, 1649, when Charles I. was beheaded, to May 29th, 1660.

(*French Hist.*) The first *R.* begins May 3, 1814, when Louis XVIII. made his entry into Paris under the protection of foreign bayonets, and ended with the return of Napoleon from Elba, March 20, 1815. The beginning of the second *R.* is generally reckoned from the battle of Waterloo, June 18, 1815, which destroyed forever the power of Napoleon, and terminated on July 29, 1830, with the abdication of Charles X.

Restorationer, **Restorationist**, *n.* One who holds to the doctrine of the final restoration of all men to happiness.

Restorationism, *n.* The doctrine of the Restorationists.

Restorative, *a.* That restores; that has power to renew strength and vigor.

—*n.* A medicine efficacious in restoring strength and vigor, or in recruiting the vital powers.

Restoratively, *adv.* In a manner or degree conducive to a renewal of strength or vigor.

Restorator, *n.* A restaurateur.

Restoratory, *a.* Restorative. (R.)

Restore, *v. a.* [Fr. *restaurer*; Lat. *restaurare*.] To replace; to repair; to rebuild; to renew; to bring back from a state of decay, ruin, devastation, degeneration, declension, &c.; as, to *restore* order, to *restore* to wealth. — To bring or give to a person, as a specific thing which he has lost, or which has been taken from him and unjustly or arbitrarily detained; to reinstate; to return; to deliver back to the owner; to replace; to bring back to a former state or condition; as, to *restore* a child to the parent, to *restore* a dispossessed or exiled monarch, &c., peace was *restored*, &c. — To cure; to recover from disease; to heal; to bring back to health, soundness, or vigor. — To revive to renew; to reestablish; to bring back as nearly as may be to its primitive state or condition; as, to *restore* a painting, statue, building, &c. — To give in lieu of, or as satisfaction or an equivalent for.

—*v. n.* To store again, or a second time, as goods.

Restorer, *n.* The person who, or thing which, restores.

Restrain, *v. a.* [Fr. *restrindre*, from Lat. *restringo*, *restringas*.] To draw back tightly; to bind or hold back; to bind fast; to hold from action, proceeding, or advancing by any means; to hold in; to curb; to check; to repress; to keep down; as, to *restrain* one from committing an act of folly. — To hinder; to abridge; to curtail; as, to *restrain* one of one's liberty. — To restrict; to limit; to constrain; to confine. — To withhold; to forbear, or keep back.

Restrainable, *a.* That may be restrained; as, *restrainable* passions.

Restrainedly, *adv.* With restraint or limitation.

Restrain'er, *n.* The person who, or thing which, restrains.

Restrain'ment, *n.* Act of restraining.

Restraint, *n.* [F. *restraint*, pp. of *restrindre*.] Act or exercise of restraining, or of holding back, or hindering from action or motion, in any manner; a hindering of the will, or of volition, or of any action, physical, moral, or mental; hindrance; repression; coercion; abridgment of liberty. — That which restrains, hinders, or represses; limitation; restriction; prohibition; as, *no restraints* were laid upon him.

Restrength'en, *n.* To strengthen, again or afresh; to fortify anew.

Restrict, *v. a.* [Lat. *restringo*, from *restringo*.] To hold or keep back within certain bounds or limits; to circumscribe; to curb; to restrain; to repress; to confine; as, to *restrict* one to a single glass of wine a day.

Fig. 2245. — RESPOND,
(Fotheringay, England.)

Restriction, (-strik'shun,) *n.* [Fr., from L. Lat. *restrictio*.] Act of restricting, or state of being restricted; limitation; confinement within bounds; as, *restriction* of wit by the laws of propriety. — That which restricts; a restraint; as, to impose *restrictions* on trade.

Restriction of words, the limitation of their force in a special manner or degree.

Restrictionary, *a.* Restrictive; using restriction.

Restrictive, *a.* [Fr. *restrictif*.] Having the quality of restricting or limiting, or of expressing limitation; imposing restraint; as, *restrictive* laws or regulations.

Restrictively, *adv.* With limitation or restriction.

Restrictiveness, *n.* State or quality of being restrictive.

Restrive, *v. a.* To strive anew.

Resubjection, (-jék'shun,) *n.* Subjection a second time.

Resublimation, *n.* A second sublimation.

Resublime, *v. a.* To sublime again.

Resudation, *n.* [Fr., from Lat. *resudare*.] Act of sweating afresh.

Result, (-zül'), *v. n.* [Fr. *résulter*; Lat. *resulto*, freq. from *resilio*—*re*, and *salio*, to leap.] To spring or leap back; to rebound. (*R.*) To follow, or have origin, as a consequence, from facts, arguments, premises, combination of circumstances, consultation, or meditation; to take effect; to proceed; to spring; to arise; to originate; as, *annul results* from idleness. — To issue; to ensue; to come out or have an issue; to terminate;—preceding in; as, the enterprise *resulted* in failure.

R. trust. (*Law.*) A trust raised by implication or construction of law, and presumed to exist from the supposed intention of the parties and the nature of the transaction.

R. use. (*Law.*) A use raised by equity for the benefit of a feoffee who has made a voluntary conveyance to uses without any declaration of the use.

—*n.* [Fr. *résultat*.] Act of leaping or flying back; resilience. (*R.*)

—That which proceeds from a given state of facts, certain premises, or the state of things, or force of circumstances, &c.; consequence; conclusion; inference; deduction; effect; issue; event; as, meanness is the natural *result* of avarice. — Decision, resolution, or determination of a council or deliberative assembly.

Resultance, *n.* Act of resulting.

Resultant, *n.* [Fr.] (*Math.*) Same as REPELLANT, *q. v.*

(*Mech.*) A term applied to a *force*, *motion*, *velocity*, or *rotation* which is mechanically equivalent to several other forces, motions, velocities, or rotations.

—*a.* Resulting from a combination; issuing from a joint effort; arising or following as a result or consequence. *Resultant force or motion.* (*Phys.*) A force which is the result of conjoined or combined forces.

Resultful, *a.* Having results or consequences.

Resultless, *a.* Without result; as, *resultless* inquiries.

Resumable, *a.* [From *resume*.] That may be resumed, or taken back.

Resume, (-rā-zū-mā,) *n.* [Fr.] A condensed statement; a summing up; a brief recapitulation.

Resume, (-rē-zū-mā,) *v. a.* [Fr. *résumer*; Lat. *resumo*—*re*, and *sumo*, to take.] To take back again. — To take up again, as that which has been given and taken away. — To begin again; to recommence, or take up again, as after absence or interruption; as, the men *resumed* work again.

Resummon, *v. a.* To summon or call again, or a second time. — To recall; to recover.

Resummons, *n.* A second, or renewed summons.

Resumption, (-zūm'shun,) *n.* [Fr., from Lat. *resumptio*—*re*, and *sumo*.] Act of resuming, taking back, or taking again; as, the *resumption* of a grant or an office, the *resumption* of cash payments.

Resumptive, (-zūm'tiv,) *a.* [Fr. *résumptif*; Lat. *resumptivus*.] Resuming, or taking back, or again.

—*n.* (*Med.*) A restorative. (*R.*)

Resupinate, *a.* [From Lat. *resupinare*, to bend back.] Inverted in position; apparently topsy-turvy, or upside down.

(*Bot.*) A term applied to parts which become inverted, usually in the twisting of their stalk, as in many orchidaceous flowers.

Resupinated, *a.* Resupinate.

Resupination, *n.* State of being resupinate or inverted;—also, state of lying on the back.

Resupine, *a.* [From Lat. *re*, again, and *supinus*, bent backward.] Stretched on the back.

Resupply, *v. a.* To supply anew.

Resurgence, (-jens,) *n.* Resurrection; act of rising again.

Resurgent, (-jēnt,) *n.* One who rises again, as from the dead or a moribund state.

Resurprise, (-priz') *v. a.* To surprise again, or anew.

Resurrection, (-rēz-ur-rék'shun,) *n.* [Fr., from Lat. *resurrectio*.] A rising again from a state of ignorance, degradation, or bondage; as, the *resurrection* of art in the Middle Ages.

(*Theol.*) A term applied to the rising again of Christ from the dead, and sometimes to the revival of mankind at the last day. The resurrection of Christ is detailed with much fulness by the Evangelists, and is frequently referred to in the other books of the New Testament. In fact, it is presented as a chief argument for the truth of Christianity; for, says the Apostle, "if Christ be not risen, then is our preaching vain, and your faith is also vain."

Resurrectionist, **Resurrection-man**, *n.* A body-snatcher; one who steals bodies from the grave, particularly for anatomical dissection.

Resurvey, (-sur-vā,) *v. a.* To survey again; to review.

—*n.* A second, or repeated survey.

Resuscitate, *a.* That may be restored to life.

Resuscitant, *n.* The person who, or thing which, resuscitates.

Resuscitate, *v. a.* [Fr. *ressusciter*; Lat. *resuscito*.] To revive; to revivify;—particularly, to recover from apparent death; as, to *resuscitate* a drowned person.

—*v. n.* To revive; to awaken to life again.

Resuscitation, *n.* [L. Lat. *resuscitatio*.] Act of resuscitating, or of reviving from a state of apparent death; state of being revived.

Ret, *v. a.* [Corrupted from *rot*.] To prepare for use, as flax, by detaching the fibres from the woody part by certain processes.

Retable, *n.* (*Arch.*) A screen for an altar.

Retail, *v. a.* [Fr. *retailer*, to cut again, *re*, and *tailler*, to cut.] To sell by cutting or dividing again and again, and dispose of in small parcels; to vend at second-hand;—opposed to *wholesale*; as, to *retail* liquors. — Hence, by analogy, to deal out or tell in small portions or broken parts; to tell to many; as, to *retail* scandalous reports.

—*n.* The sale of commodities in small quantities or parcels, or at second-hand;—correlative to *wholesale*.

—*a.* Specifying sale by small quantities or parcels; as, a *retail* business.

Retailer, *n.* One who sells goods by small quantities or parcels; also, one who tells or circulates in small portions; as, a *retailer* of idle stories.

Retailment, *n.* Act of retailing.

Retain, *v. a.* [Fr. *retenir*; Lat. *retineo*—*re*, back, and *teneo*, to hold.] To hold or keep back; to hold or keep in possession; to keep from departure or escape; to detain; not to lose or part with, or dismiss. — To hire; to engage; to keep in pay; to employ by a fee or honorarium paid; as, to *retain* an advocate.

—*v. n.* To keep; to continue.

Retainable, *a.* That may be retained.

Retainer, *n.* One who retains.—One who is retained in service; an attendant; a dependant; an adherent; a hanger-on.

(*Law.*) In former times, and in English law, the term was applied to one of a class of servants, or dependants, who wore their master's livery, but were only employed in his service on particular occasions, being, however, retained by him, and liable to be called upon to serve him at any time. In modern legal phraseology, a *retainer*, or *retaining fee*, is a fee given to a counsel to secure his services in a cause, in order to prevent the opposite side from engaging him. It is *special* when given for the purpose of securing the counsel's services for a particular case; *general*, when for securing his services generally. In America, a *retainer*, much less formal than in the English practice, is only the act of a client by which he engages an attorney or counsellor to manage a cause. The effect of a *retainer* is to confer on the attorney all the powers exercised by the forms and usages of the court in which the suit is pending.

Retainment, *n.* Retention; act of retaining.

Retain-wall, **Retaining-wall**, *n.* (*Arch.*) A wall built for resisting the thrust of the ground at the back, or for confining a body of water in a reservoir.

Retake, *v. a.* (*Imp.* RETOOK; *pp.* RETAKEN.) To take or receive again; as, to *retake* medicine.—To recapture; to take from a captor; as, to *retake* a prize at sea.

Retaker, *n.* One who takes again what had been taken before; a recaptor.

Retaliate, (-tāl'i-āt,) *v. a.* [L. Lat. *retalio*, *retaliatus*—*re*, again, and *talis*, such.] To return, as like for like; to repay or requite by an act of the same kind as has been given or proffered;—especially, to return evil for evil; as, to *retaliate* injuries.

—*v. n.* To return tit for tat, or like for like; as, to *retaliate* upon an opponent.

Retaliation, *n.* Act of retaliating; the return of like for like. See LEX TALIONIS.

Retaliative, *a.* Serving or tending to retaliate; retaliatory; inducing or involving retaliation; as, *retaliative* wit, *retaliative* justice.

Retaliatory, *a.* Retaliative; as, *retaliatory* measures.

Retard, *v. a.* [Fr. *retarder*; Lat. *retardo*—*re*, and *tardo*, to make slow.] To render slow, or slower; to keep back; to impede; to hinder; to obstruct; to diminish, as the velocity of motion; to prevent from making due progress; as, to *retard* the operations of an army;—opposed to *accelerate*.—To put off; to delay; to procrastinate; to render more late; as, to *retard* payment of a bill past due.

Retardation, *n.* [Fr.; Lat. *retardatio*.] The act of retarding; hindrance; delay.

(*Physics.*) The act of hindering the free progress of a body, and ultimately, therefore, stopping it. It arises from the opposition of the medium in which the body moves, or from the friction of the surface upon which it moves. See FRICTION, RESISTANCE.

(*Gun.*) The loss of velocity of a projectile, in consequence of the air's resistance.

Retardative, *a.* [Fr. *retardatif*.] Serving to retard.

Retarder, *n.* One who, or that which, retards.

Retardment, *n.* Act of delaying or retarding.

Retch, (-rēch,) *v. n.* [A. S. *hræcan*.] To make an effort to vomit; to heave, as the stomach; to strain, as in eructating.

Reteacious, (-tē'shus,) *a.* [From Lat. *rete*, a net.] Having the appearance of net-work.

Retell, *v. a.* To tell afresh, or over again.

Retee mucosum, *n.* [Lat., mucous net.] (*Anat.*) See SKIN.

Retent, *n.* [Lat. *retentum*.] That which is retained.

Retention, (-tēn'shun,) *n.* [Fr.; Sp. *retencion*; Lat. *retentio*.] Act of retaining, holding, or keeping; state of being retained or detained; custody.—Power of

retaining; faculty of the mind by which it retains ideas; as, *retention* of thought.—Act of withholding; restraint.

"I gave my love without *retention* or restraint."—*Shaks.*

—Confinement; custody; duress; durance; as, to be placed under *retention*, as a prisoner.

(*Med.*) Undue retaining of some natural discharge, as, *retention* of urine.

(*Law.*) A lien; the right of withholding a debt, or of retaining property until a debt due to the person claiming this right be duly paid.

Retentive, *n.* [Fr. *retentif*.] That retains; having the power to retain, as ideas; as, a *retentive* memory.

Retentively, *adv.* In a retentive manner.

Retentiveness, *n.* Quality of being retentive.

Retepore, *n.* [Lat. *rete*,

a net, and *porus*, pore.]

(*Zoöl.*) A genus of *Alcyonaria*, distinguished

by having their foliate

skeleton pierced like net-work.

The Neptune's

Ruffles, *R. cellulosa* (Fig.

2246), shows the appearance

of this genus.

Retexture, *n.* A new

texture.

Rethel, (ra'tel,) a town

of France, dept. of Arden-

nes, on the Aisne, 24 m.

S.W. of Rheims. *Munif.*

Woollens, cottons, linen, hats, and leather. *Pop.* 8,500.

Retiarii, *n. pl.* [Lat., from *rete*, a net.] (*Roman Antiq.*)

The name of a class of Roman gladiators. The retiarius

was furnished with a trident and net, with no more cover-

ing than a short tunic; and with these implements he en-

deavored to entangle and despatch his adversary, who

was called *secutor* (from *sequi*, to follow), and was armed

with a helmet, a shield, and sword.

Reticence, *n.* [Fr.; Lat. *reticentia*, from *reticere*, from

re, and *taceo*, to be silent.] Silence; concealment by

silence.

(*Rhet.*) A figure by which mention is made indirectly

of some subject, while the speaker or the writer pre-

tends to pass it over in silence.

Reticency, *n.* Reticence.

Reticent, *a.* Taciturn; disposed to be silent.

Reticule, (-ret'i-kl,) *n.* A small net; a reticule.

Reticular, *a.* [Fr. *reticulaire*.] Having the form of

a small net.

Reticulate, **Reticulated**, *a.* [Fr. *reticule*; Lat.

reticulatus.] Resembling net-work; of the form or ap-

pearance of net-work.

(*Bot.*) A term especially employed to describe the

condition of the venation in *exogens*, as compared with

that of the *endogens*.

(*Min.*) Applied to the minerals which occur in parallel

fibres crossed by other fibres, which are also parallel, so

as to exhibit meshes like those of a net.

Reticulated work. (*Masonry.*) Masonry constructed

with diamond-shaped stones, or square stones placed

diagonally (Fig. 1732). In the city of Rome this mode

of decorating the surface of a wall is generally charac-

teristic of the period of the early empire; it was fre-

quently imitated in Romanesque work in the tympanum

of a doorway, especially in Norman work.

Reticulation, *n.* Organization of substances re-

sembling network.

Reticule, *n.* [Lat. *reticulum*, dim. from *rete*, a net.]

A lady's work-bag, or a little bag to be carried in the

hand.

(*Astron.*) A network of fine spiders' webs or wires

crossing each other at right angles, and dividing the

field of view into a series of small equal squares. It has

been long used for observations on the quantity of the

enlightened parts of a luminary during eclipses, and is

found well adapted for that and similar purposes.

Retienlum, *n.* [Lat., dim. of *rete*.] (*Zoöl.*) The name

of the honeycomb bag, or second cavity of the complex

stomach of the ruminant quadrupeds; so called from the

reticulate or honeycomb-like disposition of the cells,

mostly hexagonal, which occupy its inner surface.

(*Bot.*) The debris of interlacing fibres found at the

base of the petiole in palm-trees.

Retiform, *a.* [From Lat. *rete*, and *forma*, form.] Having

the form of a net in texture; composed of cross-lines

and interstices; reticulate.

Retimo, a seaport-town of European Turkey, on the

N. coast of the island of Crete, 38 m. S. of Candia; *pop.*

8,000.

Retina, *n.*; *pl.* RETINÆ. [Lat.] (*Anat.*) The pulpy

expansion of the optic nerve in the interior of the eye.

See EYE.

Retinal, *a.* Relating to the retina.

Retinalite, *n.* [Gr. *retine*, resin, and *lithos*, a stone.]

(*Min.*) A Canadian massive variety of serpentine with

a resinous appearance.

Retinite, **Retinaphalt**, *n.* [Gr. *retine*, resin.]

(*Min.*) A mineral substance, intermediate between resin

and asphalt, discovered by Mr. Hatchett in roundish or

irregular opaque lumps, of a yellowish or pale brownish-

yellow color, in tertiary clay, at Bovey-Tracey, in Devon-

shire, England, associated with lignite; also at Halle, and

in peat at Osnabrück in Hanover. When digested in al-

cohol, it yields a portion of resin, and asphalt remains.

Retinitis, *n.* (*Med.*) Inflammation of the retina;

a disease which often produces blindness.

Retinoid, *a.* [Gr. *retine*, resin, and *eidos*, form.]

</

guished person retains as attendants; a train of persons; a suite.

Retiracy, *n.* Act of retiring.—A fortune sufficient to retire from business with; an adequate competency for life.

Retire, *v. n.* [Fr. *retirer*, from Lat. *trahere*, to draw.] To depart; to retreat; to remove; to go out of company, or from a public place, into privacy.—To withdraw from business or active life; to go from a public station.

Retired, *a.* Secret; private.—Withdrawn; removed.—Withdrawn from business or active life; secluded from public notice.

Retired flank, (*Fort.*) A flank bent inwards towards the rear of the work, or army, of which it forms a part.

Retiredly, (*re-tîr'd-le*), *adv.* In a retired manner; in solitude or privacy.

Retiredness, *n.* Solitude; privacy; secrecy.

Retirement, *n.* Act of retiring or withdrawing from company, or from public notice or station.—State of being withdrawn.—Habitation secluded from much society, or from public life.—Private way of life; seclusion; privacy; solitude.

Retirer, *n.* A person who retires.

Retort, *v. a.* [Lat. *retorqueo*, from *re*, and *torqueo*, to turn.] To bend, turn, or cast back.—To throw back; to return.—To return as an argument, accusation, censure, or incivility.

—*v. n.* To return an argument or charge; to make a severe reply.

—*n.* The return of an argument, charge, or incivility; a repartee; as, a pungent *retort*.

(*Chem.*) A vessel in which distillation is effected by means of heat. Retorts are made of glass, earthenware, or metal, according to the purposes for which they are intended. Glass retorts are employed for the preparation of those substances which do not require any extraordinary degree of cold for their condensation, such as nitric acid. Glass retorts are made of various sizes, capable of holding four or five ounces to several gallons, and both flint and green glass are used in their manufacture. They are usually heated either by spirit-lamp, by gas, or by sand-bath. When higher temperatures are required, earthen retorts are used. In making hydrofluoric acid, a lead retort is necessary; and in concentrating sulphuric acid, platinum retorts are largely employed. Very large earthenware retorts are used in the manufacture of coal-gas.

Fig. 2247. — RETORT.

Retorts are made of various sizes, capable of holding four or five ounces to several gallons, and both flint and green glass are used in their manufacture. They are usually heated either by spirit-lamp, by gas, or by sand-bath. When higher temperatures are required, earthen retorts are used. In making hydrofluoric acid, a lead retort is necessary; and in concentrating sulphuric acid, platinum retorts are largely employed. Very large earthenware retorts are used in the manufacture of coal-gas.

Retorter, *n.* One who retorts.

Retorting, *n.* The act of returning, as an argument, charge, or incivility.

Retortion, (*-tor'shun*), *n.* The act of retorting.

Retortive, *a.* Containing a retort. (*R.*)

Retoss, *v. a.* To toss back.

Retouch, (*re-tûch*'), *v. a.* To improve by new touches, as a picture or essay.

—*n.* A repeated touch; the reapplication of a master's hand to a work he had before considered complete, as a painting or sculpture.

Retrace, *v. a.* [Fr. *retracer*.] To trace back; to go back, as in the same course or path.

(*Paint.*) To trace over again, or renew the outlines of. To retrace one's steps, to return back in the same path in which one advanced.

Retract, *v. a.* [Fr. *rétracter*; Lat. *retractus*, from *re*, again, back, and *trahere*, to draw.] To draw back; to withdraw.—To take back; to resume.—To recall; to recant; to abjure; to unsay.

—*v. n.* To take back; to unsay; to withdraw concession, or declaration.

—*n.* (*Furriery.*) The act of pricking a horse's foot in nailing a shoe on.

Retractable, *a.* Capable of being retracted.

Retraction, (*n.*) [Lat. *retractio*.] Retraction; recantation. (*R.*)

Retractable, *a.* Capable of being withdrawn or retracted.

Retractile, *a.* Capable of being drawn, as claws; retractable.

Retraction, (*-trâk'shun*), *n.* [Fr., from Lat. *retractio*.] Act of withdrawing something advanced, or changing something done.—Declaration of change of opinion; recantation.

(*Med.*) State of a part when drawn towards the centre of the body backwards.

Retractive, *a.* Tending to retract; withdrawing; taking from.

—*n.* Anything that retracts or withdraws from.

Retractor, *n.* A person who retracts.

(*Surg.*) A muscle, the office of which is to retract the part into which it is inserted.

Retranslate, *v. a.* To translate again, or a second time.

Retraxit, *n.* [Lat. (*Law.*)] The act by which a plaintiff withdraws his suit. It is so called from the fact that this was the principal word used when the law entries were written in Latin.

Retread, *v. a.* To tread anew.

Retreat, *n.* [Fr. *retraite*, from *retrahere*; Lat. *re*, and *trahere*, to draw.] Act of retiring or withdrawing; a betaking of one's self away from anything or place that is dangerous or disagreeable; as, to beat a *retreat*.—State of being retired or secluded from noise, bustle, or company; seclusion; retirement; privacy; solitude.—Place of retirement, for safety or security; a shelter; an asylum; a refuge.

"That pleasing shade, a soft retreat." —Dryden.

(*Nav.*) The retirement of a ship or fleet from before the enemy, or the order or disposition of ships declining to engage in battle.

(*Mil.*) The retiring of an army or body of men from an enemy, or from any position; an orderly retrograde movement.

"Honourable retreats are no ways inferior to brave charges." —Bucon.

—A signal used in the military and naval services, by beat of drum or sound of trumpet, at sunset, or for retiring from exercise or action:—opposed to *REVEILLE*, *q. v.*

(*Eccles.*) In the Roman Catholic Church, a special season of seclusion and silence, to engage in religious ceremonies;—also, a period of withdrawal from society, extending over several days, to a religious house for exclusive devotion to the duties of religion; as, to observe a *retreat*.

—*v. n.* To withdraw; to retire from any position or place; to withdraw to a private abode, or to any secluded situation; to retire to a place of safety or security.—To move back to a place before occupied; as, the *retreating* sea.—To retire from an enemy, or from any advanced position; as, the troops *retreated* in good order.

Retreatful, *a.* Serving as a retreat. (*R.*)

Retreatment, *n.* Retreat. (*R.*)

Retrench, *v. a.* [Fr. *retrancher*—*re*, and *trancher*, from Lat. *trans*, across, and *scindere*, to cut.] To cut off; to pare away; to diminish by excision; as, to *retrench* redundancies.—To render less or smaller; to curtail; to abridge; to diminish; as, to *retrench* expenses.—To limit; to restrain; to confine; as, a *retrenched* interpretation of figures.

—*v. n.* To diminish expenses; to economize; to live at a less cost; as, it is time for us to *retrench*.

Retrenchment, *n.* [Fr. *retranchement*.] Act of retrenching, or of lopping off; act of removing what is extraneous or superfluous; as, the *retrenchment* of words in a writing.—Act of curtailing, making less, or abridging; a lessening; diminution; reduction; curtailment; as, *retrenchment* of personal expenditures.

(*Fortif.*) A line of works formed so as to cut off parts of a fortified place, and enable the garrison to continue the defence after the outlying parts are taken.

Retribute, *v. a.* [Fr. *rétribuer*, from Lat. *retribuere*.] To pay back; to make compensation, payment, or equivalent in return to; as, to *retribute* to an offender what is in proportion to his offence.

Retributer, *n.* One who renders retribution.

Retribution, (*rê-trî-bû'shun*), *n.* [Fr.; Lat. *retributio*.] Act of retributing or repaying; repayment; requital.—State of being retributed or paid back.—That which is given to retribute; return accommodated to the action; reward or punishment; recompense; compensation;—also, a gratuity or present given for services in lieu of a salary; and specifically, rewards and punishments to be distributed at the general judgment.

Retributive, **Retributory**, *a.* Making retribution; repaying; rewarding for good deeds, and punishing for offences; as, *retributive* justice.

Retrievable, (*-trêv'a-bl*), *a.* That may be retrieved or recovered; as, a *retrievable* debt.

Retrievableness, *n.* Quality or state of being retrievable.

Retrieval, *n.* Act of retrieving.

Retrieve, (*trêv'*), *v. a.* [Fr. *retrouver*; from Ger. *treffen*, to hit, to find.] To hit or light upon again; to find again; to recover; to regain; to recover from loss or detriment; as, to *retrieve* one's character or credit, to *retrieve* an impaired fortune.—To bring back; to recall.—To repair, as a loss, damage, or misfortune; to remedy the evil consequences of; as, to *retrieve* a disastrous defeat.

—*n.* (*Sporting.*) The recovery of game once sprung.

Retrieve ment, *n.* Retrieval.

Retriever, (*-trêv'er*), *n.* One who, or that which, retrieves.

(*Sporting.*) A dog trained to seek out and bring in game that is shot.

Retrim, *v. a.* To trim again, or afresh.

Retrimment, *n.* Refuse; dregs; offal; dross. (*R.*)

Retros, *a.* Latin prefix denoting back, or backward.

Retract, *v. n.* [Fr. *rétrahir*, from Lat. *retrahere*.] To act in antagonism or opposition; to act backward or reciprocally.

Retraction, (*-trâk'shun*), *n.* [Fr.] Action backward; return action.—Operation on something past or preceding.

Retractive, *a.* [Fr. *rétractif*, from Lat. *retrahere*, back, and *activus*—*ago*, to do, to act.] Acting backward; operating by returned action; affecting what is past; retrospective; as, a *retractive* statute.

Retractively, *adv.* In a retractive manner; by operating on something past or preceding.

Retrocède, (*rêtro-sêd*'), *v. a.* [Fr. *rétrécir*.] To cede back; to make returned cession; as, to *retrocède* a state to its former possessor.

—*v. n.* To go back.

Retrocèdent, *a.* (*Med.*) In pathology, a term applied to those diseases which move about from one part of the body to another; as, *retrocèdent* gout, when it leaves the toe for the stomach.

Retrocession, (*rêtro-cêsh'un*), *n.* [Fr., from Lat. *retrocedere*, a going back, from *retrocède*—*retrahere*, and *cedo*, to go.] Act of retroceding or going back; retrogression.—State of being retroceded; granted back, or restored.

Retrocopulation, *n.* Coition from behind, as in the case of most animals.

Retroduction, *n.* [Lat. *reducere*.] A leading or bringing back.

Retroflex, **Retroflexed**, *a.* [Lat. *re*, and *flectere*, flexum, to bend.] Bent or turned suddenly backward.

Ret'rofract, **Ret'rofracted**, *a.* [Lat. *retro*, and *fractus*, pp. of *frangere*, to break.] (*Bot.*) Bent backward; refracted, as a petiole.

Retrogen'erative, *a.* Generating young by retrocopulation, as many animals.

Retrogradation, *n.* [Fr.; from Lat. *retrogradatio*.] Act of going or moving backward; act of retrograding.—State of being retrograded; a going backward; retrogression.

(*Astron.*) A term applied to the apparent motion of a planet when it is contrary to the order of the signs, or when the planet appears to move westward among the fixed stars.

Ret'rograde, *a.* [Fr.; from Lat. *retrogradior*—*retro*, and *gradior*, to go, from *gradus*, a step.] Going or moving backward; retrogressive; declining from a better to a worse state.—Contrary; opposite; tending to move retrogressively; as, a *retrograde* manœuvre.

(*Astron.*) Apparently moving backward, and contrary to the succession of the planets, i. e., from east to west, as a planet; denoting apparent motion as opposed to direct motion.

—*v. n.* [Fr. *retrograder*, from Lat. *retrogradior*—*retro*, and *gradior*, to go.] To go or move backward.

Retrograd'ingly, *adv.* By retrograding; so as to go backward.

Retrogression, (*rêtro-grêsh'un*), *n.* [Fr., from Lat. *retrogradi*.] Act of going backward; retrogradation.

Retrogressive, *a.* Going or moving backward; declining from a more perfect to a less perfect state; as, a *retrogressive* national policy.

Retrogressively, *adv.* By retrogression; retrograd'ingly.

Retromin'gency, *n.* Act or quality of being retromingent.

Retromingent, *a.* [Lat. *retro*, and *mingens*—*ungere*, to make water.] Organized so as to discharge the urine backward.

—*n.* (*Zool.*) An animal that discharges its urine backward.

Retropul'sive, *a.* [Lat. *retro*, and *pellere*, *pulsum*, to drive, impel.] Repelling; repulsing; driving back.

Retorse, *a.* [Lat. *retorsus*.] Bent in a backward direction.

Retorse'ly, *adv.* In a retorse manner.

Ret'rospect, *v. n.* [Lat. *retrospicio*, *retrospectum*, to look back at.] To look back; to view what is past.

—*n.* A looking back on things past; view or contemplation of something past; review; survey; reexamination.

Retrospection, (*-spêk'shun*), *n.* Act of looking back on things past; also, the faculty of looking back on past things.

Retrospect'ive, *a.* [Fr. *retrospectif*.] Looking back, or tending to look back, on past events; as, *retrospective* survey, a *retrospective* eye.—Affecting, or having reference to, things past.

Retrospect'ively, *adv.* In a retrospective or backward surveying manner.

Retroversion, (*-ver'shun*), *n.* [Fr.] A falling or turning backward.

Ret'rovert, *v. a.* [Lat. *retro*, and *vertere*, to turn.] To turn back.

Retrude, *v. a.* [Lat. *re*, and *trudere*, to thrust.] To thrust back.

Retrusion, (*-trû'zhun*), *n.* Act of retruding, or of being retruded.

Retry, *v. a.* (*imp.* and *pp.* RETRIED.) To try again; to place on trial a second time.

Ret'tery, *n.* A place where flax is retted. See *RET*.

Ret'ting, *n.* Act or process of preparing ret.—A rettery.

Retund, *v. a.* [Lat. *re*, and *tundere*, to strike with repeated strokes.] To dull; to deaden; to blunt; to turn, as an edge; as, to *retund* the point or edge of a cutting instrument.

Return, *v. n.* (*imp.* and *pp.* RETURNED.) [Fr. *retourner*, from Lat. *tornare*, to turn.] To turn back; to come or go back to the same place, position, or condition; as, *returning* home, to *return* to a subject of conversation, &c.—To come again; to revisit; as, our hopes *return*.—To revert; to answer; to reply.

"He said, and thus the queen of heav'n returned." —Pope.

—To retort; to recriminate; to retaliate; as, you *return* upon me without cause.—To appear or begin again after a periodical revolution; as, seasons *return* with the year.

—*v. a.* To cause to turn or go back; to bring, carry, or send back; as, to *return* a borrowed umbrella.—To repay; to give back in payment; as, to *return* money lent to one.—To requite; to give in recompense, or as equivalent.—To give or send back in reply; as, to *return* an answer.—To tell, relate, report, or communicate.—To retort; to recriminate; as, to *return* a sarcasm.—To give in an account or statement; to give or send by way of official report; as, to *return* a list of killed, wounded, and missing.—To give back to a tribunal or to an office; as, to *return* a writ.—To send; to transmit; to convey.

To return to our muttons. [Fr. *revenir à nos moutons*.] To come back to the point; to return to the same subject; to resume the thread of one's discourse;—used as a proverbial colloquialism.

—*n.* Act of returning (intransitive) or coming back to the same place, position, or condition; as, the *return* of an anniversary, the *return* of long absent friends, the *return* of health and strength, &c.

"He takes little journeys, and makes quick returns." —Dryden.

—Act of returning (transitive) or sending back to the same place, position, or condition; restitution; repayment; requital; retribution; as, the *return* of a borrowed article, *return* of ingratitude for favors granted.

&c.—That which is returned; as, (1.) A payment; a requital; a remittance; as, yearly *returns* of money. (2.) A reply; an answer; a response; as, the *return* to one's question. (3.) An official account, report, or statement; a formal report or numerical statement; as, election *returns*, census *returns*, the *return* of killed, wounded, &c. (4.) Profit; advantage accrued; gain, on an investment, undertaking, and the like; as, on the principle of small profits and quick *returns*, the business yields a handsome *return*.

—pl. A kind of light-colored, mild smoking-tobacco.

(*Arch.*) A projection, moulding, or wall continued in a different or an opposite direction to that of the original direction of the body returned.

(*Law.*) The recital by the sheriff, or other officer, to whom a writ has been directed requiring him to do something, of the manner in which the order has been executed. This is indorsed on the writ, which is then returned to the court from which it issued on the "return day," or day when it is returnable.

(*Mil. and Naval.*) An official report, account, or statement, made or given to a commanding, or other superior, officer; as, a *return* of men fit for duty, a *return* of stores, &c., a *return* of soldiers, or sailors, on the sick-list.

—v. a. To turn again, or in the contrary or opposite direction; to reverse.

Returnable, a. That may be returned or restored. (*Law.*) That is legally to be returned, delivered, given, or rendered; as, a *returnable* verdict.

Return-day, n. (*Law.*) The day whereon a defendant is to appear in court, and the sheriff is to return the writ and his proceedings.

Return'er, n. One who returns, restores, or gives back.

Retuse', a. [*Lat. retusus, from retundere.*] (*Bot.*) Applied to leaves terminating in a semi-circular end, the centre of which is somewhat indented.

Retz', JEAN FRANÇOIS PAUL DE GONDI, Cardinal de, B. at Montmirail, France, 1613; became coadjutor to his uncle, the archbishop of Paris; and, after many intrigues, and fighting several duels, he was made archbishop of Corinth, and cardinal. He conspired against the life of Cardinal Richelieu, and took a prominent part in opposing Mazarin during the minority of Louis XIV. At length Mazarin, who both hated and feared him, imprisoned him in the castle of Vincennes, then at Nantes, whence he escaped, and travelled through Holland, Flanders, and England. In 1675 he wished to give up his cardinal's hat, and retire from the world, but the Pope would not receive it; and as the latter years of his life were some amendment on the past, he D. regretted, at Paris, in 1679. He was daring, turbulent, and intriguing; and in his *Memoirs*, which were written by himself during his retirement from the busy scenes of public life, he has drawn his own portrait with considerable skill and impartiality.

Reuben. [*Heb., behold a son.*] (*Script.*) The eldest son of Jacob by Leah (*Gen. xxix. 32, xxxv. 23, xvi. 8*). His improper intercourse with Bilhah, his father's concubine wife, was an enormity too great for Jacob ever to forget, and he spoke of it with abhorrence even on his dying bed. For his conduct in this matter, Jacob, in his last blessing, deprived him of the preëminence and double portion which belonged to his birthright, assigning the former to Judah, and the latter to Joseph. The doom, "Thou shalt not excel," was exactly fulfilled in the destinies of the tribe descended from Reuben, which makes no figure in the Hebrew history, and never produced any eminent person.

Reunion, n. [*Fr. réunion.*] Union formed anew after separation or discord—A meeting or assembly.

Rénion. See BOURBON, ISLE OF.

Reunite, (re-yu-nit'), v. a. To unite again; to join after separation.—To reconcile after variance.

—v. n. To be united again; to join and cohere.

Reunitedly, adv. In a reunited manner.

Reurge', v. a. To urge anew.

Reus, (rai'us), a town of Spain, prov. of Tarragona, 8 m. W. of Tarragona. Manuf. Silks, cottons, leather, hats, brandy, and liquors. Pop. 26,000.

Renss, (roiss), a river of Switzerland, rising on the S. side of Mount St. Gothard, and after a N. course of 30 m., falling into the Lake of Lucerne.

Renss, a principality of N. Germany, in Upper Saxony, divided into two parts, one adjoining Bavaria and the other Prussia, between Lat. 50° 28' and 51° 3' N., Lon. 11° 25' and 12° 20' E.; area, 458 sq. m. The surface is hilly, and the soil generally fertile. Rivers, Saale, and the Elster.

Reuss'ite, REUSS'ITE, n. (Min.) Anhydrous sulphate of soda and magnesia, occurring in crystals and in mealy efflorescences, near Seidlitz, in Bohemia.

Reutlingen, (rout'ling-en), a fortified town of Germany, in Wurtemberg, on the Eschach, 20 m. S. of Stuttgart. Manuf. Woollen, linen, and cotton stuffs, and lace, leather, paper, &c.

Revaccinate, (vák'sin-ál), v. a. To vaccinate again, or a second time.

Revaccination, n. A renewed vaccination.

Revaluation, n. A second, or renewed valuation.

Reveal, (re-vél'), v. a. [*Lat. revelo, from re, again, back, and velo, to veil.*] To disclose; to divulge; to discover; to make known, as something before unknown or concealed.—To communicate, or make known from heaven.

Revealable, a. That may be revealed.

Revealableness, n. The state or quality of being revealable.

Revealed', a. Disclosed; made known; laid open.—Communicated from heaven.

Revealer, n. One who, or that which, reveals; as, revealed religion.

Revelment, n. Act of revealing or disclosing; revelation. (R.)

Reveille, (re-vál'yā), n. [*Fr. reveiller, to awake.*] (*Mil.*) The beating of drums or sound of trumpets at daybreak in all garrisons, after which sentries do not challenge till the following retreat. See RETREAT.

Revel, v. n. [*Fr. reveiller.*] To feast with loose and clamorous merriment; to carouse.

—n. A feast with loose and noisy jollity; a carousal.

—v. a. [*Lat. revello.*] To pull or draw back.

Revel, a town of France, dept. of Haute-Garonne, 30 m. E.S.E. of Toulouse. Manuf. Linen, woollen, hosiery, and caps. Pop. 6,000.

Revel, a fortified seaport-town of Russia, govt. of Esthonia, on a small bay of the Gulf of Finland, 200 m. W.S.W. of St. Petersburg; Lat. 59° 26' 5" N., Lon. 24° 43' 2" E. It has an excellent harbor.

Revelation, n. [*Lat. revelatio.*] Act of revealing or of disclosing to others what was before unknown to them; communication; discovery.—That which is disclosed or revealed.

(*Theol.*) The preternatural communications of his mind and will made by the Deity to man, more particularly as contained in the books of the Old and New Testaments.

Book of R. (Script.) See APOCALYPSE.

Revel'ent, a. Causing revulsion.

Revel'er, n. One who revels or feasts with noisy merriment; a carouser.

Revel'ing, n. A feasting with noisy merriment; revelry.

Revello, (rai-vail'lo), a town of Italy, prov. of Coni, 20 m. N.N.W. of Coni; pop. 5,300.

Revelry, n. Noisy festivity; clamorous jollity.

Revendicate, v. a. [*Fr. revendiquer, from re, again, and vindiquer; Lat. vindico, to lay claim to.*] (*Civil and French Law.*) A claim legally made to recover.

Revendication, n. [*Fr.*] (*Civil and French Law.*) A claim legally made to recover property, by one claiming as owner.

Revenge, v. a. [*Fr. revancher, from Lat. re, and vindicare, from vis, vim, power, authority, and dico, to say, to assert.*] To inflict pain or injury upon in return for an injury received.—To vindicate by punishment of an enemy; to avenge.—To wreak one's wrongs on him who inflicted them;—with the reciprocal pronoun, or in a passive sense.

"Revenge yourselves alone on Cassius."—*Shaks.*

—v. n. To take vengeance.

—n. [*Fr. revanche.*] Return of an injury; infliction of punishment in return for an injury or offence.—The passion which is excited by an injury done or an affront given.

Revenge'able, a. Capable of being revenged.

Revenge'ance, n. Revenge. (R.)

Revenge'ful, a. Full of revenge, or a desire to inflict pain or evil for an injury received; malicious; spiteful; vindictive.

Revenge'fully, adv. By way of revenge; vindictively; with the spirit of revenge.

Revenge'fulness, n. State or quality of being revengeful, vindictiveness.

Revenge'less, a. Without having revenge; unrevengeful.

Reven'ger, n. One who revenges; one who inflicts pain on another spitefully, in return for an injury.—One who punishes crime; an avenger.

Revenge'ingly, adv. With vengeance; vindictively.

Revenue, (rev'e-nu), n. [*Fr. revenu, from revenir; Lat. revinco.*] The annual rents, profits, interest, or issues of any species of property belonging to an individual or to the public.—The annual produce of taxes, excise, customs, duties, rents, &c., which a nation or state collects and receives into the treasury for public use.

Revenue-cut'ter, n. A small, swift, armed government vessel, employed to prevent smuggling, and the unlawful clearance of vessels, and generally to assist the officers of the revenue.

Revenue-officer, n. A custom-house officer.

Reverberant, a. Resounding; reverberating.

Reverberate, v. a. [*Lat. reverbero, from re, and verbero, to whip.*] To send or drive back; to return, as sound; to resound.—To heat in an intense furnace, where the flame is reverberated on the matter to be melted or cleaned.

—v. n. To be driven back; to be repelled.—To echo, as sound; to resound.

Reverberation, n. [*Fr.*] Act of reverberating, or of driving or sending back.

(*Physics.*) The driving back or reflecting of one body by another on which it impinges, as of waves of sound, by arched and other surfaces, whereby echoes are produced, or of flame from the top of glass and reverberatory furnaces.

Reverberatory, a. That reverberates; returning or driving back.

R. furnace. A furnace in which the flame is made to pass over a bridge, and then beat down again upon a hearth or surface, on which the materials to be heated are placed.

—n. A reverberatory furnace.

Revere, PAUL, a patriot of the American Revolution, was born in Boston in 1735. He took an active part in the destruction of the tea in Boston harbor, and is famous for his midnight ride to Concord to warn the colonists of the coming of the British troops. He was one of the earliest American engravers. Died in 1818.

Revere', v. a. [*Fr. révérer, from Lat. revereor, from re, and vereor, to fear.*] To regard with fear, mingled with respect and affection; to venerate; to reverence.

Revere, (rai-vair'ai), a town of Italy, prov. of Mantua on the Po, 16 m. S. of Mantua; pop. 7,500.

Reverence, n. [*Fr., from Lat. reverentia.*] Fear mingled with respect and esteem; honor; homage; high respect.—An act of respect or obedience; a bow or courtesy.—A title of the clergy; as, his *reverence*.

—v. a. To regard with reverence; to revere; to venerate; to honor.

Reverenceer, n. One who regards with reverence.

Reverend, a. [*Fr., from Lat. reverendus—revereor.*] Worthy of reverence; entitled to respect, mingled with fear and affection.

(*NOTE.*—*Reverend* is frequently in this country, and in England invariably, used as a title of respect given to the clergy or ecclesiastical body. Thus, a clergyman of the rank of rector, incumbent, vicar, or curate is styled *reverend*, a dean *very reverend*, a bishop *right reverend*, and an archbishop *most reverend*. In Roman Catholic countries, the members of all religious orders are styled *reverend*.)

Reverent, a. [*Lat. reverens.*] Expressing reverence, veneration, or submission.—Inclined to revere; impressed with veneration; submissive; humble; meek.

Reverential, (rê-ver-en'shal), a. Proceeding from reverence, or expressing it; as, *reverential* awe, *reverential* esteem.

Reverentially, adv. In a reverential manner; with reverence or show of reverence.

Reverently, adv. In a reverent manner; with reverence; with veneration or respectful regard;—also, with fear of what is great or terrifying; as, to bow *reverently*.

"Chide him for faults, and do it *reverently*."—*Shaks.*

Rever'er, n. One who reveres or venerates.

Reverie, Revery, (rê-ver-ê, rê-ver-ÿ), n. [*Fr. rêverie, from rêver, to dream, to muse, to rave.*] A loose or irregular train of thoughts occurring in musing or meditation; wild, extravagant exaltation or conceit of the fancy or imagination; as, to be wrapped in a *reverie*.—A chimera; a vision.

(*Med.*) Voluntary inactivity of the whole, or the greater part, of the external senses to the impressions of surrounding objects during wakefulness.

Reversal, a. [*From reverse.*] A change or overturning; as, the *reversal* of a judgment or an attainder.

Reverse, v. a. [*Lat. revertor, reversus—re, and verto, to turn.*] To turn back or over; to cause to return or depart; to cause to face in a contrary direction.—To turn or put in the contrary order, direction, position, or condition; to alter to the opposite; as, to *reverse* a sentence.

"Affections quite *reverse* the soul."—*Pope.*

—To overset; to invert; to turn end for end, or upside down; as, a *reversed* pyramid.—To subvert; to overthrow; to overturn; as, the *reversed* constitution of a state.—To put, as each in the place of the other; as, the case is *reversed*.

(*Law.*) To change by a contrary decision; to make void, as a sentence; as, to *reverse* a judgment or decree. To *reverse* an engine. (*Steam-eng.*) To cause an engine or locomotive to perform backward motion, or revolutions in the opposite direction.

—n. [*Fr. revers.*] That which is reversed; a contrary; an opposite; as, sense is the *reverse* of nonsense.—The opposite; that which appears or is presented when anything is reverted or turned back.—Utter change; total opposition in characteristic circumstances or qualities; vicissitude; turn of affairs;—particularly, a change from better to worse; misfortune;—infrequently, a change for the better; good fortune; as, life is a chronicle of *reverses*.

(*Numis.*) The back side;—specifically, the reverse of a medal or coin opposite to that on which the head or principal figure or effigy is impressed, and which is called the *obverse*.

—a. Turned backward; having the contrary or opposite direction; as, in *reverse* order.

R. bearing. (*Survey.*) The bearing of a course, taken from the second end of the course, looking backwards.—*R. fire.* (*Mil.*) A fire in the rear;—also, a discharge which strikes the interior slope of a parapet at any horizontal angle greater than 30°.—*R. operation.* (*Math.*) An operation in which the steps are the same as those in a direct operation, but are taken in a contrary order.

Reversed, (-verst'), p. a. Turned side for side, or end for end; changed to the contrary;—hence, *overthrown*, *annulled*; as, a *reversed* judgment in a suit.

(*Conch.*) Sinistral.

(*Bot.*) Resperate; as, a *reversed* corolla.

Reversedly, adv. In a reversed manner.

Reverse'ly, adv. On the opposite; on the other hand; conversely.

Reverse'less, a. Irreversible. (R.)

Revers'er, n. One who, or that which, reverses.

Reversible, a. [*Fr.*] That may be reversed; as, a *reversible* sentence.

Revers'ing, p. a. Turning the contrary way;—also, annulling.

R. gear. (*Mach.*) The apparatus for reversing the motion of a marine or locomotive engine, by changing the time of action of the slide-valve. The eccentric being in advance of the crank for the forward motion, will, if turned to an equal distance behind the crank, produce a backward motion.—*R. handle and guide.* The handle placed beside the foot-plate conveniently for use when required. The guide is a quadrant fixed to the foot-plate, notched for the end of the reversing-handle for each variation of the expansive gear. To reverse the engine, the handle is removed to any notch past the centre of the guide on the opposite side to

which it was before. Expansion is varied by moving the handle from one notch to another notch on the same side of the centre of the guide from which the engine is working. When the handle is on the centre notch, the handle is said to be *out of gear*. — *R. lever*. The lever connected to a crank on the reversing-shaft of the steam-engine by a rod, and placed at the side of the fire-box between guide-plates with notches to keep it vertical, or in the forward or backward position. — *R. shaft*. The shaft, with levers attached, connected with the eccentric rods in the *rocking-shaft class*, but with the slide-valve rod in the *expansion class* of steam-engines. Both arrangements effect the object of moving the slide-valve so as to admit steam to the contrary side of the piston to which it had previously been admitted, and thus reverse its motion, and with it the motion of the engine also. — *R., or air, valve*. A valve applied to steam-boilers for the purpose of preventing the formation of a vacuum when the steam is condensing in the boiler.

Reversion, (-ver'shun,) *n.* [Fr.; Lat. *reversio*.] Return; act of reverting or returning. (R.)

(Law.) The returning of an estate to the grantor or his heirs, after a particular grant is ended; — hence, the residue of an estate left in the grantor, to commence in possession after the determination of the particular estate granted.

— Hence, possession; right to future possession or enjoyment; as, to purchase the *reversion* of an official place.

(Insurance.) A payment which is not to be received, or a benefit which does not begin, until the happening of some event, as the death of a person now living. Payments which are to be received at the end of a specified period of time are usually called *deferred payments*.

Reversionary, *a.* Pertaining to a reversion, that is, to be enjoyed in succession, or after the determination of a particular estate.

Reversioner, *n.* The person who has a reversion, or who is entitled to lands or tenements after a particular estate granted is determined.

Rever'sis, *n.* A game at cards.

Revert, *v. a.* [Lat. *revertor*, from *re*, back, and *verto*, to turn.] To turn back; to turn to the contrary; to reverse; to drive or turn back.

(Math.) To take in a contrary order, as the terms of a series.

— *v. n.* To return; to fall back.

(Law.) To return to the proprietor after the determination of a particular estate.

— *n.* (Mus.) Return; recurrence.

Revertent, *n.* (Med.) A medicine which restores the natural order of inverted motion in the body.

Revert'er, *n.* A person who, or thing which, reverts.

(Law.) Same as REVERSION, *q. v.*

Revertible, *a.* That may revert or return.

Revertive, *a.* Changing to an opposite course.

Revery, *n.* See REVERIE.

Revest, *v. a.* [Fr. *revêtir*; Lat. *revestio*, from *re*, again, and *vestio*, to clothe.] To clothe anew. — To vest again, or a second time; reinvest.

Revet, *v. a.* (Fort.) To face the sides of with masonry, &c.

Revetement, *n.* (Fort.) A facing to the steep sides of a ditch or parapet. In field-works it may be of timber, turf, hurdles, gabions, &c.; in permanent works it is generally of masonry.

Revibrate, *v. n.* To vibrate again.

Revibration, *n.* A vibrating back, or again.

Revictual, (-rev-it'l,) *v. a.* To stock with victuals again.

Revictualing, (-rev-it'l-ing,) *n.* The supplying again with victuals or provisions. — The stock or supply of provisions.

Review, (-re-vu,) *v. a.* [Fr. *revoir*, *revu*.] To view and examine again; to look back on. — To reconsider; to revise; to examine again. — To examine the state of anything, particularly of troops; to inspect. — To examine critically, as a new publication. — To retrace; to go over again.

— *v. n.* To look back.

— *n.* [Fr. *revue*.] A second or repeated view.

— A second examination, with a view to amendment or improvement; re-examination; revision; revisal.

(Mil.) An examination or inspection of troops under arms by a general or commander.

— A critical examination of a new publication, with remarks; a critique. — A periodical publication, consisting of a collection of critical essays; as, the *Edinburgh Review*.

Reviewable, (-re-vu'a-bl,) *a.* Capable of being reviewed.

Review'al, *n.* A review of a book; a critique.

Reviewer, (-re-vu'er,) *n.* One who reviews, or re-examines; an inspector. — One who critically examines a new publication, and publishes his opinion upon its merit.

Revigorate, *a.* Having renewed vigor or strength. (R.)

Revile, *v. a.* To regard or treat as vile; to treat with opprobrious and contemptuous language; to reproach; to vilify.

Revilement, *n.* Act of abusing or reviling.

Revil'er, *n.* One who reviles another; one who treats another with contemptuous language.

Reviling, *n.* Act of reviling or treating with reproachful words.

Revilingly, *adv.* With reproachful or contemptuous language; with opprobrium.

Revin'dicate, *v. a.* To vindicate again; to reclaim; to demand and take back what has been lost.

Revis'al, *n.* Revision; act of reviewing and re-examining for correction and improvement.

Revise, (-vîz,) *v. a.* [Lat. *reviso* — *re*, and *viso*, to look

at with attention.] To review; to re-examine; to look over with care for correction; to reperuse; as, to *revise* a proof-sheet; to *revise* a manuscript. — To review, alter, and amend; as, to *revise* a statute of limitations.

— *n.* Review; revision; re-examination; as, corrections and *revisions*. (R.)

(Print.) A proof-sheet taken after the first correction.

Revis'er, *n.* One who revises, or re-examines for correction.

Revision, (-vîsh'un,) *n.* [Fr., from Lat. *revisio*.] Act of reviewing, or re-examining for correction; revisal; as, the *revision* of a book, or writing, or of a proof-sheet; a statutory *revision*, &c. — That which is revised; a *revisal*. — Enumeration of population. (R.)

Revisional, **Revis'ionary**, *a.* Revisory; pertaining or having reference, to revision.

Revisit, (-vîz'it,) *v. a.* [Fr. *révisiter*; Lat. *revisitare*.] To visit again.

Revisitation, *n.* Act of revisiting.

Revis'ory, *a.* [L. Lat. *revisorius*.] Revising; with power or disposition to revise.

Revivable, (-vîv'u-bl,) *a.* That may be revived.

Reviv'al, *n.* [From *revive*.] Act of reviving, or state of being revived; as, (1.) Return, recall, or recovery to life from death, or apparent death; return, or reanimation from a state of languor and inactivity. (2.) Return or recall to activity from a state of neglect, obscurity, oblivion, or depression; as, the *revival* of the arts, or of literature. (3.) Renewed and more awakened attention to, or interest in, religion and spiritual matters. (4.) Renewed application to, or pursuit or cultivation of; also, flourishing condition of, as commerce, agriculture, &c. (5.) Restored prevalence, prestige, or popularity of, as a custom or fashion.

(Chem.) Revivification, as of a metal.

(Law.) An agreement to renew the legal obligation of a just debt after it has been barred by the act of limitation or lapse of time. — The act by which a judgment which has been dormant, or without any action upon it for a year and a day, is, at common law, again restored to its original force.

Revivalism, *n.* The awakened or revived spirit of religion.

Revivalist, *n.* One who advocates or promotes revivalism, or a fresh awakening of religious spirit.

Revive, *v. n.* [Fr. *revivre*, from Lat. *re*, and *vivere*.] To live again; to return to life; to recover life, or new health, strength, or vigor; to be reanimated. — Hence, by analogy, to be reanimated after languor or depression; to recover from a state of neglect, oblivion, obscurity, or depression; as, my hopes *revive*.

(Chem.) To regain its natural or metallic condition, as a metal.

— *v. a.* To bring to life anew; to resuscitate; to reanimate; to raise or restore from languor, depression, or discouragement; to refresh; to renew; to renovate; to bring into action after a period of suspension, as a plan or scheme. — Hence, to bring out or redeem from a state of neglect, depression, or obscurity; as, to *revive* letters, learning, or the arts. — To bring back into the mind or memory, as ideas; to inspire with new animation, hope, or activity; to awaken; to direct attention to; to bring again into notice; as, *revived* recollections, to *revive* a scandalous story, to *revive* a custom, habit, fashion, &c.

(Chem.) To restore to its natural state; to reduce to its metallic condition; — said of metals.

Reviv'er, *n.* One who, or that which, revives or reanimates; that which invigorates or refreshes; one who redeems from neglect or depression.

Reviv'ifcate, *v. a.* [Fr. *revivifier*; Lat. *revivificare*.] To revive or reanimate; to recall or restore to life. (R.)

Revivification, *n.* Act of recalling to life; renewal or restoration of life.

(Chem.) The restoration of a metal from a state of combination to its natural metallic condition.

Revivify, *v. a.* [Fr. *revivifier*, from Lat. *re*, *vivus*, alive, and *fy*, from *facio*, to make.] To reanimate; to revive; to give new life or vigor to.

Reviv'ingly, *adv.* In a reviving manner.

Reviviscence, **Reviviscency**, (-vîv-is'sens,) *n.* [Sp. *reviviscencia*.] State of being revived; renewal of life.

"Scripture makes mention of a *reviviscency* of all things." Burnet.

Revivis'cent, *a.* [From Lat. *reviviscere*, to come to life again.] Reviving; having power or disposition to revive.

Reviv'or, *n.* (Law.) A bill used to renew an original bill which, for some reason, has become inoperative.

Revocability, *n.* Quality of being revocable; capacity of being recalled, revoked, or annulled.

Revocable, *a.* [Fr., from Lat. *revocabilis*.] That may be recalled or revoked; as, a *revocable* grant.

Revocableness, *n.* Revocability; quality of being revocable.

Revocably, *a.* In a revocable manner.

Revocation, *n.* [Fr., from Lat. *revocatio*.] Act of revoking or of calling back. — State of being recalled or revoked. — The calling back of a thing granted, or act done; repeal; reversal; as, the *revocation* of an edict, will, license, &c.

Revocatory, *a.* [Fr. *révocatoire*, from Lat. *revocatus*.] Serving to revoke; involving, or pertaining to, revocation; recalling; revoking.

Revoc'e, *v. a.* To resupply with a voice; to restore, as the proper tone of an organ.

Revoke, *v. a.* [Fr. *révoquer*; Lat. *revoco* — *re*, back, and *voeo*, to call.] To annul by recalling or taking back; to repeal; to reverse; to countermand; to declare void, as a law, grant, testament, privilege, license, permission, &c.

Revoke, *v. n.* (Games.) In playing whist, to renounce;

to fail or neglect to follow suit; as, a good whist-player never *revokes*.

— *n.* (Games.) In whist, the act of revoking, or neglecting to follow with a suit-card.

Revoke'ment, *n.* Revocation; reversal; annulment.

Revok'ingly, *n.* By way of revocation.

Revolt, *v. a.* [Fr. *révolter*; Lat. *revolvere*, *revolutus*.] To roll off or back; to turn back or away; — specifically, to fall off or turn from one to another; to renounce allegiance and subjection to one's sovereign or state; to reject legal or national authority. — To be excessively shocked or offended; — with *at*; as, his palate *revolts* at coarse food.

— *v. n.* To put to flight; to overthrow; to overturn. — To shock; to do violence to; to cause to shrink or turn away with loathing, abhorrence, or disgust; as, his pride *revolted* at the idea of meanness.

— *n.* Act of revolting; — particularly, a renunciation of allegiance or fealty to one's sovereign, state, or government; insurrection; rebellion; mutiny; sedition; as, the *revolt* of the Netherlands against the Spanish yoke.

Revolt'er, *n.* One who, or that which, revolts.

Revolt'ingly, *adv.* In a revolting manner; abhorrently; offensively.

Revolute, *a.* [Lat. *revolubilis*, from *revolvere*.] Rotatory; that may revolve. (R.)

Revolute, *n.* [Fr., from Lat. *revolutus* — *revolvere*.] (Bot.) Rolled downward or backward.

R. leaf. (Bot.) A leaf which, in embryo or development, is rolled spirally back, or toward the lower surface.

Revolution, (-lū'shun,) *n.* [Fr., from Lat. *re*, and *volvo*, to roll.] Act of revolving, or turning round on a centre or an axis; rotation; motion of a body round any fixed point or centre; rotary action; as, the *revolutions* of a wheel. — Motion or course of anything which brings it back to the same point or state. — Continued course marked by the regular return of years; space measured by some regular return of a revolving body or of a state of things; as, the *revolutions* of time. — A total or radical change; a sweeping or absolute alteration; as, a *revolution* in public opinion.

(Pol.) An extensive, or entire, change in the political constitution of a country accomplished in a short space of time, whether by legal or illegal means; a revolt successfully carried out; a fundamental change or subversion in political organization; as, the French *Revolutions* of 1792, 1830, and 1848, the English *Revolution* of 1688, the American *Revolution*, &c.

(Astron.) A term used to denote the motion of a secondary body round a primary one, as contradistinguished from *rotation*, which signifies motion round an axis. The *time of revolution* is the period in which a planet, satellite, or comet returns to the place in its orbit from which we estimate its setting out.

(Mech.) See ROTATION.

(Geom.) A surface generated by the motion of a line, right or curved, around a fixed axis. Thus the surface generated by the motion of one right line around another is either a *cone*, or a *hyperboloid of revolution*, according as the two lines do or do not intersect each other. The motion of an ellipse around one of its axes generates an *ellipsoid of revolution*, which receives the name of *prolate* or *oblate spheroid*, according as the major or minor axis remains fixed. (Also called *surface of revolution*.)

Revolutionary, *a.* [Fr. *révolutionnaire*.] Pertaining, or relating, to a revolution in political or social constitution or government; tending to cause or promote a revolution; as, a *revolutionary* war, *revolutionary* principles.

— *n.* A revolutionist. (R.)

R. tribunal. (French Hist.) A tribunal for the trial of political offenders, established Aug. 17, 1792, was dismissed Nov. 30. The National Convention was induced by Robespierre and the Montagnards, or Red Republicans, March 10, 1793, to restore it with additional powers. During the trial of the Girondists, its name was changed from *Extraordinary* to *Revolutionary Tribunal*, Oct. 30, 1793. Between the date of its establishment and July 27, 1794, a period of 16 months, no less than 2,730 persons were condemned to the guillotine by this infamous tribunal, the last victims of which were Robespierre and his accomplices, July 28–30, 1794. A third tribunal, reorganized Aug. 9, 1794, was replaced, Dec. 24, by a fourth, which was dissolved June 2, 1795.

Revolution'er, *n.* Same as REVOLUTIONIST.

Revolutionism, (-lū'shun-izm,) *n.* State of being in a state of revolution. — Revolutionary doctrines; radical principles.

Revolutionist, *n.* One engaged in bringing about a change of constitution or government; one who favors or supports a revolution; a revolutioner or revolutionary.

Revolutionize, *v. a.* To effect a revolution or change in the form of, as of a political constitution or state government; one who brings about any complete or radical change; as, to *revolutionize* public taste or sentiment.

Revolve, *v. a.* [Lat. *revolvere* — *re*, and *volvo*, to roll.] To roll in a circle; to rotate; to turn round, as on an axis or pivot; to gyrate; as, a *revolving* wheel or top. — To move round a centre; as, the earth *revolves* round the sun. — To return; as, *revolving* years.

— *v. n.* To cause to turn, or roll round, as upon an axis; to rotate. — Hence, analogically, to turn over and over; to consider attentively; to meditate continuously upon; as, to *revolve* a subject in one's mind.

Revolve'ment, *n.* Act or process of revolving, or turning over and over in the mind; as, after much *revolve'ment* he came to a resolution.

Revolve'ncy, *n.* Act, operation or condition of revolving; revolution.

Revolver, n. One who, or that which, revolves.

(*Five-arms.*) A pistol with several chambers or barrels, which are brought successively under the action of the trigger, or percussion arrangement, so that several shots can be fired without the necessity of reloading. The system of revolving fire-arms is not as modern as it is generally believed. A specimen arm of the 17th cent., in the Hôtel Clugny, at Paris, has eight chambers; and a brass pistol with six chambers, and supposed to be of the time of Charles I., forms part of the collection in the United Service Museum, London. But these arms, extraordinary for the time, never came into general use, in consequence of their unavoidable clumsiness, (each chamber having its own hammer and pan,) and the inconvenience of keeping these primed. Samuel Colt (*q. v.*) directed his attention to improved pistols, and patented the *R.* which bears his name in 1835. The Colt's *R.*, which is largely used in the U. S. army, consists of one rifled barrel of considerable strength, and a massive chamber, perforated with 6 or 7 chambers, which are brought into a line with the barrel by action of the trigger. Each chamber has its nipple for a cap, which is brought under the hammer by the motion which brings the chamber or breech-piece round. The hammer is discharged by the trigger, and acts nearly horizontally in a forward direction. Under the pistol is a fixed lever-ramrod, which is used in loading the chambers. This mechanism enables a combatant to be on a tolerably fair footing with a party who have the command of six single-barrel guns. Besides all this, by withdrawing a bolt, which can be done in a moment, the entire breech-piece can be taken out, and replaced by another ready charged, so that, by carrying a spare breech-piece, a person may fire twelve shots in less time than another could fire three, if he had to load between the shots. The only objection to Colt's revolver was the necessity of stopping at every fire to cock the piece for the next shot. The pistol made by Savage, at Middletown, Conn., meets the objection against the English self-cocking pistols of their aim being destroyed by the introduction of a double trigger, similar to the English

Fig. 2248. — TRANTER REVOLVER.

a, the chamber; b, hammer; c, trigger; d, spur for raising the hammer; e, lever-ramrod.

Tranter *R.*, one part of which is fitted for the middle finger, and the other for the forefinger of the right hand. A pull with the one brings the hammer up, and a fresh chamber round to its place. The pull being released, the pistol remains cocked, and the cylinder springs forward, making its connection with the barrel tight. The trigger may be instantly pulled with the forefinger, discharging the piece. These movements may be continued with rapidity till the 6 chambers are discharged, without removing the right hand from its place, or calling the other into use. This pistol, however, has not superseded the Colt, which, along with the Remington arm, is still in general use in the U. S. cavalry service. For close encounters, the small cartridge-loading pistols are the most recent, and much the most efficient, weapons. Several varieties of these have been brought out by American inventors, and are known as Smith and Wesson's, Warner's, and Allen's. They all have the revolving cylinder, which contains 7 chambers; and they differ from each other chiefly in the manner in which the cartridges are inserted into these chambers.

Revom'it, v. a. To vomit again, or a second time.

Revn'sion, (re-vul'shun,) n. [Fr., from Lat. *revulsio*, from *re*, again, and *vellō*, to pluck.] A holding or drawing back; abstraction.

(*Med.*) The act of turning the principle of a disease from the part in which it seems to have taken its seat to some other part of the body.

Revol'sive, a. [Fr. *révulsif*.] Having the power of revulsion.

—*n.* That which has the power of withdrawing

(*Med.*) A medicine which produces a revulsion.

Rewake', v. a. and n. To wake again, or anew.

Reward', v. a. [A. S. *a* for *on*, and *ward*, or *worth*, worth, price.] To return worth or value to, or for; to give in return. — To repay; to recompense; to requite; to compensate; — usually in a good sense.

—*n.* Equivalent return for good done, for kindness, for services, and the like; the fruit of men's work or labor. — A just return of evil or suffering for wickedness; retribution; punishment.

Reward'able, a. Capable of being rewarded.

Reward'ableness, n. Worthiness of receiving reward.

Reward'ably, adv. In a manner worthy of reward.

Reward'er, n. One who rewards; one who requites or recompenses.

Reward'ful, a. Accustomed to reward; recompensing. (*R.*)

Reward'ing, n. Act of bestowing a reward; recompense.

Reward'less, a. Without reward.

Reward', (re-wur'd,) v. a. To repeat with the same words.

Rewrite', v. a. To write again.

Re'yes, or CHINCHACO'CHA, a lake of Peru; Lat. 10° 25' S. Lon. 75° 40' W. It forms one of the principal sources of the Amazons.

Reyes, (Los,) (loce ra'yes,) a town of the U. S. of Colombia, abt. 100 m. S.E. of Santa Marta. The vicinity abounds in silver, copper, and lead mines.

Rey'nard, Reynard, n. [Fr. *renard*.] A name given to the fox, in fables and in poetry.

Reynolds, SIR JOSHUA, the greatest of English portrait-painters, was the son of the rector of Plympton, in Devonshire, where he was born, 1723. He was educated at the grammar-school of his native place, and early discovered a predilection for drawing, which induced his father to place him, at the age of 17, with Hudson, then the most famous portrait-painter in London, with whom he remained two years. After practising several years as a portrait-painter, he went to Italy, and on his return to London, 1763, his talent placed him at the head of English portrait-painters; and being a man of liter-

Fig. 2249. — SIR JOSHUA REYNOLDS.

ary ability and an amiable companion, he soon numbered among his intimate friends some of the most distinguished characters of the day. Rejecting the stiff, unvaried, and unmeaning attitudes of former artists, he gave to his figures air and action adapted to their characters. When the Royal Academy was instituted, in 1768, he was unanimously chosen president, and was knighted; and although it was no prescribed part of his duty to read lectures, yet his zeal for the advancement of the fine arts induced him to deliver annual or biennial discourses before the Academy on the principles and practice of painting. Of these he pronounced fifteen, from 1769 to 1790, which were published in two sets, and form a standard work. He was a member of the celebrated club which contained the names of Johnson, Garrick, Burke, and others of the first rank of literary eminence, and seems to have been beloved and respected by his associates. In 1773 the University of Oxford conferred on Sir Joshua the honorary degree of Doctor of Laws, and in 1784, he was appointed principal painter to the King. This great artist, unmarried, 1792, and was buried in St. Paul's Cathedral.

Reynolds, in Indiana, a post-town of White co., about 24 m. N. of Lafayette.

Reynolds, in Missouri, a S.E. co.; area, about 830 sq. m. River, Big Black river. Surface, uneven; soil, generally fertile. Cap. Centerville. Pop. (1897) 7,050.

Reynoldsburg, in Ohio, a post-village of Franklin co., about 10 m. E. of Columbus.

—A village of Pike co., about 8 m. E. of Piketon.

Reynoldsburg, in Tennessee, a village of Humphreys co., about 75 m. W. of Nashville.

Reynolds Fer'ry, in California, a village of Calaveras co., about 10 m. W. of Sonoma.

Reynoldsville, in New York, a village of Schuyler county.

Rezer'de, a town of Brazil, abt. 92 m. W.N.W. of Rio de Janeiro; pop. 6,000.

Rhabar'barate, a. Impregnated or tinctured with rhubarb.

Rhabdomancy, (rāb-do-mān'se,) n. [Gr. *rhabdos*, a rod, and *mantia*, prophecy.] Divination by a rod or wand, and generally applied to the power supposed to be possessed by some persons, of discovering things hid in the bowels of the earth, especially metals, ores, and bodies of water, or the art of discovering these substances by means of a divining-rod.

Rhadaman'thus, (Myth.) Same as MINOS, *q. v.*

Rhætia, (rē'sha,) (Anc. Geog.) The name given by the Romans to a part of Southern Germany and Switzerland, now known as Suabia and the Grisons.

Rhamna'ceæ, n. [Lat.; from *Rhamnus*, one of the genera.] (*Bot.*) The Buck-thorn family, an order of plants, alliance *Rhamnales*. DIAG. Polypetalous flowers, a valvate calyx, stamens opposite the petals, and erect seeds. They are small trees or shrubs, often spiny; distributed over the globe, except in the very coldest regions. Some are acrid and purgative; others bitter, febrifugal, and tonic. A few are used in the preparation of dye-stuffs, and a few have edible fruits. The order contains 42 genera and 250 species. See RHAMNUS.

Rham'nales, n. pl. (Bot.) An alliance of plants, subclass *Perigynous exogens*. DIAG. Monodichlamydeous flowers, consolidated carpels, axile placenta, capsular, berried, or drupaceous fruit, definite seeds, and an amygdaloid embryo, with little or no albumen. The alliance includes 10 orders. — PENEACEÆ, AQUILARIACEÆ, ULMACEÆ, RHAMNACEÆ, CHAILLETACEÆ, HIPPOCRATEACEÆ, CELASTRACEÆ, STACKHOUSIACEÆ, SAPOTACEÆ, and STYRACACEÆ, *q. v.*

Rham'nus, n. [Gr. *ramnos*.] (*Bot.*) The typical genus of the order *Rhamnales*. It includes many interesting and useful species. *R. catharticus*, the Buck-thorn, produces a fruit which has been for ages employed medicinally as a cathartic; at the present time it is seldom used, on account of its violent and unpleasant operation. The color called *sap-green* is prepared by evaporating the juice of buck-thorn-berries, previously mixed with lime. The bark of *R. frangula*, the Black Alder, possesses purgative and alterative properties, and is reputed to be efficacious in various cutaneous affections, rheumatism, secondary syphilis, &c. A greenish or yellowish dye is made from the leaves. The unripe fruit of *R. infectorius* is known in commerce as French berries, or *graines d'Avignon*; while those of *R. amygdalinus* constitutes Yellow or Persian berries. Both kinds are used to produce a beautiful yellow dye, chiefly applied to morocco leather. The Chinese green dye (*Lo-rao*), now much used in Europe, is prepared from *R. chlorophorus* and *utilis*. A blue dye is prepared from *R. alaternus*. In Abyssinia, the leaves of *R. paniculatus* and the fruit of *R. staddo*, both of which possess bitter properties, are used in place of hops in the preparation of beer.

Fig. 2250.

RHAMNUS CATHARTICUS.

Rhamphast'idæ, n. pl. (Zool.) See RAMPHASTIDÆ.

Rhapsodie, Rhapsodical, (rap-sod'ik,) a. [Gr. *rapsodikos*.] Pertaining to, or consisting of, rhapsody; unconnected.

Rhapsod'ically, adv. In the manner of rhapsody.

Rhapsodist, n. [Gr. *rhapsodos*, from *rhapto*, to string together, and *odē*, a song.] Strictly, one who strings songs together, but usually applied to a class of persons in ancient Greece, who earned their living by reciting the poems of Homer. It is believed that to these persons we are chiefly indebted for the preservation of the Homeric poems. In the present day, a rhapsodist is one who composes rhapsodies or collections of poetical effusions, descriptions, &c., strung together without any natural connection or necessary dependence.

Rhapsodize, (rap'so-dīz,) v. n. To utter or recite rhapsodies; to act as a rhapsodist.

Rhapsody, (rap'so-de,) n. [Fr. *rapsodie*; Gr. *rhapsodia*, from *rhapto*, to stitch together, and *odē*, a song.] Anciently, a portion of an epic poem fit for recitation at one time. — A confused jumble of sentences or statements, without dependence or natural connection; rambling composition.

Rhe'a, (Gr. Myth.) The daughter of Cœlus and Terra, or Heaven and Earth; the wife of Saturn, and mother of Jupiter, Juno, Ceres, Vesta, and several other deities. When Jupiter usurped the sovereignty of the skies, and expelled his father from the empyrean, Rhea followed her disrowned husband, Saturn, to earth, and when he founded a terrestrial kingdom in Italy, she exercised such benevolence and charity, so constantly promoted virtue, and was so beloved for her example and goodness, that, under her auspices, universal peace and happiness prevailed on earth, so as to obtain the appellation of the "Golden Age," or the reign of Rhea.

(*Zool.*) A genus of the Ostrich family. See OSTRICH. **Rhea, (ra,) in Tennessee,** an E. by S. central co.; area, about 500 sq. m. Rivers, Tennessee river. Surface, diversified and mountainous; soil, in some parts fertile. Min. Coal. Cap. Dayton. Pop. (1897) 13,960.

Rhea-fiber, n. See RAMIE, in SECTION II.

Rhen'ish, a. (Geog.) That relates to the Rhine.

—*n.* Wine of the vineyards near the Rhine.

Rheingau, (rīn'go,) a district of Prussia, stretching along the right bank of the Rhine, forming the S.W. portion of the former duchy of Nassau, is about 12 m. long, and 6 broad. The principal town is Elfeld, with abt. 2,200 inhabitants. This district, one of the richest in Germany, protected by mountains from the N. and E. winds, and exposed to the midday sun, produces wines of the best quality.

Rhen'ish Prussia. See PRUSSIA.

Rheom'etry, n. (Math.) The differential and integral calculus; fluxions.

Rhetian, (rē'she-an,) a. (Geog.) Relating to the ancient Rætii, or to the country RHÆTIA, *q. v.*

Rhetor, (rē'tor,) n. [Lat., from Gr. *retor*.] A rhetorician.

Rhetoric, (rē'to-rik,) n. [Fr. *rhetorique*, from Gr. *retorike*, from *retor*, a public speaker.] In the widest sense

in which the word is occasionally used by modern writers, the *art of prose composition* generally. In the most restricted and most etymological sense, the *art of oratory*, or of addressing public assemblies. In an intermediate sense, in which, perhaps it is most commonly employed, the *art of argumentative composition*. This comes nearest to the signification which Aristotle, the earliest extant writer of a formal treatise on *R.*, attached to the title of his subject, when he defined it to be the art of discovering and employing topics of persuasion. He arranged those topics, or means of persuasion, under three heads. First, those which arise from the character of the orator himself; *i. e.*, the character in which, by what must be termed *rhetorical artifice*, he places himself before his hearers. It is obvious that a speaker addressing an assembly, who is known by them to be actuated by honest motives, and to understand the subject on which he speaks, advances, by the mere possession of these adventitious attributes, a long way towards the end and aim of oratory, *viz.*, *persuasion*. Hence it is that Aristotle presents, as one of the chief branches of *R.*, the art by which a speaker or writer, as it were, invests himself with these attributes, and thus insures a more favorable reception to his argument. The art of moving the passions by the use of such arguments and representations as are proper to excite each, belongs also, in Aristotle's arrangement, to this division of his subject. In his second division he treats of argument itself, considered with respect to its cogency or inconclusiveness in point of form; and hence *logic*, in this point of view, becomes ancillary to, or a subdivision of *R.* The third division of the subject exhibits the modes of persuasion arising from style, arrangement, delivery, and action; and to this third branch modern writers, who have treated of *R.* in its more limited sense, have usually confined themselves.

Rhetorical, *a.* Pertaining to rhetoric; containing the rules of rhetoric; oratorical.

Rhetorically, *adv.* In the manner of rhetoric; according to the rules of rhetoric.

Rhetoricalness, *n.* The state or quality of being rhetorical.

Rhetorician, (*ret-o-rish'an*), *n.* [Fr. *rhétoricien*.] One who teaches the art of rhetoric, or the principles and rules of correct and elegant speaking; one well versed in the rules and principles of rhetoric.—An orator.

Rhetorize, *v. a.* To represent by a figure of oratory. (*R.*)

Rhet, (*ret*), *n.* In California, a lake of Sis Kiyon co.; Lat. 41° 50' N., Lon. 121° 30' W. It covers an area of abt. 100 sq. m., and its outlet empties into Klamath River.

Rheum, (*riim*), *n.* [Gr. *reuma*, from *reo*, to flow.] (*Med.*) Any thin, watery discharge from the mucous membranes or skin, as the thin discharge from the air-passages arising from cold.

Rheum, *n.* [Said to be derived from the *Rha* (now Volga), from whose banks it was first brought.] (*Bot.*) *Rhubarb*, a genus of the order *Polygonaceæ*. The species of this genus are all more or less remarkable for their purgative and astringent properties; and their roots, which contain the largest proportion of the active principles, are largely used as medicinal agents. The exact source of our officinal *rhubarb* has not been definitely ascertained. Dr. Roylo states that the *rhubarb* country, whence Turkey or Russian *rhubarb* is derived, is in the heart of Thibet, within 95° of E. Lon., and 35° of N. Lat.; but, as no naturalist has visited this part, and as neither seeds nor plants have been obtained thence, it is as yet unknown what species yields the *rhubarb*. It is known that the greater part of the *rhubarb* of commerce is grown in this district, and is obtained in summer, from plants six years of age. When dug up, it is cleansed, peeled, and cut into pieces; these are bored through the centre, strung on a string, and dried in the sun. In the autumn, the *rhubarb* is conveyed to Simiu, where the Bukharian traders reside, and thence to the Russian frontier-town of Kiachta, and to Peking, Canton, and Macao. This is unquestionably the best kind of *rhubarb*. Chinese, or East Indian *rhubarb*, is the produce of an unknown species of *R.*, cultivated in the Chinese empire. Himalayan *rhubarb* is obtained from several species, particularly *R. moorcroftianum*, *webbianum*, and *emodi*. English *rhubarb* is the root of *R.* Fig. 2251.—RHUBARB.

rhaponticum; it is now extensively employed in the hospitals of this country and in England, but it is not so active as the officinal *rhubarb*. The so-called "genuine Turkey *rhubarb*" sold in the streets by itinerant vendors is almost invariably English *rhubarb*. The leaf-stalks of *R. rhaponticum* and other species are largely employed as a substitute for fruit in pies and puddings. Their pleasant acidity is due to the presence of oxalic and malic acids. The leaf-stalks of *R. ribes* are used in the East in the preparation of sherbet. Crystals of oxalate of lime occur abundantly in the roots of the species of this genus.

Rheumatic, (*ru-mat'ik*), *a.* [Gr. *reumatikos*, subject to a discharge.] Pertaining to rheumatism, or partaking of its nature.

Rheumatism, (*ru-ma-tizm*), *n.* [Gr. *rheumatismos*, a defluxion.] (*Med.*) A painful disease characterized by an inflamed state of the fibrous tissue,—and wherever fibrous tissues are found there may be *R.*; but it principally affects the larger joints and places covered by muscles, as the wrists, elbows, knees, hip-joint, back, and

loins. When the joints about the back and loins are affected, it is called *lumbago*; when the pain is in the hip-joint, *sciatica*; and when the muscles of the chest are affected, *pleurodynia*. *R.* may occur either with fever or without it, being in the former case termed *acute*, in the latter *chronic*. Acute *R.*, or *rheumatic fever*, may happen at any time, but occurs more particularly in autumn, and affects chiefly such as are in the prime of life. It is generally occasioned by exposing the body to cold air immediately after having been heated, and commences with chilliness and shivering, which are soon followed by heat, restlessness, and other feverish symptoms. An acute pain is soon after felt in one or other of the limbs. This quickly increases, and in a short time is accompanied with swelling and great tenderness of one or more of the large joints, with much constitutional disturbance. The patient's sufferings are now of the most agonizing character. He is restless, and yet dare not or cannot move; even the weight of the bed-clothes can scarcely be borne. The pulse is full and bounding, the skin is generally bathed in perspiration of a disagreeable sour odor, the bowels are constipated, the urine scanty and high-colored, loaded with uric acid, or urates. This disease varies considerably in intensity and duration, and may terminate in a few days, or endure for several months. Its average duration, however, when uncomplicated with other diseases, is from ten to eighteen days. One remarkable feature of it is its tendency to move from one part to another, often suddenly leaving one joint and making its appearance in another, and again going back to its original seat. It is seldom, if ever, a fatal disease, except when it attacks some vital organ, as the heart, which in severe cases it is very apt to do. It is a constitutional disease, arising from a poison circulating in the blood. This poison constitutes that predisposition to the disease without which it would not occur, and the cold probably exercises its injurious influence by checking the elimination through the skin, and other excretories, of the poisonous principle as it forms, and by thus accumulating it in the blood. Medical men are by no means agreed as to the treatment best adapted for this complaint. In general, however, when the patient is young and robust, and when the inflammatory fever is high, bleeding from the arm is recommended. Whenever the pain is very acute, opium will be found to be a very useful and necessary remedy. The free administration of active purgatives, particularly at the outset of the disease, is found to be very beneficial. Alkaline drugs are by many strongly recommended in this disease as being chemical antagonists of the poison. The chronic form of *R.* is sometimes the sequel of the acute, but it is more commonly a separate constitutional affection, coming on independently of any previous acute attack. There is commonly little constitutional disturbance, but the sufferer is constantly annoyed, and his existence made miserable, with chronic pains, which destroy his comfort by day and render him restless by night. In some instances, the pains are worst at night, being aggravated by the warmth of the bed; in others, warmth affords the greatest relief. The cure of this complaint is tedious, and often very difficult. It frequently involves and cripples some of the smaller joints, especially those of the knuckles and fingers, rendering them knobby, and distorting their form and position. It is of the utmost importance in such cases that the patient be protected from the vicissitudes of the weather by warm clothing; and those who can afford it do well by taking up their residence in a warm climate. Warm bathing, vapor and hot-air baths, with frequent friction and the use of the flesh-brush, are of great service, and stimulating internal medicines, as turpentine, are often of use. Cod-liver oil is also sometimes recommended, with bark, wine, iron, and other tonics, for invigorating the system. Persons subject to chronic *R.* should also be very careful in their diet, as there is little doubt that many of the paroxysms of this disease are brought on by a disordered state of the digestive organs. Salicylic acid has of late been recommended as a cure for *R.*

Rheny, (*räm'y*), *a.* [From *rheum*.] Full of rheum or watery matter; partaking of the nature of, or affected with, rheum; causing rheum; abounding with serous moisture; as, *rheny* eyes.

Ribes, *n.* (*Bot.*) A gen. of plants, ord. *Melastomaceæ*. *R. Virginia*, the Meadow Beauty or Deer-grass, and *R. mariana*, the Maryland Deer-grass, are perennial herbs, growing in wet grounds and sandy bogs in all the States.

Rhinal, (*ri'nal*), *a.* [Gr. *rhis*, *rhinos*, the nose.] Pertaining, or having reference, to the nose.

Rhinanthus, *n.* [Gr. *rhis*, *rhinos*, snout, and *anthos*, flower.] (*Bot.*) A genus of annual weeds, order *Scrophulariaceæ*. The common species *R. cristo galli*, or *R. minor*, which grows in pastures throughout the United States, is known as the Yellow Rattle.

Rhin, (*Bas*), [Fr. Lower Rhine,] a former N.E. dept. of France, now part of the German Reichsland of Alsace-Lorraine, bounded W. by the depts. of Moselle, Meurthe, and Vosges; area, 1,755 sq. m. The surface is diversified, well wooded, and generally fertile. Rivers, Lauter and Moder. *Prod.* The usual cerealia, vegetables, and fruits; also, tobacco and hemp. Large quantities of Rhine-wine are produced. *Min.* Iron and coal. *Manuf.* Woollen, cotton, and other fabrics, arms, machinery, &c., are very extensive. *Cap.* Strasburg. *Pop.* 588,970.

Rhine, *Reom*, (*rin*), *n.* A ditch; a gully; a water-course.

Rhine, (*The*), (*rin*), [Anc. *Rhenus*.] One of the most important rivers in W. Europe, rising on the N. side of the Alps, flowing through Switzerland and Germany, and falling into the North Sea, or German Ocean, between Lat. 46° 30' and 52° N., and Lon. 3° 40' and 9° 50' E.

Length, measured along the stream, 950 m. It originates in two principal streams, which have their sources on the N. side of the Pennine Alps: the principal of these, called by the Germans *Vorder-Rhine*, is formed by the junction of two small streams flowing from the N. side of Mount St. Gothard, at an elevation of 6,581 ft. above the sea; Lat. 46° 32' N., Lon. 8° 53' E.; only a few miles from the source of the Rhone. Hence the main stream, which soon becomes enlarged by the affluence of numerous brooks and mountain torrents, takes at first a N.E. direction through the magnificent and stupendous ravine of the Rheinwald, enclosed on both sides by almost perpendicular rocks, rising 3,000 ft. above the river, and clothed to their very summit with stately firs. At the lower end of this valley, and only a few miles above Chur, near Reichenau, the river is joined by its E. branch, the *Hinter-Rhine*, which rises on the side of the Moschelhorn or Vogelsberg, near the Pass of St. Bernard. At Chur the river deflects N., maintaining that general direction through a fertile and romantic valley, abounding with vineyards, as far as the Lake of Constance, into which it pours its waters, their level at this point being 1,255 ft. above the sea, or 5,326 ft. below the source. The river, leaving this beautiful lake at its W. end, near the town of Constance, enters a small expanse of water, called the Unter or Zetter See, in which is the island of Reichenau, and thence, narrowing its channel, runs W. to Schaffhausen; 3 m. below which the stream, pent between lofty rocks, and divided by craggy islets, falls over a ledge of rocks 76 ft. in height, forming one of the most celebrated European cataracts. (See SCHAFFHAUSEN.) The channel, from this point to Basle, is extremely tortuous, winding through lofty rocks, which confine the waters within a narrow compass, and consequently increase the rapidity of the current. At Zuzach, about 1 mile above the confluence of the Aar, occurs a second fall, down which, however, the natives venture their loaded barks, except during the spring floods. The river maintains its W. direction through a rocky valley, interrupted with frequent crags rising above the stream, as far as Basle, where it is crossed by a bridge 600 ft. in length. Here commences the navigation of the river, its level at this point being 827 ft. above the German Ocean. Basle seems to be the proper point of division between the Upper and Lower Rhine; for the navigation above this town is so interrupted by falls and rocks as to be scarcely of any importance, whereas from hence to the mouth boats pass at almost all seasons of the year. Assuming at Basle a pretty constant N. course, the Rhine becomes the boundary between France and the Grand-duchy of Baden, and afterwards between Baden and Rhenish Bavaria, the cities and towns in this part of its course being Mannheim, on the E. bank, at the confluence of the Neckar, and Strasburg, Spire, Oppenheim, and Mayence, on the W. bank. At the last of these towns, at the junction of the Mayn, the stream takes a sudden turn W. to Bingen (Fig. 2252), on the W. bank,

Fig. 2252. — BINGEN ON THE RHINE.

from which point the course of the river is pretty uniformly N.W. to the delta at its mouth. Coblenz, at the confluence of the Moselle, Bonn, Cologne, and Clèves, are the chief towns on the W. bank; those on and near the E. side comprising Wiesbaden, Düsseldorf, Wesel, and other places of inferior size. The delta of the Rhine is the largest in Europe, not even excepting that of the Volga; it extends, with its ramifications, 110 m. along the coast, from the E. shore of the Zuyder-Zee to the S. branch of the Maas; and the distance from the apex, about 10 m. below Emmerich, being 72 m., the total area of the country comprised within its limits is 4,150 sq. m. When the river divides, the left or S. arm takes the name of *Waal*; and the other, retaining that of the Rhine, is connected, a little farther N., by an artificial canal, with the Yssel. Still lower down the Rhine takes the name of the *Leck*, in order to distinguish it from the old Rhine, now sanded up, which passed by Utrecht and Leyden to the sea at Catwyk. The Rhine has at present three mouths. About two-thirds of its waters flow to the sea by the *Waal*, the remainder being carried partly to the Zuyder-Zee by the Yssel, and partly to the ocean by the *Leck* and Maas, on which is the great Rhenish port of Rotterdam. These branches, however, are so interlaced with natural and artificial channels, and there are so many lagoons and marshes in this district, that a map becomes indispensable to any detailed description. The scenery of the Rhine has been justly admired by travellers. Wildness and rude grandeur characterize it in the defiles above the Lake of Constance; and the country from the Unter-See westward, as far as Rheinfelden, 6 m. above Basle, is almost equally

romantic. But at this point the character of the scenery changes, and the river, formerly an inconsiderable feature in the landscape, becomes a broad and majestic stream, flowing as far as Mannheim through a rich open valley from 30 to 50 m. in breadth. The banks there begin to be more bold and rocky, but the scenery more generally admired is between Mayence and Coblenz. The Rhine here pursues a meandering course, pent between lofty and craggy mountains, and resembles rather a succession of lakes than a river. The mountains, however, are only mountains in miniature. The groves on the hill-sides are low and far between; but there is no grove without a church spire rising in the midst, and overtopping the trees. Frequently, a daring and fantastic cliff, crowned by an ancient castle (see Fig. 2171), frowns over the river, or rises majestically from the brow of the steep. The Rhine, with its various affluents, comprises a navigation of about 1,500 m., and in a commercial point of view, is perhaps the most important river in Europe, owing to the numerous states to which it affords a water conveyance. The navigation of the Rhine has always been of considerable importance, but since the employment of steamers, and the abolition of the tolls, and other political obstacles to its free use, its importance as a channel of navigation and traffic has been immeasurably increased. Vessels of large burden ascend the river to Cologne, Strasburg, and Rotterdam, and a vast increase has taken place in the number of passengers in recent years, despite the lines of railway which run along the banks of the river.

Rhine, in *Wisconsin*, a post-township of Sheboygan co.

Rhinebeck, in *New York*, a post-village and township of Dutchess co., abt. 55 m. S. of Albany. The township also contains the village of Rhinebeck Landing, on the Hudson River.

Rhine-land, in *Missouri*, a post-village of Montgomery co., abt. 75 m. W. of St. Louis.

Rhine-wine, *n.* The name properly given to the wines produced in the Rheingau, the most valued and costly of which are the Schloss-Johannisberger, Hochheimer, Kloster-Erbacher, Rudesheimer, Steinberger, Gräfenberger, Lauterbrunner, Rothenberger, Scharlachberger, and Markobrunner. The red Rhine-wines, of which the Asmainshäuser is the most celebrated, are not nearly so much prized as the white; neither have they the strength or bouquet of the latter. The wines of the Lower Rhine, from Düsseldorf downwards, are generally of inferior quality. The term *Rhine-wine*, in its general signification, includes the Pfalz and Moselle wines. It is now generally held in Germany that Rhine-wines that have been properly kept for three or four years are in the most wholesome condition for use.

Rhin, (*Haut*.) [Fr. Upper Rhine,] a former N.E. dept. of France, now part of the German Reichsland of Alsace-Lorraine, b. W. by the French territory; area, 1,585 sq. m. The surface is diversified, well wooded, and fertile. *Rivers*. Principally, the Ill. *Prod.* Various kinds of grain, tobacco, hemp, linseed, beet-root, &c. *Min.* Silver, lead, iron, coal, asphalt, and granite. *Manuf.* Silks, cottons, and a variety of others. Rhine-wine is extensively raised. *Cap.* Colmar. *Pop.* 530,285.

Rhino, (*ri'no*.) *n.* [Scot. *ri'no*.] A cant term for money, cash, coin; as, plenty of ready *rhino*, i. e., ready money.

Rhinocerial, Rhinocerial, (*-sē ri'al, -sēr'ik-al*.) *a.* [From *rhinoceros*.] Pertaining or relating to, or resembling, the rhinoceros.

Rhinoceri'dæ, *n. pl.* (Zool.) The Rhinoceros family, including large and uncouth-looking pachydermatous animals, which inhabit the hotter regions of Asia and Africa, and, next to the elephant, contains the most powerful quadrupeds. The common Indian rhinoceros (*R. unicornis*), is usually about 12 feet long from the tip of the nose to the insertion of the tail. Its height is about 7 feet, and the circumference of its body is nearly equal to its length. The back, instead of rising, as in the elephant, sinks in considerably. The head is moderately large and long. The upper lip protrudes considerably, and being extremely pliable, answers the end of a small proboscis; but its most distinguishing mark is the possession of a solid, slightly curved, sharp-pointed horn, which rests on a strong arch formed by the nasal bones. This horn is sometimes, but not generally, as much as 3 feet in length, and 18 inches in circumference at its base, and is used as a most powerful and effective weapon. The animal is also characterized by having 7 molars on each side above and below, with only 4 incisors, and no canine teeth. The ears are moderately large, upright, and pointed; the eyes small and half closed. The skin is thick and coarse, with a knobby or granulated surface, and so impenetrable on the body and limbs as to resist either the claws of the lion or the tiger, the sword or the shot of the hunter. About the neck, the skin is disposed in several large plaits or folds. Another fold passes from the shoulders to the fore legs, and another from the hind part of the back to the thighs. The tail is slender, flattened at the end, and covered on the sides with very stiff and thick black hairs. The belly is somewhat pendulous, the legs very short, strong, and thick, and the feet divided into 3 large hoofs, all standing forwards. In India, the rhinoceros leads a tranquil, indolent life, wallowing on the marshy borders of lakes and rivers, and occasionally bathing itself in their waters. Its movements are usually slow; and it carries its head low, like the hog, plunging up the ground with its horn, and making its way by sheer force through the jungle. It is naturally of a quiet and inoffensive disposition, but very furious and dangerous when provoked or attacked, charging with great impetuosity, and trampling down or ripping

up with its horn any animal which opposes it. The bones of the *R.*, like those of the elephant, are often found in the fossil state in various parts of the world; and in the year 1772 an entire *R.* was found buried in the banks of a Siberian river, in the ancient frozen soil, with the skin, tendons, and some of the flesh in the highest state of preservation.—The Two-horned *R.* (*R. bicornis*) (Fig. 2021), is found in various parts of Africa, and seems to have been the kind known to the ancient Romans. In size it equals the common species; and its habits and manner of feeding are the same; but it differs greatly in the appearance of its skin, which, instead of the vast and regularly marked armor-like folds of the former, has merely a slight wrinkle across the shoulders and on the hinder parts, with a few fainter wrinkles on the sides, so that, in comparison with the common *R.*, it appears almost smooth. The skin, however, is rough or tuberculated; but what constitutes the specific or principal distinction is, that the nose is furnished with two horns, one of which is smaller than the other, and situated higher up, and that they are fixed to the nose by a strong apparatus of muscles and tendons, so that they are loose when the animal is in a quiescent state, but become firm and immovable when he is enraged.

Rhinoceros, (*ri-nōs'e-rōs*.) *n.* [Fr., from Gr. *rhinokeros*—*rhin*, or *rhis*, rhinos, the nose or snout, and *keros*, a horn.] (Zool.) One of the *Rhinoceri'dæ*.

Rhinoceros-bird, *n.* (Zool.) See *BUCCERIDÆ*.

Rhinoplas'tic, *a.* [Fr. *rhinoplastique*, from Gr. *rhis*, rhinos, the nose, and *plassein*, to mould, form.] Forming or constituting a nose.

R. operation. (*Surg.*) An operation which supplies an artificial in lieu of a natural nose, or which renews the latter.

Rhinoplas'ty, *n.* [Gr. *rhin*, rhinos, the nose, and *plassein*, to form.] (*Surg.*) The operation for forming a new nose, which dates far back. Three chief methods have been described:—1. The method of *Celsus*, which consists in bringing forward the skin of the cheeks, and forming a septum, if necessary, from the upper lip. 2. The *Italian*, or *Tuliacotian method* or *operation*, called, also, the *German method*, on account of the application made of it by Von Gräfe, which consists in pining the edges of the nostrils, and uniting them to a graft taken from the arm, but left attached to it until union has taken place. 3. The *Indian method*, practised for ages in the East Indies, where cutting off the nose has been a common punishment for criminals, in which the graft is taken from the forehead. This method is the one now generally practiced.

Rhipid'ura, *n.* (Zool.) See *FANTAIL*.

Rhizanth'eæ, *n. pl.* (Bot.) Same as *RHIZOGENS*, *q. v.*

Rhizobola'ceæ, *n.* [Gr. *rhiza*, a root.] (Bot.) The Sonri-nut family, an order of plants, alliance *Guttiferales*.—*Diag.* Digitate opposite leaves; symmetrical flowers; equilateral petals; sessile stigmas; solitary seeds; and an embryo with an enormous radicle.—They are large trees, native of the forests of the hottest parts of S. America. Some are valuable for their timber, others yield an excellent oil, and some edible nuts. The order contains 2 genera and 8 species. See *CARYOCAR*.

Rhizogens, *RHIZANTH'EÆ*, *n. pl.* [Gr. *rhiza*, a root, and *gennao*, to produce.] (Bot.) The third class of the vegetable kingdom, including parasitical plants destitute of true leaves, in room of which they have cellular scales. Their stem is either an amorphous fungous mass, or a ramified mycelium appearing to be lost in the tissue of the plants. No instance of green color is known among them; but they are brown, yellow, or purple. They are furnished with true flowers, having genuine stamens and carpels, and surrounded by a trimerous or pentamerous calyx, or absolutely naked. The true nature of their seeds is in most species quite unknown. The *R.* are separated into the three orders *BALANOPHACEÆ*, *CYTINACEÆ*, and *RAFFLESACEÆ*, *q. v.*

Rhizo'ma, Rhizome, or *Root'stock*, *n.* [Gr. *rhizos*, to support by roots.] (Bot.) A thick fleshy stem, lying on the surface of the earth, or partly beneath it, giving forth roots from its lower side, and shooting forth leaves every spring. It is commonly mistaken for a root. It is conspicuous in the Iris (Fig. 2253), and in Solomon's seal.

Rhizoph'ora, *n.* [Gr. *rhiza*, a root, *phoro*, to bear or carry.] (Bot.) The typical genus of the natural order *Rhizophoraceæ*. The species *R. mangle* is the Mangrove-tree of tropical sea-shores. It is remarkable for the aerial roots thrown off from the stem, which, fixing themselves into the mud, act as props to keep the tree in an erect position. It frequently happens that these aerial roots form the entire support of the stem, in consequence of this decaying at its lower part. The bark of the Mangrove-tree is used as a tanning material. The fruit is sweet and edible, and its juice, when fermented, forms a kind of wine. See *MANGROVE*.

Rhizophora'ceæ, *n.* (Bot.) The Mangrove family, an order of plants, alliance *Myrtales*. *Diag.* A plurilocular ovary, polypetalous flowers, valvate calyx, indefinite stamens, and flat cotyledons much shorter than the radicle, which germinates before the fruit falls. They are trees or shrubs, native of the muddy sea-shores in

the tropics, and are generally remarkable for their astringent properties. The order contains 5 genera and 20 species. See *RHIZOPHORA*.

Rhizopo'da, *n.* [Gr. *rhiza*, root, and *pous*, foot.] (Zool.) A division of the *Protozoa*, including minute animals of the lower degree, possessing a power of locomotion by means of minute tentacular filaments. The *R.* comprise the animals which constructed the *miliola* shells found in such large quantities in the strata of many quarries near Paris. The class also includes some other microscopic foraminiferous shells.

Rho'da, an island of Egypt, in the Nile, opposite Cairo, containing the Pasha's gardens. It is 2 m. long.

Rhode Island, the smallest State of the American Union, is situated in New England, and comprises a territory on both sides of Narragansett Bay, having N. and E. Massachusetts, W. Connecticut, and S. the Atlantic Ocean. It lies between Lat. 41° 18' and 42° 3' N., and Lon. 71° 8' and 71° 53' W. Area, 1,054.6 sq. m. To this land area may be added a water area of 360 sq. m., comprising the waters of Narragansett Bay. The State is 48 m. long from north to south, and 35 m. wide east to west.—*Gen. Desc.* The State derives its name from an island in Narragansett Bay, probably named from some supposed resemblance to the island of Rhodes in the Mediterranean, though some derive it from the Dutch word *roodt*, "red," referring to the color of the soil. Narragansett Bay divides the State into two unequal portions, that lying east being quite small. Though the ocean coast line of the State is only about 45 m., that of Narragansett Bay, which penetrates some 30 m. inland, and has numerous inlets and islands, affords about 350 m. of shore line. Limited as the State is in area it has a considerable diversity of soil, and even of climate. In some parts—those of the north and east—the surface is quite hilly, though nowhere mountainous, while southward it slopes to a level region. Of the elevations which have received titles may be mentioned Woonsocket Hill, Diamond Hill, Hopkins Hill, and Mount Hope, the last having a historical interest as the scene of the death of the Indian King Philip. The soil is also diversified, being dry and sandy in some localities, wet and heavy in others. West of Point Judith extends a low, sandy coast, with many fine beaches, and salt-water ponds and marshes. Further west the sea is faced by high rocky cliffs, between which are beaches of sand. The abundance of salt water tempers the climate, which is agreeable in summer, and in winter milder and more equable than in the inland portions of New England. The principal rivers are the Seekonk, Pawtuxet, and Pawcatuck. These and the minor streams are of little value for navigation, but are of high importance for their water power, and have played an important part in the development of the active manufacturing interests of the State. *R. I.* possesses some of the most famous seaside resorts in the U. S., including Newport, Narragansett Pier, and Watch Hill. Block Island, which lies in the Atlantic, about 10 m. S. W. of Point Judith, is also a favorite summer resort.—*Geol.* The western part of the State is characterized geologically mainly by the Montalban gneiss, which extends through much of southern New England. But this Archean formation is succeeded eastward by a Carboniferous one, which extends under the bay and through the eastern part of the State into Massachusetts. Its coal, of which some 750,000 tons have been mined, is of the anthracite variety, but inferior in quality. The only other important deposit is one of magnetic oxide of iron. Limestones and granite of excellent quality occur. The terminal moraine of the Glacial period has left its marks in this State, in a stony soil that interferes in many places with agriculture.—*Agric.* The soil is better adapted to grazing than to tillage, though corn, rye, barley, and oats, and in some places wheat, are raised in sufficient quantity for home use. The soil is in many parts too rough and difficult for cultivation, and has been planted with introduced grasses, on which cattle of fine breed are fed. The apple crop is sufficient to yield cider for transportation. The most fertile sections are on the islands in Narragansett Bay, where market gardening is the leading agricultural interest. The State in 1900 had in all 5,498 farms, with 455,602 acres of improved land, this being valued at \$13,421,770. The inhabitants, generally, have applied themselves rather to commerce, manufactures and the fisheries, than to agriculture.—*Monf.* *R. I.*, while the smallest State in the Union, is the most densely peopled, having a population of 318 to the square mile. This density results from its manufacturing activity, in which it holds a high rank among the States, its products including cotton and woollen textiles, iron and steel goods, and manufactures of brass, gold, silver, rubber, and many other materials. The manufacture of cotton in the U. S. had its origin in *R. I.*, the first cotton mill being built at Pawtucket Falls, by Samuel Slater, in 1790. Here also originated the bleaching and calico-printing industries in America. The industries named still hold the leading place among those of

Fig. 2254.—SEAL OF THE STATE.

Fig. 2253.—RHIZOMA OF IRIS.

the State, while those of woollen and iron goods come second, especially screws, firearms and locomotives. Other important industries are those of jewelry, rubber and leather goods. The water-power of the State is largely utilized in those various manufactures, though largely supplemented by steam-power.—*Commerce*. Narragansett Bay invites commerce by its extensive area of safe anchorage, the harbor of Newport being one of the best in the world, while Providence, Warren, and Bristol have also excellent harbors. At one time the State enjoyed a large foreign commerce, but it disappeared after the War of 1812, and the commerce of the State is now confined to a coasting trade, it having been dwarfed by the great development of the manufacturing interests.—*Pol. Div.* The State is divided into 5 counties, as follows: Bristol, Kent, Newport, Providence, and Washington. It has 2 State capitals, Providence and Newport. Other towns of importance are Bristol, Pawtucket, Lonsdale, Woonsocket, Natick, Warren, &c.—*Gov.* The governor and lieutenant-governor are elected annually. The assembly, composed of two chambers, holds its regular session at Newport, beginning in May, and a session, by adjournment, at Providence in the following January. The judicial power resides in a Supreme Court, and such inferior courts as the General Assembly shall from time to time establish.—*Educ.* The common school system is of a high order, yet much illiteracy prevails, on account of the number of foreigners drawn to the centers of manufacture and the difficulty of getting their children to attend school. There are a number of meritorious private institutions, while Brown University, at Providence (founded in 1764), is one of the best colleges in the country.—*Hist.* It is claimed that the Northmen visited this region about 1,000 A. D., and certain antiquities have been ascribed to them, but the question of the location of *Vinland* seems never likely to be definitely settled. The first English settlement was made at Providence in 1636, by Roger Williams, whose religious opinions had caused his expulsion from Massachusetts. He and other settlers bought lands from the Indians, and an unwonted degree of religious toleration was established. The charter granted by Charles II. to the colony was so liberal in its provisions that it remained the fundamental law of the State until 1843. *R. I.* was firm in opposition to the King Philip War, yet that State suffered more severely therefrom than any of her sister colonies. King Philip himself was killed in what is now the town of Bristol. The great "swamp fight" occurred (1675) in the Narragansett country, where more than a thousand Indians were killed. The charter was temporarily suspended (1686-87) by Sir Edmund Andros, who, however, was never able to gain possession of the original document. Sir Edmund was deposed in 1690, and a new government was immediately organized under the old form. This continued until, in 1841, a legally unauthorized people's convention met and framed a new constitution, which action precipitated a crisis, culminating in the "Dorr rebellion," and adoption of a new constitution in 1842, this going into effect in 1843. Under this charter suffrage was limited, about 9,500 men composing the electorate in 1840 out of a pop. of 109,000. The present suffrage laws were adopted in 1888. *R. I.* was the last of the States to ratify the Federal Constitution (1790). It took an active part in the Revolutionary War, being long held by the English. Pop. (1870) 217,356; (1880) 276,531; (1890) 345,506; (1900) 428,556.

Rhodes, (*rōds*), an island in the Mediterranean, appertaining to Asiatic Turkey, near the coast of Asia Minor; lies in Lat. between 35° 53' and 36° 25' N., Lon. between 27° 40' and 28° 12' E. It is 40 m. long, with a breadth of 18 m. at its widest point; has an area of 44 sq. m., and is traversed by a range of mountains, on which grow forests of pine, in great request for ship-building. Beneath this range rises a tract of lower hills, on which a species of the vine is largely cultivated, which produces the perfumed wine so much praised by the ancients. The tract beneath forms the greatest portion of the island, and, sloping gradually down to the sea, is watered by numerous streams, which renders it capable of producing the most luxuriant crops. A great part of the island is uncultivated, but it yields corn, olives, pomegranates, lemons, wine, wax, honey, and figs. The manufactures are silk, shoes, red leather, and amber. Its exports are wax, honey, figs, and other fruits. Imports — colonial produce, woollens, iron, nails, shot, soap, cordage, hardware, coals, horses, cattle, carpets, and corn. Pop. 30,000.

RHODES, the capital of the former island, and situated at the N.E. extremity of the island. It is defended by towers about 800 feet distant from each other, while in the centre of the mole there is a square bastion 120 feet high. *R.* presents at present very few vestiges of its ancient grandeur; its streets are narrow and winding, and devoid of elegance or regularity. It has two good harbors, separated only by a mole running obliquely out into the sea. The principal manufactures are red leather and shoes. It was at the entrance to the harbor of this city that stood the celebrated *Colossus*, q. v. Pop. 20,000.—*Hist.* The ancient Rhodes was taken possession of by a branch of the Doric race, who held it at the time of the Trojan war, B. C. 1184. It was of small political importance among the states of Greece till the city of Rhodes was built and made the capital of the island, B. C. 408. In the war between Cæsar and Pompey, the Rhodians, who had long held supremacy at sea, took part with the former, B. C. 50; and continuing their aid to Cassius, were defeated by the Romans and completely subjugated, B. C. 42. They then held their liberties by the caprice of the emperors, and their city was made, by

Constantine I., the metropolis of the Provincia Insularum in 330. It was taken by Chosroes II., King of Persia, in 616; by the Saracens in 651; and by the Knights of St. John, Aug. 15, 1309 (See *HOSPITALIERS*.) Mohammed II. besieged it ineffectually in 1480, and the

Fig. 2255.—RHODES.

Sultan Solymán I. compelled it to capitulate after a vigorous siege and brave defence, that lasted from June to Dec., 1522. An earthquake which occurred in Rhodes, April 22, 1863, destroyed 2,000 houses, and swallowed up or otherwise killed and wounded thousands of the inhabitants.

Rhodesz, or **Rodez**, (*ro'dai*), a town of France, cap. of the dept. of Aveyron, 85 m. N.W. of Montpellier; pop. 10,300.

Rhodium, (*ro'de-um*), *n.* [Gr. *rhodon*, a rose, on account of the red color of some of its salts.] (*Chem.*) *R.* is one of the rare metals found in platinum ores. It is very hard, white, and brittle, and, with the exception of iridium, one of the most infusible of metals. When pure, it is insoluble in acids, but when alloyed with platinum, bismuth, or copper, it is dissolved with them in aqua regia. Heated in contact with chloride of sodium in a current of chlorine, the double chloride of *R.* and sodium is formed. The only use to which *R.* has been applied, is to form the nibs of metallic pens, for which it is extremely well fitted, from its hardness and unalterability. It forms four definite oxides— RhO , Rh_2O_3 , RhO_2 , and RhO_3 . The first two are insoluble in the strongest acids. *R.* forms 2 sulphides, RhS and Rh_2S , and 1 chloride, Rh_2Cl_6 . *R.* was discovered by Wollaston in 1804, associated in small quantity with native platinum. The salts formed by the chloride crystallize in cubes of a delicate rosy hue, hence the name. *Equiv.* 52; *spec. grav.* 12.1; *sym.* *Rh*.

Rhodizite, *n.* [Gr. *rhodizein*, to make red.] (*Min.*) A species of lime-boracite, which, when heated before the blow-pipe, colors the flame first green, but afterwards red. It is found in minute translucent and shining crystals, which are white, or inclining to yellow or gray, near Mursinsk in the Ural.

Rhododendron, *n.* [Gr., from *rhodon*, a rose, *dendron*, a tree.] (*Bot.*) A genus of shrubs belonging to the natural order *Ericaceæ*. Many species are largely cultivated in this country on account of the beauty of their flowers. The narcotic properties which characterize the whole genus are particularly evident in the flowers of *R. arboreum*, which are eaten by the hill people of India, and in all parts of *R. chrysanthum*, a Siberian plant. The powdered leaves of *R. paniculatum* are used as snuff in some parts of India. The brown pulverulent substance found on the petioles of some rhododendrons and kalmias is also used in the American States as snuff. See *ERICACEÆ*.

Rhodomenia, *n.* [Gr. *rhodos*, red, *hymen*, a membrane.] (*Bot.*) A genus of *Algæ*, or sea-weeds. *R. palmata* is the *dulse* c. the Scotch, and the *dillesk* of the Irish. It is very nutritious and wholesome.

Rhodomontade, (*rōd-o-mon-tād'*) *n.* See *RODOMONTADE*.

Rhodomontader, *n.* Same as *RODOMONTADER*, q. v.
Rho'donite, **Ro'doise**, *n.* [Gr. *rhodon*, the rose.] (*Mir.*) A silicate of manganese or manganese-augite, sometimes used in a polished state for inlaying. *Comp.* Protoxide of manganese 54.1, silica 49.9 = 100. It is found in New Jersey.

Rhodori'za, *n.* (*Bot.*) A genus of plants, order *Convolvulacæ*. The volatile oil, called *oil of rhodium*, is obtained from species of this genus. The powdered wood is used for fumigation and as snuff.

Rhomb, **Rhom'bus**, (*rōmb*), *n.* [Fr. *rhombe*; Lat. *rhombus*; Gr. *rhombos*, from *rhembō*, to turn or whirl round.] (*Geom.*) A quadrilateral figure whose sides are equal, and the opposite sides parallel, but whose angles are not right angles.

(*Crystall.*) A rhombohedron.

Rhomb-solid. (*Geom.*) A solid formed of two equal right cones united together at their bases.

Fresnel's rhomb. (*Optics.*) To obtain a ray of circularly polarized light, it is sufficient to decompose a ray of plane polarized light in such a manner as to produce two rays of light of equal intensity polarized in planes at right angles to each other, and differing in their paths by a quarter of an undulation. Fresnel effected this by means of a rhomb, which has received his name. It is made of glass; its acute angle is 54°, and its obtuse 126°. If a ray, *a*, Fig. 2256, of plane polarized light falls perpendicularly on the face *AB*, it will undergo two total internal reflections at an angle of about 54°, one at *E*, and the other at *F*, and will emerge

perpendicularly. If the plane *ABDC* be inclined at an angle of 45° to the plane of polarization, the polarized ray will be divided into 2 coincident rays, with their planes of polarization at right angles to each other, and it appears that one of them loses exactly a quarter of an undulation, so that on emerging from the rhomb the ray is circularly polarized.

Rhom'bie, *σ.* Having a rhomb-like configuration.

Rhombohe'dral, *n.* [Fr. *rhombohedrique*.] (*Geom. and Crystallog.*) Pertaining or relating to, or presenting forms derivable from, a rhombohedron.

Rhombohe'dron, *n.* [Fr. *rhomboëdra*, from Gr. *rhombos*, and *hedra*, base.] (*Geom. and Crystallog.*) A solid contained by six equal rhombic planes.

Rhomboid, *n.* [Gr. *rhombos*, and *eidos*, form.] (*Geom.*) A quadrilateral figure whose opposite sides and angles are equal, but which is neither equilateral nor equiangular.

Rhomboid, **Rhomboid'al**, *a.* [Fr. *rhomboidol*.] Approaching the shape of a rhomb; in geometry, a term used to denote an oblique-angle parallelogram.

R. muscle. (*Anat.*) A square-shaped muscle of the back, serving to move the scapula, or shoulder-blade and arm.

Rhomb'spar, *n.* (*Min.*) Same as *MAGNESITE*, q. v.

Rhom'bus, *n.*; pl. *RHOMBI*. [Lat.] (*Geom.*) See *RHOMB*.

Rhône, (*rōn*), (anc. *Rhodanus*), a river of S.W. Europe, rising in the Rhone Glacier, Switzerland, at the foot of Mount Furca, five miles from the source of the Rhine, and at the height of 5,500 feet. It flows in a western direction, through a long and winding valley of the Swiss canton of the Valais, and, after being swelled by a variety of mountain streams, passes through the Lake of Geneva, flowing southwards, enters France, where, after being joined by the Saone at Lyons, and by the Durance, it discharges itself, after a course of 650 m., by three mouths, into that part of the Mediterranean called the Gulf of Lyons.

Rhône, a dept. in the S.E. of France, having N. the dept. of Saone-et-Loire, E. Ain and Isere, S. and W. Loire; area, 1,050 sq. m. The surface is mostly mountainous or hilly. *Prod.* Principally corn, the vine, and mulberry trees. The wines are famous for their excellent quality. *Min.* Iron, copper, and coal. *Manuf.* Silks, cotton, linen, glass, paper, and hats. *Cap. Lycns.* Pop. 678,648.

Rhu'barb, *n.* (*Bot.*) See *RHEUM*.

Rhu'barby, *a.* Like rhubarb.

Rhumb, (*rūm*), *n.* [From Gr. *rhombos*, a rhomb.] (*Nav.*)

A vertical circle of any given place, or the intersection of a part of such circle with the horizon. Rhumbs coincide with the points of the horizon, and are distinguished like those of the compass. A *rhumb-line* cuts all the meridians under the same angle.

To sail on a rhumb, to sail constantly on one course.

Rhumb-line, *n.* (*Navig.*) The course of a ship sailing on a rhumb. See *RHUMB*.

Rhus, (*rus*), *n.* [Gr. *rhous*, the Attic contracted form of *rhōos*, a stream, from the wide spreading of its roots.] (*Bot.*) The Sumach, a gen. of small trees or shrubs of

the order *Anacardiaceæ*. The species, chiefly American, are occasionally characterized by poisonous properties and a milky juice, which becomes black on exposure to the air. *R. toxicodendron* is the Poison-oak or Poison-ivy. Its leaves contain a peculiar acid principle, and are thought to be useful in the treatment of old paralytic cases and chronic rheumatism. A twining variety of this species, with similar properties, has been given the scientific name of *R. radicans*. *R. venenata*, the Poison-ash, or Poison-elder, like the former species, is extremely poisonous. When in a fresh condition, all parts of the above plants require to be very carefully handled, as their juices frequently excite violent erysipelatous inflammation. The bark of *R. coriaria* is a powerful astringent, and is used for tanning; its fruit is acidulous, and is eaten by the Turks. The dried and powdered leaves of the *R. cotinus*, and *R. glabra* (Fig. 2257), constitute the well-known tanning and dyeing agent called *sumac*, or *sumach*, which has been in use for ages. The wood of the same species is also known in commerce as *Young fustic*, or *Zante fustic*. It is used in dyeing to produce a rich yellow. *R. metopium*, a native of Jamaica, furnishes the *hog-gun* of that island, which is said to be astringent, diuretic, and purgative, when used as an internal medicine, and to act as a vulnerary when applied externally to wounds and bruises. The substance called *Japanese wax*, now largely used as a candle material, is obtained from the fruits of *R. succedaneum* and other species.

Rhyme, (*rīm*), *n.* [A. S. *rim*; Fr. *rime*; Ger. *reim*.] (*Poet.*) The consonance of sounds in the last words or syllables of verses. In the former cases it is called *male rhyme*, in the latter *female*. There are rhymed verses in the Latin classical poets, where the jingle seems intentional, and more distinct examples of it in the fragments of Roman military songs, &c., which have come down to us. But in the earlier period of the decay of the Latin language, when accent was substituted for metre in the rhythmical arrangement of the verse, rhyme made its way into the composition of church hymns, &c. It has been attempted, but with little success, to deduce this innovation from the Goths and from the Arabians; but the former, like the old Teutonic races, probably used alliteration, but no rhyme, in their verses; and the latter could not have influenced European literature until a period long after that in which rhyme first appears. It has been proved, beyond the possibility of doubt, that rhymed Latin verse was in use from the end of the fourth century. — See *PROSODY*.

Rhyme or reason, number or sense.

—*v. n.* To make verses. — To accord in sound.

—*v. a.* To put into rhyme. — To influence by rhyme.

Rhymeless, (*rīm'less*), *a.* Destitute of rhyme; not having consonance of sound.

Rhym'er, *n.* One who makes rhymes; a versifier; a poor poet; a balladeer.

Rhym'ery, *n.* The act of making rhymes; — used in contempt.

Rhymic, (*rīm'ik*), *a.* Relating to rhyme.

Rhym'ist, **Rhym'ster**, *n.* One who makes rhymes; a poet, in contempt.

Rhythm, (*ritm*), *n.* [Gr. *rhythmos*, from *rheo*, *rheosomai*, to flow.] (*Pros. and Mus.*) The metrical arrangement of speech, denoting the measure of the feet, or the number and combination of long and short syllables, called also *metre* and *quantity*. But the most common application of this term is to express the *time* or duration of many sounds heard in succession, whether these sounds are musical, and such as are produced by voices and instruments, or without a determinate tone, as in the strokes of a hammer upon an anvil, and in the articulations of the voice in common speech in repeating poetry or pronouncing an oration.

Rhythmic, **Rhythm'ical**, *a.* Pertaining to rhythm; having rhythm.

Rhythmically, *adv.* With rhythm.

Rhythmies, *n. sing.* (*Mus.*) That department of the science which treats of the length of sounds.

Rhythm'ing, *a.* Writing or composing rhythm.

Rhythm'less, *a.* Without rhythm.

Rhythmometer, *n.* [Gr. *rhythmos*, rhythm, and *metron*, measure.] An instrument for marking time to movements in music.

Rhythm'us, *n.* [Lat.] Rhythm.

Rial, *n.* (*Nuñais*) A Spanish coin. Same as *REAL*, *q. v.* — A gold coin current in the reigns of Henry VI. and Elizabeth of England; under the former its value was ten shillings, under the latter fifteen shillings.

Riant, (*re'ong*), *a.* [Fr., from *rire*, to laugh.] Laughable; droll.

Riazan, (*re-azan'*) a govt. of European Russia, having N. Vladimir, E. and S. Tambov, and W. Moscow and Tula; area, 16,227 sq. m. It is low and sandy in the N., and the S. portion is elevated and very fertile. Rivers. Oka and Don. *Prod.* Wheat, rye, oats, millet, buckwheat, and vegetables. *Min.* Iron and limestone. *Manuf.* Needles, cottons, glass, leather, and iron-ware. *Cap.* Riazan. *Pop.* 1,418,293.

RIAZAN', a town of European Russia, and cap. of above govt., on the Troubege, a tributary of the Oka, 110 m. S. E. of Moscow. The town has greatly increased in size within the last 50 years; but most of the houses and pavements remain of wood.

Rib, *n.* [A. S.] (*Anat.*) One of the long curved bones which form the walls of the chest. They extend in an oblique direction from the vertebrae of the back to the sternum in front. There are usually twelve on each side; but in some rare cases thirteen have been found, in others only eleven. They are distinguished into *true* and *false*; the former being the seven upper ribs, which are articulated to the sternum; the latter the five lower

ones, which are not immediately attached to that bone. The use of the ribs is to cover and defend the lungs and heart; and their articulations with the vertebrae and

Fig. 2258. — THE RIBS.

A, Sternum, or Breast-bone; B, The Seven true ribs; C, The Five false ribs; D, The Spine; E, The Ensiform cartilage, or continuation of the sternum.

sternum admitting of a slight motion, they assist in respiration. See *ANATOMY, THORAX*.

(*Ship-building*.) One of the timbers of a ship, which have their base in the keel as a back-bone, and serve to maintain generally the cavity of the vessel.

(*Arch.*) One of the curvilinear timbers to which, in an arched or covered plaster ceiling, the laths are nailed.

(*Bot.*) The principal vein or nervure which proceeds from the petiole into the blade of a leaf.

(*Mining*.) A pillar of coal left for the support of the roof of a mine.

—A prominent line or rising in cloth, like a rib. — Something long, thin, and narrow; a strip. — A vulgar name for a wife; — in allusion to Eve, who was made from one of Adam's ribs.

—*v. a.* To furnish with ribs; to form with rising lines and channels. — To inclose with ribs.

Rib'ald, *n.* [Fr. *riband*, from L. Lat. *ribaldus*, a light-armed soldier.] A low, brutal, vulgar, foul-mouthed wretch; a lewd fellow.

—*a.* Low; base; filthy; obscene.

Rib'band, *n.* (*Ship-building*.) One of the longitudinal bands of comparatively thin timber stretching from stem to stern at different distances from the keel. They are bolted on outside the ribs, in order to preserve the proper curvature, and to impart stability to the vessel while yet in skeleton.

Rib'bing, *n.* An assemblage of ribs for a vault or covered ceiling.

Ribble, (*rib'bl*), a river of England, rising in the W. part of the co. of York, and falling into the Irish Sea, S. W. of Preston.

Rib'bon, *n.* (Written also *riban*, *riband*, and *ribband*.) [Fr. *ruban*.] A fillet of silk; a narrow band of silk, satin, &c., used for an ornament, as a badge, or for fastening some part of female dress. — A narrow, thin strip of anything. — The reins or lines used for holding a horse; as, to handle the *ribbons*. (*Colloq.*)

(*Her.*) A diminutive of the ordinary called the *bend*, of which it is one-eighth in width.

—*v. a.* To adorn with ribbons.

—To mark with stripes or lines to resemble ribbons.

Rib'bon-grass, *n.* (*Bot.*) The *Phalaris arundinacea*, a species of canary-grass with variegated leaves.

Rib'bonism, *n.* The principles of a secret association formed among Roman Catholics in Ireland towards the beginning of this century, the direct and immediate object of which was antagonism to the Orange Confederation, to which, in some respects, it bore considerable resemblance. From the absence of all statistical information, and from the rude and illiterate material out of which it was chiefly formed, it is impossible to offer any estimate of its number and extent.

Ribeauville, (*re'bo-veel*), a town of France, dept. of Haut-Rhin, 6 m. S. of Schelestadt. *Manuf.* Calicoes. *Pop.* 7,500.

Ribe'ra, José, (called SPAGNOLETTA), an eminent Span-

ish painter, born at Jativa, in Valencia, 1588. He was at first a pupil of Ribalto, but went early to Italy, and had for his master Caravaggio, whose bold naturalistic style was the model of his own. He visited Parma and Modena, and thence went to Naples, where the viceroy named him his painter. According to some accounts, he left his house suddenly in 1648, and was never again heard of. Others state that he d. at Naples, in 1656. His historical pictures are chiefly representations of martyrdoms, tortures, &c.; the genius of Spagnoletto, in fact, seemed to revel in scenes of horror and cruelty. *R.* was one of the three artists who conspired to secure to themselves the art patronage of Naples, expelling all competitors. Among his pupils were Luca Giordano, and Salvator Rosa.

Ribes, (*ri'bee*), *n.* [An Arabic name, properly belonging to an acid-leaved species of *Rheum*, but which, for about two hundred years, has, by mistake, been applied to the Currant and Gooseberry tribe.] (*Bot.*) A genus of the order *Grossulariaceæ*. Some of the species are remarkable for their agreeable and wholesome acid fruits, and are, on this account, much cultivated in our gardens. *R. grossularia* is the source of the numerous varieties of gooseberries, so much used, both in the ripe and unripe conditions, for tarts and puddings, for making wine, and for dessert.

R. rubrum yields both red and white currants, and *R. nigrum*, black currants, or cassis. These are used for the same purposes as gooseberries, and are particularly adapted for making jams and jellies. An infusion of black currants is much used, under the name of *black-currant tea*, as a cooling drink in fevers.

Fig. 2260. — CURRANTS.

Rib'less, *a.* Without ribs.

Rib'roast, *v. a.* To beat soundly; — a burlesque word.

Rib'supported, *a.* Supported by ribs.

Ric, [A. S.] A termination, signifying authority or jurisdiction over; originally, a rich, powerful, or valiant man.

Ricas'oli, BETTINO, BARON, an Italian statesman, B. in Tuscany, 1809, and educated at Florence, early devoted his attention to politics, and always advocated moderation. He took an active part in the liberation of Tuscany after the campaign against Austria in 1859. An unsuccessful attempt was made to assassinate him in 1860, and, in March, he filled an important post in the administration. After the death of Count Cavour, in 1861, he became prime-minister of the new kingdom of Italy, in which situation he endeavored to follow the policy of his predecessor, but, unable to secure the confidence of parliament, resigned the premiership, March 2, 1862, and was succeeded by Signor Rattazzi. He again acceded to power as prime-minister June 20, 1866, and retired in 1867. D. October 21, 1880.

Riccia, (*rit'cha*), a town of S. Italy, prov. of Molise, 12 m. S. E. of Campo-basso; *pop.* 4,700.

Riccia'ceæ, *n.* (*Bot.*) The Crystal-wort family, an order of plants, alliance *Muscales*. *DIAG.* Spore-cases valveless, without operculum or slaters. — They are terrestrial herbs of diminutive size, inhabiting mud or water, swimming or floating, usually annual. The plants are found in America, and at the Cape of Good Hope. Their uses are not known. The order includes 8 genera and 29 species.

Rice, *n.* [Fr. *riz*; Ger. *reiss*; Lat. and Gr. *oryza*.] (*Bot.*) The common name of the genus *Oryza*, order *Graminaceæ*.

O. sativa, the Rice-plant, the grain of which is more largely used than any other cereal. *R.* is extensively cultivated in Italy, India, China, Japan, and America, chiefly in low grounds, near large rivers, which are liable to be annually inundated and enriched by the deposition of mud. In the South'n States it has long been a staple commodity. — From 40 to 50 varieties of the rice-plant are known and cultivated in different countries. As an article of food rice appears to be less nutritive than the other cereal grains: it is of a binding nature; — hence its use in diarrhoea.

Fig. 2261. — RICE.

Spirit is sometimes distilled from the fermented infusion of rice; this spirit is frequently called *arrack*; but that name is properly applied only to spirit distilled from palm-wine. Starch of excellent quality for laundry purposes is now manufactured from rice.

Rice, in *Minnesota*, a S.E. co.; *area*, abt. 500 sq. m. *Rivers*, Cannon and Zumbro rivers, and several lakes. *Surface*, mostly level or undulating; *soil*, generally fertile, producing large crops of wheat, corn, and oats. *Cap.* Faribault.

Rice, in *Ohio*, a twp. of Sandusky co.

Rice-bird, *Rice-bunting*, *n.* (Zool.) The BOB-O-LINK, *q. v.*

Riceborough, in *Georgia*, a post-village of Liberty co., abt. 32 m. S.S.W. of Savannah.

Rice City, in *Rhode Island*, a post-village of Kent co., abt. 19 m. W. by S. of Providence.

Rice Creek, in *Michigan*, enters the Kalamazoo River from Calhoun co.

Rice-paper, *n.* The produce of the *Aralia papyrifera*, a low shrub, with large leaves, from Formosa, where it is wild and abundant. The trunk and branches resemble those of the elder. The pith, dried and rolled, or hammered, and pared by sharp knives, forms the paper. It is dyed of different colors, and large sheets are obtained by pressing the smaller pieces together. It is usually sold in small squares of about four inches, made up into packets of 100 each.

Rice-milk, *n.* Boiled milk, thickened with rice.

Riceville, in *Pennsylvania*, a post-village of Crawford co., abt. 20 m. N.E. of Meadville.

Riceville, in *Virginia*, a post-village of Pittsylvania co., abt. 150 m. S.W. of Richmond.

Rice-weevil, *n.* (Zool.) See CALANDRA.

Rich, *a.* [A. S. *ric*, *rice*; Sw. *rik*; Ger. *reich*; Fr. *riche*.] Abounding in money, cattle, goods, or land; wealthy; opulent. — Abundant in materials, or in valuable ingredients or qualities; precious; sumptuous; costly. — Yielding great quantities of anything valuable; fertile; fruitful. — Abounding with nutritious qualities; highly seasoned; abounding with a variety of delicious food. — Affording abundance; plentiful; as, a *rich* entertainment. — Vivid; strong; as, a *rich* color. — Full of beautiful scenery; abounding with elegant effects. — Full of sweet or harmonious sounds; as, *rich* music. — Affording entertainment; abounding in humor; as, a *rich* scene.

Richard I., King of England, surnamed the *Lion-hearted*, or *Cœur-de-Lion*, succeeded his father, Henry II., in 1189, at the age of thirty-two, his own disobedient conduct and rebellious practices having greatly hastened that event. He was born at Oxford, 1157.

His reign commenced with a fearful riot and massacre of the Jews. In 1190, Richard joined the crusade with Philip Augustus of France, but, a division soon taking place between them, the two kings separated, Philip returning to France, and Richard remaining in the East, where he displayed the most impetuous valor against the celebrated Saladin, whom he defeated near Caesarea, and, having made a truce, embarked in a small vessel, which was wrecked on the coast of Italy. He then travelled in disguise through part of Germany; but, being discovered by his enemy, Leopold, Duke of Austria, he was made prisoner, confined in a castle in the Tyrol, and bound with chains, but was at length ransomed by his subjects for 100,000 marks, and landed at Sandwich, in 1194, after which he was again crowned. Philip of France having, contrary to treaty, seized on part of Normandy, Richard invaded France with a large army, but peace was concluded in 1196; the truce was, however, a short one, for in 1199 war was again renewed, and Richard, in besieging the Castle of Chalus, in Aquitaine, received a wound from an arrow, of which he died in 1199. His character was strongly marked, presenting much to admire and much to condemn. He was of the bravest among the brave; frank, liberal, and often generous; at the same time, he was haughty, violent, unjust, and sanguinary; uniting, as Gibbon observes, "the ferocity of a gladiator to the cruelty of a tyrant." His talents were considerable, both in the cabinet and in the field; neither was he deficient in the art of poetry, as some of his compositions, preserved among those of the Troubadours, bear witness.

Richard II., was the son of the renowned Edward, (the Black Prince,) and succeeded his grandfather, Edward III., at eleven years of age. This weak and unfortunate prince ascended the English throne in the year 1377. During his minority he evinced considerable ability, and displayed great promptitude in quelling the dangerous insurrection headed by Wat Tyler, in Smithfield, and, when that insurgent was slain by Walworth, Lord-Mayor of London, the young king, then about fifteen years of age, rode up to the irritated populace, and said, "Follow your king; I will be your leader and redress your grievances." The people, struck with astonishment, obeyed the call, and dispersed quietly to their own homes. When the government had thus quelled

Fig. 2262. — FEMALE COSTUMES, (Reign of Richard I.)

the revolt, no promises were kept, no grievances redressed, but, instead, more than 1,500 people were executed on the scaffold. The remainder of Richard's short reign was unfortunate. Discontents prevailed among the nobility, of which Henry, Duke of Lancaster, availed himself, and assumed the title of king. (See HENRY IV.) Richard was betrayed into his hands by the Earl of Northumberland, and, in 1399, he was taken to London and confined in the Tower, where, before the assembled magnates of the kingdom, he abdicated the throne. He is supposed to have been poisoned at Pontefract Castle in 1400.

Richard III., B. at Fotheringay Castle, Northamptonshire, 1453, was the brother of Edward IV., and created Duke of Gloucester. He caused his nephews, Edward V. and Richard, Duke of York, to be secretly murdered in the Tower; after which he was himself proclaimed king in 1483. The Duke of Buckingham, who had assisted him in his usurpation, subsequently conspired against him, but was taken prisoner and beheaded. Henry, Earl of Richmond, afterwards Henry VII., of the house of Lancaster, was abroad, but returned privately and landed at Milford, in Wales, where he was joined by a few followers, who soon increased. He then marched against Richard III., whom he encountered at Bosworth Field, where, after performing prodigies of valor, the king was slain, and the crown being found, it was placed on the head of Henry. The character of Richard III. has been most variously represented by different historians; Walpole declares that all the crimes attributed to him were mere fabrications. It is, however, certain that he was a man as unscrupulous as he was energetic and determined. Killed, 1485.

Richardson, Dr. CHARLES, a modern English philologist, B. 1775. In 1805 he produced his *Illustrations of English Philology*, and subsequently undertook the lexicographical portion of the *Encyclopædia Britannica*. His greatest work was completed in 1837, under the title of *Richardson's Dictionary of the English Language*, which is, in many respects, superior to that of Dr. Johnson. D. 1865.

Richardson, SAMUEL, an English novelist, was born in 1689, in Derbyshire, and received his education at a common day-school. At the usual age he was bound apprentice to a London printer, and after the expiration of his time he worked as a compositor and corrector of the press for some years. At length he took up his freedom, and set up business for himself, first in a court in Fleet Street, afterwards in Salisbury Square, and became eminent in his profession. In 1740 he published *Pamela*, the popularity of which was so great, that it ran through five editions in one year, being recommended even from the pulpit. Two years later appeared the *Joseph Andrews*, of Fielding, written as a burlesque of the prolix details and high-flown moral sentiment of *Pamela*. In 1748, *Clarissa Harlowe* fully established the literary reputation of R., and its pathos, its variety of character and minute development of the human heart, will cause it ever to be regarded as a work of genius. The *History of Sir Charles Grandison* appeared in 1753, and was received with great applause. Besides these works, R. published *Familiar Letters for the Use of Young People*, and *Æsop's Fables, with Reflections*. His *Correspondence* was published in 1804, with his *Life* by Mrs. Barbauld. He was pious and benevolent, but immensely vain, and lived surrounded by a circle of affectionate friends, mostly ladies, who valued him for his moral worth and amiable disposition. D. 1761.

Richardsonia, (*ritsh'ard-so-ne-ä*) *n.* (Bot.) A gen. of plants, ord. *Cinchonaceæ*. *R. scabra*, or *braziliensis*, contains the active principle *emetina* in its root, which is used in some parts as a substitute for the true *ipecauanha*, under the names of *undulata*, *white*, and *amygdalaceous ipecauanha*.

Richardson's Creek, in *N. Carolina*, enters Rocky River from Anson co.—A post-village of Union co., abt. 167 m. S.W. of Raleigh.

Richardsonville, in *N. Carolina*, a post-village of Edgefield dist., abt. 55 m. W. of Columbia.

Richardsonville, in *Virginia*, a village of Culpeper co., abt. 95 m. N.N.W. of Richmond.

Richborough, in *Pennsylvania*, a post-village of Bucks co., abt. 114 m. E. of Harrisburg.

Richburg, in *New York*, a post-village of Allegheny co., abt. 300 m. W.S.W. of Albany.

Rich'elieu, ARMAND JEAN DU PLESSIS, CARDINAL, and DUKE DE, first minister of France under Louis XIII., was B. at Paris in 1585. Destined at first for the army, he turned to the church on his brother's resignation of the See of Luçon, studied theology at the college of Navarre, and was consecrated bishop of that see in 1607. He occupied himself with his episcopal functions, especially aiming at the conversion of Calvinists, till 1614, when he was chosen deputy to the state-general; and having attracted attention by his eloquence, he was charged to harangue the young king and was named almoner to the queen-mother, Marie de Medicis. Two years later he became secretary of state for war and foreign affairs. He had at this time the protection of the queen's favorite, the Marshal d'Ancre; after whose assassination, and the exile of the queen to Blois, he was banished from the court, first to his diocese, and then to Avignon, where he employed himself in writing theological works. He afterwards managed a formal reconciliation between the king and the queen; was recreated cardinal in 1622; and in 1624 took his place in the council of state as first minister, a post which he held for 18 years. He made himself absolute master of France, owning neither colleagues nor equals. His history for the rest of his life is the history of France, the government of which he chiefly contributed to make an

absolute monarchy. In working out his policy, whether domestic or foreign, he was unscrupulous as to means. He broke the power of the nobility, put many of them to death, and imprisoned many more; he suppressed the Calvinists as a party in the state by his severe measures, and besieged and took Rochelle in 1628; while at the same time, to humiliate the house of Haps-

Fig. 2263. — CARDINAL RICHELIEU.

burg, he aided the Protestants of Germany, Switzerland, and the Netherlands. R. meanwhile, like some other despotic ministers, distinguished himself by a liberal patronage of letters and the arts. In 1635 he founded the French Academy; he greatly improved the royal printing-office; built the Palais Cardinal, since called Palais Royal, and rebuilt on a grander scale the Sorbonne. By the imposition of additional taxes he excited in his latter years general discontent, and conspiracies were formed to assassinate him; in one of them Cinq-Mars and De Thou were implicated, and both perished on the scaffold in 1642. The queen-mother died the same year in want and misery at Cologne. R. had lost by death four years before his friend and diplomatic agent, the Père Joseph; and the cardinal himself d. at Paris, December 4th, 1642, having recommended Cardinal Mazarin as his successor.

Rich'elieu, LOUIS FRANÇOIS ARMAND DU PLESSIS, DUKE DE, a marshal of France, descended from the same family as the Cardinal, was B. in 1696. After the death of Louis XIV., he was admitted into the court of the Regent; the Duke d'Orleans and he largely participated in its profligacy. He was sent to the Bastille in 1716, for fighting a duel with the Comte de Gacé, and again in 1719, as an accomplice with the Spanish ambassador in a conspiracy against the Regent. He distinguished himself under Villars, and afterward at Kehl, Philipshurg, Dettingen, and Fontenoy; conquered Minorca, forced the Duke of Cumberland to submit to the capitulation of Klosterseven, and devastated the electorate of Hanover. In 1781, he obtained the rank of deau of the French marshals; and he concluded his long career, varied with acts of heroism and villany, in 1788.

Rich'elieu, a S.W. co. of prov. of Quebec; *area*, about 373 sq. m. *Rivers*, St. Lawrence and Richelieu rivers. *Surface*, diversified; *soil*, generally fertile. *Cap.* Sorel. *Pop.* (1897) 22,180.

Rich'elieu, SOREL, ST. JOHN, or CHAMBLY, a river of prov. of Quebec, rises in Lake Champlain, on the United States boundary, and flowing almost due N., joins the St. Lawrence River between the cos. of Richelieu and Vercheres. *Length*, abt. 80 m.

Rich'elieu Islands, a small group of pr. of Quebec, in Lake St. Peter (or St. Pierre), an expansion of the St. Lawrence, at the mouth of the Richelieu River.

Rich'es, *n. pl.* [A. S. and Fr. *richesse*; It. *ricchezza*.] Extensive possessions of lands, goods, or money; wealth; opulence; affluence.—Splendor; sumptuous appearance.

Rich'field, in *Illinois*, a post-township of Adams co.

Richfield, in *Michigan*, a post-village and township of Genesee co., abt. 11 m. N.E. of Flint.

Richfield, in *New York*, a post-township of Otsego co., contains the post-village of Ritchfield Springs, abt. 75 m. W. of Albany. These springs are recommended for rheumatism, skin diseases, &c., and are much resorted to.

Richfield, in *Ohio*, a township of Henry co.—A township of Lucas county.—A post-village and township of Summit county, abt. 134 m. N.E. of Columbus.

Richfield, in *Wisconsin*, a post-village and township of Washington co., abt. 23 m. N.W. of Milwaukee.

Rich'ford, in *New York*, a post-village and township of Tioga co., abt. 140 m. W. by S. of Albany.—A township of Otsego co.

Richford, in *Vermont*, a post-township of Franklin co.

Rich Hill, in *Ohio*, a township of Muskingum county.

Rich Hill, in *Pennsylvania*, a township of Greene co.

Richibucto, a town and port of entry of Kent co., New Brunswick, on a river of the same name, which here forms an excellent harbor, abt. 120 m. N.E. of St. John. It has an active trade, chiefly in lumber.

Rich'land, in Arkansas, a township of Jefferson co.—A township of Madison co.—A township of Newton co.—A post-township of Desha co.—A township of Searcy co.—A township of Washington co.

Richland, in California, a village of Sacramento co.

Richland, in South Dakota, a post-village of Union co.

Richland, in Georgia, a post-village of Stewart co., about 150 m. S.W. of Milledgeville.

Richland, in Illinois, a S.E. co.; area, about 361 sq. m. Rivers. Little Wabash river, and Fox and Bonpas creeks. Surface, mostly level; soil, fertile. The county is intersected by the Ohio & Mississippi and Grayville & Mattoon railroads. Products. Corn, wheat, oats, hay, and pork. Cap. Olney. Pop. (1897) 16,640.—A township of La Salle co.—A township of Marshall co.—A post-village of Sangamon co.

Richland, in Indiana, a township of De Kalb co.—A township of Fountain county.—A township of Fulton county.—A township of Grant county.—A township of Greene county.—A township of Jay county.—A township of Madison county.—A township of Miami county.—A township of Monroe county.—A post-village and township of Rush county, about 10 m. S.S.E. of Rushville.—A township of Steuben county.—A township of Whitley county.

Richland, in Iowa, a township of Adair county.—A township of Chickasaw county.—A township of Decatur county.—A township of Delaware county.—A township of Franklin county.—A township of Guthrie county.—A township of Jackson county.—A township of Jasper county.—A township of Jones county.—A post-village and township of Keokuk county, about 15 m. N. of Fairfield.—A township of Mahaska county.—A township of Tama county.—A township of Wapello county.—A township of Warren co.

Richland, in Kansas, a post-village of Shawnee co.

Richland, in Kentucky, a post-office of Hopkins co.

Richland, in Michigan, a post-village of Kalamazoo co.

Richland, in Minnesota, a post-office of Rice co.

Richland, in Missouri, a township of Gasconade co.—A village of Greene co., about 10 m. N. by W. of Springfield.—A post-town of Pulaski co.

Richland, in Nebraska, a post-village of Colfax co.

Richland, in New York, a post-town of Oswego co., about 42 m. N.W. of Rome.

Richland, in Ohio, a N. central co.; area, about 487 sq. m. Rivers. Huron river, and Black and Clear Forks of Walhonding river. Surface, level or gently undulating; soil, very fertile. The county is traversed by several railroads. Cap. Mansfield. Pop. (1897) 40,050.—A township of Allen co.—A village and township of Belmont co., about 14 m. W. of Wheeling, W. Va.—A township of Clinton co.—A township of Darke co.—A township of DeWitt co.—A township of Fairfield co.—A township of Guernsey co.—A township of Holmes co.—A village and township of Logan co., about 125 m. N. by E. of Cincinnati.—A township of Marion co.—A village of Richland co., about 16 m. N. by W. of Mansfield.—A township of Vinton co.—A township of Wyandot co.

Richland, in Pennsylvania, a township of Bucks co.—A township of Cambria co.—A township of Clarion co.—A township of Venango co.

Richland, in South Carolina, a central co.; area, about 620 sq. m. Rivers. Wateree, Broad, and Congaree rivers. Surface, somewhat hilly; soil, mostly fertile. Cap. Columbia, which is also the seat of the State government. Pop. (1897) 37,670.—A post-office of Oconee co.

Richland, in Texas, a post-village of Navarro co.

Richland, in Virginia, a village of Stafford co.

Richland, in Wisconsin, a S.W. co.; area, about 570 sq. m. Rivers. Wisconsin, Eagle, and Kickapoo rivers. Surface, diversified; soil, generally fertile. Cap. Richland Center, about 128 m. W.N.W. of Milwaukee. Pop. (1895) 19,619. A natural bridge is in the county, situated on Pine creek.

Richland City, in Wisconsin, a post-village of Richland co., about 50 m. W. of Madison.

Richland Creek, in Tennessee, enters Elk river from Giles co.

Richland Grove, in Illinois, a village of Rock Island co., about 13 m. S.S.E. of Rock Island.

Richlandtown, in Pennsylvania, a post-village of Bucks co., abt. 105 m. E. of Harrisburg.

Richly, adv. With riches; with opulence; with abundance of goods or estate; wealthily. —Plenteously; abundantly; amply. —Truly; really; abundantly; —used ironically; as, he richly deserved a beating.

Richman, in Iowa, a township of Wayne co.; pop. 301.

Richmond, a town of England, co. of Surrey, on the Thames, 10 m. W. of St. Paul's Cathedral, London, and celebrated for its picturesque beauty; pop. 10,921.

Richmond, a town of England, co. of York, on the Swale, 42 m. N.W. of York. Manuf. Paper, leather, and hardware. Pop. 5,000.

Richmond, an E. co. of Nova Scotia, comprising the S. portion of Cape Breton Island. Cap. Arichat.

Richmond, a S. central co. of Quebec.

Richmond, a village of Carleton co., prov. of Ontario, abt. 73 m. N.N.E. of Kingston; pop. 500.

Richmond, in Georgia, an E. co., adjoining S. Carolina; area, about 329 sq. m. Rivers. Savannah river, and Brier, Butler's, Maclean's, and Spirit creeks. Surface, uneven; soil, in the vicinity of the streams, fertile. Min. Granite and bluestone. The county is intersected by the Georgia Central and other railroads. Cap. Augusta. Pop. (1897) 60,000.

Richmond, in Illinois, a village of Brown co., about 70 m. W. by N. of Springfield.—A post-village and township of McHenry co., about 75 m. N. W. of Chicago.

Richmond, in Indiana, a village of Decatur co., about

55 m. S.E. of Indianapolis.—A city, cap. of Wayne co., about 68 m. E. of Indianapolis. It has numerous manufacturing, chiefly of cotton and woollen goods, paper, flour, and iron. Pop. (1897) 19,750.

Richmond, in Kentucky, a post-village, cap. of Madison co., about 50 m. S.S.E. of Frankfort. It is a handsome and thriving place. Pop. (1897) 5,100. Here, on Aug. 30, 1862, Gen. E. Kirby Smith, at the head of about 18,000 Confederate troops, attacked, and, after a desperate encounter of three hours, totally defeated a greatly superior Union army under Gens. M. D. Manson and William Nelson. The National loss was over 5,000 men killed, wounded, and prisoners, among the last of whom was Gen. Maunson.

Richmond, in Louisiana, a village, former cap. of Madison parish, about 300 m. N. of Baton Rouge.

Richmond, in Maine, a post-village and township of Sagadahoc co., abt. 17 m. S. of Augusta.

Richmond, in Massachusetts, a post-vill. and township of Berkshire co., abt. 150 m. W. of Boston.

Richmond, in Michigan, a village of Allegan co., abt. 17 m. N.W. of Allegan.—A post-township of Macomb co.

Richmond, in Missouri, a city, cap. of Ray co., 150 m. N. W. of Jefferson City. Pop. (1897) 3,050.

Richmond, in North Carolina, a S. co., adjoining S. Carolina. Area, about 789 sq. m. Rivers. Yadkin, Lumber, and Little Pedee rivers. Surface, level or undulating; soil, fertile. Cap. Rockingham. Pop. (1897) 25,250.

Richmond, in New Hampshire, a post-township of Cheshire co.

Richmond, in New York, an extremo S. co., comprising Staten Island, and bordering on New Jersey, Newark Bay, New York Bay, and Raritan Bay. Area, about 61 sq. m. Surface, uneven and hilly; soil, generally fertile. Min. Iron. Until 1898 the capital was Richmond. This co. is now a part of New York city, and is to be known hereafter as Richmond. Pop. (1897) about 60,000.

Richmond, in Ohio, a township of Ashtabula county.—A township of Huron county.—A post-village of Jefferson county, about 11 miles north-west of Steubenville.—A village of Lake county, on Grand River, about 1 mile above its mouth.—A village of Ross county, about 14 miles south-east of Chillicothe.

Richmond, in Pennsylvania, a township of Berks county.—A township of Crawford county.—A post-village of Northampton county, about 12 miles N. of Easton.—A former village of Philadelphia county, now included within the limits of the city of Philadelphia, on the Delaware river, about 4 m. N. E. of the City Hall. It is also called Port Richmond, and is one of the largest shipping ports for coal in the world.—In Rhode Island, a township of Washington co.—In Texas, a post-town, cap. of Fort Bend co.—In Vermont, a post-village and township of Chittenden co.

Richmond, in Virginia, an E. co.; area, about 210 sq. m. Rivers. Rappahannock river. Surface, mostly level; soil, fertile. Cap. Warsaw. Pop. (1897) 7,450.

—A city and port of entry, cap. of Henrico co. and of the State of Virginia, on James River, about 150 m. from its mouth in Chesapeake Bay, and 100 S.S.W. of Washington. The situation of R. is very striking. The town is built on rising grounds of various shapes, descending to the eastward. The chief street is handsome and spacious, and there is a fine square, covering about 10 acres, planted with trees, and laid out in gravel-walks. In this square is the capitol, an elegant building, on the model of the *Maison carrée* at Nîmes, erected shortly after the War of Independence. It has a statue of Washington, by Houdon. A public library has been established in the Senate hall, which has also a portrait of Jefferson. The churches are numerous, and one occupies the site of the theatre destroyed by fire, with great loss of life, in 1811. The Virginian armory, the penitentiary, and a new theatre, include the other chief objects of notice. The city is abundantly supplied with water. R. is favorably situated for commerce. It stands at the head of the tide-water, in James River, and is connected by James River Canal with Buchanan, 195 m. distant, and by railways with Aquia Creek and Petersburg. It is, consequently, the natural depot for the wheat, hemp, and other produce of a large extent of country. Immediately above the city are some falls, beyond which the river is navigable by boats for upwards of 200 m. The falls supply valuable water power, which is used to work flour, cotton, paper, and rolling mills. R. has also large iron works and tobacco factories. The suburb of Manchester is connected with R. by two bridges; and with some coal mines, 13 m. distant, by a railway. R. became the capital of the so-called Confederate States in July, 1861, and the Congress assembled July 20. The Nationals, under General Kilpatrick and Col. Dahlgren, attempted to seize the city, March 1, 1864, but were repulsed with great loss. It was eventually taken April 3, 1865. It was set on fire by Confederate hands, and a considerable part of the city was burned in the conflagration that followed, but in the interval that has succeeded the former beauty of the city has been restored, and its prosperity and importance greatly enhanced. An "agricultural, mechanical, and tobacco exposition" was held in 1888. The city occupies an area of $5\frac{1}{2}$ sq. m. Its net public debt in 1897 was \$7,202,682, and the assessed value of taxable property, \$64,155,383. Pop. 1890, 81,388; 1897, about 100,000.

Richmond, in Wis., a twp. of St. Croix co.—A twp. of Shawano co.—A post-vill. and twp. of Walworth co.

Richmond Dale, in Ohio, a post-village of Ross co.

Richmond Factory, in Ga., a vil. of Richmond co.

Richmondville, in New York, a post-village and township of Schoharie co., about 48 m. W. of Albany.

Rich'ness, n. State of being rich.—Opulence; wealth. —Fertility; fecundity; fruitfulness.—Quality of abounding with something valuable; abundance of any ingredient or quality.—Abundance of nutritious qualities; repletion of high seasoning.—Profuseness of beautiful scenery, vividness, or whatever constitutes perfection.—Copiousness of imagery or striking ideas.

Rich'ter, JEAN PAUL FRIEDRICH, commonly called JEAN PAUL, a celebrated German humorist, b. at Wunsiedel, near Bayreuth, 1763. His father, a Lutheran village pastor, was so poor that his son's education was carried on with much difficulty; and, dying before Jean Paul reached the university, he left his family in great distress. The youth, bent on attaining scholarship, and intending at first to be a clergyman, struggled on for a while at Leipzig, often wanting bread; and in 1783 he found his way to the press with a work, the *Grün-andische Prozenen*, which showed him to have already opened his peculiar vein. Another of his strange sketches, *An Extract from the Devil's Papers*, lay unpublished for several years, during which J. P. remained in the depths of penury. In 1793 he opened a school in the little town of Schwarzenbach, in his native province; and then also he attracted public applause for the first time, by the publication of *The Invisible Lodge*. Thus encouraged, he devoted himself entirely to authorship, poured forth his works with rapidity, and became one of the most celebrated among the German writers of his time. He shifted his residence often till 1803, and then settled at Bayreuth for the remainder of his life, which closed in 1825. J. P. wrote philosophical treatises, such as his *Levana, or the Theory of Education*, and the *Introduction to Aesthetics* (*Vorschule der Ästhetik*). But his fame rests on a kind of compositions which are almost, yet not quite, novels or romances. They unite narrative, description, and reflection; they pass from the wildest flights of grotesque and original humor to the depths of pathetic tenderness; they contain as much of striking thought as ever was embodied in any work of fiction, and as much of poetic imagination as ever was expressed in prose. His thinking is unsystematic, but often wonderfully suggestive as well as acute; and his style is entirely his own, and so eccentric, that his books are not less difficult for Germans than for foreigners. Among the works which fill his sixty volumes a few may be named:—*Hesperus*; *Quintus Fixlein*; *Biographical Diversions under the Skull of a Giantess*; *Flower, Fruit, and Thorn-Pieces*; *The Journey of the Regimental Chaplain Schmeltzle*; *Titan*; *The Life of Eibel*; *The Comet*; or *Nicolaus Markgraf*.

Rich View, in Illinois, a post-village of Washington co., abt. 8 m. N.E. of Nashville.

Rich'ville, in New York, a post-village of St. Lawrence co., abt. 18 m. S.W. of Canton.

Rich'wood, in Ohio, a post-village of Union co., abt. 44 m. N.W. of Columbus.

Richwood, in Wisconsin, a post-village of Dodge co., abt. 6 m. N.W. of Watertown.—A township of Richland co.

Ricin'ic, a. [From Lat. *ricinus*.] Relating to, or procured from, castor-oil.

Ric'inus, n. [Lat., a tick, which its seed resembles.] (Bot.) A gen. of plants, ord. *Euphorbiaceæ*. *R. communis* is the Palma Christi, or Castor-oil plant (Fig. 1036), a native of the E. and W. Indies and Florida. Castor-oil is obtained from the seeds, either by expression with or without the aid of heat, or by decoction, or sometimes by the aid of alcohol. Castor seeds, when taken whole, are extremely acrid, and have produced death; but the expressed oil is a mild and most efficient non-irritating laxative. Its valuable properties are principally owing to the presence of an acrid resin. The so-called *concentrated castor-oil*, which is sold in gelatine capsules, is adulterated with croton-oil, and hence may produce serious effects when administered in certain cases. The Palma Christi has been recently cultivated in Algeria for the purpose of feeding silk-worms on the leaves.

Rick, n. [A. S. *hrec*, from *racian*.] A heap or pile of grain or hay in the field or open air, but commonly sheltered with a covering of some kind. —A small heap of corn or hay piled by the gatherer.

—v. a. To pile up, as hay or corn.

Rick'ets, **Rack'itis**, n. [Gr. *rachites*.] (Med.) A disease of the bones, in which they are of unnatural softness, and become bent under the weight of the superincumbent parts of the body. It is confined to the young, and commonly makes its appearance between the first and third year. As soon as the weight of the body is thrown on the limbs, they become bent and twisted in the most extraordinary manner; the joints become enlarged, the chest and pelvis deformed, and the head large and swollen. The bones in this disease are found to be soft and cellular, and deficient in earthy matter. In addition to this, the muscles are always pale and weak, with other signs of general debility; besides which the brain and organs contained in the chest and abdomen are liable to suffer. The nature of this disease requires that its treatment be directed chiefly to strengthening the general constitution by a good and well-regulated diet, pure air, warm clothing, bathing, and such active exercise as may be borne without fatigue.

Rick'ety, a. Affected with rickets.—Weak; feeble in the joints; imperfect.

Rick'mansworth, a town of England, on the Chess, 10 m. from St. Albans. Manuf. Straw plait, paper, and flour. Pop. 5,000.

Rickreal, (*rik-re-awl*.) in Oregon, a small river, flowing from the Coast Range E. into the Willamette River. abt. 3 m. S. of Salem.

Ricochet, (*rik-o-shai'*), n. [Fr., ducks and drakes.] (Gun.) A term applied to the repeated rebounding of a

shot or shell. *R. firing* is a method of firing with small charges from pieces of ordnance elevated at small angles. It is very destructive in its nature, as the rebound causes the shot or shell to pass along a considerable space, almost on a level with the ground, destroying all that it meets with in its path. The practice of ricochet firing was first tried by Vanban at the sieges of Philipsburg and Mannheim, in 1683. According to his own letters, its success was very great on the first trial; but it was much greater at the siege of Ath, which was conducted by Vanban during the same war. From experiments made at Woolwich in 1821, it would appear that the best elevation of ordnance for ricochet firing is that in which the axis of the piece is directed at an angle varying from 6° to 9° above a line drawn from the chamber of the gun to the crest of the parapet over which the projectile is to pass. In the rifled ordnance now so much employed, the rotation of the shot causes it to be deflected immensely when it touches the ground, so that hitherto very little good *R. practice* has been made with them. However, the service of artillery is now so precise, that when guns in an enemy's work can be seen, they can be as readily dismantled by direct firing as by the ricochet.

—*v. a.* To operate on by ricochet firing.

Ri'cord, PHILIPPE, a French physician, b. at Baltimore, Md. in 1800, went to Paris in 1820. He was almost immediately admitted as an *interne*; was attached successively to the *Hôtel Dieu*, under Dupuytren, and to *La Pitié*, under Lefranc, and was appointed, in 1831, Surgeon-in-chief to the *Hôpital des Vénériens of the South*, which position he held till Oct., 1860, when he retired. This appointment secured *R.* the special reputation which he enjoys for his knowledge and treatment of that class of diseases to which it relates. *R.* discovered a cure for varicocoele, &c., for which he received, in 1842, the Monthyon prize. He has been a member of the Imperial Academy (section of Surgical Pathology) since 1850, and is attached, as consulting-surgeon, to the Dispensary of Public Health. By decree, July 28, 1862, he was appointed Physician-in-Ordinary to Prince Napoleon. He was promoted to the rank of Commander of the Legion of Honor Aug. 12, 1860, and has been decorated with numerous foreign orders. Among his various works may be named, *De l'Emploi du Spéculum* (1833); *De la Blennorrhagie de la Femme* (1834); *Emploi de l'Onguent Mercuriel dans le Traitement de l'Érèsiopèle* (1856); *Monographie du Chancre* (1837); *Traité des Maladies Vénériennes* (1838); *De l'Ophthalmie Blennorrhagique* (1842); *Clinique Iconographique de l'Hôpital des Vénériens* (1842-1851); and *De la Syphilisation et de la Contagion des Accidents Secondaires* (1853). Died Oct. 22, 1889.

Rid, *v. a.* [A. S. *hreddan*, or *hreddan*; Du. *redde*; Ger. *retten*, or *eretten*.] To liberate; to free; to deliver; to disencumber. — To make away; to remove by violence. (R.) — To dispatch; to get rid of. (R.)

To get rid of, to be freed from.

Rid'dance, *n.* A setting free; act of clearing away. — State of being free; disencumbrance.

Rid'der, *n.* The person who, or that which, rids.

Rid'dle, *n.* [A. S. *hriddel*, from *hriddan*, to free.] An instrument for separating grain from chaff.

—*v. a.* To separate, as grain from chaff, with a *rid'dle*. — To perforate with balls or shot; to make little holes in.

—*n.* [A. S. *rædelse*, from *ræda*, to read, conjecture, guess.] Something proposed for conjecture, or that is to be solved by guesswork; a puzzling question; an ambiguous proposition; an enigma. — Anything ambiguous or puzzling.

—*v. a.* To solve; to explain; to unriddle.

—*n.* To speak ambiguously or obscurely.

Rid'dler, *n.* One who speaks ambiguously, or in riddles.

Rid'dlingly, *adv.* In the manner of a riddle; secretly.

Ride, *v. n.* (imp. *RODE*; pp. *RIDDEN*.) [A. S. *ridan*; Ger. *reiten*; Sw. *rida*.] To be borne along in a chariot or other vehicle. — To be carried on horseback, or on any beast. — To be borne on or in a fluid. — To be supported in motion; to be upheld by something subservient; to sit. — To practise riding; to manage a horse well.

—*v. a.* To sit or to place one's self on, so as to be carried. — To control insolently at will.

—*n.* An excursion on horseback, or in a vehicle. — A road cut in a woods, or through a ground, for the amusement of riding; a drive; a riding.

Rideau, (*re-dō'*), *n.* [Fr., a curtain.] (*Fort.*) A rising ground or elevation of earth, extending itself lengthwise on a plain, serving to shelter a camp from the approach of the enemy, or to give some other advantage to the position.

Rid'er, *n.* One who rides, or is borne on a horse or other beast, or in a vehicle. — One who breaks or manages a horse. — An addition to a manuscript, or other document, inserted, after its completion, on a separate piece of paper; an additional clause, as to a bill in Parliament.

(*Mining*.) A deposit of ore overlying the principal mineral.

(*Com.*) A traveller who carries patterns and samples; a commercial traveller; a riding-clerk.

Riderless, *a.* Without a rider.

Ridge, (*rij*), *n.* [A. S. *hric*, *hrieg*, *hrycce*; Du. *rug*; Ger. *rücken*.] The back, or top of the back.

— A long, or continued, range of hills or mountains; the upper part of such a range; a steep elevation, eminence, or protuberance.

— A strip of ground thrown up by a plough, or left between furrows.

(*Arch.*) The upper angle of a roof; the intersection of two surfaces forming a salient angle.

(*Fort.*) The uppermost part of the glacis proceeding from the salient angle of the covered way.

—*v. a.* (imp. and pp. *RIDGED*), (*rijd*.) To form into a ridge.

"Bristles that *ridge* the back of chafed wild boars." — *Milton*.

— To wrinkle; to crease.

(*Agric.*) To form into ridges with the plough, as soil.

Ridge, in *Ohio*, a township of Van Wert co. — A township of Wyandot co.

Ridge-band, *n.* (Known also as *RIDGE-ROPE*, *RIDGE-STAY*, and *RIDGER*.) That part of a horse's harness which passes over the saddle, and serves to support the shafts of a cart, &c.

Ridgebury, in *Connecticut*, a post-village of Fairfield co., abt. 35 m. W. by N. of New Haven.

Ridgebury, in *New York*, a post-village of Orange co., abt. 110 m. S.S.W. of Albany.

Ridgebury, in *Pennsylvania*, a post-township of Bradford co.

Ridge Farm, in *Illinois*, a post-village of Vermilion co., abt. 16 m. S. of Danville.

Ridgefield, in *Connecticut*, a post-village and township of Fairfield co., abt. 35 m. N. of New Haven. — Samuel P. Goodrich, the celebrated "Peter Parley," was b. in this village, in 1793.

Ridgefield, in *Ohio*, a township of Huron county.

Ridgel, (*rij'l*), *n.* See *RIDGIL*.

Ridgelet, (*rij'let*), *n.* A small ridge.

Ridgely, (*rij'lee*), in *Illinois*, a village of Madison co., abt. 64 m. S. by W. of Springfield.

Ridge-pole, *n.* (Also called *RIDGE-PLATE* or *RIDGE-PIECE*.) (*Arch.*) The timber or beam forming the ridge of a roof, and into which the rafters are secured.

Ridge-rope, *n.* (*Naut.*) A rope on shipboard, serving to keep persons from falling overboard, or to secure an awning.

Ridgeville, in *Alabama*, a village of Butler co., about 50 m. S. W. of Montgomery.

Ridgeville, in *Indiana*, a post-town of Randolph co., about 14 m. N. W. of Union City.

Ridgeville, in *Ohio*, a township of Henry county. — A township of Lorain county. — A village of Monroe county, about 33 miles N.E. of Marietta. — A post-town of Warren county, about 38 miles N. N. E. of Cincinnati.

Ridgeville, in *South Carolina*, a post-town of Colleton co., about 31 m. N. W. of Charleston.

Ridgeville, in *Wisconsin*, a post-township of Monroe county.

Ridge-way, in *Iowa*, a post-village of Winneshiek county.

Ridge-way, in *Kansas*, a post-village and township of Osage co., about 17 m. S. E. of Topeka.

Ridge-way, in *Michigan*, a post-village and township of Lenawee co., about 12 m. N. E. of Adrian.

Ridge-way, in *New York*, a post-township of Orleans county.

Ridge-way, in *North Carolina*, a post-village of Warren co., about 58 m. N. N. E. of Raleigh.

Ridge-way, in *Ohio*, a post-village of Hardin co., about 15 m. N. E. of Bellefontaine.

Ridge-way, or *RIDGWAY*, in *Pennsylvania*, a post-borough, cap. of Elk co., about 160 m. N. W. of Harrisburg. It was laid out in 1843, and is a place of much business activity. Pop. (1897) 2,250.

Ridge-way, in *South Carolina*, a post-town of Fairfield co., about 24 m. N. of Columbia.

Ridge-way, in *Wisconsin*, a post-village and township of Iowa county, about 32 miles west by south of Madison.

Ridgil, *Ridgling*, (*rij'il*), also *REDGIL*, *n.* [Prov. Ger. *riegler*, a half-castrated cock.] The male of any animal half gelt.

Ridg'ingly, *adv.* So as to form ridges.

Ridgy, (*rij'y*), *a.* Having a ridge, or ridges; rising in a ridge; as, *ridgy waves*.

Rid'icule, *n.* [Fr., from Lat. *ridiculus*, laughable — *rideo*, *resum*, to laugh at.] The expression of laughter, generally accompanied with some degree of contempt; wit of that species that excites laughter; remarks designed to excite derisive mirth; derision; banter; raillery; badinage; mockery; satire; persiflage; satirical merriment; as, to hold a person up to *ridicule*. — That kind of writing which excites derisive or contemptuous laughter, and which is not strictly *burlesque*. —*v. a.* To expose to ridicule or derision; to laugh with expression of contempt; to treat with sarcastic or satirical merriment; to deride; to banter; to rally; to mock; to cover with badinage; as, to *ridicule* a shallow-brained Quaker.

Ridic'ul'er, *n.* One who ridicules or banters.

"The *ridiculer* shall only make himself ridiculous." — *Lord Chesterfield*.

Ridic'ulous, *a.* [Lat. *ridiculus*; It. *ridicoloso*.] That may justly excite laughter with contempt or derision; ludicrous; laughable; droll; absurd; preposterous; odd; as, a *ridiculous* remark, *ridiculous* manners, notions, or dress — Involving ridicule. (R.)

Ridic'ulously, *adv.* In a manner provoking or exciting derisive laughter; oddly; absurdly; preposterously; as, a woman *ridiculously* conceited.

Ridic'ulousness, *n.* Quality of being ridiculous; absurdness.

Riding, *a.* Used in, or pertaining to, riding; employed to travel on any occasion; as, a *riding* apparitor. — Adapted for equestrian exercise; as, a *riding* horse.

(*NOTE.* *Riding* forms sundry self-explaining compounds; as, *riding-cape*, *riding-habit*, *riding-whip*, &c.) —*n.* Act of one who rides; as, to take a *riding*. — In England, a district visited by an officer; as, an excise-man's *riding*; — more frequently abbreviated *ride*. — A road cut in a wood, or through a park or pleasure-ground, for the diversion of riding therein; — more frequently called *ride*.

— [From A. S. *trithing*, or *triding*, third part.] In England, the term given to the three divisions of the county

of York, viz., the North *Riding*, East *Riding*, West *Riding*.

Riding-bitts, *n. pl.* (*Ship-building*.) Massive frames of wood or iron, round which the cable is coiled on ship-board when a ship rides at anchor. The bitts are bolted through two decks. Large vessels have two pairs, smaller craft one pair. In merchant-ships of inconsiderable tonnage, the windlass is made to do duty for riding-bitts.

Riding-clerk, *n.* In England, one of the six clerks in Chancery.

Riding-days, *n. pl.* Days of predatory excursion by moss-troopers or mounted horsemen; days of raid or foray.

Riding-hood, *n.* A hood worn by female equestrians.

Riding-house, *n.* A place where the art of riding is taught or practised.

Riding-master, *n.* A male instructor in the art of riding.

(*Mil.*) In the British army, a commissioned officer in regiments of cavalry and brigades of artillery. He holds the relative rank of *lieutenant*.

Riding-mistress, *n.* An instructress in equestrianism.

Riding-school, *n.* See *RIDING-HOUSE*.

Rid'ley, in *Pennsylvania*, a township of Delaware county.

Rid'dott, or *RIDOTTS*, in *Illinois*, a post-village of Stephenson co., abt. 110 m. N.W. by W. of Chicago.

Ridot'to, *n.* [It., from L. Lat. *reductus*, a retreat.] A favorite public Italian entertainment, consisting of music and dancing; — held generally on fast eves.

—*v. n.* To attend *ridottos*. (R.)

Rie'glesville, or *RIEGLER'S MILLS*, in *New Jersey*, a village of Warren co., abt. 40 m. N.N.W. of Trenton.

Rienzi, (*re-ain'dza*.) NICOLA GABRINI, the Roman liberator, b. about 1310. He was of obscure birth; but having received an excellent education, which he improved by a strong will and vigorous understanding, he was sent by his fellow-citizens to Clement VI., at Avignon, in order to prevail upon that pontiff to return to Rome. His eloquence pleased the Pope, though it did not persuade him; and Rienzi on his return formed the design of making himself master of Rome, with the title of *tribune*. Having gained a considerable number of partisans, he entered the Capitol, harangued the people, and elevated the standard of liberty. He designed to unite the whole of Italy into one great republic, with Rome for its capital. For some time he was successful, his government was popular, and even Plutarch wrote in his favor, comparing him to Brutus. But at length a conspiracy was formed against him; and having lost the popular favor by his arrogance and tyranny, he was compelled to seek safety in flight, but was taken and cruelly put to death, 1352.

Riet'bok, *n.* [Ger. *ried*, reed, and *book*, buck.] (*Zoöl.*) An African species of antelope, *Eleotagus orundinaceus*.

Rieti, (*re-ai'te*), a town of central Italy, prov. of Perugia, on the Velino, 42 m. N.E. of Rome. *Manuf.* Woollens. Pop. 12,000.

Riever, *n.* A raider; a marauder; a forayer.

Rifacimento, (*re-fas'e-ment-o*), *n.* [It., reestablishment.] (*Lit.*) A work or treatise, the materials of which have not been derived from original sources, or are collected for the first time.

Rife, *a.* [S. *ryf*; Ger. *rief*, ripe, mature; W. *rhwy*, superfluity.] Prevalent; common; prevailing; abounding; as, the plague was then *rife* in Hungary, discontent is *rife* among the people, &c.

Rifely, *adv.* Prevalently; frequently; abundantly.

Rife'ness, *n.* State of being rife; prevalence; frequency.

Rif'raff, *n.* [It. *ruffa-raffa*.] The rabble; the mob; the dregs or scum of society; the canaille.

Rifle, (*rij'l*), *v. a.* [O. Fr. *rifler*, to spoil, to ransack, from L. Lat. *rieflare*, to ravage, from A. S. *raefian*, to spoil, to plunder.] To seize and bear away by force; to snatch away and carry off.

"Till time shall *rifle* every youthful grace." — *Pope*.

— To rob; to pillage; to plunder; to ransack; as, a foot-pat waylaid him and *rifled* his pockets.

Rifle, *n.* [Ger. *reifeln*, to channel, to flute, dimin. of *reifen*, to groove.] A gun, or small-arm, about the usual size of a musket, the inside of whose barrel is *rifled*, that is, grooved, or formed with spiral chambers. — A sharpening instrument, or whetstone, for a scythe.

— *pl.* (*Mil.*) A regiment of soldiers armed with rifles; as, the Queen's Own *Rifles*.

—*v. a.* To groove; to channel; to flute; — particularly, to groove internally with spiral channels; as, to *rifle* the bore of a gun, or the tube of a musket.

Rifled ordnance, *Rifled fire-arms*. During the 17th century rifled arms came into use in several countries on the continent of Europe, and were, in particular, employed by the French carabineers in 1692. Of the ancient pieces still in existence, a rifled cannon of 13 grooves, bearing date 1664, and with the breech secured by means of a screw, is preserved at Berlin, while another at Munich possesses 8 grooves, with a bore of about 2 inches, and both are of such a size as to lead to the conclusion that the projectiles employed must have been leaden balls; but the principle would appear never to have been extended to guns of large calibre, whose chief service was for bombarding, for which balls of soft metal are without doubt unsuitable. Probably on this account it was that the English so sparingly used rifled ordnance during the American Revolutionary war. It is known, however, that they had 2-pounder pieces, which, with a range of 1,300 yards, gave a lateral deflection of only 2 feet, far surpassing in range and accuracy any other pieces of that period. It is also stated that they even used elongated bullets, and had employed conical

bullets as far back as the siege of La Rochelle, in 1627. Still the smooth-bore continued almost exclusively in use in Europe for small-arms as well as heavy guns. Arms of this character were more readily loaded, and consequently more rapid discharges were kept up with them, which seems to have been considered peculiarly important at that time, when it was not the general custom in warfare to take exact aim in firing. During the war of the Revolution, rifle corps were organized in the American army, and their effective use of the rifle, then for the first time practically adopted in military operations, gave to the foreign troops who encountered them ample evidence of its efficiency. From that time the *R.* began to be introduced into European armies, and, toward the close of the last century, a few German and English battalions were equipped with this class of weapon. Napoleon I., however, discouraged their use among his troops, and hence they were not considered of much value by other European powers. The Swiss alone in Europe fully appreciated their good qualities, and the backwoodsmen of America clung to the rifle as their most cherished arm. Rifled fire-arms may be said to date from about the commencement of the 17th cent., when an ingenious gunsmith of Nuremberg, called Koster, first proposed grooving the bore of a musket, and making these grooves describe a circle, or indeed more than a circle, between the breech and the muzzle. The ball was also cast larger than the bore, so that it might forcibly receive indentations caused by the grooves in the act of loading. It was not long before those who used weapons of this description found that their bullets attained far greater accuracy than when fired from a smooth-bore. Nearly a century, however, elapsed before the true reason of this was discovered by Benjamin Robins, an Englishman, who, in 1742, showed that the spinning of a rifle-ball, like the rotary motion of an arrow, kept the axis of either in the same direction throughout their flight. After the system of rifle grooving had been adopted, nearly 200 years elapsed before any important change was made in the construction of the rifle. In 1826, however, a Frenchman, M. Delvigne, invented a chamber for the powder of smaller diameter than the rest of the barrel, and opening into this by a square shoulder all round the bore. The ball, of such size as would drop freely down, being introduced into the muzzle and resting on the shoulder, was then rammed by a heavy ramrod till the lead was forced into the grooves. This form was tried for some years by the French army in Algeria, but was eventually abandoned in consequence of the liability of the piece to become foul by the powder lodging upon the shoulders. In 1842 Col. Thouvenin substituted for the depressed chamber a steel stem, which projected into the barrel far enough to contain the charge of powder around it, and it was solid enough to afford a firm support to the ball, which, being dropped down upon it, was hammered by the ramrod as in the other case. Delvigne then invented a conical bullet, with a cylindrical extension for its base, and also a ramrod hollowed at the end to fit the point of the bullet. This piece is the *carabine-à-tige* of the French, and is still employed by their infantry, though partially subject to the same objections as Delvigne's chambered rifle. (See *CARABINE-À-TIGE*.) The next improvement in the rifle was that effected by Capt. Minié, in 1847 (see *MINIÉ*). Next came the *Zündnadelgewehr* of the Germans (see *NEEDLE-GUN*), the English Enfield, Whitworth, and Jacob rifles, and the American Snider. (q.v.) (See *JACOB RIFLE*, *WHITWORTH RIFLE*.) The *Snider-converted Enfield rifle*, which has now supplanted the former kinds of arm in the English infantry service, is a simple, safe, and comparatively cheap weapon. In this country, the breech-loading pieces may be included in three varieties. The first is the *revolver*, of which Colt's is the best known (see *REVOLVER*). The next is the *hinge* variety, which includes the rifle invented by Gen. Burdette of the U. S. army, and many others which differ only in the manner in which a portion of the breech or the barrel is made to turn upon a hinge or pivot, so as to present the chamber for receiving the cartridge. A third variety, including several important rifles, are constructed on the *slide* system. The Prussian needle-gun is made on this plan. So, also, is the American carbine known as *Sharps' rifle*, a very effective piece invented by Mr. Sharps of Philadelphia. The breech of this is secured by a sliding block of metal, or *cut-off*, which being drawn down near the yard, exposes a cavity on the upper side leading into the bore. The cartridge is introduced, and the block is pushed up, cutting off the rear end of the cartridge. The *Greene carbine* also belongs to the slide system. It is provided with 2 triggers. By pulling the forward one the barrel is unlocked from the breeching, when a twist to the left and a forward pull cause it to slide on a pivot, so that the cartridge may be introduced; the barrel is then immediately returned and locked by a reverse motion. The chamber for the charge contains a sliding-tube, with its bore in the breech-end contracted, so as to present a levelled or conical surface or shoulder. The force of the explosion acting against this, throws the tube back, greatly adding to the tightness of the joint. This, like other rifles employed in the U. S. service, is provided with the *Maynard primer*, which is a detonating pill, or small dot, numbers of which are attached in succession upon a flexible tape-like holder, which is coiled up in the breech of the piece, and brought forward with each cocking of the lock, presenting a pill upon the end of the nipple. In the *Greene carbine*, the lower end of the nipple tube is extended a little way forward of the breech, so that when the barrel is returned to its place the cartridge is punctured by this tube, which then terminates in the midst of the powder. Other improved American arms are the *Remington rifle*, and

the *Ward-Burton breech-loading rifle*, originally the invention of Mr. Bethel Burton, of Brooklyn, N. Y., and since greatly developed and improved by Brig.-Gen. W. G. Ward. It is constructed on the bolt, or needle-gun, system, and is operated by holding the piece in the left hand below the lower band, in the position known in the manual for muzzle-loading arms as *prime*, and seizing the handle of the breech with the right hand, nails uppermost. The breech is then opened by turning the handle up and withdrawing it to its full extent of motion, a cartridge taken from the pouch with the right hand and dropped bullet-end to the front in the now open receiver, and the breech closed by reversing the motions required to open it. By the motion of opening the breech to reload, the empty cartridge-shell will be ejected. The breech, however, may be closed during the act of raising the gun to the position of aim. A manual to load and fire by command in six motions may thus be readily devised. Practically, to load and fire requires but four motions. In Fig. 2264, representing this gun, *b* shows the enlargement of the cover-slide; *C*, the cover-slide; *D*, recoil-block, in one piece; *d*, ejector; *d'*, projection for receiving the shock of the

Fig. 2264. — WARD-BURTON BREECH-LOADING RIFLE.

recoil and steadying the finger; *E*, steady pin, forming a portion of *D*, the recoil-block; *e*, turning stud; *F*, breech-pin sleeve; *f*, handle of the same in one piece; *f'*, stud withdrawing firing-pin; *G*, hammer and firing-pin in one piece; *g*, inclined shoulder on the same; *g'*, cocking shoulder; *g''*, cam groove in connection with *f'*, *e*, and *g'*, withdrawing firing-pin from contact with cartridge; *g''*, rotating stud; *H*, main-spring; *K*, extractor; *L*, slot in breech-pin sleeve; *m*, safety notch in the same; *N*, slot in trigger; *O*, trigger; *P*, trigger spring. The piece, altogether, consists of 15 pieces, which, with some addition to its cost, might be reduced to 11 pieces. This rifle has been fired 25 times per minute, and 17 shots have been placed in the same time in a target 12 × 12 inches in size, at a distance of 50 yards. It has been submitted to the severest tests of rusting, has been filled with sand and dirt, and thoroughly tried with defective cartridges, without in the least affecting its perfect working. The machinery required for the manufacturing of the breech mechanism of these rifles is simple, and cheaper, it is claimed, than any other known; in fact, the parts can be made with ease in any shop having a lathe and scraper. This rifle was satisfactorily tested before the New York State Board in 1867; Massachusetts State Board in 1868; the Naval Board in 1869; and in April, 1870, before the Army Board in session at St. Louis, Mo. — *Rifled ordnance*. The object of rifling a gun of heavy calibre is to give the projectile a rotation round an axis coincident with that of the bore. This insures greater accuracy of fire. If a *spherical* projectile be employed, no other advantages follow; but if an *elongated* projectile be used, as it can be when thus given, a rotation round its longer axis, not only is accuracy increased, but we gain all the other advantages due to this form. Elongated projectiles have, therefore, entirely superseded spherical projectiles for rifled guns. The groove of a rifled gun is simply a portion of the thread of a female screw with a long pitch. If *A B C* be a right-angled triangle (1, Fig. 2265), in which *B C* equals the circumference of the bore of the gun, and *A B* the length of the bore — suppose the triangle *A B C* wrapped round the surface of the bore (2, Fig. 2265), then *A C* is the *helix* of curve of the groove. But in most rifled guns the *twist*, or inclination of the grooves, is much less than one turn in the length of the bore, and is measured in terms of the length in which one turn is completed. When *A C* in a straight line, as (1, Fig. 2265), the twist is *uniform*; but if *A C* be curved, as in 3, Fig. 2265, the groove will have an *increasing* or *gaining* twist, the angle of twist, *C A B*, becoming greater towards the muzzle. In this case the projectile is easily started, gaining a greater velocity of rotation as it proceeds towards the muzzle of the gun. The conditions which a rifled cannon should fulfil are: (1) to insure accuracy of fire; (2) to give as high velocity as possible; (3) to remain uninjured by much work; (4) to be simple in construction. To insure accuracy of fire, a rotatory motion must be given to the projectile round an axis coincident with that of the bore; the axis of the shot must be stable on leaving the piece; and the shot must have sufficient velocity of rotation (depending on its form, length, and weight,) to counteract the tendency which it has to turn over. To give the projectile a high velocity, the gun must be able to stand a large charge of powder; and in order to do this, remaining uninjured, a very strong construction is required. This strength will depend on the quality

Fig. 2265.

of the metal used, on its being distributed so as best to resist the strains to which the different parts are subjected, and on the method of rifling, not exerting undue strain on the gun. The construction should be so simple that the gun may be easily and rapidly worked, and not liable to derangement. *Breech-loading* and *muzzle-loading* ordnance have each their advocates. The advantages of the former are that a projectile of larger diameter than the bore can be used, and so its axis will be perfectly stable; that the gun can be loaded when run up (the gunners being thus less exposed), and can be easily examined and cleaned; and that a shot is sure to be *home*. Their disadvantages, as compared with muzzle-loading guns, are that the construction is necessarily more complicated; with large guns the breech-loading apparatus is heavy; and they are weaker, weight for weight. Wrought-iron and steel are the metals now almost universally employed for rifled guns. Wrought-iron is exceedingly tough, and not liable to snap or to fly into destructive pieces, but it is rather too soft for the bore of a gun, and it is very difficult to obtain thoroughly sound forgings of great size. Cast-steel, well hammered, is hard and elastic, but is liable to snap without warning, and fly into pieces; it is rendered harder and tougher by being tempered in oil, but there is great difficulty in obtaining large castings of thoroughly uniform quality. Steel is also very expensive. In the U. States, we have a great variety of rifled ordnance, although the naval authorities still favor cast-iron smooth-bored guns of large calibre. Some 20-inch guns have been made in this country, a pair of which are fitted to the "Puritan" iron-clad, a pair of them being also in readiness for land-service; but these will only stand comparatively small charges, although by a method of cooling from the interior, invented by Rodman, greater strength is obtained in the cast-iron of which they are made. The rifled Parrott guns, which are made of cast-iron strengthened with wrought-iron hoops, were of much service during the late war, though several cases of bursting occurred. (See *PARROTT GUN*.) A committee on ordnance some time ago recommended the *Ames gun*, which is built up of wrought-iron. No breech-loading system is, however, in favor in the U. States, the plan generally adopted being, as in the Parrott gun, a ring of brass at the base of the projectile, which is expanded by the gas into the grooves, or, as in the Schenkel system, a papier-mâché detached wad, which takes the rotation, and transfers it to the projectile. The various descriptions of rifled guns belonging to this country will be found elsewhere noted under their respective heads. In England, the Whitworth, Armstrong, Blakely, and Lancaster guns (all of which see), are held in high estimation, as, also, improved kinds, such as the Palliser, Mackay, and Fraser guns. The French field-guns are of bronze; the *canon de 4-rayé*, which is their general service field-gun, has the same calibre as the old brass 4-pounder; it has 6 deep grooves, and the projectile has 2 rows of studs. Their heavy guns are principally cast-iron hooped with steel, and muzzle-loaders, with a gaining twist applied to the system above-described. The Austrian field-guns are bronze muzzle-loaders, and the projectiles are covered with tin and zinc of the same shape as the bore, but 1-12 of an inch less in diameter. They have lately made a number of breech-loading cast-iron field-guns for siege and garrison purposes, on the old Prussian system, the *Kolben vorschuss* of Warendorff. The Prussians have a few 24-pounder breech-loaders on their new system (Krauer's), throwing shell weighing about 60 lbs.; for field-guns, they have entirely adopted the breech-loading system and steel guns. The latter are cast and hammered by Krupp, of Essen, and afterwards bored and rifled at Spandau, near Berlin. The International Rifle Contest of Sept., 1877, between the English and American teams, exhibited the superiority of the breech-loading rifle over the muzzle-loader of the English, and the shooting was the best ever done. Out of a possible 3,600 points, the English scored 3,242, and the Americans 3,334, the latter leading 92 points. For description of later models, see *MAGAZINE GUNS*.

Rifleman, *n.*; *pl.* *RIFLEMEN*. A civilian or soldier armed with a rifle; a sharpshooter; as, to send out *rifle-men* as skirmishers.

Rifle-pit, *n.* (*Mn.*) A pit or trench dug for the shelter of sharpshooters. Rifle-pits are usually about 4 feet long and 3 feet deep, forming, with the earth thrown out in front of them, cover for two men. There is, generally, a loop-hole on the top of the breastwork.

Rifter, *n.* One who rifles; a foot-pad; a robber; a thief.

Rift, Relt, *n.* (*pp.* of *RIVE*, *q. v.*) An opening made by riving or splitting; a cleft; a fissure; a crevice. — **A** ford in a stream; a crossing-place.

— *v. a.* To rive; to split; to cleave; as, to *rift* a tree.

— *v. n.* To be riven; to burst open; to split, as, *rifted* rock. — To poop; to belch; to break wind. (*Prov. Eng.*)

Rig, *v. a.* (*imp.* and *pp.* *RIGGED*,) (*rigd.*) [*A. S. wigan*, to cover, clothe.] To clothe; to dress; to apparel; — particularly, in an odd, or a quaint or fanciful manner. — To accoutre; to fit with tackling; to furnish with gear or apparatus; as, to *rig* a purchase.

To *rig* a ship. (*Naut.*) To fit the standing and running rigging to their respective masts and yards.

— *n.* Dress; apparel; — particularly, odd, quaint, or fanciful attire; as, a man-o-war's man's *rig*.

(*Naut.*) The peculiar manner of fitting the masts and rigging to the hull of any vessel: thus the terms *ship rig*, *barque rig*, *schooner rig*, &c., imply the masts and sails of such vessels irrespective of the hull. — A woman of loose morals; a wanton; a prostitute. — A frolic; an antic; a sportive trick; a practical joke.

To *run the rig*, to play a sportive trick, or practical joke.

To run the rig on or upon, to practise a sportive trick, &c., upon; as, don't run the rigs upon me.

-n. To trick; to frolic; to play practical jokes upon; also, to banter; to chaff; as, to be rigged concerning one's sweetheart.

Rīga, a city of European Russia, and the capital of Livonia, situate about 9 miles from the sea, in a large plain on the Dwina, or Duna, which is here, in summer, crossed by a bridge of pontoons, 25 miles from Mittau; Lat. 56° 5' 1" N., Lon. 24° 7' 45" E. During the winter the river is crossed on the ice. The town stands on the right, the suburbs on the left bank of the river. Without being a regular fortress, Riga has considerable strength. The entrance of the river is guarded from maritime attacks by the fortress of Dunamunde. Of the public buildings, the principal are the Town-house, the Exchange, the House of Assembly for the states or representatives of Livonia, the arsenal, the hospital of St. George, and the Catharinehof, a public library, academy, cabinet of natural history, an observatory, and a society of Lithuanian literature. The church of St. Peter is remarkable for its fine tower, commanding a magnificent view of the harbor. The export trade is chiefly managed by English and Scottish houses; the principal articles being timber, flax, hemp, and corn. The manufactures are insignificant.

Rīga, in Michigan, a post-township of Lenawee county.

Riga, in New York, a post-township of Monroe county.

Riga, (Gulf of), an inlet in the N.E. of the Baltic Sea, between the coasts of Courland, Livonia, and Esthonia. It is 100 m. long from N. to S. and 70 m. broad. The Dwina is the principal river that flows into it. The navigation is dangerous, owing to sandbanks.

Rigadoon, *n.* [Fr. *rigadon*, from *ric-din-don*, the refrain of an old dancing-song.] (*Dancing*) A lively dance, — for a long time out of fashion, — performed by one couple, and somewhat resembling a jig or reel.

Rigel, *n.* (*Astron.*) Same as REGEL, *q. v.*

Rigger, *n.* One who rigs or dresses; — especially, one whose occupation is to fit the rigging and apparel of a ship.

(*Mech.*) A wheel with a flat or slightly curved rim, moved by a leather band.

Rigging, *n.* Dress; apparel; as, to buy new rigging. (*Colloq.*)

(*Naut.*) The system of cordage and tackling by which the masts are supported and the sails extended, taken in, or arranged to the disposition of the wind. It is consequently divided into *standing rigging* and *running rigging*. The standing rigging is that which is used to sustain the masts, and remains in a fixed position, as the *shrouds*, *stays*, and *back-stays*; the running rigging is that which is fitted to arrange the sails, by passing through different blocks, in various places about the masts, yards, shrouds, &c., as the *braces*, *sheets*, *halyards*, *clew-lines*, &c.

Rigging-loft, *n.* The room, or rooms, in which rigging for ships is prepared and tested.

Riggle, *v. a.* Written more correctly WRIGGLE, *q. v.*

Righi, (*The*), (*re'ge*), a mountain of Switzerland, canton of Schwyz, 5 m. from Schwyz. Height, 5,905 feet.

Right, (*rit*), *a.* [A. S. *riht*, *geriht*; Ger. *recht*; Lat. *rectus*, straight.] Straight; not crooked; as, a right line; — hence, by implication, most direct; shortest; as, the right way from Boston to New York. — Erect; upright; perpendicular; not oblique; as, right ascension. — Hence, by analogy, upright in mind or morals; according to the standard of truth and justice, or the will of God; just; true; not swerving or deviating; corresponding with truth and duty; — opposed to *wrong*. — Fit; suitable; becoming; proper; as, to put the right man in the right place. — Passing a judgment according to truth; correct; not mistaken or wrong; lawful. — Denoting truth, reality, genuineness, or actuality; unquestionable; veritable; as, he knew he was right. — Most happy, favorable, efficacious, or convenient; as, the right side of anything. — Not left, but its opposite; most convenient, expert, or dexterous; as, one's right hand, as being more apt or useful of the two. — Orderly; well regulated; properly placed, disposed, or adjusted; suitably performed; as, to do a thing in the right way. — Being on the right hand of a person whose face is toward the embouchure of a river; as, the right bank of the Mississippi. — Denoting the side which was designed to go or be worn outward; as, the right side of a garment.

(*Geom.*) A term applied to certain figures which are deemed to be the simplest of their kind; straight; perpendicular from a base; possessing an upright axis, as, a right angle.

At right angles, so as to form a right angle, as when one line intersects another perpendicularly. — On the right, on the same side as the right hand. — Right and left, on all sides; in all directions; as, to spend money right and left. (*Colloq.*) — Right angle. (*Geom.*) An angle formed by two straight lines, which intersect each other in such a way as to divide the whole angular space around their point of intersection into four equal parts. — Right ascension. (*Astron.*) See ASCENSION. — Right cone, right cylinder, right prism, right pyramid, a cone, cylinder, prism, or pyramid, the axis of which is perpendicular to the plane of the base. — Right or left side, extreme right, extreme left, terms derived from certain legislative assemblies, where the adherents of government occupy the right side of the chamber, and the party in opposition the left.

{NOTE. Right is often used in an elliptic sense for *it is right, you are right*, &c.; as, "Right, cries his lordship." — Pope.)

Right, *adv.* In a right manner; — particularly, in a right or straight line; directly; immediately; as, he walked right ahead of me. — According to any rule of art. — According to fact, truth, or reality; as, to repeat a lesson right. — Consonant to the will of God, or to the standard of truth and justice; as, to act right. — In a great or considerable degree; very; as, right noble, right happy, right fit, &c. — Exceedingly; very; superiorly; — used as a prefix to titles; as, the right honorable gentleman, the right reverend father in God, the right worshipful master. — Positively; veritably; actually; really; as, I am right sure about it.

Right away, right off, at once; straightway; on the spur of the moment; immediately; as, let this be done right away. (*An American colloquialism.*)

Right, *n.* That which is right, straight, or correct; as, (1.) The direct course; conformity to the divine or moral law; accordance with the standard of truth or justice; obedience to lawful authority, divine or human; adherence to duty; freedom from guilt or error. — (2.) That which is due, just, or proper; justice; integrity; uprightness; as, to do right by one. — (3.) Conformity with truth or fact; freedom from error or falsehood; adherence to veracity or authenticity.

"He can't be wrong whose life is in the right." — Pope.

— That which is claimable; as, (1.) Just claim; legal title; ownership; as, rights have corresponding duties. — (2.) Legal power or authority; as, a magistrate has the right to sentence a criminal. — (3.) Just claim by courtesy, customs, or the principles of civility and decorum. — (3.) Just claim by prescription, prerogative, or sovereignty; as, "The right divine of kings to govern wrong." Pope. — (4.) Immunity, privilege, or prescription granted by authority. — (5.) Legal power of exclusive possession or enjoyment; title; interest; ownership; share.

"They made a digest of anarchy, called the Rights of Man." — Burke.

— That which is opposite to the left, or on the right side; as, he had a lady on his right during dinner. — The finer, outward surface, as of a piece of cloth; as, the right side.

(*Law.*) Whatever may be maintained or enforced by law. It hence follows that every right presupposes the existence of positive law. Rights may be acquired in a variety of ways, as by contract, gift, succession, &c. Rights are also of several kinds, as, *personal rights*, or such as regard a man's own person; *rights in property*, regarding his dominion over the external and sensible things by which he is surrounded; *rights of private relations*, as a member of a family; and *public rights*, regarding his social condition as a member of the community. Rights necessarily imply duties; for whatever is due to one man, or set of men, is necessarily due to another. Rights are further distinguished as *natural*, or those which a man has a natural or just claim to, as his life, liberty, the produce of his labor, &c.; and *adventitious*, or those derived from human appointments, as the right of a king over his subjects, of a general over his soldiers, &c. Every one, when he becomes a member of a civil community, alienates a part of his natural rights. Right is also sometimes used in a secondary sense, to signify not legal, but moral claims; *i. e.*, such as are enforced by moral sanction, but are of no legal obligation.

Bill of rights. See BILL. — By rights, or by good rights, properly; correctly; duly; as, I should have had a fortune by good rights. — To rights, in a direct line; straight. (*R.*)

"The whole tract sinks down to rights in the abyss." — Woodward.

— Soon; shortly; directly. (*R.*) — To set to rights, or to put to rights, to rectify; to regulate; to adjust; to place in good order or condition that which was in disorder; as, he puts things to rights promptly. — Writ of right. (*Law.*) See WRIT.

— *v. a.* [A. S. *rihtan*.] To make or cause to be right; to make right or straight, as that which was before wrong or crooked; to set upright, as a ship. — To do justice to; to make reparation to; to relieve from wrong or injustice; as, to right one who is injured. — To right a ship. (*Naut.*) To cause her to resume an upright position after careening, or after being partially capsized at sea. — To right her, to bring it even with the middle of the ship.

— *v. n.* To recover the natural or proper position; to become upright; — especially, to rise with the masts erect, as a ship, after having been pressed down on one side.

Right-angled, (*rit-ang-gld*), *a.* Having a right angle, or right angles; as, a right-angled figure.

Righteous, (*ri'chūs*), *a.* [A. S. *riht-wis*.] Accordant to justice or desert; just; rightful; equitable; — especially, upright in conduct; pious; honest; virtuous; accordant to the divine law, or to the principles of rectitude; godly; holy; free from guilt or sin; as, a righteous man, a righteous cause.

Righteously, (*ri'chūs-ly*), *adv.* In a righteous manner; with rectitude; justly; equitably; — in accordance with the laws of justice; as, a decision righteously given.

Righteousness, (*ri'chūs-nes*), *n.* State or quality of being righteous; exact rectitude; purity; as, the righteousness of a claim.

(*Theol.*) Conformity of heart and life to the divine law; — when applied to God, the perfection of his nature; purity of heart and rectitude of conduct; uprightness; holiness; godliness; integrity.

"Learn righteousness, and dread th' avenging deities." — Dryden.

Right'er, *n.* One who, or that which, sets right, or restores to order; one who does justice or redresses wrong.

Rightful, (*rit'ful*), *a.* Having the right or just claim according to established laws; as, the rightful heir to an estate. — Just; consonant to justice; as, a rightful

cause. — Being by right, or by true or just claim; as, she is my rightful wife.

Right'fully, *adv.* According to right, law, truth, or justice.

Right'fulness, *n.* Quality of being rightful; justice; retribution; accordance with the rules of right; as, the right'fulness of a claim.

Right'hand, *n.* The hand opposite to the left, and generally more used, as being stronger, and more convenient, ready, expert, or dexterous; — hence, by analogy, an individual who stands in the position of one's second self, or is highly valuable or indispensable; as, he is my right-hand in the business.

Right'hand'ed, *a.* Using the right-hand invariably, or more readily than the left; as, to deliver a right-hand'ed blow.

(*Conch.*) With the convolutions turning from right to left, as certain shells. — Right-hand'ed screw, a screw, the threads of which course spirally from left to right.

Right'hand'edness, *n.* State of being right-hand'ed; — hence, implicatively, skill; expertness; dexterity.

Right'heart'ed, *a.* Possessing right dispositions.

Right'less, *a.* Lacking right.

Rightly, (*rit'ly*), *adv.* In a right manner; according to truth or justice; consonant to the divine law or moral rectitude; honestly; uprightly; as, an action rightly done. — Fitly; properly; suitably; appropriately; evenly; as, he is rightly called a fool. — In accordance with truth, fact, or reality; exactly; not erroneously; as, I did not rightly understand you.

Right'mind'ed, *a.* Possessed of a right or well-balanced mind.

Right'mind'edness, *n.* State of being right-minded; rectitude of mind or morals.

Right'ness, *n.* Quality of being right, straight, or direct; as, the rightness of a line. — State of being right; conformity to truth or justice, or to the divine will, which is the standard of moral rectitude; correctness; as, rightness of conscience.

Right'running, *a.* Straight-running.

Right'ward, *a.* To the right; toward the right hand or right side; — opposed to *leftward*.

Right'whale, *n.* (*Zoöl.*) See BALENIDÆ, and WHALE.

Rigid, (*rij'id*), *a.* [Fr. *rigide*, from Lat. *rigidas* — *rigo*, to be stiff or numb; allied to Gr. *rhigos*, frost, cold.]

Unyielding to pressure; not pliant or easily bent; stiff; — correlative to *flexible*; as, a rigid body. — Hence, by implication, characterized by opinion, practice, demand, or discipline, or by severity of temper; unbending; inflexible; not lax or indulgent; harsh; strict; austere; rigorous; severely just, as a doom or sentence; as, rigid discipline, a rigid officer, a rigid master.

Rigidity, *n.* [Fr. *rigidité*; Lat. *rigiditas*.] State or quality of being rigid or unyielding. — Quality of being stiff or constrained in appearance or manner; want of ease or airy elegance.

(*Mech.*) Resistance to change of form. In theoretical investigations respecting the application of forces through the intervention of machines, the latter are frequently assumed to be perfectly rigid, so far as the forces employed are able to affect their integrity of form and structure. Rigidity is often, in the arts, called *stiffness*, and is opposed to *flexibility*.

Rig'idly, *adv.* Stiffly; not pliantly; severely; strictly; exactly; without laxity, indulgence, or abatement.

Rigid'ness, *n.* State or quality of being rigid; rigidity.

Rig'let, *n.* (*Printing.*) Same as REGLET, *q. v.*

Rig'marole, *n.* Nonsense; bosh; humbug; senseless or confused talk; blarney; frivolous language.

— *a.* Consisting of, or expressed in, rigmarole; nonsensical; absurd; silly; frivolous.

Rigolet's (*rig'o-lai's*) Bayou, in Louisiana, connects Lake Washa and Little Lake in Jefferson parish.

Rig'oll, *n.* (A corruption of REGAL, *q. v.*) An old-time musical instrument, composed of, and played upon by, sticks.

Rig'or, **Rig'our**, *n.* [Lat. *rigor*; Fr. *rigueur*.] State of being, or becoming, stiff or rigid; stiffness; hardness; rigidity; numbness.

— Quality of being severe or very cold; as, the rigor of a climate or season. — Quality of being stiff or severe in opinion or temper; strictness; severity; sternness.

— Quality of being severe in life; austerity; voluntary submission to pain, abstinence, or mortification; as, the rigor practised by a Capuchin. — Quality of being strict or exact, without allowance, latitude, or indulgence; as, to execute a law or command with rigor.

(*Med.*) Sensation of cold, with involuntary shivering or shaking of the whole body. It is generally one of the earliest symptoms in the coming on of a severe attack of illness.

Rigor mortis. [Lat.] (*Physiol.*) The general stiffening of the body produced by the simultaneous contraction of all the muscles of the trunk after death. The muscular coat of the arteries also contracts after death, on division and mechanical irritation, on the application of cold, and under the stimulus of electricity.

Rig'orism, *n.* Rigidity in principles or practice. — Harshness or rigidity, as of style, manner, &c.

Rig'orist, *n.* [Fr. *rigoriste*.] A very rigorous person; — a term occasionally applied to an extreme Jansenist.

Rig'orous, *a.* [Fr. *rigoureux*, from L. Lat. *rigorosos*, from Lat. *rigor*.] Full of rigor; rigid; stiff; inflexible; unyielding; allowing no abatement or mitigation; as, a rigorous disciplinarian; severe; exact; strict; stern; without abatement or relaxation; as, rigorous criticism; scrupulously accurate; as, a rigorous definition; very cold; severe; intense; as, a rigorous climate.

Rig'orously, *adv.* Severely; in a rigorous manner; without relaxation, abatement, or mitigation; rigidly; strictly; exactly; with scrupulous nicety.

Rig'orousness, n. State or quality of being rigorous.

Rile, v. a. To roil; to stir up; to render muddy or turbid; to chafe, as the temper; to vex; to make angry; to exasperate; to provoke; as, it takes very little to rile him. (Colloq. Am.)

Riley, in Illinois, a post-village and township of McHenry county, about 65 miles north-west by west of Chicago.

Riley, in Indiana, a post-township of Vigo co.

Riley, in Iowa, a post-village of Clarke co., abt. 8 m. S. W. of Osceola.

Riley, in Kansas, a N.E. co.; area, about 612 sq. m. Rivers, Kansas, Big Blue, and Republican rivers. Surface, diversified; soil, very fertile. Min. Limestone. The county is traversed by the Kansas Pacific R. R. Cap. Manhattan. Pop. (1895) 12,394.

Riley, in Michigan, a post-township of Clinton co. —A township of St. Clair co.

Riley, in Ohio, a township of Putnam co. —A township of Sandusky co.

Riley Center, in Kansas, a village of Riley co., about 15 m. N.W. of Manhattan.

Rileyville, in Pennsylvania, a post-village of Wayne co., abt. 190 m. N.E. of Harrisburg.

Rilievo, n. [It.] Same as RELIEVO. q. v.

Rill, n. [Ger. rille.] A small brook; a rivulet; a streamlet. "A thousand rills their mazy progress take." —Cray.

—v. n. To run in a small stream, or in streamlets.

Rillet, n. A rivulet; a small stream.

Riloughs, in Georgia, a district of Lumpkin county.

Rim, n. [A. S. rima, reoma, from rum, room.] The limit of the extension of anything; the border, edge, brim, or margin which surrounds a thing; as, the rim of a hat.

—v. a. (imp. and pp. RIMMED,) (rimd.) To supply with a rim.

Rima, n. [Lat.] (Anat.) A slit or opening; — applied to the narrow opening into the larynx, or organ of voice, which, bounded on each side by vocal chords, is protected above by the small, oval cartilage called the glottis, the opening receiving the name of the rima glottidis.

Rimac, a river of Peru, flowing W. into the Pacific Ocean at Callao, abt. 4 m. W. of Lima; length, abt. 75 m.

Rimau-Da-han, n. (Zool.) See LEOPARD.

Rimbase, n. (Gun.) A short cylinder connecting a trunnion with the body of a piece of ordnance.

Rime, n. [A. S. hrím; D. rijn; O. Ger. rime.] White or hoar-frost; congealed dew or vapor.

—v. n. To freeze or congeal with hoar-frost.

Rime, n. A rung of a ladder.

Rim'er, n. A tool for shaping the rimes of a ladder.

Rimini, (re-mé-ne.) [Anc. Ariminum.] A city of central Italy, prov. of Forlì, on the Marecchia, and two miles from the Adriatic. The streets are clean and straight, and contain several beautiful mansions and churches, built of Italian marble. The cathedral is also ornamented with very handsome marbles. The church of St. Francis, a fine edifice of the fifteenth century, has a profusion of sculptures, statues, and bas-reliefs, and there are several valuable remains of Roman antiquities. Manuf. Silk, glass, and earthenware. Pop. 17,412.

Rimini, FRANCESCA DI. See MALATESTA.

Rimose, Rimons, a. [Lat. rimosus, from rima, a chink.] Full of crevices, chinks, or crannies.

(Bot.) Full of parallel fissures or chinks, like those in the bark of trees.

(Zool.) Applied to the surface or part of an animal, when it has numerous minute, narrow, and nearly parallel excavations which run into each other, resembling the bark of a tree.

Rimosity, n. State of being rimose.

Rimonski (re-moos'kee), a co. of prov. of Quebec, bordering on the St. Lawrence river; area, about 4,931 sq. m. Cap. Rimonski, about 120 m. N.E. of Quebec. Pop. (1897) 29,400.

Rim'ple, n. Same as RUMPLE. q. v.

Rim'y, a. [From rime.] Characterized by rime; frosty; as, riny weather.

Rind, n. [A. S. hrind; Ger. rinde; Gr. rimos, the hide of a beast.] The skin or coat of fruit that may be pared or peeled off; the peel; — also, the bark of trees; the shell, as of a nut; the external covering of flesh, as the skin.

Rind'erpest, [Ger.] or CATTLE-PLAGUE, n. (Farriery.) A contagious disease, much resembling murrain, almost entirely confined to ruminating animals, and by far less common in the sheep and goat. It does not seem to have made its appearance on this side of the Atlantic, but it wrought extensive mischief in England in 1866, and reappeared in 1870 in many parts of Germany, and was introduced into France with the Prussian armies. No unfailing specific has been discovered, but some facts have been ascertained which throw considerable light on the pathology of this disorder. It appears within forty-eight hours of the time when the animal has imbibed the disease, the temperature of the body rising from two to three and a half degrees of the thermometer. The period of incubation is thus shown to be shorter than was generally supposed, and this rise of temperature is especially valuable as furnishing a means of separating sick from healthy cattle, and shortening the time of quarantine. The whole course of the disease is seven days; but hitherto it has been erroneously treated as beginning, when it has already existed for four days, and obtained a fatal hold on its victim. It is said to be propagated only by contagion, and to consist in a poison generated in the blood, and capable of being conveyed by inoculation, the increase of the poisonous matter when the disease is once established being marvellously rapid.

Inoculation and vaccination with the matter of the cow-pox have been tried as a preventive, but without success. All strong medicines, it is asserted, heighten the mortality; and the only remedies suggested are cleanliness, ventilation, disinfection, and careful feeding.

Rindge, (rinj,) in New Hampshire, a post-township of Cheshire co.

Rin'dle, n. [From A. S. rennan, to run, to flow.] A small channel for water; a small gutter.

Rind'less, a. Without a riud.

Rind'y, a. Thin-riuded; thick-skinned.

Rinforzando, (-fort-san'do,) a. [It., from rinforzare, to reinforce.] (Mus.) A direction to the performer of a piece of music, denoting that the sound is to be increased. It is marked thus < ; and is also expressed by the abbreviation *rf.*

Ring, n. [A. S. hring, hrinc; Icel. hringr.] A circle, or a circular line, or anything in the form of a hoop or circular line. — Specifically, a circle of gold, or of some other material, worn as an ornament. The practice of wearing rings has been very prevalent in different countries and at different periods. Rings have been used to decorate the legs (Fig. 133), ears (Fig. 898), fingers, toes,

Fig. 2266. — ISRAELITISH RING, AND MODE OF WEARING.

and nose, which last fashion was very prevalent among Israelitish women (Fig. 2266). Various explanations have been given on the connection of the ring with marriage. It would rather appear that wedding-rings were worn by the Jews prior to Christian times. It has been said that as the delivery of the signet-ring to any one was a sign of confidence, so the delivery of a ring by the husband to the wife indicated that she was admitted into his confidence. Another explanation is, that the form of the ring symbolizes eternity and constancy; and it has been alleged that the left hand was chosen to denote the wife's subjection to her husband, and the third finger, because it thereby pressed a vein which was supposed to communicate directly with the heart. The third finger has always been selected as the finger on which official rings are to be worn. Bishops, on their consecration, receive a ring to be worn on the third finger of the right hand, in order to indicate ecclesiastical authority; and doctors were formerly expected, for a similar reason, to wear a ring on the same finger. A ring has been much used at betrothal as well as marriage, and in many countries a wedding-ring is worn by the husband as well as the wife.

—A circular course; a circular arena, or area, in which a race is run, or exercises are performed; — especially, the place in which pugilists meet to encounter; as, to form a ring. — A circle of persons grouped together. — Hence, a particular class of persons or people; as, the whisky ring. — The practice of boxing, or the class of pugilists in general; as, a hero of the ring.

(Geom.) A solid body generated by a circle whose centre describes a closed curve to which the plane of the circle is always normal. The radius of the generating circle is usually constant, so that the ring is enclosed by a tubular surface. Ordinarily, too, the locus of the centre of the generating circle is itself a circle.

(Astron. and Nav.) An instrument for measuring the sun's altitude, &c.

Ring-dropper, in England, one who drops a ring or other article of apparent value, but really worthless, and who black-mails the finder by claiming a share of the value, and receiving it in money.

Ring of an anchor. (Naut.) See ANCHOR.

Rings of Saturn. (Astron.) See SATURN.

—v. a. To encircle; to surround, as with a ring. — To furnish with rings; as, to ring the fingers, to ring a hog's snout.

(Hort.) To decorticate, as bark.

Ring, v. a. (imp. RANG, or RUNG; pp. RUNG.) [A. S. ringan, hringan; Ger. ringen.] To cause to sound, particularly by striking, as a bell or metallic body.

—v. n. To sound, as a bell or other sonorous body, particularly a metallic one. — To practise the art of campanology. — To sound; to resound; to utter, as a bell.

"With sweeter notes each rising temple ring." — Pope.

—To tinkle; to vibrate; to have the sensation of a sound continued

"My ears still ring with noise." — Dryden.

—To be filled with report or talk; as, Europe rings with his fame.

—n. The sound of a sonorous body of a circular form. — A sound, particularly a metallic sound, as the ring of a bell. — Any loud sound, or the sound of numerous voices; sound continued, repeated, or reverberated; as, the ring of applause. — A chime, or set of bells harmoniously tuned; as, a ring of bells.

Ring-armor, Ring-mail, n. (Archæol.) Armor composed of small rings of steel sewn edgewise upon a strong garment of leather or quilted cloth. Banded ring-mail is a variety in which the rings were attached

to straps or bands of leather; and these, again, were fastened to some under-lining of strong material. Ring-mail differs from chain-mail in the rings of the latter being interlaced with each other, and strongly fastened with rivets. These kinds of armor were worn in the 13th, and during part of the 14th centuries.

Ring-blackbird, n. (Zool.) Same as RING-OUSEL.

Ring-bolt, n. (Naut.) A strong iron ring, passing through a hole at the end of an iron pin, which is clinched through the beams of a ship's deck or side. Its principal use is to give bearing to the tackle for running the guns in and out.

Ring-bone, n. (Far.) A callus growing above a horse's coronet.

Ring-chuck, n. (Mach.) A form of chuck for lathes, having a sliding-ring to render it tight or loose, as occasion may require.

Ring-dial, n. A pocket sun-dial of circular form.

Ring-dove, (-dūv,) n. (Zool.) See PIGEON.

Ringed, (ringd,) a. Having a ring; furnished with a ring, or rings; as, ringed fingers, a ringed hog.

(Bot.) Encircled by lines upon the surface of the bark, as a tree.

Ringent, (-jent,) a. [Fr.; Lat. ringens.] (Bot.) Having the lips gaping apart; as, a ringent bi-labiate corolla.

Ringer, n. One who rings; — especially, one who rings chimes on bells; a campanologist.

(Mining.) A crow-bar.

Ring-fence, n. A fence encircling an estate within an enclosure.

Ring-finger, n. The third finger of the left hand, on which the marriage-ring is placed and worn.

Ringgold, in Georgia, a post-village, cap. of Catoosa co., abt. 287 m. N.W. of Augusta. On Nov. 27, 1863, (the day following the signal Union victory at Missionaries' Ridge,) the Confederate army, under Gen. Bragg, having retreated through this village, his rear-guard, commanded by Gen. Cleburne, was here overtaken, and, after an obstinate and sanguinary encounter of several hours, defeated by Gen. Hooker. The Union loss was abt. 450 killed and wounded; that of the enemy, 130.

Ringgold, in Illinois, a village of Cook co., abt. 23 m. W.N.W. of Chicago.

Ringgold, in Indiana, a village of La Grange co., about 45 m. N.N.W. of Fort Wayne.

Ringgold, in Iowa, a S.S.W. co., adjoining Missouri; area, about 545 sq. m. Rivers, East and West Forks of Grand river. Surface, mostly level; soil, fertile. Cap. Mount Ayr. Pop. (1895) 14,065.

Ringgold, in Ohio, a post-village of Morgan co., abt. 33 m. W.N.W. of Marietta.

Ringgold, in Pennsylvania, a post-township of Jefferson co.

Ringgold, in Virginia, a post-village of Pittsylvania co., abt. 5 m. E. of Danville.

Ring-head, n. An instrument for stretching woollen cloth.

Ring-lead, v. a. To head; to conduct. (R.)

Ring-leader, n. The leader of a ring or circle of persons; — especially, the leader of any body or association of persons engaged in violation of law, or in an illegal enterprise, as rioters, mutineers, and the like.

Ring-let, n. [dim. of ring.] A small ring or circle. (R.) — A curl; a wavy tress of hair; as, to dress one's hair in ringlets.

Ring-mail, n. See RING-ARMOR.

Ringoes, (ring'goz,) in New Jersey, a post-village of Hunterdon co., abt. 6 m. S. of Flemington.

Ring-ousel, Ring-blackbird, n. (Zool.) A species of European thrush common in England.

Ring-ropes, n. pl. (Naut.) Auxiliary ropes bearing on ring-bolts in a ship's deck, and temporarily fastened to the cable at different parts in very heavy weather, to furnish a more powerful hold on it, while diminishing the strain on the riding-bits.

Ring-sail, n. (Naut.) A small and light sail set on a mast on the taffrail; — also, a studding-sail set upon the gaff of a fore-and-aft sail, and stretched on the ring-sail boom. It is very rarely used, and is sometimes termed ring-tail.

Ringsted, an ancient town of Denmark, on the island of Zealand, 36 m. W.S.W. of Copenhagen; pop. abt. 1,450.

Ring-tail, n. (Zool.) The female of the fien-harrier, Circus cyaneus; — so called from its whitish tail.

(Naut.) See RING-SAIL.

Ring-tailed, a. Having a tail striped annularly.

Ring-tailed Eagle, n. (Zool.) See GOLDEN EAGLE.

Ringwood, a town of England, co. of Hants, on the Avon, 30 m. from Winchester; pop. 4,000.

Ringwood, a small river rising in Orange co., New York, and flowing S. into New Jersey, joins Pequannock Creek from Passaic co.

Ringwood, in Illinois, a post-village of McHenry co., abt. 36 m. N.W. of Chicago.

Ringwood, in New Jersey, a village of Passaic co., abt. 24 m. N.W. of Hackensack.

Ring-worm, n. [Lat. porrigo.] (Med.) An eruptive disease of the skin, more particularly on the head, and of which there are several kinds. The most common kind commences with clusters of small light-yellow pustules, which soon break and form thin scabs, which, if neglected, become thick and hard by accumulation. When removed, they appear again in a few days; and by these repetitions the incrustations become thicker, and the area of the patches extends, so as, if neglected, to affect the whole head, and extend also to the forehead and neck. The patches are of an irregular circular form. This disease occurs generally in children of three or four years and upwards, and often continues for several years. It is said to occur spontaneously in children afflicted and uncleanly, and is readily propagated by conta-

gion. The principal local treatment, when the patches are in an inflamed and irritable condition, consists in regular washing or sponging with warm water, or some emollient fomentation. When the inflammatory state is diminished, and a dry scaly scab appears, active stimulants are required to effect a change in the disorder. Further, a nutritious diet, warm clothing, tonics, and regular exercise are necessary.

Rino'sa, in *Illinois*, a post-village of Kaukaee co., abt. 60 m. S.S.E. of Chicago.

Rinse, (*rins*), *v. a.* [Fr. *rincer*; L. Lat. *resincerare*—*re*, and *sincerus*, pure.] To wash lightly with water; to cleanse with a second repeated application of water after washing; as, to *rinse* one's hands.—To cleanse by the introduction of water, applied particularly to hollow vessels; as, to *rinse* a basin.

Rins'er, *n.* One who rinses.

Rin'sones, or **RINCONES**, in *Colorado*, a village of Conejos co., abt. 35 m. S. of Fort Garland.

Rio, (*re'ô*), in *Georgia*, a village of Coweta co., abt. 120 m. W. by N. of Milledgeville.

Rio, in *Illinois*, a township of Knox co.

Rio, in *Wisconsin*, a post-village of Columbia co., abt. 14 m. S.E. of Portage City.

Rio Arriba (*re'ô ar-ree'ba*), in *New Mexico*, a N. co., adjoining Colorado; area, 7,150 sq. m. *Rivers*. Rio Colorado and Rio Del Norte. *Surface*, much diversified and in some parts mountainous; *soil*, generally fertile, but better adapted to grazing. *Cap.* Tierra Amarilla. *Pop.* (1897) 2,150.

Rio bamba, (*Nuevo*), (*nuê'vo*), a town of Ecuador, abt. 84 m. N.E. of Guayaquil. About 9 m. from here are the ruins of Riobamba Vieja, (old Riobamba,) destroyed by an earthquake in 1797.

Rio Bonito, (*re'ô bo-nê'ô*), a town of Brazil, abt. 23 m. E.N.E. of Rio de Janeiro.

Rio Brau'co, or **PARIMA**, ("White River,") a river of Brazil, rises on the S. slope of the Serra Pecaraima, and flowing a general S. course, joins the Rio Negro a few m. above Mour. Its waters are of a whitish tint, and almost opaque. Navigation is impeded by numerous falls and rapids. *Length*, abt. 700 m.

Rio Bravo del Norte, a river of N. America. See **RIO GRANDE**.

Rio Colora'do. See **COLORADO RIVER**.

Rio Colorado Chiquito, (*che-kê'to*), or **LITTLE COLORADO RIVER**, in *Arizona Territory*, is formed by the confluence of numerous branches in the N.E. central part of the territory, and flowing N.W., enters the Colorado River abt. 40 m. S.E. of Grafton, Utah.

Rio de Cont'as, a town of Brazil, abt. 230 m. S.S.W. of Bahia.

Rio de Janeiro, (*ja-nai'ro*), the metropolitan prov. of Brazil, taking its name from the river Janeiro, which runs through it. It is bounded N. by the prov. of Espirito Santo, E. and S. by the Atlantic Ocean, and W. by the extensive region of Minas-Geraes; Lat. between 21° 23' and 23° 20' S., Lon. between 40° 53' and 44° 40' W.; area, 26,634 sq. m. *Desc.* Extremely fertile, producing sugar in great abundance, which is accordingly one of its chief exports. The other products are coffee, cotton, maize, rice, indigo, cacao, and fine woods. The country is mountainous, and is well wooded and watered. *Pop.* (1897) 1,220,410.

RIO DE JANEIRO, or simply **RIO**, a city and seaport, cap. of Brazil and of the above prov., and the largest and most important commercial city of S. America, is situated on the W. side of one of the finest bays in the world, 80 m. W. of Cape Frio, in Lat. 22° 54' S., Lon. 43° 7' 15" W. The city stands on a tongue of land close to the shore, on the W. side of the bay, at the foot of several high mountains which rise behind it. The houses are gen-

erally built of stone or brick. The streets are straight, well paved, and have excellent foot-paths. The convents and churches are numerous, but none of them can be called fine buildings. The cathedral is of a superior style of architecture. Parallel with the beach runs the main street, called *Rua de Direita*, from which the minor streets branch off at right angles, and are intersected by others at regular distances. The imperial palace skirts the beach, and is seen to great advantage from the landing-place, which is within sixty yards of its entrance. The other public buildings are the naval and military arsenal, a public hospital, a national library containing abt. 100,000 vols., colleges, and other educational establishments. It has, besides, several scientific institutions, a museum of natural history, a botanic garden, and a theatre. The harbor is one of the finest known, and indeed can scarcely be excelled for capaciousness, and the security which it affords to vessels of every description. The entrance into it from the sea does not exceed a mile from point to point; it afterwards widens to abt. 3 or 4 m., and is commanded in every direction with heavy batteries—all the numerous little islands with which it is interspersed being crowned with artillery. This city is the chief mart of Brazil, and especially of the provs. of Minas-Geraes, S. Paulo, Goyaz, Matto-Grosso, and Curitiba. The mining districts, being most populous, require the greatest proportion of consumable goods, and in return send the most valuable articles of commerce; hence, innumerable troops of mules are continually travelling to and from those districts. *Imp.* These consist in immense quantities of dried beef, tallow, hides, grain, salt, provisions, flour, household furniture, pitch, tar, wax, oil, sulphur, woods, slaves, and wine. *Exp.* Cotton, sugar, rum, ship-timber, various fine cabinet-woods, hides, tallow, indigo, and coarse cotton cloths. Among the more precious articles are gold, diamonds, topazes of various colors, amethysts, tourmalines, chrysoberyls, aqua-marines, and wrought jewelry. *Pop.* (1906) 811,265.

Rio de las Cas'as Gran'des, or **RIVER OF THE GREAT HOUSES**, a river of Mexico, State of Chihuahua, flowing N. into Lake Guzman. It derives its name from the ruins of an Aztec city on its bank.

Rio del Norte, ("North River.") See **RIO GRANDE**.

Rio de los Mar'tires, or **RIVER OF MARTYRS**, in *California*, enters the Pacific Ocean abt. Lat. 33° 20' N.

Rio del Rey, (*re'ô-del-rai*), ("King's River,") a river of W. Africa, the most S. of the estuaries which fall into the Gulf of Benin; Lat. 4° 30' N., Lon. at its mouth, 8° 5' E.

Rio de San Juan, (*-hū'an*), rises in the N.W. part of New Mexico, and flowing N.W. through a portion of Arizona, enters Utah and joins the Colorado River from Kane co.

Rio de São Lourenço, (*-sai'yôloo-rân'sô*), a river of Brazil, rises among the Maracayon Mountains, and flowing W., joins the Paraguay River in the Xarayes Marsh.

Rio Doce, (*-dô'se*), in Brazil. See **DOCE**.

Rio Frio, (*-frê'ô*), or **COLD RIVER**, in *Texas*, enters the Nueces River from Nueces co.

Rio Grande, ("Great River,") a river of W. Africa, rising in Lat. 11° 20' N., Lon. 11° W., and falling into the Atlantic between the Casamanza and the Nunez rivers.

Rio Grande, two rivers of Brazil.—1. Rises in the prov. of Minas-Geraes, and flowing W., enters the Paranaíba, abt. Lat. 20° 30' S. *Length*, abt. 600 m.—2. Flowing into the Rio São Francisco at the town of Barra-do-Rio-Grande. *Length*, abt. 250 m.

Rio Grande, or **SARA**, a river of Bolivia, rises in the eastern chain of the Andes, and flowing circuitously S. E., E. N.E., then N.W., receives the name of **MAMORE**, *q. v.*

Rio Grande, a river of the Republic of Colombia, flowing into the Pacific Ocean abt. 2 m. S.W. of Panama.

Rio Grande, a river of Nicaragua, flowing into the Caribbean Sea abt. 30 m. N. of Pearl Key Lagoon.

Rio Grande, a river of Mexico, rises in Lake Chapala, and flowing N.W., enters the Pacific Ocean from the State of Jalisco.

Rio Grande, **RIO BRAVO DEL NORTE**, **RIO GRANDE DEL NORTE**, or **RIO DEL NORTE**, a river of North America, rises in the Rocky Mountains of Colorado and flows a general S. course through New Mexico. Crossing the S. border of the latter Territory at Franklin, it turns to the S.E., and following that direction in a somewhat tortuous manner, forms the entire boundary between Texas and Mexico, entering the Gulf of Mexico near Lat. 26° N., Lon. 97° 15' W. *Length*, about 1,800 miles. Navigation is much impeded by rapids and shallows.

Rio Grande City, in *Texas*, a city, port of entry, and the cap. of Starr co., on the Rio Grande, about 550 m. S. by W. of Austin. *Pop.* (1897) 2,260.

Rio Grande do Norte, ("Great River of the North,") a prov. of Brazil, bordering on the Atlantic Ocean; area, 22,784 sq. m. *Rivers*. Rio Grande, Serido, and Appody. *Surface*, much diversified; *soil*, generally fertile, producing cotton, rice, sugar, and a superior quality of Brazil wood. There are also large exports of salt, drugs, and cattle. *Chief towns*. Natal (the cap.), Villa Flor, Arez, Anacu, Porto Alegre, Villa Nova da Princeza, and Villa Nova do Principe. *Pop.* abt. 290,000.

Rio Grande do Sul, ("Great River of the South,") SAO PEDRO DO RIO GRANDE, or SAO PEDRO DO SUL, an extreme S. prov. of Brazil, bordering on the Atlantic Ocean, Uruguay, and the Argentine Republic; area, 93,756 sq. m. *Rivers*. One, Taquari, Uruguay, Tebignari, and Tahnas rivers. There are also several lakes, as Patos, Viamao, and Mirim. *Surface*, generally elevated; *soil*, fertile, producing all the finer fruits of temperate climates, besides wheat and the other cereals, flax, rice, and coffee. Cattle is raised in immense droves. *Min.* Gold, silver, iron, sulphur, and a superior quality of porcelain-clay. *Cap.* Porto Alegre. *Pop.* 455,000.—A town of Brazil, in the above prov., at the S. extremity of Lake Patos; Lat. 32° 7' S., Lon. 52° 8' W.; *pop.* 4,500.

Rio Hach'a, or **RIO DE LA HACHA**, in the Republic of Colombia, a river flowing N. into the Caribbean Sea, abt. 90 m. E.N.E. of Santa Marta. *Length*, abt. 120 m.—A town on the above river, abt. 200 m. E.N.E. of Cartagena; Lat. 11° 33' N., Lon. 72° 52' 30" W.

Rioja, or **LA RIOJA**, (*re-ô'ha*), a W. prov. of the Argentine Republic, adjoining Chili; area, abt. 31,500 sq. m. *Rivers*. Bermejo and Angualasta rivers, besides several considerable lakes. *Surface*, hilly or mountainous, the

Andes forming the W. boundary of the prov.; *soil*, generally fertile, and adapted to the culture of cereals, especially wheat. *Cap.* Rioja, on an extensive plain abt. 120 m. S.S.W. of Catamarca. *Pop.* (of town) 4,000, (of prov.) 40,000.

Riolite, *n.* [Named after *Del Rio*, by whom it was analyzed] (*Min.*) A native selenite of silver found at Tasco in Mexico.

Riom, (*re'om*), a town of France, dept. of Puy-de-Dôme, 8 m. N.N.E. of Clermont. *Manuf.* Linen, cotton, leather, and brandy. *Pop.* 8,206.

Rio Negro ("Black River"), or **SAUCES**, a river of South America, which rises on the E. slope of the Andes of the Argentine Republic, flows N.E.E. and then E.S.E. to the Atlantic, which it enters near Lat. 41° S., taking its course through the Patagonian district of Argentina. It is about 650 m. long, and is navigable almost through its whole course for vessels of light draught.

Rio Negro, a river of Uruguay, rises near the N.E. border, and flowing S.W. enters the Uruguay river at its mouth. *Length*, about 250 m.

Rio Negro, a river of Paraguay, flowing into the Tebicuary, about Lat. 26° 25' S.

Rio Negro, **GUIANA**, or **PARANA**, a river of S. America, rises in the S.E. central part of the Republic of Colombia, about Lat. 2° N., Lon. 72° 30' W., and flowing a general E. and N.E. course into Venezuela, turns to the S.E. and S., and enters Brazil. Thence turning to the E.S.E. it enters the Amazon at Manaos. *Length*, about 1,000 m. In Venezuela it communicates with the Orinoco by the Cassiquiare River (*q. v.*). It receives the Ubaupes, Cababuri, Padaviri, and Rio Brauco.

Rionero, (*-nai'ro*), a town of S. Italy, prov. of Potenza, 5 m. S. of Melfi. *Manuf.* Snuff-boxes. *Pop.* 13,804.

Rio Pecos, (*pū'koce*), a considerable river rising in San Miguel co., New Mexico. Flowing a tortuous S. course into Texas, it turns to the S.E., and again to the S., and enters the Rio Grande on the E. border of Presidio co., abt. Lat. 29° 40' N., Lon. 102° W. *Length*, abt. 700 m.

Rio Preto, two towns of Brazil.—1, abt. 380 m. W. N.W. of Bahia;—2, abt. 35 m. N.E. of Diamantina.

Rio Sala'do, ("Salt River,") two rivers of the Argentine Republic,—1, flows into La Plata, abt. 95 m. S.S.E. of Buenos Ayres. *Length*, abt. 400 m.—2, Flows into the La Plata, abt. 210 m. N.W. of Buenos Ayres. *Length*, abt. 1,000 m.

Rio Seco, or **DRY RIVER**, (*re'ô sa'ko*), in *California*, a post-village of Butte co., abt. 10 m. W. of Oroville.

Riot, *n.* [A. S. *wreotan*, *reotan*, to make a cracking noise; Fr. *rioter*; It. *riottare*.] Uproar; tumult; unruly or unrestrained behavior; as, headlong *riot*.—A disorderly, tumultuous excess of mirth, revelry, licentiousness, or dissipation; carousal; wild and noisy festivity; excessive and costly feasting.

(*Law.*) A tumultuous disturbance of the peace by three persons or more assembling together of their own authority in order to assist each other, against any one who shall oppose them, in the execution of a private purpose, and afterwards executing the same in a violent and turbulent manner. A *riot* is said to be a disturbance of the peace by persons assembled together to do a thing, which, if executed, would make them rioters, and making some motion towards that object; an *unlawful assembly* is a similar disturbance by persons who neither execute their purpose, nor make any actual motion towards the execution of it.

To *run riot*, to act wildly, loosely, or unrestrainedly; to revel in.

—*v. n.* To be mutinous or insubordinate with clamor; to banquet with uproarious mirth; to run to excess in feasting, drinking, or other sensual indulgences.

"He riots in pleasure, and neglects the law."—*W. Daniel*.

—To raise an uproar or seditious disturbance.—To be wildly excited.

"No pulse that riots, and no blood that glows."—*Pope*.

Rioter, *n.* One who riots.

(*Law.*) One who takes part in a riot; one of three or more persons who, being met together for the purpose, commit a breach of the peace by engaging in tumult or seditious disturbance.

Rio Tinto, (*teen'to*), a river of Central America, flowing into the Caribbean Sea from the Mosquito Territory, abt. Lat. 15° 54' N., Lon. 84° 55' W.

Riotous, *a.* Practising, or involving, or pertaining to riot; also, pertaining to reckless sensual indulgence or loose festivity; as, *riotous* living.—Partaking of the nature or character of an unlawful assembly; seditious; tumultuous; turbulent; as, *riotous* proceedings.

Riotously, *adv.* In a riotous manner; with excessive or licentious luxury; in the manner of an unlawful assembly; seditiously; tumultuously; turbulently; as, a mob *riotously* inclined.

Riotousness, *n.* State or quality of being riotous.

Riotry, *n.* Act or practice of rioting; riot.

Rio Vermejo, (*vair-mā'ho*), or **RIO GRANDE**, a river of the Argentine Republic, flowing S. E. into the Paraguay River, abt. 14 m. S.W. of Neembucu. *Length*, abt. 750 sq. m.

Rio Vermel'ho, in Brazil, a town abt. 80 m. E.N.E. of Serro; *pop.* 5,000.—A village on the island of Catharina, abt. Lat. 27° 30' S.; *pop.* 1,500.

Rio Vis'ta, in *California*, a post-village of Solano co., abt. 70 m. N.E. of San Francisco.

Rip, *v. a.* (*imp.* and *pp.* **RIPPED**, (*ript*).) [A. S. *rypan*, *ryppan*, *hyppan*, to spoil, to rob.] To separate the parts of by cutting or tearing; to tear, or cut open, or off; to tear off, or out, by violence; as, to *rip* open the seams of a garment, to *rip* open a sack, to *rip* up a floor, to *rip* off the skin of a beast;—generally employed with

Fig. 2267. — RIO DE JANEIRO.

erally built of stone or brick. The streets are straight, well paved, and have excellent foot-paths. The convents and churches are numerous, but none of them can be called fine buildings. The cathedral is of a superior style of architecture. Parallel with the beach runs the main street, called *Rua de Direita*, from which the minor streets branch off at right angles, and are intersected by others at regular distances. The imperial palace skirts the beach, and is seen to great advantage from the landing-place, which is within sixty yards of its entrance. The other public buildings are the naval and military

out, off, open, or up.—To take out or away by cutting or tearing.—To tear up for search, scrutiny, or disclosure, or for alteration; to search to the bottom;—with *up*.

To *rip out*. See *RAP*, *v. a.*

-n. A tear; a rent caused by ripping; a laceration.—A mean or vicious thing or person; as, a good-for-nothing *rip*.—A fisher's creel.

Riparian, *a.* [Lat. *riparius*, from *ripa*, a bank.] Pertaining, or relating, to the bank of a river.

R. proprietor. (*Law.*) One who owns the land bounding upon a water-course. Each *R. proprietor* owns that portion of the bed of the river (not navigable) which is adjoining his land *usque ad filum aque*, i. e., to the thread or central line of the stream.

Ripe, *a.* (*comp.* *riper*; *superl.* *ripest*.) [*A. S.*; *Du.* *riyp*; *Ger.* *reif*.] Fit to be cut or gathered, as grain; brought to perfection in growth or completeness of good quality; mature;—said of that which is for edible uses; as, *ripe fruit*.—Fit for use; advanced to perfection; as, *ripe cheese*.—Matured; suppurated to the highest degree; as, a *ripe abscess*.—Finished; consummate; matured; perfected; as, a *ripe scholar*.—Ready; prepared; fully qualified by improvement; as, matters looked *ripe* for a quarrel.—Resembling the ruddy and plump characteristics of ripened fruit; as, the *ripe lips* of a young and pretty woman.

Ripe'ly, *adv.* Maturely; at the fit time or proper season.

Ripen, (*rip'n*), *v. n.* [*A. S.* *ripan*.] To grow ripe; to become fit for reaping, as grain; to be matured, as fruit.—To be fitted or prepared; to advance or come to perfection.

-v. a. To make ripe, as grain or fruit; to mature; as, a *ripening rose*.—To fit or prepare; to mature; to bring to perfection; as, *ripened schemes*, *ripened judgment*.

Ripeness, *n.* State of being ripe, or of being brought to that degree of perfection which fits for use; maturity; full growth; perfection; completeness; fitness; qualification; a state of preparation; complete maturation or suppurated, as of an ulcer or abscess; as, the *ripeness* of grain, fruits, mental powers, schemes, &c.

Riphean, (*-fē'an*), *a.* [Lat. *Ripheus*.] (*Geog.*) Pertaining, or relating, to a certain chain of mountains in the north of Asia.

Ripidolite, *n.* [*Gr.* *ripis*, *ripidos*, a fan, and *lithos*, stone.] (*Min.*) A green chlorite occurring in grouped folia. It is a hydrated silicate of alumina, and protoxide of iron and magnesia.

Ripieno, (*-ā'no*), *a.* [*It.*] (*Mus.*) Full;—a term used in compositions of many parts, to distinguish those which fill up the harmony and play only occasionally, from those that play throughout the piece.

Ripley, ELEAZAR WHELOCK, an American general, b. in Hanover, N. H., 1782, who, during the second war against England (1812-1815), greatly distinguished himself in the battles of Chippewa and Lundy's Lane, and in the sortie from Fort Erie, Nov. 3, 1814. Died in Louisiana in 1839.

Ripley, in *Illinois*, a post-village and township of Brown co., about 8 m. N.E. of Mount Sterling.

Ripley, in *Indiana*, a S.E. co.; *area*, about 450 sq. m. *Rivers*, Laughery creek, and Graham's Fork of White river. *Surface*, nearly level; *soil*, generally fertile. *Products*, Corn, wheat, hay, oats, pork, &c. *Cap.* Versailles. *Pop.* (1897) 21,050.

—A township of Montgomery co.

—A township of Rush co.

Ripley, in *Iowa*, a township of Butler co.

Ripley, in *Maine*, a post-township of Somerset co.

Ripley, in *Minnesota*, a township of Dodge co.

—A township of Morrison co.

Ripley, in *Mississippi*, a post-town, cap. of Tippah co., about 210 m. N. by E. of Jackson.

Ripley, in *Missouri*, a S.E. co., adjoining Arkansas; *area*, about 640 sq. m. *Rivers*, Current and Little Black rivers, and Fourche, Dumas, and Davies creeks. *Surface*, uneven; *soil*, in some parts fertile. *Cap.* Doniphan. *Pop.* (1897) 9,350.

Ripley, in *New York*, a post-village and township of Chautauqua co., abt. 65 m. S.W. of Buffalo.

Ripley, in *Ohio*, a post-village of Brown co., abt. 56 m. S.E. of Cincinnati.—A township of Holmes co.—A township of Huron co.

Ripley, in *Tennessee*, a post-village, cap. of Lauderdale co., abt. 195 m. W. of Nashville.

Ripley, formerly JACKSON COURT-HOUSE, in *W. Virginia*, a village of Jackson co., about 36 m. N. of Charleston.—A village of Tyler co., about 50 m. S. of Wheeling.

Rip'on, a city of England, co. of York, at the confluence of the Ure and Skell, 23 m. N.W. of York. *Manuf.* Machinery, saddle-trees, varnish, &c. *Pop.* 6,172.

Ripon, in *Wisconsin*, a city and township of Fond du Lac co., 20 m. N.W. of Fond du Lac. *Pop.* (1895) 4,380.

Rip'onny, RIPUNYNY, or RUPUNYNY, a river of British Guiana, flowing N. into the Essequibo, abt. Lat. 3° N., Lon. 58° 12' W. *Length*, abt. 250 m.

Riposto, a town of Italy, on the E. coast of the island of Sicily, 10 m. S.W. of Taormina; *pop.* 4,000.

Ripper, *n.* One who rips, tears, or cuts open.

Rippey, in *Iowa*, a post-village of Greene co., abt. 45 m. N.W. of Des Moines.

Ripping, *n.* A tearing; a lacerating.

Ripple, *v. n.* [Of the same origin as *RUMPLE*, *q. v.*] To become roughened or ruffled on the surface; to fret on the surface, as water when agitated; to be rippled or rimped; to have undulations; as, a *rippling brook*.

-v. a. To ruffle or agitate, or fret or dimple, as the surface of water; to cover with small wavy undulations.—To comb flax by means of a *ripple*.

-n. The ruffling, fretting, or rimping of the surface of water; a little, curling or undulating wave.—A kind

of comb with long wire teeth, through which flax plants are passed in order to remove the capsules containing the seed.

Rip'ple-grass, *n.* (*Bot.*) A species of plantain, *Plantago lanceolata*.

Rip'ple-mark, *n.* The peculiar undulated mark left by the receding waves on the sea-beach, or on sand- or mud-banks.

(*Geol.*) A mark found occasionally in some of the older strata of rocks, and which is considered as announcing the action of sea-water at some remote period.

Rip'ple-marked, (*-märkt*), *a.* Presenting ripple-marks.

Rip'plet, *n.* A small ripple.

Rip'plingly, *adv.* After the manner of ripples; as, her voice sounded *ripplingly*.

Rip'rap, *n.* (*Civ. Eng.*) A base or parapet of stones thrown together pell-mell, as in deep water or a soft bottom.

Rip'rap, *v. a.* (*imp.* and *pp.* *RIPRAPPED*), (*-rāpt*.) To make a riprap in or upon.

Rip'saw, **Ripping-saw**, *n.* A coarse-toothed hand-saw, employed for cutting wood in the direction of the fibre.

Rip'ton, in *Vermont*, a post-township of Addison county.

Ris'don, in *Illinois*, a post-village of St. Clair co., abt. 22 m. S. by E. of Belleville.

Risdon, in *Ohio*, a village of Hancock co., abt. 93 m. N. by W. of Columbus.

Rise, (*riz*), *v. n.* (*imp.* *ROSE*; *pp.* *RISEN*; *ppr.* *RISING*.) [*A. S.* *arisan*.] To move upward; to pass upward in any manner; to ascend; to mount up; to become elevated above the level or surface, as of the ground; to reach a height; as, (1.) To get up or move from any recumbent or sitting posture to an erect posture; to assume an upright position; as, to *rise* from a chair. (2.) To ascend or go upward by a saltatory, volut, ascensional, or other voluntary motion; as, a balloon *rises* in the air, a fish *rises* to the bait. (3.) To ascend or float in a fluid, as gases in air, cork in water, &c. (4.) To grow upward; to arrive at a given height; as, a chimney *rises* one hundred feet. (5.) To attain a higher level in any contracted space by increase of bulk, quantity, or volume; as, a lake *rises* in its bed. (6.) To arise; to get up; to leave the place of sleep or rest; as, to *rise* from one's bed. (7.) To be elevated above the level or the surface; to tower up; to be heaved up; as, the Andes *rise* high above the sea. (8.) To slope upward; as, the surface *rises* in a northerly direction. (9.) To abandon; to retire from; as, *rising* from a siege. (10.) To swell up; to upheave in the process of fermentation; to become light or puffy, as dough, and the like.—To have the appearance or effect of rising; as, (1.) To seem to rise; to appear above the horizon; to become more apparent by occupying a higher elevation; as, the *rising sun*. (2.) Hence, to appear; to come forth; to emerge into view; as, the land *rises* into view on approach from the sea. (3.) To begin to exist; to originate; to proceed; to have a beginning; as, the river *rises* in a mountain lake, he *rose* from nothing, *rising* emotions of love, &c.

—To enlarge, increase, or expand in force, size, effect, or value; to proceed toward a climax or consummation; as, (1.) To increase in power or rage;—used with reference to winds or a storm, and hence, implicatively, to the passions; as, a *rising gale*, *rising indignation*. (2.) To be advanced in price; to increase in cost;—said of salable articles; as, bread has *risen* four cents a loaf, gold is *rising* rapidly. (3.) To swell; to expand; to become larger; as, a *rising tumor*. (4.) To acquire greater intensity;—applied to rank, property, or estimation; as, his *rising* fortunes are owing to the royal favor, my salary *rose*, &c.—(5.) To become elevated in pitch, or louder; as, his voice *rises* in anger.—To enlarge; to become of additional amount; as, his profits *rose* above his anticipations.—Hence, figuratively, (1.) To be excited or roused into action, particularly, hostile action; as, the people *rose* in revolt. (2.) To gain elevation in rank, fortune, or public estimation; to be promoted; to succeed; to excel; as, that officer *rose* from the ranks. (3.) To elevate in style or manner; to become more and more dignified and forcible; to increase in interest or excellence; as, his declamation often *rises* to eloquence. (4.) To come by chance to recollection; to occur; to be suggested; as, an idea *rose* in his mind. (5.) To offer itself; to come to hand; a new opportunity has *risen*.—To come back to life; to be resuscitated from the dead; to revive.

"After I am *risen* again, I will go before you."—*Matt.* xxvi.

—To adjourn; to close a sitting or session; as, the house *rose* after a protracted debate.

(*Mus.*) To ascend on the diatonic scale; as to *rise* a semi-tone.

(*Printing*.) To be able to be safely taken from the imposing-stone;—expressing a form from which, when lifted, none of the types drop out.

Rise, *n.* Act of rising, either in a literal or figurative sense; state of being risen; ascent.—Act of springing or mounting from the ground.—Distance through which anything rises; as, the *rise* of the barometer was six degrees.—That which rises or appears to rise; elevation or degree of ascent; any place elevated above the common level; an ascent; an acclivity; as, the *rise* of a mountain.—Spring; source; origin; commencement; beginning; as, the river takes its *rise* in the mountains, authorship has its *rise* in education.—Increase in price or value; advance; augmentation; as, a *rise* in public securities.

Ris'er, *n.* One who rises.

(*Arch.*) An upright piece of wood or stone which supports a stairs.

Risibil'ity, *n.* [*Fr.* *risibilité*, from *L. Lat.* *risibilitas*.] State or quality of being risible; quality of laughing, or of being capable of laughter; liability to laugh.

Ris'ible, *a.* [*Fr.*; *Lat.* *risibilis*, from *rideo*, *risum*, to laugh.] Having the faculty or power of laughing. (*R.*)—Capable of exciting laughter; laughable; ludicrous.

Ris'ibleness, *n.* State or quality of being risible; risibility.

Ris'ibly, *adv.* In a risible manner; so as to awaken laughter.

Ris'ing, *a.* Increasing in wealth, power, or distinction.—Growing or advancing in adult years, and to the state of active life.—Older than; exceeding; as, a horse *rising* three years old.

-n. Act of rising, or of getting up from any recumbent or sitting posture.—A tumor on the body.

Ris'ing Sun, in *Indiana*, a post-village, cap. of Ohio co., abt. 90 m. S.E. of Indianapolis. It contains several extensive manufactories.

Rising Sun, in *Iowa*, a post-village of Polk co., abt. 10 m. E. of Des Moines.

Rising Sun, in *Kansas*, a village of Jefferson co., on the Kansas River, opposite Lecompton.

Rising Sun, in *Pennsylvania*, a former village of Philadelphia co., now included within the limits of the city of Philadelphia, abt. 5 m. N. of the State House.

Risk, *n.* [*Fr.* *risque*, from *L. Lat.* *risco*, danger, peril.] Hazard; danger; peril.

(*Com.*) Chance of loss or damage.

—To run a *risk*, to be exposed to hazard or danger.—To take a *risk*, to imply danger;—hence, in commerce, to insure, as goods or ships.

-v. a. [*Fr.* *risquer*.] To expose to injury or loss, as life or property; to hazard; to peril; to endanger; to jeopardize; to venture; to dare to undertake.

Risk'er, *n.* (*Com.*) A person who takes risks; an underwriter.

Risk'y, *a.* Accompanied with danger; hazardous.

Riso'rial, *a.* [*Lat.* *risus*, laughter.] Relating to laughter.

Risot'to, *n.* [*It.*] (*Cooking*.) An Italian dish, of which rice is the principal component. Onions are shred into a frying-pan, with plenty of butter, and then fried together until the onions become very brown, and communicate their color to the butter. The butter is then run off, and to this is added some rich broth, slightly colored with saffron, when the whole is thickened with well-boiled rice, and served up as a pottage, instead of soup, at the commencement of a dinner.

Rissol'e, *n.* [*Fr.* *rissolé*.] (*Cooking*.) A culinary preparation used as an *entrée*. It consists of meat, or fish, of any kind finely minced and made into small forms, which are then coated with a very thin crust either of pastry or of bread-crumbs, mixed with yolk of egg, and fried. There are great varieties of this dish.

Risto'ri, ADELAIDE, an Italian tragic actress, b. at Cividale, in Friuli, in 1821, being the child of a poor actor, was trained at a very early age for the stage. She appears to have risen through a long series of struggles to the eminence she ultimately attained. Upon her marriage with the Marquis del Grillo, she retired from the stage, but, in 1849, having played on one occasion for the benefit of one of her old friends, her fondness for her former profession returned with a force which resisted all considerations of rank and family. Having accepted in 1855 an engagement in Paris, she sought the favor of a French audience as an interpreter of the Tragic Muse at the very time when Rachel was in the zenith of her fame. Her appearance at such a period was regarded by the French as an open challenge to contest the supremacy of their tragic queen, and they assembled much more disposed to criticize than to applaud. The genius of Ristori, however, triumphed, and from that moment her position was unassailed. Her reception in England was equally enthusiastic, and after that time she visited Spain, Holland, Russia, Constantinople, the United States, and other countries, with unabated success. Died October 9, 1906.

Risus Sardon'icus. [*Lat.*, a sardonic laugh.] (*Med.*) A sardonic or convulsive laugh, smile, or grin, giving a peculiarly horrible expression to the countenance, chiefly observed in cases of tetanus and inflammation of the diaphragm.

Ritard'an'do, *a.* [*It.*] (*Mus.*) Slower and slower.

Ritchie, (*ritch'ee*), in *California*, a village of Napa co., abt. 55 m. N. of San Francisco.

Ritchie, in *W. Virginia*, a N.W. co.; *area*, abt. 480 sq. m. It is washed by Hughes River. *Surface*, uneven; *soil*, generally fertile. *Cap.* Harrisville.

Ritch'ieville, in *Virginia*, a post-village of Pinwidie co., abt. 41 m. S. of Richmond.

Rite, *n.* [*Fr.* *rit*, *rite*; *Lat.* *ritus*.] The manner of performing a divine or solemn service as established by law, precept, or custom; formal act of religion or other solemn duty; form; ceremony; observance.

Ritornelle, **Ritornello**, (*rit-or-nell'*), *n.* [*Fr.* *ritournelle*; *It.* *ritornello*, dim. of *ritorno*, return.] (*Mus.*) Properly, a short repetition, such as that of an echo, or of the last words of a song, especially if such repetition be made after a voice by one or more instruments. But by custom this word is now used to denote all symphonies played to a song before the voice begins, or after it ends.

Rit'tenhouse, in *Pennsylvania*, a village of Montgomery co., abt. 4 m. N.W. of Norristown.

Rit'tenhousetown, in *Pennsylvania*, a suburban village included within the incorporated limits of the city of Philadelphia, abt. 2 m. W. of Germantown.

Rit'nal, (*rit'yu-al*), *n.* [*Lat.* *ritualis*, from *ritus*, a rite.] Pertaining to rites; consisting of rites.—Prescribing rites. (*Eccl.*) A book or manual, in which are given the

order and forms to be observed in the celebration of divine service, the administration of the sacraments, &c., in any particular church.

Ritualism, *n.* [Fr. *ritualisme*.] The system of rituals, or prescribed forms of religious worship.

—Observance of prescribed forms in religion.

Ritualist, *n.* One skilled in, or who adheres to, or treats of, the ritual, or rituals.

Ritualistic, *a.* Relating to, or in accordance with, a ritual.

Ritually, *adv.* In accordance with the ritual; by rites, or by a particular rite.

Riva, a town of Italy, on the Lake of Como, 6 m. from Chiavenna; pop. 5,000.

Rivage, *n.* [Fr. *rivage*, from Lat. *ripa*, bank, shore.] A bank; a coast. (*r.*)

Rival, *n.* [Fr. from Lat. *rivalis*, from *rivus*, a book.] One who is in pursuit of the same object as another; one striving to reach or obtain something which another is attempting to obtain, and which one only can possess; a competitor; as, *rivals* in love.

—*a.* Having the same pretensions or claims; standing in competition for superiority; as, *rival* candidates.

—*v. a.* To stand in competition with; to strive to gain the object which another is contending for. — To strive to equal or excel; to emulate.

Rivalry, *n.* State or quality of being a rival; an endeavor to equal or surpass another in some excellence; competition; contest.

Rivalship, *n.* Rivalry; contention for superiority; emulation.

Rivanua, in Virginia, a small river flowing into James River from Fluvanna co.

Rive, *v. a.* [A. S. *rofan*, to break, to split.] To cleave; to rend asunder by force; to split.

—*v. n.* To be split or rent asunder.

Rive-de-Gier, (*reev-deir-zhe'ai*), a town of France, dept. of Loire, on the Gier, 13 m. N.E. of St. Etienne, and 23 m. S.W. of Lyons. *Manuf.* Glass, steel, and hardware. *Pop.* 13,752.

River, *n.* A person who splits or rives.

River, *n.* [Fr. *riviere*, from L. Lat. *rivaria* = Lat. *rius*, from Gr. *rhoē*.] (*Geog.*) A flowing stream or current of water; a large stream of water flowing in a channel on land towards the ocean, a lake, or another river; a stream larger than a brook or rivulet.

—Hence, copious flow; abundance; as, *rivers* of wine.

(NOTE. *River* frequently forms self-explaining compounds; as, *river-bank*, *river-bed*, *river-channel*, *river-craft*, *river-water*, &c.)

Riverdale, in Indiana, a village of Lawrence co., abt. 25 m. S.W. of Seymour.

Riverdale, in New York, a post-village of Westchester co., abt. 14 m. N. of New York city.

River-delta, *n.* A delta formed by the current of a river.

River-dragon, *n.* A crocodile; — a term applied by Milton to the king of Egypt.

River-driver, *n.* In the U. States, a lumber-man.

Rivered, (*riverd*), *a.* Having rivers; as, a well-*rivered* country.

River Falls, in Wisconsin, a city and township of Pierce co., 10 m. N.E. of Prescott. *Pop.* (1895) 1,919.

River Fisheries, *n. pl.* (*Com.*) The river and lake fisheries of the United States are of great importance. There are valuable shad fisheries in the Connecticut, Hudson, Delaware, Potomac, and other rivers falling into the Atlantic. The great lake fisheries are those of Erie, Huron, Michigan, and Superior. The white fish is the principal object of pursuit, though trout and pickerel are caught in large quantities. The amount taken annually is estimated at 45,000 barrels, which are worth nearly \$500,000. From the rivers flowing into the lakes, about 10,000 barrels of pickerel, worth \$85,000, are annually taken. The river fisheries of the Pacific coast of the United States have proved especially rich in salmon, which are annually taken in great quantities. Shad have been planted in some of these streams.

River-god, *n.* The suppositions tutelary divinity of a river.

Riverhead, in New York, a post-village and township, cap. of Suffolk co., abt. 74 m. E. by N. of New York city.

Riverhood, *n.* State or quality of being a river.

River-horse, *n.* (*Zoöl.*) See HIPPOPOTAMUS.

Riverside, in Wisconsin, a village of La Fayette co., abt. 7 m. S.E. of Darlington.

Riverton, in Iowa, a village and township of Floyd co., abt. 8 m. S.E. of Charles City.

Riverton, in New Jersey, a village of Burlington co., abt. 8 m. N.E. of Camden.

River Trent, or FORT TRENT, a village of Northumberland county, Upper Canada, abt. 12 m. W. of Belleville.

River-weed, *n.* (*Bot.*) See PODOSTEMACEÆ.

Rives, in Michigan, a township of Jackson county.

Rives, in Ohio, a post-village of Richland co., about 79 m. N.N.E. of Columbus.

Rivesaltes, (*reev'salt*), a town of France, dept. of Pyrénées-Orientales, 5 m. from Perpignan; *pop.* 4,000.

Rivesville, in W. Virginia, a post-village of Marion co., abt. 4 m. N. of Fairmont.

Rivet, *v. a.* [Fr. *river*; It. *ribadire*, to clinch, from Lat. *re*, back, and *batuo*, *batuere*.] To fasten with a rivet, or with rivets; as, to *rivet* two pieces of iron. — To clinch; as, to *rivet* a bolt. — Hence, by implication, to fasten firmly or securely; to make firm, strong, or immovable; as, to *rivet* one's affections upon an object.

—*n.* A pin of iron, or other metal, inserted into a hole at

the junction of two pieces of metal or wood, and after insertion, hammered broad at the ends, so as to keep the pieces closely bound together.

Riveting, *n.* Act or operation of joining with rivets.

—The entire set of rivets taken collectively.

Rivière-au-Bœuf, (*ree-ve-air'-o-buf*), in Missouri, a small stream flowing into the Missouri River from Franklin co.

Rivière-au-Cuivre, (*-kē'vr*), or COPPER RIVER, in Missouri, rises in Audrain co., and flowing E.S.E., enters the Mississippi between St. Charles and Lincoln cos.

Rivière des Acadiens, (*daz a-la-de-ang'*), in Louisiana, a small stream flowing into Lake Maurepas from Ascension parish.

Rivière du Loup en Bas, (*du-loo-ong-ba*), a village and seigniory of Lower Canada, on the St. Lawrence, abt. 114 m. below Quebec.

Rivière du Loup en Haut, (*-ong-ho*), a village and seigniory of Lower Canada, abt. 58 m. N.E. of Montreal.

Rivière Ouelle (*oo-ell'*), a village and seigniory of Quebec, about 80 m. below Quebec city. *Pop.* 4,500.

Rivière Pilote, a town on the S. coast of the island of Martinique, W. Indies; *pop.* 4,500.

Rivière Salée, (*sa-lā*), the strait which separates the island of Guadeloupe, W. Indies, into two parts. — A town on the S.W. coast of that island; *pop.* 2,800.

Rivoli, (*re-vo-le*), a town of Italy, prov. of Turin, on the Dora, 9 m. W. of Turin. *Manuf.* Linen, woollens, and silk. *Pop.* 10,200.

Rivoli, a small place of N. Italy, on the Adige, 12 m. from Kerone, near which, Jan. 17, 1797, the French, under General Bonaparte, defeated the Austrians under Alvinzi.

Rivoli, in Illinois, a post-village of Mercer co., abt. 12 m. E. of Aledo.

Rivose, *a.* [Lat. *rius*, a channel.] (*Zoöl.*) A term signifying that the surface of an animal, or part, is marked with furrows which do not run in a parallel direction, and are rather sinuate.

Rixatrix, *n.* [Lat.] (*Law.*) A common scold.

Rix-dollar, *n.* [Swed. *riksdaler*; Dan. *rigsdaler*; Du. *rijksdaller*; Ger. *reichsthaler*. dollar of the realm.] A silver coin of Germany, the Netherlands, Denmark, and Sweden, of different value in different places, and varying, according to the country where coined, from 60 cents to \$1.08. As money of account at the Custom-house, the rix-dollar of Bremen is deemed to be of the value of 78 3/4 cents.

Rixeyville, in Virginia, a village of Culpeper co., abt. 100 m. N. N.W. of Richmond.

Rizah, or **Rizeh**, (*re'za*), a seaport-town of Asiatic Turkey, on the Black Sea, 35 m. S.E. of Trebizond. *Manuf.* Hempen fabrics. *Pop.* 30,000.

Rizered, (*ri'zerd*), *a.* Half-dried by smoking; cured by salting; as, a *rizered* salmon or haddock.

Rizzio, or **Riccio**, DAVID, (*ri'si-o*), an Italian musician and linguist, who became private secretary to Mary Queen of Scots, and was murdered at Holyrood House by Lord Ruthven, and the other accomplices of Darnley (q. v.), 1566. It was pretended by the enemies of the Queen that an improper intimacy existed between her and Rizzio, but all the probabilities are opposed to such a belief.

R. N. Abbreviation of *Royal Navy*.

Roach, (*röchl'*) *n.* [A. S. *reohche*.] (*Zoöl.*) A European fresh-water fish, *Cyprinus rutilus* of Linnaeus, from *Cyprinidae*. It is characterized by having 12 reddish rays to the anal fin, and the ventral fins very obtuse.

(*Naut.*) The curve, or arch, which is generally cut in the foot of some square sails, from one clew to the other, to keep the foot clear of stays and ropes.

—A cockroach.

As sound as a roach, a colloquialism implying a state of perfect soundness; — generally supposed to have been originally written as *sound* as a *rock*.

Road, (*röd'*) *n.* [A. S. *rad*, *rade*; Ger. *ritt*; Ice. *reid*; Dan. *ridt*; Du. *rid*, all signifying a riding.] Ground appropriated for travel, forming a communication between one city, town, or place, and another; a highway; a thoroughfare; a pathway; a way, route, passage, or course.

Road, **Roadstead**, *n.* [A. S. *rād*; Fr. *rade*.] A place of anchorage for ships, distinguished from a harbor by being at some distance from the shore. A good roadstead is one protected from the prevailing winds, and from ocean swells; an open roadstead, one without such protection. A vessel when at anchor is termed a *road*, or *roadster*, in contradistinction to another under sail.

Road-bed, *n.* The bed or foundation on which the superstructure of a railway rests.

Road-book, *n.* An itinerary; a guide-book for roads.

Road-metal, *n.* The broken stone, or gravel, used in macadamizing roads.

Roadster, *n.* A horse suitable for undertaking journeys.

(*Naut.*) See ROAD.

Roadstown, in New Jersey, a post-village of Cumberland co., abt. 6 m. W. of Bridgeton.

Roadway, *n.* A highway; the part of a road travelled by carriages.

Roak, *n.* See ROKE.

Roam, (*röm*), *v. n.* (*imp.* and *pp.* ROAMED,) (*römd*.) [A. S. *ryman*, to make room, *rumian*, to give way; Ger. *räumen*.] To move or wander over an extent of space or room; to walk or move about from place to place without any certain purpose or direction; to wander; to rove; to stroll; to ramble; to stray; as, *roaming* over foreign countries.

—*v. a.* To range; to wander over; as, to *roam* by night, as about the streets.

Roam, *n.* A wandering; the act of roaming.

Roamer, *n.* One who roams; a rover; a wanderer; — also, a vagrant.

Roan, (*rön*), *a.* [Fr. *rouan*; Sp. *ruano*.] Of a color between yellow and gray; of a bay, sorrel, or dark color, with spots of gray or white thickly interspersed; of a mixed hue, having a decided shade of red; as, a *roan* horse.

—*n.* A roan color; tawny-gray. — A roan horse; as, he drives a team of *roans*. — A kind of leather used in book-binding, made from sheep-skin, in imitation of morocco.

Roane, in Arkansas, a township of Lafayette co.

Roane, in Tennessee, an E. central co.; area, about 450 sq. m. *Rivers*. Tennessee, Clinch, and Holston. *Surface*, much diversified, the Cumberland Mountains forming the N.W. boundary of the co.; soil, generally fertile. *Min.* Iron and coal in abundance. *Cap.* Kingston. *Pop.* (1897) 18,180.

Roane, in West Virginia, a W. central co.; area, about 350 sq. m. *Rivers*. Pocatalico river, and West Fork of the Little Kanawha river. *Surface*, hilly and broken; soil, in some parts fertile. *Cap.* Spencer. *Pop.* (1897) 15,990.

Roanne (*ro-an'*), a town of France, dept. of Loire, on the river Loire, 40 m. N.W. of Lyons. It is the entrepôt of an extensive commerce. *Manuf.* Cottons, muslins, paper, and jewelry. *Pop.* 14,500.

Roanoke (*ro-an-ök'*), in Illinois, a post-township of Woodford co.

Roanoke, in Indiana, a post-town of Huntingdon co., about 16 m. S.W. of Fort Wayne.

Roanoke, in Missouri, a post-town of Howard co., about 75 m. N.N.W. of Jefferson City.

Roanoke, in New York, a village of Genesee co., about 30 m. W.S.W. of Rochester.

Roanoke, in North Carolina, a village of Martin co., about 82 m. E.N.E. of Raleigh.

Roanoke, in Virginia, a W.S.W. co.; area, about 321 sq. m., washed by Staunton river. *Surface*, generally hilly, and in the E. mountainous; soil, very fertile. *Min.* Limestone. *Cap.* Salem. *Pop.* (1897) 31,439.

Roanoke Bridge, in Virginia, a village of Charlotte co., abt. 89 m. S.W. of Richmond.

Roanoke Island, in N. Carolina, a strip of land off Tyrrel co., between Albemarle and Pamlico Sounds. *Length*, abt. 13 m. This island having been strongly fortified and manned by the Confederates, presented a formidable barrier against invasion from the Union naval forces. On Jan. 11, 1862, a powerful expedition under Gen. Burnside, consisting of over one hundred steam- and sailing-vessels, with 16,000 troops and a battery of artillery, left Hampton Roads, and after encountering a severe gale, in which several vessels were lost, arrived at R. I. On the night of Feb. 7, the fleet having been placed in position, 11,000 troops, under Gen. Foster, were safely landed, and early next morning commenced the attack. Batteries had been erected at all the favorable points by the Confederates, and much severe fighting ensued. However, aided by the fire from the fleet, the superior numbers of Union forces had an overwhelming advantage, and before night every battery and fortification had either surrendered unconditionally, or been carried by assault. The loss in killed and wounded was severe on both sides. The Confederate prisoners numbered abt. 4,000.

Roanoke River, formed in Mecklenburg co., Virginia, by the union of the Dan and Staunton rivers, and flowing E.S.E. into N. Carolina; thence pursuing a tortuous S.E. and E. course, it enters Albemarle Sound between Bertie and Washington cos. It is a remarkably rapid stream, and flows through a very fertile region. *Length* of main stream, abt. 250 m.; including the Staunton River, abt. 450 m.

Roar, *v. n.* [A. S. *rarian*; Lat. *rugio*, to roar.] To cry with a full, loud, continued sound; — particularly, to bellow, as a beast; as, a *roaring* lion; also, to cry aloud, as in distress; to bawl, as a child; — again, to cry loudly, as in anger; as, he *roared* at his servants. — To make a loud, confused, obstreperous sound, as passing vehicles, a shouting, tumultuous crowd; winds, waves, &c. — To be disorderly; to engage in riotous proceedings; as, those fellows had a *roaring* time of it. — To guffaw; to laugh out loudly and continuously; as, they fairly *roared* with merriment. — To make a loud rasping noise in breathing, as horses when under the influence of a certain disease.

Roaring boy, a rattling, rantipole fellow.

—*v. a.* To utter or proclaim loudly. (*r.*)

—*n.* A full, loud sound of some continuance; as, the *roar* of the wind, &c.

"The cannon's opening roar." — Byron.

—The sound of roaring, as the bellow or loud cry of a beast; as, the *roar* of a gorilla; — also, the loud cry of one in distress; as, the *roar* of a child when beaten. — Clamor; outcry of joy, mirth, or laughter.

"Merriment, that was wont to set the table on a roar." — Shakespeare.

Roarer, *n.* One who, or that which, roars; — particularly, a rantipole, noisy, loud-voiced fellow; as, mauls and *roarers*; a horse subject to roaring.

Roaring, *n.* A loud, continuous sound, as of a beast, or of one in distress, pain, anger, mirth, &c.; also, the loud, continued sound of the billows of the sea, or of a tempest.

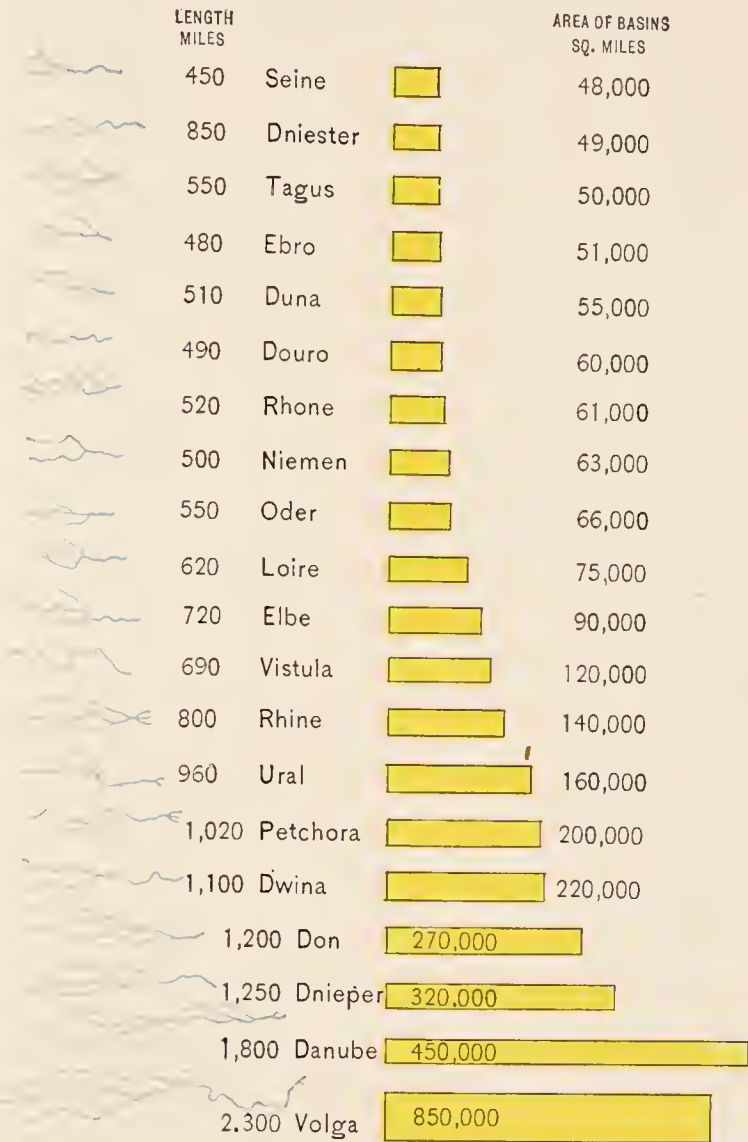

(*Far.*) A disorder of a horse's windpipe, causing a peculiar, loud, wheezy noise in breathing under exertion; also, the making of the noise so caused.

Roaring Creek, in N. Carolina, enters the Yadkin River from Wilkes co.

Roaring Creek, in Pennsylvania, enters the North

RIVER SYSTEMS OF THE WORLD

AMERICA

Branch of the Susquehanna River from Columbia co.—A post-township of Columbia co.—A village of Montour co., abt. 10 m. S. by W. of Pottsville.

Roaringly, *adv.* In a roaring manner.

Roark, in Missouri, a township of Gasconade county.

Roar'y, **Ror'y**, *a.* [Lat. *ros*, *roris*, dew.] Dewy; as, "with roary May-dews wet." — *Fairfax*.

Roast, (*röst*), *v. a.* [Ger. *rösten*; It. *arrostire*; Fr. *rôtir*.] To cook, dress, or prepare meat for the table by exposing it to heat before a fire, as on a spit, in a bake-pan, in an oven, or the like. — To prepare for food by exposure to heat; as, to roast apples, eggs, chestnuts, &c. — To dry and parch by the application of heat; as, to roast coffee. — Hence, to heat to a degree of violence or excess; as, "roasted in wrath and fire." (*Shaks.*) — To jeer; to chaff; to banter with some degree of sarcasm; as, to roast mock modesty.

(*Metal.*) To dissipate the volatile parts, as of ore by heat.

—*v. n.* To undergo the process of roasting, as meat, &c.

—*n.* That which is roasted, or suitable to roast; as, a roast of beef.

To rule the roast, to domineer; to take the lead; to have the supreme control of; as, his wife rules the roast at home.

—*a.* (for roasted.) Roasted.

Roaster, *n.* One who cooks meat by roasting. — A contrivance for roasting meat; a jack. — A pig, or other animal, fit to be roasted whole.

Roasting, *n.* The act of one who roasts.

(*Metal.*) The protracted application of heat to metallic ores, below their fusing points. It is generally resorted to to expel volatile matters, especially sulphur, arsenic, carbonic acid, water, &c., and is generally performed in a current of air, so as to effect simultaneous oxidation.

Rob, *n.* [Fr. and Sp.; Pers. *rub*.] The thin extract or inspissated juice of ripe fruit, reduced to syrupy consistence.

—*v. a.* (imp. and pp. **ROBBED**), (*rôbd*). [A. S. *reafian*; Ger. *rauben*.] To take away from by unlawful violence; to reave; to seize and carry either by open force or secret theft; to strip by pillage; to plunder; as, to rob a bank.

—To take from; to deprive; as, laughter robs the mind of its gravity.

(*Law.*) To take away from the person of by open and violent assault; as, to rob a traveller; to take away by oppression or by force; as, to rob a man of his rights.

Roband, *n.* (*Naut.*) Same as ROPE-BAND, *q. v.*

Robb, in Indiana, a twp. of Posey co.

Robber, *n.* [Ger. *rauber*.] One who robs; a plunderer; a pillager; a despoiler; one who takes goods or money from the person of another by force or menaces, and with a felonious intent; one who takes that to which he has no right; one who steals, plunders, or strips by violence and wrong; a thief; a highwayman; a footpad; a pirate; a bandit; a brigand; a rifter; a depredator.

Robbery, *n.* (*Law.*) The unlawful taking away of money or goods of any value from the person of another, or in his presence, either by violence or by putting him in fear. Hence, in order to constitute *R.*, there must be, 1. An unlawful taking; 2. The thing must be of some value, but it is immaterial, as constituting the offence, whether it be a cent or a dollar; and, 3. The taking must be by force, or a previous putting in fear. It is this last which distinguishes *R.* from other larcenies, and makes the violation of the person more atrocious than private stealing. The taking must also be either directly from the person or in his presence, or it is not *R.* The thing taken must have been in the possession of the thief, and if he once has it in his possession, even though he immediately restore it, he is still guilty of *R.* This offence is punishable by penal servitude for life, or for any term of not less than seven years, or by imprisonment for any term not exceeding three years. Assaulting, with intent to rob, or demanding any property of a person by menaces or force, is made punishable by imprisonment for any term not exceeding three years; and upon an indictment for *R.*, or any other offence which includes assault, the jury may acquit of the felony and find guilty of the assault, for which the party indicted may be sentenced to imprisonment for any term not exceeding three years. Where the crime of *R.* is attended with, or immediately followed by, stabbing, cutting, or wounding, it is a capital offence.

Robbin, *n.* The spring of a carriage.

(*Com.*) In the East Indies, a certain kind of package in which pepper and dry-goods are sometimes exported. The *robbin* of rice as exported from Malabar weighs about 84 lbs.

Robbinston, in Maine, a post-township of Washington co.

Robe, *n.* [Fr., from L. Lat. *rauba*, spoil, the taking of one's garments.] A kind of gown, or long, loose garment, worn over other dress, particularly by persons in a high station of life; as, the robes of a Knight of the Garter; a splendid gown, dress, or garment worn by women; as, a velvet robe; — hence, any elegant dress or article of splendid attire.

—In the U. States and Canada, a skin of the bear, wolf, buffalo, &c., dressed and prepared for use.

Master of the Robes, in England, an officer of the royal household, whose duty consists in ordering the sovereign's robes; now usually termed *Groom of the Stole*.

Mistress of the Robes, in England, a lady who holds the highest rank of all ladies attached to the Queen's household, and who has the charge of her robes.

Robe-de-chambre. [Fr., literally, a chamber-gown.] A dressing-gown; a morning-gown.

Robe, *v. a.* To put a robe upon, or to dress with magnificence; to array; to attire; to invest, as with beauty or elegance; as, trees robed with leaves.

Robert I., King of France, was the second son of Robert "the Strong." He was chosen king at Soissons, in 992, to the prejudice of Charles "the Simple," but was killed during the following year at the battle of Soissons. He was the father of Hugh "the Great," and grandfather of Hugh Capet.

Robert II., surnamed *The Sage and Devout*; b. about 970. He was an accomplished prince, and succeeded his father, Hugh Capet, in 996. He married his cousin Bertha, but Pope Gregory V. declared the marriage void, and excommunicated the king, who took for his second wife the daughter of the Count of Arles and Provence. D. 1031.

Robert I., King of Scotland. See BRUCE.

Robert II. and III. See STUART.

Robert I., Duke of Normandy, surnamed the "Magnificent," though more familiarly called *Robert the Devil*, succeeded his father, Duke Richard II., whom he is reported to have poisoned. He repressed several revolts in his dominions, assisted Baudouin VI., Count of Flanders, and attempted to defend Alfred and Edward, the sons of Edmund, who had been excluded from the English throne by Canute. To expiate the errors of his youth, he made a pilgrimage to the Holy Land, but died upon his return, it is supposed from poison. He left one son, the celebrated William "the Conqueror." Died at Nicea, 1035.

Robert, LEOPOLD, a French painter, b. 1797, studied under Gérard and David, and perfected his talents in Italy, where he executed many of his finest pictures. His greatest works are, the *Neapolitan Improvisatore*, *The Reapers*, and the *Venetian Fishermen*. Committed suicide in Venice, 1835.

Robert, (*Le*), a town on the E. coast of the Island of Martinique, W. Indies; pop. 5,000.

Roberts, in Illinois, a township of Marshall co.; pop. abt. 1,500.

Robertson, WILLIAM, a British historian, b. 1721, at Borthwick, or Edinburgh, where his father was minister. Having completed his theological studies at Edinburgh, he obtained a license to preach, and in 1743 was presented to the living of Gladsmair, in East Lothian. He soon became distinguished by his eloquence as a preacher; but it was not till 1759 that, by his *History of Scotland*, he acquired a place among British classical writers. The distinction he acquired by this work, which reached a fourteenth edition before his death, appeared in his successive preferments. He became King's chaplain in 1761, principal of the University of Edinburgh in 1762, and Historiographer-Royal of Scotland in 1764. His other works are: *History of Charles V.*; *History of America*; and *An Historical Disquisition concerning the Knowledge which the Ancients had of India*. D. 1793. As a historian, Dr. Robertson is admired for luminous and skilful arrangement, graphic description, and a singularly perspicuous style.

Robertson, in Tennessee, a N. co., adjoining Kentucky; area, abt. 500 sq. m. Rivers, Red River and Sycamore Creek. Surface, uneven; soil, fertile and well adapted to grain. Cap. Springfield. Pop. (1897) 22,050.

Robertson, in Texas, an E. central co.; area, about 850 sq. m. Rivers, Brazos and Navasoto rivers. Surface, level or slightly undulating; soil, generally fertile. Cap. Franklin. Pop. (1897) 27,180.

Robertsville, in Connecticut, a post-village of Litchfield co., abt. 28 m. N.W. of Hartford.

Robertsville, in Ohio, a post-village of Stark co., abt. 10 m. E.S.E. of Canton.

Robertsville, in Pennsylvania, a village of Indiana co., abt. 70 m. N.E. of Pittsburg.

Robertsville, in Tennessee, a village of Anderson co., abt. 166 m. E. of Nashville.

Robeson, in North Carolina, a S. co., adjoining South Carolina; area, about 1,040 sq. m. River, Lumber river. Surface, nearly level; soil, fertile, yielding considerable crops of corn and cotton. Cap. Lumberton. Pop. (1897) 32,220.

Robeson, or ROBESONIA, in Pennsylvania, a post-village and township of Berks county, about 12 miles west of Reading.

Robespierre, FRANÇOIS MAXIMILIEN JOSEPH ISIDORE, (*robès'pair*), a famous French revolutionist, b. at Arras, 1759, was the son of a provincial advocate, and was educated at the expense of the bishop of Arras. After completing his studies at Paris, he entered upon the profession of the law, but with no great success. Upon the outbreak of the Revolution, he became a member of the National Assembly, and in a short time rose to be chief of the Jacobins. He declared that "France must be revolutionized," and was soon named Public Accuser. Having risen to power, he, to maintain it, had recourse to the most cruel expedients. The prisons were crowded with unfortunate victims of all ages and of both sexes. Numbers were daily put to death, and the streets were deluged with blood. At length a conspiracy was formed against him. He was accused of seeking

his own aggrandizement by getting rid of his old colleagues, and was condemned to death. He was taken, but contrived to effect his escape, and marched against the Convention; yet he had not sufficient personal courage to turn the tide once more in his own favor, and was again taken prisoner. His jaw was broken by a pistol shot, if from his own hand, or from an assailant, is not known, but he was, with 22 of his associates, dragged to the scaffold. His character has been decried, but deservedly so. He was cowardly and cruel, but eloquent and not mercenary. His partisans surnamed him the "Incorruptible"; and at his death he was worth but 50 francs. His mean and low qualities were so greatly in excess of the better faculties, that he rendered himself as great a foe to democracy as to monarchy and aristocracy. Guillotined, 1794.

Robin, *n.* [From Lat. *rubro*, to be red.] (*Zoöl.*) The name given in different countries to red-breasted birds belonging to different genera of the family *Turdidae*. The common Robin (*Turdus migratorius*) of all North America, is about 10 inches long, and is so well known that it needs no further description. This is one of the most common and most interesting birds, coming to the temperate districts early in the spring, and remaining late in the autumn. Some remain through the whole winter even in New England, but keep in the thick swamps and on the sunny sides of woods. The song of the robin at the close of the early days of spring is among the sweetest that issues from our groves and orchards. — The Robin-redbreast of Europe (*Erythra rubecula*, or *Molucilla rubecula*) is also familiar to every one, at least by name. This pretty little bird is from 5 to 6 inches long, brownish-gray above, the throat and breast red, and belly white. It delights in the presence of man, and often enters his dwelling. In the cold weather, it sometimes takes up its abode in houses, and, selecting a perch, warbles its song when the day is clear, or the fire burns brightly.

Robin Good-fellow, *n.* Same as PUCK, *q. v.*

Robing-room, *n.* In England, a room where state dignitaries, members of knightly orders, or lawyers, put on their robes; as, the robing-room of the House of Lords.

Robin Hood, a celebrated hero in English ballad poetry. He was the captain of a band of outlaws, who made Sherwood Forest, in Nottinghamshire, their haunt, and from whence they made excursions into different parts of England. He had as his second a celebrated character called *Little John*; and, according to Stowe, they continued their marauding course of life from 1186 to 1247, without being brought to justice. The most complete edition of the ballads in which his deeds are sung is that of Gutch, 1847.

Robinia, *n.* (*Bot.*) A genus of plants, order *Fabaceæ*. The species *R. pseudo-acacia* is known as the Locust-tree, and frequently cultivated on account of its flowers and its hard and durable wood. It must not be confounded with the useful West Indian Locust-tree (see *LYMENEÆ*), or with the plant producing the so-called locust-bean. See CERATONIA.

Robinson, EDWARD, a distinguished American philologist and biblical scholar, was born at Southington, Conn., 1794. He studied at Hamilton College, and graduated in 1816 with the highest honors. Continuing his studies diligently, he became associated, in 1822, with Professor Stuart, at Andover, in preparing a new edition of his *Hebrew Grammar*, and soon after was appointed Assistant-instructor in Sacred Literature, a post which he filled for four years. He visited Europe in 1826; and on his return to America, in 1830, he was appointed Professor-extraordinary of Biblical Literature at Andover, where in the following year he established the *Biblical Repository*, which he edited for four years. In consequence of failing health, he removed, in 1834, to Boston, still devoting himself to work in his chosen field. He was chosen, in 1837, Professor of Biblical Literature in the Union Theological Seminary of New York, but, before entering on his new office, visited Palestine, for the purpose of geographical exploration, and then spent two years at Berlin in the preparation of his *Biblical Researches in Palestine*, which appeared in 1841. It gained him a European reputation, and also, by its courageous disregard of ecclesiastical traditions, provoked much bitter controversy. He received one of the gold medals of the Royal Geographical Society of London, and was created D. D. by the University of Halle. He visited Europe again in 1851, and Palestine in 1852. The latter years of his life were devoted to the preparation of a great work on the physical and historical geography of Palestine, the first portion of which appeared in 1865. Dr. R. was author of the well-known *Greek and English Lexicon of the New Testament*, the first edition of which appeared in 1836, and a second, revised, in 1850. He published translations of Hahli's *Clavis Novi Testamenti*, Buttmann's *Greek Grammar*, and Gesenius' *Hebrew Lexicon*, of which five editions have appeared. He originated the *Bibliotheca Sacra* in 1843, and published a *Harmony of the Four Gospels* in Greek, in 1845. His name is held in high honor as one of the soundest and most accomplished scholars of his age. Died at New York, January 25th, 1863. In 1828, Dr. R. married for his second wife Teresa, daughter of Professor Von Jacob, of Halle, who has distinguished herself as a writer under the assumed name of "Talvi."

Robinson, in Illinois, a city, cap. of Crawford co., on the C., C. & St. L. and Ind. & Ill. Southern R. Rs., 44 m. W. of Terre Haute, Ind. Pop. (1897) 1,520.

Robinson, in Indiana, a township of Posey co.

Robinson, in Kansas, a post-village of Brown co., about 26 m. N.W. of Atchison.

Fig. 2268. — ROBESPIERRE.

Robinson, in *Michigan*, a post-township of Ottawa county.

Robinson, in *Missouri*, a former township of Greene county.

Robinson, in *Oregon*, a village of Lane co.

Robinson, in *Pennsylvania*, a township of Allegheny county.—A village and township of Washington county, about 20 miles S.S.W. of Pittsburgh.

Robinson's River, in *Virginia*, enters Rapidan River between Madison and Orange cos.

Rob'in's-plan'tain, *n.* (*Bot.*) See *ERIGERON*.

Rob'orant, *a.* [From *Lat. roborare*, to strengthen.] Strengthening.

—*n.* (*Med.*) A tonic; a medicine to strengthen the bodily system.

Rob Roy, or **ROBERT THE RED**, was a celebrated Highland freebooter, whose true name was Robert Macgregor, but who assumed that of Campbell, on account of the outlawry of the clan of Macgregor by the Scotch Parliament, in 1662. He was b. about 1660, and, like other Highland gentlemen, he was a trader in cattle previous to the rebellion of 1715, in which he joined the adherents of the Pretender. On the suppression of the rebellion, the Duke of Montrose, with whom Rob Roy had previously had a quarrel, took the opportunity to deprive him of his estate; and the latter began to indemnify himself by a war of reprisals upon the property of the Duke. An English garrison was stationed at Inversnaid, near Aberfoyle, the residence of Rob Roy; but his activity and courage saved him from the hands of his enemies, from whom he continued for some time to levy black-mail. D. about 1735. The story of Rob Roy furnished Scott with the theme of one of his most fascinating novels.

Rob Roy, in *Indiana*, a post-village of Fountain co., abt. 12 m. N.E. of Covington.

Robust, *a.* [*Fr. robuste*, from *Lat. robustus*.] Indicating strength; denoting vigorous health; strong; sinewy; muscular; sound; lusty; stout; sturdy; as, a robust constitution.—Boisterous; rough; rude; robustions; as, robust gallantry.—Demanding or necessitating strength or vigor; as, robust exercise.

Robustious, (*-büst'yus*), *a.* Rough; rude; boisterous; as, a robustious young fellow. (*R.*)

Robust'ly, *adv.* With great strength; muscularly; in a robust manner.

Robustness, *n.* State or quality of being robust; strength, vigor, or the condition of the body when it has full, firm flesh, and sound health.

Roc, *n.* [*Ar.* and *Pers. rukh*.] A monstrous bird of Arabian mythology, of the same fabulous species with the *simurg* of the Persians.

Roc-ambale, *n.* (*Bot.*) The common name for *Allium scorodoprasum*, a plant closely resembling the garlic, *A. sativum*. The bulbs, which are cultivated for the same purposes as those of the latter species, are said to have a more delicate flavor.

Ro'cas, an island in the Atlantic Ocean, abt. 125 m. N.E. of Cape St. Roque; *Lat.* 3° 55' S., *Lon.* 33° 43' W.

Rocella, *n.* (*Bot.*) A genus of lichens. The species are known under the common name of *Orchella* weeds, and are extensively used in the manufacture of the purple and red dyes called *archil*, or *orchil*, and cudbear. In Holland, the blue dye-stuff called *litmus* is also prepared from these lichens. *Orchella* weeds are exported from various parts of the world; as the Canary and Cape de Verd Islands, the Azores, Angola, Madagascar, Mauritius, Madeira, S. America, and the Cape of Good Hope. In commerce, the different kinds are distinguished by the names of the countries whence they are derived. It is remarkable that there is no coloring matter ready formed in these lichens; it is produced by the combined action of air and ammonia upon some colorless principles contained in them. See *ARCHIL*, *LECANORA*, *LITMUS*.

Rocell'ic, *a.* (*Chem.*) Pertaining or relating to, or obtained from, *Rocella tinctoria*.

Rochambeau, (*rôsh-am-bô')* JEAN BAPTISTE DONATIEU DE VIMEUR, COUNT DE, Marshal of France, b. at Vendôme, 1725. He entered the army at the age of 16, greatly distinguished himself in several battles, and, having been made lieutenant-general, was, in 1780, sent with an army of 6,000 men to the assistance of the U. States. Having embarked in Rhode Island, he acted in concert with Washington, first against Clinton, in New York, and then against Cornwallis. *R.* was raised to the rank of marshal by Louis XVI., and, after the Revolution, he was appointed to the command of the army of the north; but he was superseded by more active officers, and retired to his estate, near Vendôme, where he died, 1807. His *Mémoires* were published in 1809.

Rock'dale, a town of England, co. of Lancaster, on the Roch, 12 m. N.N.E. of Manchester. *Manuf.* Flannels, kerseys, calicoes, baizes, fustians, hats, and machinery.

Roche-a-Gris, (*rôsh-a-gré')* in *Wisconsin*, a small river flowing into the Wisconsin River from Adams co.

Rock'-alum, **Rock'-alum**, *n.* (*Chem.*) Alum deprived of part of its water of crystallization by heat.

Rochefort, (*rôsh'for*), an important seaport and naval arsenal of France, dept. of Charente-Inférieure, on the Charente, 5 m. from its mouth, and 18 m. S.E. of La Rochelle; *Lat.* 45° 56' 6" N., *Lon.* 57° 7" W. It is the third port of France in importance, and contains numerous public works. *Manuf.* Cordage, stone-ware, oil, and sugar refining. *Pop.* 30,151.

Rochelle. See *LA ROCHELLE*.

Rochelle, in *Illinois*, a city of Ogle co., at junction of C. & N. W. and the Chic., B. & Quincy R. Rs., 75 m. W. of Chicago; contains some fine edifices, and is the center of a large agricultural trade. *Pop.* (1897) 2,150.

Rochelle Salt, *n.* [From the town of *Rochelle*, France.] (*Chem.*) The tartrate of soda and potassa. It is a double salt, composed of 2 atoms of tartaric acid, 1 of potassa, and 1 of soda. Its crystals, which are large and well-defined prisms, often presenting 8, 10, or 12 sides, include 8 atoms of water.

Roche Percée, (*rôsh per'sa*), in *Missouri*, a small river flowing into the Missouri River from Boone co.

Roche'port, in *Missouri*, a p-vill. of Boone co., abt. 40 m. N. W. of Jefferson City.

Roche'ester, a city of England, co. of Kent, on the Medway, 30 m. S.E. of London; *pop.* abt. 20,000; in *Ill.*, a p-vill. of Sangamon co., abt. 6 m. S.E. of Springfield; in *Ind.*, a vill. of Franklin co., abt. 76 m. E.S.E. of Indianapolis.—A p-vill. and twp., cap. of Fulton co., 92 m. N. of Indianapolis; *pop.* abt. 3,000.—A vill. of Noble co., abt. 130 m. N.N.E. of Indianapolis; in *Iowa*, a p-vill. and twp. of Cedar co., abt. 20 m. E. of Iowa City.

Rochester, in *Kentucky*, a post-village of Butler co., abt. 30 m. N.W. of Bowling Green.

Rochester, in *Massachusetts*, a post-township of Plymouth co.

Rochester, in *Michigan*, a post-village of Oakland co., abt. 28 m. N. of Detroit.

Rochester, in *Minnesota*, a city, cap. of Olmsted co., on the Chicago & Northwestern R. R., 40 m. S. of Red Wing; has several flour mills, and is the trade center of a flourishing agricultural region. *Pop.* (1895) 6,429.

Rochester, in *Missouri*, a post-village and township of Andrew co., about 62 m. N. by W. of Independence.

Rochester, in *New Hampshire*, a post-town of Strafford co.

Rochester, in *New York*, a city on the Genesee River, 7 m. from its embouchure in Lake Ontario, and 260 m. N.W. of New York. It is remarkable, even in this country, for the rapidity of its growth, which increase has been owing, in part, to the advantageous situation of the city for an emporium, from its easy communication with the lakes by means of the Genesee River, which is navigable to within 2 miles of the town, and with the country traversed by the Erie Canal, and by various railways, which either terminate in or pass by the town; but principally, perhaps, to its immense command of water-power, the various falls of the Genesee River within its limits, amounting in all to 268 feet in perpendicular height; it has several large flour mills, and was at one time the principal seat of the flour trade of the country. It has a variety of large establishments, the moving power in which is supplied, wholly or in part, by water—such as fulling-mills, woollen and cotton factories, iron foundries, &c. Its principal industries are the manufacture of ready-made clothing and boots and shoes; these two branches alone give employment to over 7,000 persons. *R.* is well built, having wide streets, large stores and warehouses, and many neat, and some superior dwelling-houses, with shrubberies attached. Being the cap. of a co., it has a court-house, jail and other county buildings; numerous schools, academies and churches; a collegiate institution and museum; various public banks, and one of the largest savings' banks in the State. It was incorporated as a city in 1834. *Pop.* (1870) 62,385; (1880) 89,363; (1890) 138,896; (1897) 151,400; (1900) 162,435.

Rochester, in *Ohio*, a post-village and township of Lorain co., abt. 94 m. N.N.E. of Columbus. *Pop.* (1897) 910.

—A village of Noble co., about 30 m. E.S.E. of Zanesville.

—A small village of Warren co.

Rochester, in *Pennsylvania*, a post-borough of Beaver co., abt. 25 m. N.W. of Pittsburgh.

Rochester, in *Vermont*, a post-township of Windsor co.

Rochester, in *Wisconsin*, a post-village and township of Racine co., abt. 24 m. W. of Racine.

Roche'ester Colony, in *Michigan*, a village of Clinton co., abt. 28 m. N.E. of Lansing.

Rochet, (*rôch'et*), *n.* [*Fr.* from *L. Lat. rochetum*, an external garment.] A vestment made of white linen, and worn by priests and bishops when officiating. It differs from the surplice by being gathered at the wrists, and having tight-fitting sleeves.

—In England, a mantlelet worn by the English peers at state ceremonies.

Rochlitz, (*rôk'litz*), a town of Germany, in Saxony, on the Mulda, 28 m. E. of Leipsic; *pop.* 4,500.

Rock, *n.* [*Fr. roc, roche*; *A. S. roc*; *It. rocca*.] A vast mass of stone, of broken surface, rugged and steep; a large mass of stony matter, either bedded in the earth, or resting on its surface.—Hence, analogically and figuratively, that which resembles a rock in stability; a defence; a means of safety or security; a protection; an asylum; as, the rock of faith.—Hence, also, that by which any disaster is occasioned in a manner like that by which a ship is wrecked by striking upon a rock.

(*Geol.*) All mineral masses underlying the soil and sub-soil of any part of the earth are designated, by the geologist, *rocks*. *R.* are either *fossiliferous* or *non-fossiliferous*, the former being for the most part stratified and of aqueous origin, and the latter frequently unstratified. Of the latter, some appear to have distinct reference to the action of heat, or have been apparently so far altered as to be, with manifest reason, called *igneous* or *crystalline*. Among the former are lavas and basaltic rocks; among the latter, granites and porphyries. There is a large intermediate class, called *metamorphic*, including slates and schists. The essential basis of stratified *R.* is always either limestone, sandstone, or clay. Unstratified *R.* present modifications of the same materials. Stratified *R.* often contain numerous organic remains, which are rarely found in unstratified *R.* *R.* present many mechanical modifica-

tions, resulting from the conditions to which they have been exposed.

(NOTE. *Rock* forms the prefix of numerous self-explanatory compounds; as, *rock-bound*, *rock-hearted*, *rock-ribbed*, &c.)

Rock, *n.* [*Ger. rocken*.] A distaff used in spinning;—specifically, the staff or frame about which flax or wool is arranged, from which the flax is drawn in spinning.

Rock, *v. a.* [*Ger. rücken*, to push, move, from *ruck*, a wrench.] To move backward and forward, as a body resting on a foundation; to move backward and forward, as in a chair, cradle, &c.—To set to sleep by rocking;—hence, to still; to quiet; to tranquillize.

"Sleep rock thy brain."—*Shaks.*

—*v. n.* To reel; to totter; to oscillate; to be moved backward and forward; as, the rocking motion of an earthquake.

Rock, in *Iowa*, a township of Mitchell co.

Rock, in *Wisconsin*, a S. co., adjoining Illinois; *area*, abt. 770 sq. m. *Rivers*. Rock and Sugar rivers. *Surface*, mostly undulating; *soil*, very fertile, producing abundant crops of grain and fruit. *Minerals*. Blue limestone. *Cap.* Janesville. *Pop.* (1895) 48,414.

—A township of the above county.

Rock'-alum, *n.* See *ROCHE-ALUM*.

Rock'away, *n.* A low, four-wheeled, two-seated carriage for riding in, with full standing top.

Rock'away, in *New Jersey*, a town and township of Morris co., abt. 9 m. N. of Morristown. It owes its importance chiefly to the rich iron mines in the vicinity, and the extensive iron manufactories established here. *Pop.* abt. 7,000.

Rockaway, in *New York*, a post-village of Queen's co., abt. 24 m. E.S.E. of New York city.

Rockaway River, in *New Jersey*, enters the Passaic between Morris and Essex cos.

Rock Bluff, in *Nebraska*, a post-village of Cass co., abt. 6 m. S. by E. of Plattsmouth.

Rock'bridge, in *Virginia*, a W. co.; *area*, abt. 780 sq. m. *Rivers*. North and James rivers. *Surface*, diversified, the Blue Ridge forming the S.E. boundary of the co.; *soil*, exceedingly fertile. In this co. is the remarkable NATURAL BRIDGE, *q. v.* *Cap.* Lexington.

Rockbridge, in *Wisconsin*, a post-village and township of Richland co., abt. 33 m. W. of Baraboo. The name is derived from a curious natural bridge at the W. Branch of Pine River.

Rock Castle, (*rôk kas'sel*), in *Kentucky*, a S.E. central co.; *area*, abt. 300 sq. m. *Rivers*. Dick's and Rock Castle rivers. *Surface*, hilly; *soil*, not very fertile. *Prod.* Corn, grass, and pork. *Min.* Bituminous Coal. *Cap.* Mount Vernon.—A post-village of Trigg co., abt. 240 m. W.S.W. of Frankfort.—A small river flowing S.S.W. into Cumberland River between Pulaski and Laurel cos.

Rock'cork, *n.* (*Min.*) Same as MOUNTAIN-CORK.

Rock Creek, in *California*, enters the Sacramento River between Tehama and Butte cos.

Rock Creek, in the *District of Columbia*, enters the Potomac River at Georgetown.

Rock Creek, in *Illinois*, a post-twp. of Carroll co.

—A twp. of Hancock co.

Rock Creek, in *Indiana*, enters the Wabash River from Carroll co.—A post-township of Bartholomew county.—A township of Carroll county.—A township of Huntington county.—A township of Wells county.

Rock Creek, in *Kansas*, a township of Jefferson co.—A township of Nemaha co.

Rock Creek, in *Kentucky*, a post-village of Lewis co., abt. 125 m. E.N.E. of Frankfort.

Rock Creek, in *Pennsylvania*, enters Monocacy River from Adams co.

Rock Creek, in *Wisconsin*, a township of Dunn county.

Rock'-erys'tal, *n.* (*Min.*) A common term applied to transparent, crystallized silica. It is also called QUARTZ, *q. v.*

Rock'dale, in *Pennsylvania*, a village of Chester co., abt. 40 m. W. by N. of Philadelphia.—A post-township of Crawford co.

Rock Dell, in *Minnesota*, a post-township of Olmstead co.

Rock'er, *n.* One who rocks, as a chair or cradle.—The curving piece of wood on which a cradle or chair rocks.

—Any instrument capable of a rocking or oscillatory motion; as, a rocker for separating gold-dust from earth, &c.

Rock'ery, *n.* A hillock formed of stones, earth, &c., for plants; rock-work.

Rock'et, *n.* [*Dan. raquette*.] (*Pyrotechny*.) A cylindrical case of paste-board or metal, attached to one extremity of a light wooden rod, and containing a composition which, being fired, shoots the whole of the arrangement through the air, by that principle that an unbalanced reaction from the heated gases which issue from openings in fire-works gives them motion in the opposite direction. As signals between persons who were unable to communicate with each other on account of darkness or some other cause, *R.* have long been employed. They were also used for the important service of determining the difference of longitude between two places. In signal-rockets, the composition with which the case is filled consists generally of saltpetre, sulphur, and charcoal, or gunpowder; the whole is reduced to a meal state, and well mixed together, the annexed being the proportions:—saltpetre, 4 lbs.; sulphur, 1 lb.; and charcoal, 1 lb. 8 oz. The mixture for producing *R.* with stars, consists of, saltpetre, 8 lbs.; sulphur, 2 lbs.; sulphide of antimony, 2 lbs.; meal powder, 8 oz.; and isinglass, 3¼ oz. The last ingre-

lient is dissolved in a quart of vinegar, after which 1 pint of spirits of wine is added, and then the mealed composition is mixed with the liquid till the whole mass comes to be of the consistency of thick paste. After being moulded into short cylinders and carefully dried, these cylinders are packed into the head with a small bursting charge. As soon as the *R.* is shot off and burned out, the bursting charge opens the head and sets free the lighted stars. The force by which a *R.* ascends is similar to that by which a gun recoils when it is fired. The rod serves to guide the *R.* in its flight, the common centre of gravity of the *R.* and rod being a little below the top of the latter. The distance at which signal-rockets can be seen varies between 35 and 40 miles; and the times of ascent from seven to ten seconds. At the beginning of this century Sir William Congreve converted the *R.* into a terrible projectile of war, with ranges which no ordnance of that day could attain. Discarding the small sizes, he made 12-lb., 18-lb., and 32-lb. *R.*, which he charged with canister-shot, bullets, and other missiles. The stick for a 32-lb. *R.* is 18 ft. in length, and the maximum range 3,500 yards. The range can be also increased by discharging the *R.* from a cannon, with a time-fuse to ignite it at the cannon's utmost range, when the rocket commences its own course. As missiles, these *R.* are found to annoy most seriously the defenders in any fortified work, and, in a bombardment, they speedily set houses and buildings on fire. In the field, also, the plunging, ricocheting motion of the *R.* greatly disturbs both cavalry and infantry. The Congreve *R.* were first tried in actual service, and with fatal effect, at the attack on Copenhagen, in 1807.

—A piece of wood employed to blunt the end of a lance in a tourney, to prevent it from doing hurt.

—[Fr. *roquette*, from Lat. *eruca*.] (Bot.) See HESPERIS.

Rock Falls, in Wisconsin, a post-village of Dunn co., abt. 16 m. S.E. of Menomonie.

Rockfield, in Indiana, a post-village of Carroll co., abt. 7 m. N.E. of Delphi.

Rockfish, *n.* (Zool.) A fish of the family *Gobiidae*, the Black-fish, *Gobius niger*, found on sea-coasts.

Rockfish, in Virginia, a village of Nelson co., abt. 36 m. N.N.E. of Lynchburg.

Rockfish Gap, in Virginia, a pass through the Blue Ridge, abt. 16 m. S.E. of Staunton.

Rockford, in Alabama, a post-village, cap. of Coosa co., abt. 40 m. N. by E. of Montgomery.

Rockford, in Illinois, a city, cap. of Winnebago co., on Rock River, abt. 92 m. W.N.W. of Chicago. It contains some extensive manufactories, and is a place of active and increasing business.

Rockford, in Indiana, a post-village of Jackson co., abt. 60 m. S. of Indianapolis. — A village of Wells co., abt. 100 m. N.E. of Indianapolis.

Rockford, in Iowa, a post-township of Floyd co. — A township of Pottawatomie co.

Rockford, in Minnesota, a post-village of Wright co.

Rockford, in North Carolina, a village, former cap. of Surry co., about 145 m. W. by N. of Raleigh.

Rockford, in Ohio, a village of Tuscarawas co., abt. 40 m. W. by N. of Steubenville.

Rockford, in Tennessee, a post-village of Blount co., abt. 10 m. S. by W. of Knoxville.

Rock Grove, in Illinois, a post-village and township of Stephenson co., abt. 55 m. E. by N. of Galena.

Rock Grove, in Iowa, a twp. of Floyd co.

Rock Hall, in Maryland, a post-village of Kent co., abt. 25 m. N.E. of Annapolis.

Rock Hill, in Missouri, a post-village of St. Louis co., abt. 10 m. W. by S. of St. Louis.

Rockhill, in Pennsylvania, a borough of Huntingdon county.

Rock House Prairie, in Missouri, a village of Buchanan co., about 44 m. N.N.W. of Independence.

Rockiness, *n.* State of abounding with rocks.

Rocking-chair, *n.* A chair mounted on rockers.

Rockingham, in Iowa, a village and township of Scott co., about 55 m. E.S.E. of Iowa City.

Rockingham, in Kansas, a former village and township of Pottawatomie county, about 11 miles N. E. of Manhattan.

Rockingham, in North Carolina, a N. co., adjoining Virginia; area, about 608 sq. m. Rivers, Dan and Haw rivers. Surface, elevated and hilly; soil, fertile. Cap. Wentworth. Pop. (1897) 26,129. — A post-village, cap. of Richmond co., about 105 m. S.W. of Raleigh.

Rockingham, in New Hampshire, a S.E. co., bordering on the Atlantic Ocean and Massachusetts; area, abt. 750 sq. m. Rivers, Lamprey, Beaver, Piscataqua, and Exeter rivers. Great Bay and Massabesic Lake are also in this co. Surface, uneven and hilly; soil, fertile and well cultivated. The co. is traversed by several railroads. Seats of justice, Exeter and Portsmouth.

Rockingham, in Vermont, a post-village and township of Windham county, about 82 miles S. by E. of Montpelier.

Rockingham, in Virginia, a N.W. co., adjoining W. Virginia; area, abt. 900 sq. m. Rivers, Shenandoah River and its North Fork, Dry, and North rivers. Surface, diversified; having the Shenandoah Mountains on the N.W., and the Blue Ridge on the S.E.; soil, generally very fertile. Cap. Harrisonburg.

Rocking-horse, *n.* A wooden horse, mounted on rockers, for the pastime of children.

Rocking-shaft, *n.* (Mech.) The shaft, with levers on it, which works the side-valves in some steam engines. The eccentric-rod drops on to a stud fixed in one lever, and the links of the side-valve rod are attached to the opposite lever or the same shaft.

Rock'ing-stone, LOGGING-STONE, *n.* (Archæol.) A Druidical stone, sometimes of an immense size, at others of ordinary dimensions, so placed and accurately adjusted on the point or edges of another stone, or stones, that, when touched by the lightest finger, the upper or logging-stone will rock or oscillate without the slightest fear of its fall or displacement. Sometimes these remarkable stones consist of one immense mass of rock, with a rude kind of cone or projection for its base, which, resting on or in a sort of socket of the rock below, becomes so evenly poised that, though 20 horses could not displace the stone, a baby's hand can make it oscillate. They are common in Brittany (France), and in Cornwall (England).

Rock Island, in Illinois, a N.W. co., adjoining Iowa; area, about 440 sq. m. Rivers, Mississippi and Rock rivers. Surface, diversified; soil, fertile. Min. Stone-coal. Cap. Rock Island. Pop. (1897) 43,400.

—A city, cap. of the above co., on the Mississippi river, about 182 m. W. by S. of Chicago. It is finely situated at the foot of the Upper Rapids, which extend 15 m. up the river, and afford immense hydraulic power for manufacturing purposes. Rock Island in the Mississippi, nearly opposite the city, contains an extensive arsenal and government emporium for the fabrication of arms and ammunition. Pop. (1897) 15,100.

Rockland, in Illinois, a village of Lako co., about 30 m. N. by W. of Chicago.

Rockland, formerly EAST THOMASTON, in Maine, a city, cap. of Knox co., on the S.W. shore of Penobscot Bay, abt. 40 m. S.E. of Augusta. It contains some extensive manufactories, and is a place of much business activity. Ship-building is carried on to a considerable extent, and the inhabitants are largely engaged in fishing and commerce.

Rockland, in Michigan, a post-village and township of Ontonagon county, about 13 miles S.S.E. of Ontonagon.

Rockland, in New York, a S.E. co., adjoining New Jersey; area, abt. 200 sq. m. Rivers, Hudson, Hackensack, and Passaic rivers. Surface, uneven, and in the E. part mountainous; soil, very fertile, especially in the valleys. Min. Iron and sandstone. The co. is intersected by the Erie R. R. and the Northern N. J. Cap. New City. Pop. (1897) 37,750.

—A post-town of Sullivan county.

Rockland, in Pennsylvania, a township of Berks co.

—A post-township of Venango co.

Rockland, in Washington, a village, former cap. of Klilkat co., about 100 m. E. of Portland, Oregon.

Rockland, in Wisconsin, a township of Brown co.

—A township of Manitowoc co.

Rock'less, *a.* Without rocks.

Rock'milk, *n.* (Min.) See AGARIC MINERAL.

Rock'moss, *n.* (Bot.) *Lecanora tartarea*. See LECANORA.

Rock'oil, *n.* Same as PETROLEUM (*q. v.*).

Rockport, in Arkansas, a village, former cap. of Hot Springs co., about 50 m. W.S.W. of Little Rock.

Rockport, Illinois, a post-village of Pike co., about 80 m. W. by S. of Springfield.

Rockport, in Indiana, a post-town, cap. of Spencer co., about 50 m. S.S.E. of Evansville.

Rockport, in Maine, a post-village of Knox co., about 7 m. N. by E. of Rockland.

Rockport, in Massachusetts, a post-village and township of Essex co., about 32 m. N.E. of Boston.

Rockport, in Missouri, a post-village, cap. of Atchison co., about 60 m. N.W. of St. Joseph.

Rockport, in Ohio, a village of Allen co., about 10 m. N.N.E. of Lima.

—A post-village and township of Cuyahoga co., about 7 m. S.W. of Cleveland.

Rock Prairie, in Wisconsin, a post-village of Rock co., about 8 m. E. of Janesville.

Rock River, rises in Washington co., Wisconsin, and flows S. into Illinois; thence pursuing a S.S.W. and S.W. course, it enters the Mississippi river from Rock Island co. Length, about 330 m.

Rock'roe, in Arkansas, a township of Monroe county.

Rock'rose, *n.* (Bot.) Two plants of the genera *Cistus* and *Helianthemum*. See CISTACEÆ and HELIANTHEMUM.

Rock-ruby, *n.* (Min.) A name sometimes applied to a dark-red variety of garnet.

Rock Run, in Illinois, a post-township of Stephenson co.

Rock'salt, *n.* (Min.) Common salt, or chloride of sodium, occurring as a mineral and in a solid form. It is always mixed with various impurities. It is found massive or crystallized, its crystals generally cubes, its masses very often either granular or fibrous. It is white, gray, or, owing to the presence of impurities, more rarely red, violet, blue, or striped. For its chemical and other qualities, see SALT. It is a very extensively-diffused mineral, and in some places forms great rock and even mountain masses. A hill of *R.-S.* near Montserrat, in Spain, is 500 feet high. The island of Ormus, in the Persian Gulf, is formed of *R.-S.* The Indians, in the upper part of its course, forces its way through hills of rock-salt, rising in cliffs ten feet above the river. In many parts of the world, *R.-S.* is found in beds under the soil of other rocks.

Rock'shell, *n.* (Conch.) See MUREX.

Rock'soap, *n.* (Min.) A hydrated silicate of alumina resembling Bole, and used for crayons and for washing cloth. It is found in basalt in the Isle of Skye, and in greenish-gray or brown modules in the trap-rocks of Antrim, Ireland.

Rock Stream, in New York, a post-village of Yates co., abt. 27 m. N. of Elmira.

Rock'tar, *n.* See PETROLEUM.

Rock'ton, in Illinois, a post-village and township of Winnebago county, about 16 miles north of Rockford.

Rockton, in New York. See LITTLE FALLS.

Rockton, in Pennsylvania, a post-village of Clearfield co., abt. 14 m. W.N.W. of Clearfield.

Rock'town, in New Jersey, a village of Hunterdon co., abt. 7 m. S. of Flemington.

Rock'vale, in Illinois, a township of Ogle county.

Rock'ville, in California, a post-village of Solano co., abt. 9 m. N. by E. of Vallejo.

Rockville, in Connecticut, a city of Tolland co., about 14 m. N.E. of Hartford. Pop. (1897) 8,150.

Rockville, in Illinois, a post-village and township of Kankakee co., abt. 22 m. S. of Joliet.

A village of Will co., abt. 162 m. N.E. of Springfield.

Rockville, in Indiana, a post-village, cap. of Parke co., abt. 60 m. W. of Indianapolis.

Rockville, in Maryland, a post-village, cap. of Montgomery co., abt. 16 m. N.N.W. of Washington, D. C.

Rockville, in Massachusetts, a post-village of Norfolk co., abt. 26 m. S. of Boston.

Rockville, in Minnesota, a post-village and township of Stearns co., abt. 11 m. S.W. of St. Cloud.

Rockville, in N. Carolina, a post-village of Rowan co., abt. 10 m. S.E. of Salisbury.

Rockville, in New York, a village of Alleghany co., abt. 35 m. S.E. of Buffalo.

Rockville, in Ohio, a village of Adams co., abt. 90 m. E.S.E. of Cincinnati. — A village of Muskingum co., abt. 17 m. E.S.E. of Zanesville.

Rockville, in Pennsylvania, a post-village of Chester co., 45 m. W. by N. of Philadelphia. — A village of Dauphin co., abt. 5 m. N. of Harrisburg.

Rock'well, in Illinois, a village of Bond co., abt. 70 m. S. of Springfield.

Rock'wood, *n.* The common name for ligniform asbestos. It is chiefly found at Sterzing, in the Tyrol.

Rock'wood, in Iowa, a village of Hardin co., abt. 44 m. W. of Cedar Falls.

Rockwood, in New York, a post-village of Fulton co., abt. 40 m. E. of Utica.

Rock'work, *n.* (Arch.) Masonry wrought in imitation of rough stone, in various arrangements, and used chiefly in the basement of houses, or in such situations as require the effect of solidity and massiveness.

(Gardening.) A quantity of stones, fragments of rock, or even vitrified bricks, piled together in such a manner as to form a nidus for the growth and display of alpine plants.

Rock'y, *a.* Full of rocks; as, the Rocky Mountains. — Consisting of or formed of rocks; as, rocky pillars. — Resembling a rock; as, the rocky orb of a shield. (Milton.) — Having the characteristic qualities of rock; very hard; stony; unsuceptible of impression; unfeeling; as, a rocky bosom. — Shaks. See ROCK-WORK.

Rocky Bar, in Idaho, a post-village of Elmore co., about 10 m. E. by N. of Boise City.

Rocky Bayou, in Arkansas, a village and township of Izard co., abt. 10 m. E. of Mount Olive.

Rocky Comfort Creek, in Georgia, enters the Ogeechee River from Jefferson co.

Rocky Creek, in Georgia, enters the Ochopee River from Tattnall co.

Rocky Hill, in Connecticut, a post-village and twp. of Hartford co., abt. 7 m. S. of Hartford.

Rocky Hill, in New Jersey, a post-village of Somerset co., abt. 4 m. N. of Trenton.

Rocky Mount, in Georgia, a post-village of Meriwether co., abt. 95 m. W. of Milledgeville.

Rocky Mount, in Missouri, a post-village of Miller co., abt. 30 m. S.W. of Jefferson City.

Rocky Mount, in N. Carolina, a post-village of Edgecombe co., abt. 36 m. E. of Raleigh.

Rocky Mount, in Virginia, a post-village, cap. of Franklin county, about 180 miles west by south of Richmond.

Rock'y Moun'tains, (The.) a chain of mountains in the central and W. portions of the N. American continent, are a prolongation of the great Mexican Cordillera, extending from the N. frontier of Mexico northward in several ranges, one of which, the eastern, passing through British N. America, reaches the Arctic Ocean in about Lat. 70° N.; while the western, passing near the Pacific coast, terminates near Prince William's Sound, in about Lat. 60° N. The territory occupied by the *R. M.* extends from the Californian shores of the Pacific to about Lon. 105° W., or it may be considered as extending 125 m. further E., including the Black Hills of Nebraska. The whole area properly included by the mountains and their intervening valleys and desert lands in the country belonging to the U. States is estimated at about 980,000 sq. m. The mountainous belt of E. New Mexico and of the State of Colorado, first met with in crossing the great plains that lie along the head-waters of the rivers which flow S.E. into the Mexican gulf, and E. toward the Mississippi, has a general N. and S. direction. Santa Fé, the cap. of New Mexico, is situated on this belt, and further N. it includes territorially the Spanish peaks. On its E. margin stands Pike's Peak, while in Colorado and Nebraska are those portions of the chain known as the Three Parks, and the Medicine Bow Mountains. From Long's Peak, in about Lat. 40°, the range trends N.W., connecting with the Wind River Mountains, which latter includes Fremont's Peak, 13,870 feet above sea-level. Beyond that peak to the northern boundary of the U. S., the range separates Dakota and Washington, and the Pass known as Lewis and Clark's, in Lat. 47°, is the

most N. pass of its system in the Union, and is the one followed by the Northern Pacific Railroad. In British North America the "Rockies" divide the waters of the Pacific from those which flow into Hudson's Bay, as the Saskatchewan, Athabaska, &c., and also from Mackenzie's River, whose outlet is the Arctic Ocean. The next great range of this mountain system toward the W. is that called the *Wahsatch Mountains*, lying S. from great Salt Lake, and toward the N.W. this region is traced along the W. bank of the Colorado towards the Sierra Nevada, which forms the E. boundary of California, and the watershed of the Colorado, and Lewis's Fork of the Columbia River, in Lat. 37° and 46° respectively. Nearly the whole area between these points, and for a breadth of about 10 degrees of Lon., stretching E. from the Sierra Nevada, is a vast and partially explored territory, from 4,000 to 5,000 feet above sea-level, which receives the streams that fall on the W. slope of the Wahsatch range and the E. slope of the Sierra Nevada. In British America this section of the chain interlocks with the main trunk of the *R. M.* The western portion of the chain commences at the S. extremity of the Lower Californian peninsula, then passing through California it bifurcates into two ranges, known, respectively, as the *Sierra Nevada*, at a distance of about 160 m. from the coast, and the *Coast Range*, skirting the shores of the Pacific from 10 to 50 m. inland, till it reconnects with the Sierra Nevada in N. California, in which section Mount Shasta attains an altitude of about 14,000 feet above tide-water. Throughout all of Oregon and Washington, the distinction is still maintained between the main range (Sierra Nevada), here called the *Cascade Mountains*, and the Coast Range. The latter traverses the central portion of Vancouver's Island for its whole length, and on the main land in British Columbia, the Sierra Nevada proceeds N., and is crossed by Fraser's River. Though the Sierra Nevada in its range between California and Nevada is intersected by no rivers, several of the streams which flow down its E. slopes have their sources high upon the summits, in the vicinity of those which feed the W. watershed. Several depressions are met with at these points, which serve as passes for the routes from Sonora, Sacramento, and Marysville to the E. By the cañon of Carson River, the range is crossed at an elevation of about 7,250 feet; and by the Truckee Pass the elevation is about 6,000 feet. From these passes the route is N.E. to the main road which crosses the Sierra Nevada in the N. portion of California, and which eastwardly passes by the Humboldt Mountains to Salt Lake City. To the E. of Salt Lake this route continues across the Wahsatch range to the great South Pass of the Wind River Mountains, immediately S. of Fremont's Peak, and thence down the Sweetwater to the N. fork of the Platte. A more S. route connects Pike's Peak with the Utah Basin, and thence turning S. W. crosses the Sierra Nevada near its junction with the Coast Range in N. California, meeting at this point the route from Santa Fé through New Mexico, and the still more S. one from Texas, which follows the valley of the Gila, and crosses that river and the Colorado at their junction. Mount St. Elias, in Alaska, is 18,100 feet in height, being one of the highest peaks of this extensively ramified mountain system, though claimed to be surpassed in height by the neighboring Mount Logan. The mineralogical, geological, and botanical characteristics of the various ranges of the *R. M.*'s chain are treated in this work under the names of the several States, Territories, and regions with which it has connection. The *R. M.* were first partially explored by Lewis and Clark's expedition in 1804. Subsequently explorations were made by Harman, Long, Schoolcraft, Nicollet, Bonneville, and, particularly, by Fremont, and since 1844 quite a number of expeditions have been engaged in the work of further exploration. The Union Pacific Railroad crosses the *R. M.* first at Bridger's Pass, in Wyoming, next the Bear Range, before reaching Salt Lake City, and the Sierra Nevada, to the W. of Carson City, near the frontier of Nevada and California.

Rock'y River, in Michigan, enters St. Joseph's river in St. Joseph's co.

Rocky River, in North Carolina, enters the Yadkin river between Stanley and Anson cos.

—Enters Deep river from Chatham co.

Rocky River, in South Carolina, enters the Savannah river from Abbeville co.

Rocky River, in Tennessee, enters Caney Fork of Cumberland River between Warren and Van Buren counties

Rocky Run, in Illinois, a township of Hancock county.

Ro'oa, *n.* [Fr. *roncon*; Sp. and Pg. *urucu*.] The erude substance of ANNOTTO, *q. v.*

Roco'co, *a. and n.* [Etymol. uncertain.] (*Arch.*) A florid, debased kind of ornamentation, which succeeded the styles current in France during the times of Louis XIV. and XV., and which exaggerated the main features and peculiarities of those modes. It is chiefly remarkable for the lavish abundance of its details, which are thrown together without propriety and due connection. Scroll and shell ornaments abound; sometimes rock-work pavilions, birds, and fish, combine with enormous flowers, purposely defying all constructive harmony, and all meaning or individuality is sacrificed to a profuse or overloaded effect. This term, and the word *baroque*, are also employed adjectively to denote a bad taste in design and ornamentation generally.

Roc'roy, a small fortified town of France, dept. of Ardennes, 15 m. from Mézières: pop. 1,500. — Here a great victory was gained by the French, under the youthful Prince de Condé, over the Spaniards and Walloons, under Don Francisco de Melo, May 19, 1643. In this battle,

which laid the foundation of Condé's military renown, 9,000 Spaniards and Walloons were slain.

Rod, *n.* [A. S. *rod*; Ger. *ruthe*; Gr. *rhabdos*.] A branch, or a stem of a shrub; the shoot or twig of any woody plant; as, a *rod* of hickory, hazel, &c. — Something long and slender in the form of a wand; as, (1.) An instrument of castigation or correction; — hence, chastisement; discipline. — (2.) A pole for supporting a line for angling; as, a fishing-rod. — (3.) A staff or wand, as a badge of authority: a sceptre; as, the *rod* of empire. — (4.) A shepherd's crook. — (5.) A flail, or instrument for thrashing.

—A sprout; whence, a family; a line; a race.

—A measure of length, otherwise called a *pole*, containing 5½ yards, or 16½ feet; and four of these make the GUNTER'S CHAIN, *q. v.*

Rode, *imp. and pp.* of RIDE, *q. v.*

Rod'ent, *a.* [Lat. *rodens*, from *rodo*, to gnaw.] Gnawing; a term having reference to the *Rodentia*; as, a *rodent* animal.

Rodent'ia, *n.; pl.* RODENTS. (*Zoöl.*) An order of mammiferous quadrupeds, occupying, in many respects, an intermediate place between the purely carnivorous and purely herbivorous mammalia, and so forming the connecting link between them. The order embraces rats and mice, hares, rabbits, guinea-pigs, and other well-known animals. These animals have two great incisor teeth in each jaw, separated from the molar by a wide space, with which they could hardly seize a living prey, or rend flesh; they could not even cut aliments, but they might serve for reducing them, by continued labor, into fine molecules — in a word, by gnawing them; whence the term *Rodents*, or *Gnawers*, applied to this order. The characteristic of this order is that the lower jaw has no horizontal movement except

from behind forwards, and vice versa, convenient for the action of gnawing; the molars of the *R.*, consequently, have flat crowns, the enamelled eminences of which are always transversal, so as to be in opposition to the horizontal movements of the jaw, and to be better adapted for trituration. The hinder parts of the body of the rodents in general exceed their anterior. The brain of the rodents is nearly smooth, and without convolutions; the eyes are entirely directed laterally; the jaws are weak, and the forearms have scarcely any rotatory motion, and their two bones are nearly united. In the greater part of the details of their organization, the inferiority of the animals is displayed; but some of them enjoy a certain dexterity, using their forefeet for carrying their food to their mouth; while others again (the squirrels), climb trees with facility. *R.* are most abundant in temperate regions. In N. America there are 99 species, 19 genera; 81 species, 16 genera in Europe and the north of Asia; in Africa, 53 species, 16 genera; in India and its islands, 58 species, 10 genera; in South America and West India Islands, 89 species, 25 genera.

Rodez. See RHODEZ.

Rodgers, (*roj'ers*), JOHN, a commodore in the U. S. navy, b. in Maryland, 1771. He entered the navy as a lieutenant, 1798, and from that time till 1814, took an active and glorious part in the naval operations against the French, Tripoli, and the English. From April, 1815, to Dec., 1824, he served as president of the Board of Navy Commissioners, and from 1824 to 1827, in command of the squadron in the Mediterranean. On his return from this command he was again appointed to the Board of Navy Commissioners, which he relinquished in 1837. D. 1838. His son John, an Admiral in the U. S. Navy, b. in Md., 1812, served with great distinction in the Civil War, receiving the thanks of Congress. D. 1882.

Rod'man, in N. Y., a p. v. and twp. of Jefferson co.

Rod'ney, GEORGE BRYDGES, LORD, an English admiral, b. at Walton-upon-Thames, 1708. He was created rear-admiral in 1759, and distinguished himself in several expeditions. In 1780 he defeated the Spanish fleet and took several ships. This was followed soon after by a more splendid victory, and the capture of the Spanish admiral, Don Juan de Langara. But the most important achievement of this brave admiral was the defeat of the French fleet under Comte de Grasse in the West Indies in 1782, when the French admiral and a number of his ships were taken. D. 1792.

Rod'ney, in Mississippi, a post-town of Jefferson co., about 40 m. N.E. of Jefferson.

Rodney, in Ohio, a post-village of Gallia co., abt. 7 m. W.N.W. of Gallipolis.

Rodolph I., Emperor of Germany, and founder of the imperial house of Austria, was b. in 1218, being the eldest son of Albert IV., Count of Hapsburg and Landgrave of Alsace. He first served under Ottocar, King of Bohemia, against the Prussians, and distinguished himself by his prudence, valor, and the spirit of justice with which he protected the inhabitants of the town from their baronial oppressors. In 1273, as he was encamped before the walls of Basle, he received the unexpected intelligence that he was elected King of the Romans and Emperor in preference to Alphonso, King of Cas-

tile, and Ottocar, King of Bohemia, the latter of whom opposed his election, and refused to do homage for his estates. But *R.*, supported by powerful allies, made war on him, and compelled him to submit. Ottocar afterwards made another attempt to recover what he had lost, but in Aug., 1278, was defeated and slain. After a reign of 19 years, *R.* expired, in 1291, aged 72. He was brave, indefatigable, affable, magnanimous, intelligent, and just.

RODOLPH II., b. at Vienna, 1552, was crowned King of Hungary 1572, King of Bohemia and King of the Romans 1575, and emperor on the death of his father, Maximilian II., 1576. He lost the kingdoms of Hungary and Bohemia by the revolt of his brother, Matthias. After a long and inglorious reign of 26 years, this weak-minded prince d., 1612.

Rod'omel, *n.* [Gr. *rhodon*, rose, and *meli*, honey.] The juice of roses mixed with honey into a syrup.

Rod'omont, *a.* Braggart; blustering; idly boasting.

Rodomontade, **Rhodomontade**, *n.* [Fr., from *Rodomont*, a boisterous character in the *Orlando Furioso*.] Vain boasting; empty bluster or braggadocio; rant; hosh.

—*v. a.* To talk loud or blusteringly; to boast loudly; to rant; to brag; to boonce.

Rodomontad'ist, *n.* A braggart; an empty boaster; a braggadocio; a ranter; a vanter.

Rodos, a town of European Turkey, in the eyalet of Roumania, near the Sea of Marmora; pop. 18,000.

Rodrigues, (*ro'dre-gais*), an island in the Indian Ocean, belonging to Great Britain, 330 m. E.N.E. of Mauritius; Lat. 19° 4' S., Lon. 63° 25' E. Ext. 12 m. long, with a breadth averaging from 3 to 6 m.

Roe, *n.* [A. S. *ra*, *raa*.] A ROEBUCK, *q. v.*

—The female of any cervine species.

[Ger. *rogen*; Icel. *hrogn*; Dan. *rogn*.] The seed or spawn of fishes; — the roe of the male is termed *soft roe*, or *melt*; of the female, *hard roe*, or *spawn*.

—The mottled appearance of mahogany, and certain other woods.

Roeb'ling, JOHN A., an American engineer, b. in Muhlbanssen, Prussia, 1806. Emigrating to the U. States in 1831, he obtained his first situation in America as assistant-engineer on the slack-water navigation of the Beaver River, a tributary of the Ohio. Afterwards entering the service of the State of Penna., he was employed for three years in surveying and locating three lines of railway across the Alleghany Mountains, from Harrisburg to Pittsburg, the road being ultimately built by the Penna. Central Railroad Company. In the year 1844, at Pittsburg, the wooden aqueduct of the Penna. Canal across the Alleghany River having become so unsafe as to require its removal, and the erection of a new structure on the old piers, the time being limited to nine months, including the winter season of 1844-45, the work was let by contract to the lowest bidder, who proved to be *R.* It was carried to a successful completion by him within the time specified, and opened to commerce in May, 1845. This aqueduct comprised seven spans of 162 feet each, consisting of a wooden trunk to hold the water, and supported by a continuous wire cable on each side of seven inches diameter. Following the building of the aqueduct came the erection of the Monongahela Suspension Bridge at Pittsburg. In 1848 *R.* undertook the construction of a series of five suspension aqueducts on the line of the Delaware and Hudson Canal, connecting the anthracite coal regions of Penna. with the tide-water of the Hudson River. They were all completed in the course of two years. During this period *R.* removed from the West, and established his works at his residence at Trenton, in the State of New Jersey. Public attention had for some time past been directed to the problem of connecting the New York Central and Great Western Railway of Canada by bridging the chasm of the Niagara River, a problem which, from the nature of the locality, admitted of no other solution than by a railway suspension bridge. *R.* was invited to make plans and estimates for the bridge, and was at the same time appointed the engineer. For four years, commencing with 1851, the work was continued without interruption, until, in March of 1855, the first locomotive and train crossed a railway suspension bridge. In the fall of 1856 the foundations of the towers of the Ohio bridge, at Cincinnati, were laid, but the bridge was not finally finished until 1867. The last and crowning triumph of engineering by *R.* is the bridge over the East River at New York, an enterprise of the most gigantic proportions. This bridge was commenced Jan. 3d, 1870, and completed under the supervision of the son of *R.*, also a distinguished engineer, and opened for travel in May, 1883. The length of river span is 1,596 ft., total length of bridge 5,980 ft., height of towers above high-water mark 278 ft.; total cost about \$15,500,000. D. 1870.

Roebuck, (*ro'bük*), *n.* [Dan. *raabuk*.] The *Cervus capreolus* of Linnæus, the most light and handsome of all the European deer. It is very small, weighing only about 60 pounds, and inhabits the high mountains of the temperate parts of Europe.

Roe'd, (*röd*), *a.* Filled or impregnated with roe.

Roermond, or **Ruremond**, (*rer-mond*), a town of Holland, prov. of Limburg, on the Meuse, 25 m. N.E. of Maestricht. *Manuf.* Cottons, woollen cloth, paper, leather, pipes, soap, &c. Pop. 9,500.

Roe'stone, *n.* (*Geol.*) See OOLITE.

Ro'gasen, a town of Prussian Poland, on the Wetna, 24 m. N. of Posen. *Manuf.* Woollens, linens, and leather. Pop. 5,000.

Rogation, (*-gä'shun*), *n.* [Fr., from Lat. *rogatio*, from *rogo*, to ask.] Litany; supplication; an asking.

Rogation Days, (*Eccl.*) The three days immediately

Fig. 2269. — SKULL OF THE BEAVER, SHOWING THE DENTITION.

before the feast of Ascension;—so styled as being days of supplication.

Rogation Week, the second week before Whit-Sunday, or that in which Rogation Days occur.

Rogers Farm, in *Illinois*, an unimportant village of McLean co.

Rogersville, in *Alabama*, a post-village of Landerdale co., abt. 24 m. E. of Florence.

Rogersville, in *Indiana*, a post-village of Henry co., abt. 9 m. N. by E. of Newcastle.

Rogersville, in *Ohio*, a post-village of Tuscarawas co., abt. 9 m. E.N.E. of Columbus.

Rogersville, in *S. Carolina*, a post-village of Anderson dist., abt. 131 m. W.N.W. of Columbia.

Rogersville, in *Tennessee*, a post-village, cap. of Hawkins co., abt. 255 m. E. of Nashville.

Rogue, (*rôg*), *n.* [*A. S. earg*, idle, weak, evil; *Fr. rogue*, proud, haughty, supercilious.] An idle, slothful, inactive person;—in the legal sense, a vagrant; a vagabond; a sturdy beggar.—A knave; a rascal; a wilfully dishonest person; a cheat; a trickster.—A name of slight tenderness or endearment for one who is mischievous or frolicsome; as, a wicked *rogue* (in irony).

—*v. a.* To play knavish tricks; to act as a rogue; to cheat; to trick; as, to *rogue* a person out of money.

Rogue River, in *Oregon*, rises among the Cascade Range in Jackson co., and, flowing a tortuous W. course, enters the Pacific Ocean from Curry co.

Roguer, (*rôg'er-y*), *n.* Knavish tricks; cheating; fraud; dishonest practices.—Waggery; arch tricks; frolicsome practices; mischievousness; as, he is full of *rogue*.

Rogue-ship, *n.* The qualities or personage of a rogue.

Rogue's-march, *n.* (*Mil.*) Derivative music played when a soldier is drummed out of a regiment.

Rogue's-yarn, *n.* (*Naut.*) A yarn of a different twist and color from the rest, and inserted in the cordage of the British navy, to identify it in case of theft.

Roguish, (*rôg'ish*), *a.* Pertaining, or relating, to a rogue; knavish; trickish; rogue-like; fraudulent; dishonest; as, *roguish* malpractices.—Waggish; wanton; frolicsome; slightly mischievous; espiègle; as, that girl has a *roguish* pair of eyes.

Roguishly, *adv.* Like a rogue; knavishly; wantonly; waggishly.

Roguishness, *n.* Qualities of a rogue; knavery; dishonesty.—Archness; espièglerie; mischievousness; frolicsome; sly cunning.

Rohan, LOUIS RENE EDOUARD, (*ro'an*), PRINCE DE, Cardinal-archbishop of Strasburg, was b. 1734. He became coadjutor to his uncle in the See of Strasburg, and afterwards his successor; was sent in 1772 as ambassador to Vienna, where he displayed the most ridiculous luxury, but vainly sought to obtain the favor of the Empress Maria Theresa. As coadjutor, he had ceremonially received the Princess Maria Antoinette on her entrance into France. On the death of Louis XV. he returned to Paris, and for ten years bent all his energies and efforts to winning the favor of the Queen, but all in vain. Nevertheless, he had meanwhile become, in spite of his known profligacy, archbishop, grand-almoner, cardinal, and commendator of St. Wast of Aeras, one of the richest benefices in France. Associate of the quack Cagliostro, and of the infamous Madame Lamotte, he was duped by a forged letter with the signature of the Queen, and induced to buy of Boehmer, the court jeweller, the now too celebrated diamond necklace, in the name of the Queen. The necklace was placed in the hands of Madame Lamotte, forged autograph messages from the Queen followed, and an interview in the Park of Versailles, between the cardinal and a fair adventuress personating the Queen. On the discovery of the fraud, *R.* was summoned before the king, answered vaguely and unsatisfactorily, and was arrested and imprisoned in the Bastille, August 15th, 1785. After a year's proceedings he was acquitted and released, but at the same time exiled from the court, and deprived of his grand-almonership. He was deputy to the States-general in 1789; was afterwards accused of various disloyal intrigues and maladministration; gave up his See in 1801, and d. in 1803.

Rohrersville, in *Maryland*, a post-village of Washington co., abt. 80 m. W.N.W. of Annapolis.

Rohrsburg, in *Pennsylvania*, a post-village of Columbia co., abt. 88 m. N.N.E. of Harrisburg.

Roil, *v. a.* [*A corruption of broil.*] To make turbid by stirring up the lees or sediment of; as, to *roil* bottled wine.—To exasperate; to excite some degree of anger or disturbance in; to rile.—To bother; to perplex; to worry. (*Prov. Eng.*)

—*v. n.* To romp; to act in a hoidenish manner. (Used as provincial English.)

Roily, *a.* A colloquialism for turbid; disturbed; muddy;—also, skittish.

Roist', *interj.* Same as AROYNT, *q. v.*

Roist', Roister, *v. n.* [*From Lat. rusticus*, clownish.] To bluster; to swagger; to talk big; to act the braggadocio; to be bold, noisy, or turbulent; as, a *roistering* fellow.

Roist'er, Roist'erer, *n.* A bold, blatant, loud-voiced, hectoring fellow; a rakehell.

Roist'erly, *a.* Blustering; turbulent; with braggadocio.—*adv.* In a bullying, blustering, devil-me-care manner.

Roke', Rook', Runk', *n.* Reek; mist; vapor; smoke. (*Prov. Eng.*)

(*Mining.*) A vein of ore.

Roke'age, Rokée, *n.* In the U. States, a term applied to a preparation of parched maize, pounded up and mixed with sugar.

Roke'ay, *n.* Same as ROQUELAURE, *q. v.*

Roke'by, in *Ohio*, a village of Morgan co., about 24 m. S. by E. of Zanesville.

Roland, a celebrated hero of chivalric romance. He was one of the paladins of Charlemagne, whose nephew he is by some stated to have been. His character was that of a brave warrior,—devoted and loyal. Charlemagne appointed him commandant of the Marches of Brittany, and afterwards took him with himself to the conquest of Spain. Returning from that expedition, he fell into an ambush at Roncesvalles, where, together with the flower of the French chivalry, he perished in 778. His adventures are celebrated in the famous continental romance entitled the *Chanson of Roland*. He is also the hero of the *Roland Amoureux* of Boiardo, and of the *Orlando Furioso* of Ariosto. The town of Rocamadour, in France, pretends to be in possession of the "Durandal," or the celebrated sword, of Roland.

Roland, in *Illinois*, a post-village of White co., 14 m. S.S.W. of Carui.

Role (*rôl*), *n.* [*Fr.*] The specific part undertaken by an actor or public performer;—hence any notable action or prescribed duty carried out by anyone; as, Garrick's best *role* was Richard III., his *role* is politics, &c.

Roles'ville, in *North Carolina*, a post-village of Wake co., about 16 m. N.N.E. of Raleigh.

Role'ta, in *Missouri*, a village of Pettis co., about 36 m. S.E. of Lexington.

Rolle, in *Iowa*, a post-village, former cap. of Pocahontas co.

Roll, *v. a.* [*Fr. rouler*; *Sp. arrollar*; *Dn. and Ger. rollen*.] To cause to turn on the surface, or with a circular motion; to cause to revolve, or turn on its axis; to move in a circular or rotary manner or direction; as, to *roll* a wheel, to *roll* a ball.—To inwrap; to bind or involve in a bandage, or the like; as, to *roll* a piece of rag round a cut finger.—To form into a spherical or cylindrical body; to form by rolling into round masses; as, to *roll* a bundle of manuscript, to *roll* a snow-ball.—To drive and impel with a circular motion, or to drive forward with force or violence; as, to *roll* a stone down a mountain.—To spread with a roller or rolling-pin; to press or level with a roller; as, to *roll* paste, to *roll* a grass-plot, &c.—To produce a periodical revolution; to move, or cause to be moved, upon, or by means of, rollers or small wheels.—To sound a roll upon, as a drum. To *roll one's self*, to wallow.

—*v. n.* To move by turning on the surface, or with the successive application of all parts of the surface to a plane; to move, turn, or run on an axis, as a wheel; to run on wheels; to turn over and over; as, a *rolling* ball.—To keep falling over and over; as, a *rolling* cataract.—To turn; to move circularly, or in a rotatory manner; as, his eyes *rolled* with rage.—To be tossed about; to move, as waves or billows, with alternate swells and depressions;—hence, to rock or move from side to side; as, a ship *rolled* in a heavy sea.—To move tumultuously; to fluctuate; as, certain thoughts *roll* in one's head.—To run on wheels; as, the *rolling*-stock of a line of railroad.—To wallow; to tumble; as, being drunk he *rolled* into the gutter.—To be formed into a ball or cylinder; as, *rolled* calico.—To spread under a roller or rolling-pin; as, she *rolls* paste dextrally.—To beat a drum with excessive rapidity of strokes, so as to produce a rumbling sound on the ear.

—*n.* Act of rolling, or state of being rolled; as, the *roll* of a wheel, the *roll* of a ship in a heavy ground-swell.—A roller; anything which rolls; as, a heavy cylinder of stone, wood, or metal used for crushing clods;—also, plurally, a set of rollers in a rolling-mill.—Anything which is rolled up; as, (1.) A quantity of cloth wound up into a cylindrical form; as, a *roll* of flannel. (2.) A cake, or small loaf of bread, generally of an oblong circular form; as, we had French *rolls* for breakfast. (3.) Any paper, manuscript, or document which may be rolled up; a scroll; as, a *roll* of music;—hence, an official or public document; a register; a record;—also, a catalogue; a list; as, the *Rolls* of Parliament, the *roll* of an army, &c. (4.) A cylindrical twist of tobacco; as, a *roll* of pig-tail.

—The regular beating of a drum with strokes so rapid as scarcely to be distinguished by the ear.—A chronicle; history; annals; as, his name is inscribed in the *roll* of fame.

Long-roll, (*Mil.*) A prolonged roll of the drums, as the signal of attack by the enemy, and for the troops to form into line; as, to beat the *long-roll*.—*Master of the Rolls*, (*Eng. Law*.) See MASTER.—*Rolls of Parliament*, of court, or of any public body, parchments officially engrossed, recording the acts and proceedings of that assembly or body, which, being kept in *rolls*, are deposited in the archives.

To *call the roll*, to recite a roll of names of persons who constitute an organized body or assembly, in order to ascertain from the responses who are absent and who present; as, to *call the roll* of a ship's company.

Roll'a, in *Missouri*, a city and township, cap. of Phelps co., about 113 m. S.W. of St. Louis. *Pop.* (1897) 1,695.

Roll'able, *a.* That may be rolled.

Roll'call, *n.* Act, or time, of calling over a list of names, as of soldiers on parade.

Roll'er, *n.* That which rolls; that which revolves on its own axis;—especially, a solid cylinder of metal, wood, stone, &c., used in agriculture and the arts.

(*Print.*) A wooden cylinder coated with a composition of treacle and glue, and revolving upon an iron rod running through it, with which to ink the form of type previous to taking an impression. The introduction of composition rollers in place of *pell-balls* has been the cause of a complete change in printing. But for this invention, machine- or cylindrical-printing could never have been accomplished, as all the early attempts

with sheep-skis failed, from the necessity of joining the edges.

—*pl.* (*Ord.*) Cylinders of wood, used in mounting guns on their carriages, shifting them from one carriage to another, or moving them on the ground.

—*pl.* (*Naut.*) In nautical parlance, a term applied to unusually heavy waves, which set in upon a coast or island without wind. They are frequent at the Island of Ascension.—On ship-board, certain cylindrical pieces of timber placed so as to revolve horizontally or vertically. Their object is to lessen the friction on the hawsers in passing any angle.

(*Surg.*) A bandage, or fillet, used in surgical operations.

(*Zool.*) See CORACIAS.

Roll'er-bolt, *n.* In England, the bar, or whiffle-tree, of a carriage, to which the traces are fastened.

Rollersville, in *Ohio*, a post-village of Sandusky co., abt. 42 m. N. of Columbus.

Roll'ey, in *Iowa*, a village of Jackson co., abt. 22 m. N.W. of Lyons.

Roll'ic, Roll'lick, *v. n.* (*imp.* and *pp.* ROLLIKED.) (*roll'lick*.) [Perhaps a corrupt combination of *roll* and *frollic*.] To move about in a swaggering manner, or with a rolling gait; to frolic; to sport; to carry a jaunty air; as, a *roll'licking* sailor.

Roll'in, CHARLES, a French professor, rhetorician, and historian, b. at Paris, 1661. This excellent man and great scholar, after studying in the College of Plessis and at the Sorbonne, became Professor of Rhetoric in the College of Du Plessis. In 1694 he was appointed Rector of the University of Paris, where he revived the study of Greek, and introduced many important regulations in the academical exercises. His principal works were an edition of *Quintilian*; *Treatises on Studying and Teaching the Belles-Lettres*; *Ancient History of the Egyptians, Carthaginians, and Babylonians*; *History of Rome*; and, *Miscellaneous Pieces*. D. 1741.

Roll'in, in *Michigan*, a post-village and township of Lenawee co., abt. 17 m. W. by N. of Adrian.

Roll'ing, *p. a.* Thruing over; revolving; moving on wheels, or as if on wheels; as, a *rolling* stone gathers no moss.

—In the U. States, undulating, like the waves of the sea; presenting a succession of round eminences and depressions; as, a *rolling* prairie.

(*Mech.*) This term is used when all the parts of the surface of one body come into successive contact with those of another, under such conditions that at every instant the portion of the two surfaces which have been in contact are exactly equal. When this condition is not fulfilled, the one side to slide upon the other. The friction of bodies in *rolling* is much less than in that of *sliding*; and hence the advantage of wheels to all kinds of carriages.

(*Naut.*) The lateral oscillation of a ship. This motion, which is often very great when the vessel is running before the sea, endangers the masts, strains the sides, and loosens the decks at the water-ways; it also tends to cause the guns (if any) to break adrift. When the centre of gravity is too low, the oscillations begin and end violently. Rolling is, in fact, an oscillation or partial revolution round the centre of gravity of the ship. Of course, if the centre of gravity be too high up, the vessel's tendency will be to capsize; but, on the other hand, if it be below the load-water-line, there remains so little depth of vessel and keel for the water's resistance to operate on, in opposition to the height of hull and masts above the centre of gravity, that the rolling will necessarily be violent and considerable. The least rolling is experienced when the centre of gravity coincides nearest with the load-water-line.

Rolling circle of a paddle-wheel, the circle described by the point whose velocity equals the velocity of the ship. (*Bourne*.)—*Rolling curves*. See ROULETE.—*Roll'ing fire*, (*Mil.*) A discharge of musketry in rapid succession, by troops in line, and in the order in which they stand.—*Rolling stock*, or *railway plant*, the locomotives, cars, trucks, &c., employed on a railroad.—*Roll'ing machine*, an invention for making the brass mouldings in fenders, and the brass-work in grates.—*Roll'ing pendulum*, a cylinder caused to oscillate in small spaces on a horizontal plane.—*Roll'ing tackle*, (*Naut.*) A tackle, or pulley, hooked to the weather quarter of a yard, and to a lashing or strap round the mast near the slings or parrel of the yard; the object of it is to keep the yard constantly over to leeward, thereby depriving it of play and friction when the ship rolls to windward.

Roll'ing-mill, *n.* A mill for reducing masses of iron, copper, or other metals, to even parallel bars or thin plates. This is effected by passing the metal, while red-hot, between two cylindrical rollers of steel, put in motion by the mill, and so mounted in a strong metal frame that they cannot recede from each other.

Roll'ing-pin, *n.* A cylindrical piece of wood, with which paste or dough may be rolled out and reduced to a proper degree of thickness or tenuity.

Roll'ing Prairie, in *Wisconsin*, a post-village of Dodge co., abt. 5 m. W. of Horicon.

Roll'ing-press, *n.* A press or machine consisting of two or more rollers, or cylinders, revolving very nearly in contact with each other, used for taking impressions from plates, or for rolling iron or other metal into plates, or for other purposes.

Roll'ing Stone, in *Minnesota*, a post-township of Winona co.

Roll'o, a chieftain of Norway, who, being driven from that country by the King of Denmark, landed in Normandy, which was ceded to him by Charles the Simple in 911. Rollo embraced the Christian religion in the following year, and was baptized by the name of Robert.

He assumed the title of Duke of Normandy, married Giselle, the daughter of the French king, and was the ancestor of William the Conqueror. D. either in 920 or 927.

Rolly-poly, Roly-poly, n. A kind of pudding made of a surface of paste spread with jam, &c., and rolled up into a cylindrical, oblong form.

—*a.* Shaped like a roly-poly pudding; —hence, puffy; portly; having a round body; as, a *rolly-poly* little woman.

Rolly-poly, n. A game wherein a ball, rolling into a certain place, wins, as in roulette.

Ro'ma, in Texas, a post-village and port of entry of Starr co., abt. 550 m. S. by W. of Austin.

Romagna, (ro-mahn'yä), a large and fruitful tract of country in Central Italy, formerly included in the Papal legations of Bologna, Ravenna, Ferrara, and Forlì. The name has been long obsolete, except as relates to that strip of territory along the Adriatic, whose inhabitants are still called *Romagnoli*.

Roma'ic, n. [Fr. *Romaïque*; Mod. Gr. *Romaikos*.] The language of the modern Greeks, who call themselves *Romans*, an appellation which has survived the overthrow of the Roman Empire of the East established at Constantinople. The language differs from the ancient Greek chiefly by the abbreviation of words, indifference to the old inflexions, and the infusion of foreign words and expressions.

—*a.* Belonging to, or having relation, to modern Greece, or to its language.

Romal, (ro-mawl'), n. [Hind. and Per. *rumal*, a handkerchief.] A kind of silk-stuff brought from the East Indies.

Roman, a. [Lat. *Romanus*, from *Roma*.] Pertaining to Rome, or to the Roman people.

—Pertaining to, or professing, the Roman Catholic religion.

(*Print.*) Erect; upright; perpendicular; —referring to the letters ordinarily used, as distinguished from *italic* characters. —Expressed in letters, not in figures, as I. V., i. v., &c.; —said of numerals, as distinguished from the *Arabic* numerals, 1, 5, &c. —*R. balance*, a form of balance somewhat resembling the modern steelyard. —*Roman candle*, (*Pyrotech.*) A fire-work in the form of a candle, which throws out bright stars in succession. —*Roman cement*. See CEMENT. —*Roman ochre*, or *Italian earth*, (*Paint.*) A pigment of a rich deep and powerful orange-yellow color, transparent, and durable. It is used both raw and burnt, in oil and water-color painting. —*Roman white*, (*Paint.*) A pigment of the purest white color, differing from the *blanc d'argent* only in the warm flesh-color of the external surface of the large square masses in which it is usually prepared.

—*n.* A native citizen, or permanent denizen, of Rome.

—*pl.* Specifically, the members of the Christian Church at Rome, to which Paul addressed an Epistle.

Roman Architecture. It can hardly be said that the early Romans had any style of architecture of their own, since they borrowed their ideas of building first from the Etruscans, and afterwards from the Greeks. In the time of Romulus, their dwellings were of the rudest description, being chiefly composed of straw; and at a later period, their temples were only small square buildings, scarcely large enough to contain the statues of their deities. The first king who constructed works of a large class requiring architectural skill was Ancus Martius. His first attempt was the building of the city and port of Ostia, at the mouth of the Tiber. During the time of Tarquin the Elder, the city was much improved by the skill and enterprise of the Etruscans, the great Circus was built, and the walls of the city constructed of large hewn stones. The great Cloaca, or public sewer, was also commenced, together with the temple of Jupiter Capitolinus. The decoration and improvement of the city was greatly increased during the reign of Tarquinius Superbus; but the Capitol was not finished till after the expulsion of the kings. During the first two Punic wars, many temples were erected; but they do not appear to have been of great magnificence. Altogether, very little taste had been shown in the Roman buildings till their conquests extended, and they became intimate with the more costly buildings of their enemies. Metellus Macedonicus, the contemporary of Mummius, the victor of Corinth, was the first who built a temple of marble at Rome; but from that time most of the larger edifices were built of that material. Grecian art and architects were also introduced about the same period. Under Julius Caesar, many new and magnificent buildings were erected; and during the Golden Age, under Augustus, most of the finest edifices were built; architects flocked from all quarters, and especially from Greece, to beautify the city. It was said of Augustus, "that he found Rome built of brick, and left it of marble." Under Vespasian and the Antonines, architecture flourished, as the remains of the Coliseum and the Temples of Antoninus and Faustina testify. After this period, however, architecture declined till Constantine transferred the seat of government to Byzantium, when a new style was introduced. (See BYZANTINE ARCHITECTURE.) In comparing Greek and Roman architecture, there can be no doubt that the former greatly excels in matter of taste. Among the Greeks, moreover, religion was almost the sole purpose for which architecture seemed to exist; while, among the Romans, their temples were neither so extensive nor so numerous as their buildings of public utility or convenience. Besides a large number of engineering works, there are still the remains in Rome of fora, baths, palaces, circi, theatres, amphitheatres, libraries, halls of justice, triumphal arches, commemorative columns, mausolea, and similar buildings. The requirements of such edifices as these naturally led to the practice of

composition and grouping, as one uniform plan of building would not have been suitable for such a variety of purposes. Another cause of variety lay in the employment of the arch, which allowed much greater latitude in compositions than the entablature of the Greeks. The semi-circular form of the arch next led to quite a new feature in architectural design — namely, the dome, — a feature which gave a totally distinct character to the buildings in which it was employed. The Pantheon

Fig. 270. —TOMB OF CECILIA METELLA, (ROME.)

(Fig. 239), is the most remarkable example of this arrangement. The circular plan of building became also a favorite one for tombs and mausolea. Among the most noted of these was the mausoleum of Hadrian, the remains of which form the well-known castle of St. Angelo; and the tomb of Cecilia Metella (Fig. 2270). A characteristic feature in Roman architecture, and one that entered largely into the system, is the employment of order above order in the same building. While this arrangement is faulty, for it is incompatible with the requirements of the highest standard of taste, yet still, at the same time, it proves the Roman aptness of invention and versatility of design. The style of architecture called the *Roman order* was invented by the Romans from the Ionic and Corinthian orders; and hence it is sometimes called the *Composite order*.

Roman Catholic Church. The name commonly given to that system of Christianity which, regarding the bishop of Rome, or Pope, as its spiritual head, maintains that the title of *Catholic* or *Universal* belongs exclusively to itself, and has for followers the great majority of the whole body of Christians, its last statistics presenting a total of about 225,000,000, against about 150,000,000 Protestants of all denominations, and 100,000,000 belonging to the Eastern, or Greek, Church. Its history begins with the pastoral commission given after Christ's resurrection to the Apostle St. Peter, who, about the year 67, sealed his apostolic labors with martyrdom in the city of Rome, which event attached his office to this See. The relations of the bishops generally to Rome, on account of its higher chiefdom, are distinctly stated, in the early part of the 2d century, by Irenæus, who, however, earnestly remonstrated with Pope Victor on his determination to cut off various Asiatic churches from communion, for their attachment to the usage of celebrating Easter on the same day as the Jews. In the year 325, and by mandate of the Emperor Constantine, a council was called at Nica, when 318 bishops proclaimed Christ to be God, consubstantial to the Father. The 5th cent. was illustrious for the pontification of St. Leo. His exposition of the mystery of the Incarnation crowned the efforts of his predecessors for the maintenance of the faith, and received the homage of the bishops assembled at Chalcedon. "This," they cried, "is the faith of the fathers. We all have this faith. Peter has spoken by the mouth of Leo." The accession of Gregory the Great to the Papal chair in 590 is the commencement of one of the most important eras in the history of the R. C. Church. The ancient Roman empire had finally disappeared, and new-born nations were struggling into life, and waiting for new institutions. Gregory saw the opportunity, and embraced it, and the supremacy of the Pope was acknowledged by all the sovereigns of the western nations. The claims advanced by the Papal See led to frequent contests with the secular powers; but the result invariably was the triumph of the Church and the depression of the secular power. To Gregory, the R. C. Church is indebted for the completion of the monastic system. In the 7th cent., the sovereigns of W. Europe submitted implicitly to the Roman See; in the 8th, the war of the Iconoclasts broke out, which eventually led to the separation of the Eastern and Western churches. The Patriarch of Constantinople had caused images to be removed from the churches, and an imperial edict was issued forbidding their worship; the consequence being that the people broke out into insurrection over the whole empire. Lombardy was still subject to the Greek empire, and its king, taking part with the emperor, forbade the use of images in the churches. Pepin, of France, marched with a numerous army across the Alps to the assistance of his spiritual sire, defeated the King of the Lombards, and compelled him to deliver up a part of his territories to the Roman pontiff. Thus was laid, in 755,

the foundation of the temporal sovereignty of the Pope. The Lombards becoming troublesome to the Roman pontiff, he again supplicated the aid of France, and Charlemagne entering Italy in 774, at the head of an army, reduced them to subjection, visited the Pope at Rome, and ratified and confirmed the donations of his father, Pepin. A second time he had to march to save the Papacy from apparent destruction, and he conferred on the Roman See the territories which he subdued, including Corsica, Sardinia, Sicily, &c. In 800, Leo III. proclaimed Charlemagne Emperor of the West, and placed the crown upon his head. The ascent of Gregory VII., in 1073, inaugurated a new era in Church history. He was a man of stern virtue, and determined, at every hazard, to root out scandal from the sanctuary. With all his zeal, and the authority of his office, he condemned the marriage of the clergy, which from toleration had gained a coloring of right. He resisted the Emperor Henry IV., who disposed of bishoprics, abbaties, and other high offices, for bribes and like corrupt considerations. The inveterate character of these abuses, and the imperial influence, involved the saintly pontiff in a long and fierce struggle, in which he seemed to succumb, dying an exile, but in reality overcame, leaving his successors to reap the fruits of his labors. The contest between the popes and emperors continued, with intervals of rest, throughout the 12th and 13th centuries. Investitures were the chief subject of disputes, the popes resisting the claims of the emperors to invest bishops with the temporalities of their sees, by delivering to them the ring and crozier, chief symbols of episcopal authority. The opportunity thus furnished for promoting unworthy men, courtiers, and favorites, determined the popes to vigorous resistance; and although Paschal II. yielded for a moment to imperial violence, on the recovery of his liberty he retracted his consent, and humbled himself for his weakness. Innocent IV., in the middle of the 13th cent., in the Council of Lyons, deposed the Emperor Frederic II. for various acts of simony, sacrilege, and tyranny, following out the principles and the example of Gregory VII., who was the first to proceed to a similar deposition. The 14th cent. is remarkable for the removal of the Papal chair to Avignon, by Clement V., whose example was followed by his successors for 70 years. The Greeks returned for a short time to the communion of the Roman See in the Council of Florence held in 1439, but were drawn back into the gulf of schism by the persevering efforts of Mark, bishop of Ephesus, who resisted every influence employed by his colleagues and by the emperor at the Council. Constantinople a few years afterward fell under the power of the Turks, and the degradation of the Eastern church and empire was alike consummated. As the Mediæval period came near its end, a marked growth in the feeling of nationality enhanced the power of the kings, while the authority of the popes over secular matters declined. But their spiritual supremacy remained intact, and it was not till the sixteenth century that any of the States of Europe withdrew from the ecclesiastical control of the Roman Catholic Church. Martin Luther inaugurated the revolt. The rivalry of two religious orders resulted in theological disputes, which, on the part of Luther, were marked by great boldness. He soon became a leader, and before he was fully aware, he was head of a sect inculcating principles subversive of the Papal authority. A swarm of minor sects soon appeared, and a vast portion of the Catholic world was drawn away from obedience to the pontiff. Henry VIII., King of England, ventured on the theological arena to drive back the daring monk beyond the ring, and received plaudits from Leo as Defender of the Faith; but he, also, from a champion became an enemy, when his desires for a union with Anne Boleyn were thwarted by Clement VII. The great Council of Trent met in 1545, sat, with intervals, for eighteen years, and did more to systematize, to define, and to present in popular form the doctrinal belief of Rome, than had been accomplished by the united efforts of the schoolmen of the three centuries which preceded the Reformation. The latter half of the 16th cent. was a period of new life in the R. C. Church. The celebration of local synods, the establishment of episcopal seminaries, the organization of schools, and other provision for religious instruction, — above all, the foundation of religious orders of both sexes, in all which this active work of the church was one of the striking and prominent characteristics, had the effect of arresting in many countries the at first rapid progress of Protestantism; and Lord Macaulay has traced out with curious minuteness the line which marks in the several countries the origin and progress of this religious reaction. The subtleties of Jansenius, *q. v.*, annoyed the church in the 17th and 18th centuries; his followers, after his example, employing the authority of Augustine to countenance doctrines decidedly Calvinistic. The French Church especially was harassed by these innovators. The contentions which prevailed throughout the early part of the 18th cent. prepared the way for the triumph of infidelity in the Revolution. In the present cent. there is a manifest return to Catholic unity. The Church of France, after the endurance of a persecution of the most frightful character, stands in intimate union with the See of Peter. The same sentiments prevail throughout the Catholic portions of Germany, as also in the Spanish dominions; and in some Protestant countries, chiefly in England, the R. C. Church has regained of late years considerable advance. Even on this side of the Atlantic, and from the memorable day, Oct. 11, 1492, on which Columbus landed upon the island of San Salvador, and at the foot of the cross poured forth his fervent thanks to God for the success of his glorious enterprise, this

Church of St. Gereon, Cologne (Ger.).

Church has, amid many reverses, continued gradually to advance. In all the American continent there are about 4 Roman Catholics to 3 Protestants of all denominations; and though the proportion be by far less considerable in the U. States, their progress is here perhaps more rapid than in any other country, the body of *R. C.* having grown from about 1,200,000, in 1840, to above 7,750,000, in 1897.—The constitution of the *R. C.* Church, and the details of its discipline, are given elsewhere. Its doctrinal system may be best explained from her latest authentic creed, that known as Pius V.; a summary of the authoritative teaching up to that time, including the decrees of the Council of Trent, as follows: "I believe in one God, the Father Almighty, Maker of heaven and earth, of all things visible and invisible, and in one Lord Jesus Christ, the only-begotten Son of God, born of the Father, before all ages; God of God; Light of Light; true God of the true God; begotten, not made; consubstantial with the Father, by whom all things were made. Who for us men, and for our salvation, came down from heaven, and was incarnate by the Holy Ghost of the Virgin Mary, and was made man. He was crucified also for us under Pontius Pilate, suffered, and was buried. And the third day he rose again according to the Scriptures; he ascended into heaven, sitteth at the right hand of the Father, and shall come again with glory to judge the living and the dead; of whose kingdom there shall be no end. And in the Holy Ghost, the Lord and Giver of life, who proceeds from the Father and the Son, who, together with the Father and the Son, is adored and glorified, who spoke by the prophets. And in one holy, Catholic, and Apostolic Church. I confess one baptism for the remission of sins; and I look for the resurrection of the dead, and the life of the world to come. Amen. I most steadfastly admit and embrace the apostolical and ecclesiastical traditions, and all other observances and constitutions of the same church. I also admit the Holy Scriptures, according to that sense which our holy mother the Church hath held and doth hold; to whom it belongeth to judge of the true sense and interpretation of the Scriptures; neither will I ever take and interpret them otherwise than according to the unanimous consent of the Fathers. I also profess that there are truly and properly seven sacraments of the new law, instituted by Jesus Christ, our Lord, and necessary for the salvation of mankind, though not all for every one: to wit—Baptism, Confirmation, the Eucharist, Penance, Extreme Unction, Order, and Matrimony; and that they confer grace; and that of these, Baptism, Confirmation, and Order cannot be repeated without sacrilege. I also receive and admit the received and approved ceremonies of the Catholic Church, used in the solemn administration of the aforesaid sacraments. I embrace and receive all and every one of the things which have been defined and declared in the holy Council of Trent concerning original sin and justification. I profess, likewise, that in the Mass there is offered to God a true, proper, and propitiatory sacrifice for the living and the dead; and that in the most holy sacrament of the Eucharist there is truly, really, and substantially the Body and Blood, together with the soul and divinity of our Lord Jesus Christ; and that there is made a conversion of the whole substance of the bread into the Body, and of the whole substance of the wine into the Blood; which conversion the Catholic Church calleth Transubstantiation. I also confess that under either kind alone Christ is received whole and entire, and a true sacrament. I constantly hold that there is a Purgatory, and that the souls therein detained are helped by the suffrages of the faithful. Likewise, that the saints reigning together with Christ are to be honored and invoked, and that they offer prayers to God for us, and that their relics are to be held in veneration. I most firmly assert that the Images of Christ, of the Mother of God, ever Virgin, and also of other saints, ought to be had and retained, and that due honor and veneration are to be given them. I also affirm that the power of indulgences was left by Christ in the Church, and that the use of them is most wholesome to Christian people. I acknowledge the holy Catholic, Apostolic, Roman Church for the mother and mistress of all churches; and I promise true obedience to the Bishop of Rome, successor of St. Peter, Prince of the Apostles, and Vicar of Jesus Christ. I likewise undoubtedly receive and profess all other things delivered, defined, and declared, particularly by the holy Council of Trent; and I condemn, reject, and anathematize all things contrary thereto, and all heresies which the church hath condemned, rejected, and anathematized. I do at this present freely profess, and sincerely hold this true Catholic faith, out of which no one can be saved; and I promise most constantly to retain and confess the same entire and inviolate, by God's assistance, to the end of my life."—Since the compilation of the above creed, the *R. C.* Church has defined certain further articles in the controversy on grace, which are from the teaching of *Jansenius*, q. v.; still more recently that of the *IMMACULATE CONCEPTION*, q. v.; and, in 1870, the infallibility of the Pope, for which see *ECUMENICAL COUNCIL*, and *PIUS IX.*—The Catholic Church was first established in the English colonies of America by the settlers in Maryland, in 1634, and was long mainly confined to that State. The first Catholic bishop of the U. S. was Most Rev. John Carroll, of Baltimore, appointed in 1790. Under him were about 20 priests, and 30,000 church members, throughout the 13 States, but mainly in Maryland, Pennsylvania, and the Northwestern Territory. In 1803 the annexation of Louisiana added 30,000, so that in 1810, there were 50,000 native, and 30,000 foreign, Catholics in the country. In 1890 these had increased to about 7,000,000,

and in 1900 to approximately 8,500,000. In 1893 an Apostolic Legation was established in Washington, with power to adjudicate many, if not all, questions of discipline arising in the Catholic dioceses of this country. The first legate was Monsignor Francis Satolli, titular archbishop of Lepanto. In November, 1895, he was raised to the dignity of cardinal, and recalled to Rome, being succeeded by Archbishop Sebastian Martinelli, who arrived Oct. 3, 1896. There are at present in this country 1 cardinal, 14 archbishops, and 82 bishops. In 1902 the priests numbered 12,113, the churches, 12,313, and the communicants 9,158,741.

Romance, *n.* [Sp.; It. *romanza*; Fr. *roman*, from L. Lat. *romanicum*, from Lat. adv. *romanic*, in the language or manner of Rome.] (*Lit.*) Originally, a military tale of the Middle Ages; among the moderns, a fabulous relation or story of adventures and incidents, designed for the entertainment of readers: a narrative of extraordinary adventures, fictitious and often extravagant, usually a tale of love or war, subjects awakening the sensibilities of the heart, or the passions of wonder and curiosity; any wild, extravagant story or invention of the imagination; a work of fiction, in prose or verse, containing the relation of a series of adventures, either marvellous or probable;—a tale confined to the latter class of events has, indeed, been considered to be more strictly designated by the term *novel*. But, as our nomenclature for works of fiction is not very precise or accurate, the word *romance* is very frequently used to comprehend both; as, to write a *romance*, the "*Romance of the Forest*," &c.

(*Philol.*) A name given to those modern languages which are closely akin to the old language of the Romans, and which are modifications of the ancient Italian dialects; of these, six still remain literary dialects, viz., the languages of Portugal, Spain, France, Italy, Rumania, and the Grisons of Switzerland. The Provençal, or language of the Troubadours, is now a mere patois.

(*Mus.*) A small, song-like piece of vocal or instrumental music, somewhat in the character of a ballad;—also called *romanza*.

—*a.* Pertaining, or having reference, to the *Romance* language or dialects.

—*v. n.* To forge and relate fictitious stories, to deal in extravagant stories or romances; as, he *romanced* about his mistress as though she were a paragon.

Roman'cer. Roman'cist. (*-ist.*) *n.* A writer of romances; one who romances, or who invents fictitious stories.

Romancero. (*-sē'ro.*) *n.* (*Lit.*) The general Spanish appellation given to a collection of the national ballads or romances;—so called from the term *Roman*, or *Romantic*, which, in the early part of the Middle Ages, seems to have been the common designation of all the dialects spoken from the Alps to the western extremity of the Mediterranean. The *Romancero General*, the most celebrated of these collections, was published in 1604-1614.

Romanese. *n.* (*Philol.*) The language of the Wallachs, who call themselves *Români*, or Romanians. It is spoken in Wallachia, Moldavia, and in parts of Hungary, Transylvania, and Bessarabia, and is divided by the Danube into two branches, the northern being to a certain extent a literary language; the southern has borrowed many Greek and Albanian words, and has never been fixed grammatically.

Romanesque. (*-ēs'k.*) *a.* [Fr.; It. *romanesco*.] Pertaining or relating to, or characterized by, romance; romantic.

(*Arch.*) A general term for all the debased styles of architecture which sprung from attempts to imitate the Roman, and which flourished in Europe from the period of the destruction of the Roman power till the introduction of Gothic architecture.

It is thus described by Dr. Whewell: Its characters are a more or less close imitation of the features of Roman architecture. The arches are round; are supported on pillars, retaining traces of the classical proportions; the pilasters, cornices, and entablatures, have a correspondence and similarity with those of classical architecture; there is a prevalence of rectangular faces and square-edged projections; the openings in walls are small, and subordinate to the surfaces in which they occur; the members of the architecture are massive and heavy, very limited in kind and repetition, the enrichments being introduced rather by sculpturing surfaces, than by multiplying and extending the component parts. There is in this style a predominance of horizontal lines, or at least no predominance and prolongation of vertical ones. For instance, the pillars are not prolonged in corresponding mouldings along the arches; the walls have no prominent buttresses, and are generally terminated by a strong, horizontal tablet or cornice.

(*Paint.*) Having reference to fable or romance in

painting. In historical pieces, it consists in the choice of a fanciful subject, rather than one founded on fact. *Romanesque* differs from *romantic* in that the latter may be founded on truth, which the former never is.

(*Philol.*) The common dialect of Languedoc and other districts in the south of France. It is a remnant of the old Roman language. See *ROMANCE*.

Roman'ic. *a.* Pertaining, or relating, to Rome, or to its people.—Belonging or having reference to any or all of the various languages or dialects which, in the Middle Ages, sprung out of the old Roman. See *ROMANCE*.—Having relation to the Roman people by affinity;—said particularly of races and nations speaking any of the Romanic tongues.

Romanish. *a.* Pertaining, or relating, to Romanism. **Romanism.** *n.* (*Theol.*) The religious tenets held by the Church of Rome.

Romanist. *n.* One who professes the religion of the Church of Rome; a Roman Catholic.

Romanize. *v. a.* To Latinize; to fill with Latin words or modes of speech;—also, to convert to the Roman Catholic religion or opinions; as, a *Romanized* peasant from the Episcopal ministry.

—*v. n.* To conform to Roman Catholic opinions, customs, or phraseology.

Romanizer. *n.* One who conforms to the Roman Catholic faith.

Roman Law, or CIVIL LAW. The name given to that body of laws principally declared in the *Pandects*, *Codes*, and *Institutes* of the Emperor Justinian; but these contain only a digest of a small portion of the laws which prevailed in the ancient Roman empire. "Inasmuch," to use the words of the learned judge, Sir John Holt, "as the laws of all nations are doubtless raised out of the civil law, as all governments are sprung from the ruins of the Roman empire, it must be owned that the principles of our law are borrowed from the civil law, therefore grounded upon the same reason in many things." The manner in which the Roman law has been introduced into the jurisprudence of modern Europe may be said to have been *twofold*: first, through the prevalence of Roman usages, derived from the times of the empire, among the population of various countries, especially that part of it which was collected in towns; secondly, through the efforts of the ecclesiastics, who learned the civil law from the *Code* of Theodosius, and from the works of Justinian, and introduced it, as far as their authority extended, into such branches of justice as they were permitted to administer, and especially into their canon law, which the various princes of Europe permitted to be binding, to a different extent in different countries, upon their lay, as well as clerical subjects. Thus, the Roman law is, in one sense, the oldest and fundamental part of public right in many countries; in another sense, it is a comparatively recent importation, altering the character of their respective legislations. The Roman law comprises what are termed the *INSTITUTES*, *PANDECTS*, *CODE*, and *NOVELLE*, q. v. These have been collected and published together, under the title of *Corpus Juris Civilis*; the best editions being those of Amsterdam (Svo. 1664), for the text, and of Gothofred (fol. Paris, 1628), for the text and notes. The most elaborate modern work on the history of the Roman law is that of Savigny.

Roman Literature. See *LATIN LITERATURE AND LANGUAGE*.

Romanoff. or *ROMANOV*, MICHAEL, Czar of Muscovy, or Russia, was elected by a council of the states at Moscow in 1613, but had to combat the rival pretensions of Sweden and Poland. After a short war, he concluded a peace with Sweden in 1617, by which he ceded to Gustavus Adolphus a large portion of territory. In the following year he signed a truce with Ladislaus, King of Poland, who had advanced to the walls of Moscow. Directed by the sage counsels of his father, Michael would have advanced the civilization of his country, had not his death prematurely taken place in 1645. He left his throne to his son Alexis. The dynasty of Romanoff reigned in Russia from the year 1613 until 1732, when it became extinct, in the person of the Empress Elizabeth, who died without issue. It was succeeded by the dynasty of Holstein-Gottorp, with which it was connected by ties of marriage, Charles Peter Ulrich, who reigned after Elizabeth, under the name of Peter III., being the son of her sister, Anna Petrovna, Duchess of Holstein-Gottorp, and daughter of Peter the Great.

Romans. (*ro'mawng.*) a town of France, dept. of Drôme, on the Isère, by which it is separated from Bourg-de-Péage, on the opposite side of the river, the communication between the two being maintained by a fine bridge, 12 m. N.E. of Valence, and 35 m. W.S.W. of Grenoble. *Manuf.* Silk and woollen fabrics, hosiery, and gloves. *Pop.* 7,223.

Romans. (Epistle to the.) (*Script.*) One of the books of the New Testament, written by the Apostle Paul, and addressed to the Christian Church at Rome. It is the fifth in order of time, though placed first among the epistles, either from the predominance of Rome, or because it is the longest and most comprehensive of the Apostle's epistles. It is generally agreed to have been written about A. D. 58, after he had passed through a lengthened period of experience. That it is the genuine and authentic production of the Apostle has rarely been called in question, and is supported by the strongest evidence. It was written from Corinth, and sent to Rome by one Phoebe, a servant or deaconess of the church at Corinth. The occasion of it was, doubtless, the disputes that began to prevail among the Christians at Rome. The Church there was composed of both converted Jews and Gentiles, and the former, attached to the Mosaic institutions, were desirous of

Fig. 2271. — ROMANESQUE INTERIOR.

imposing upon their Gentile fellow-worshippers many of the Mosaic rites and ceremonies, especially that of circumcision. The Gentiles, on the other hand, despised the prejudices of the Jews; and hence, the divisions and contentions among them which called forth the admonitions and cautions contained in this epistle.

Romansch, *n.* [Gris. *Rumansch*.] (*Philol.*) The language spoken by the people of the Grisons, in Switzerland; — also written *Rumansch*, or *Rumonsch*.

Ro'man School, *n.* (*Painting*.) See **PAINTING**.

Ro'mansville, in *Pennsylvania*, a village of Chester co., abt. 10 m. W. of West Chester.

Roman'tic, *a.* [Fr. *romantique*.] Pertaining to romance, or resembling it; involving romance; belonging or appropriate to the style characteristic of the popular literature of mediæval times, as opposed to the *classical antique*; — hence, wild; fanciful; fabulous; extravagant; improbable or chimerical; fictitious; full of fantastic imagery; as, a *romantic story*, a *romantic idea*, a *romantic enterprise*, a *romantic individual*. — Characterized by novelty, oddness, or variety; wild; fantastic; quaintly picturesque; — applied to scenery; as, a *romantic prospect*.

Roman'tical, *a.* Romantic. (*R.*)

Roman'tically, *adv.* In a romantic manner; wildly; extravagantly.

Roman'ticism, (*-izm*), *n.* [Fr. *romantisme*.] (*Lit.*) State or quality of being romantic or fantastic; — a term of recent origin, applied chiefly to the fanciful and unnatural productions of the modern French school of novelists, at the head of which are Balzac, Victor Hugo, Sue, Alex. Dumas (*pere et fils*), Mme. Dudevant ("George Sand"), &c., and their imitators in France and other countries.

Roman'ticist, (*-ist*), *n.* One imbued with romanticism.

Roman'ticness, *n.* State or quality of being romantic; fancifulness; fantasticness; wildness; extravagance.

Roman'us I., Emperor of Constantinople and of the East, surnamed *Lacapenus*, was an Armenian soldier, who became the associate of Constantine X., in 919. He was dethroned by his sons, Stephen and Constantine, in 945, and died in a monastery, 948. — **ROMANUS II.**, called *The Younger*, succeeded his father, son of Constantine X., 959, and died of intemperance, 963. — **ROMANUS III.**, called *Argyros*, became emperor by marrying the princess Zoë, 1028. He was murdered by his wife and her paramour, Michael (Michael IV.), 1034. — **ROMANUS IV.**, surnamed *Diogenes*, was a condemned conspirator, who was married to Endoxia, the widow of Constantine Ducas, and associated with her on the throne, 1068. Died, after being deposed and mutilated by Michael (Michael VII.), 1171.

Roman'za, *n.* [It.] (*Mus.*) See **ROMANCE**.

Roman'zieri, *n. pl.* [It.] (*Lit.*) In Italian literature, a series of poets who took for the subject of their compositions the chivalrous romances of France and Spain; and chiefly those relating to Charlemagne and his paladins: — of this school were Boiardo, Pulci, Berni, and Ariosto, the last of whom carried this class of poetry to the highest degree of perfection in his *Orlando Furioso*.

Roman'zoff, or **ROMANZOW**, PETER ALEXANDROVITCH, Count, a Russian general, born about 1730, succeeded Prince Galitzin as commander-in-chief against the Turks, 1770. He obtained many advantages, and concluded the treaty of Kainardji, 1774. Named general of the second army directed against the Turks, he threw up his command in 1789, in consequence of a quarrel with Potemkin. Died 1796. — His son and successor in the title, NICHOLAS, distinguished as a diplomatist, and for the devotion of his wealth to patriotic and benevolent objects, flourished 1753–1826. — MICHAEL PAUL, brother and heir of the latter, d. 1838.

Roman'zowite, *n.* (*Min.*) A brown, or brownish-black, variety of lime-garnet. It is a triple silicate of lime, alumina, and iron.

Rombowline, (*-bō'lin*), *n.* (*Naut.*) Old, refuse cordage, rope, &c., fit for use in chafing-gear only.

Rome. [Lat. *Roma*.] The most celebrated of European cities, famous alike in ancient and modern history; first, as the metropolis of the most powerful nation of antiquity, and afterwards, as the ecclesiastical capital of Christendom, now cap. of the kingdom of Italy, is situated on the Tiber, abt. 16 m. from its mouth, 115 m. N.E. of Naples, and 145 m. S.S.E. of Florence; Lat. 41° 53' 52" N., Lon. 12° 28' 40" E. The space inclosed by walls approaches to the form of a square, of three, or somewhat more than three, miles each way, the circuit of the walls being in all about 16 miles. This is equal to the circumference of Rome in its greatest splendor; but of the seven eminences on which the former city stood, several of them are now covered with vineyards, corn-fields, or villas, the close population being confined to the level tract between the eminences and the river, and occupying little more than a third of the space inclosed within the walls. The most regularly built part of Rome is that which is adjacent to the northern gate, called *Porta del Popolo*, and the quarter Borgo, on the right of the river. The great drawback on its beauty as a city, is the mixed nature of its buildings, a mansion, entitled to the name of palace, being too often placed amidst a group of hovels. The points from which the city can best be viewed, are the Pincian Hill, Mount Janiculum, the tower of the Capitol, and the tops of the Trajan and Antonine columns. The streets have seldom any foot-pavement; they are in general narrow. Three of the finest are those which diverge from the Piazza di Popolo, near the northern gate; viz., the Corso, extending to the foot of the Capitol; the Strada del Babuino,

ending in the Piazza di Spagna, and the Strada di Ripetta, leading to the Tiber. The Corso is the great public walk of Rome, and the scene of carnival festivities. The squares are small, but numerous, and, in general, adorned with obelisks, fountains, or other monuments. The space in front of St. Peter's Church is a large area of an oval form, surrounded with a magnificent colonnade, the work of the celebrated Bernini. The Roman forum was anciently bordered with temples and lined with statues, and is now called Campo Vaccino

Fig. 2272. — CAMPO VACCINO. (Ancient Forum).

(Fig. 2272). Among the ancient edifices, the Pantheon, or Rotonda (Fig. 2039), a structure distinguished equally for solidity and elegance, is conspicuous. A still more imposing object is the Coliseum, or amphitheatre of Vespasian (Fig. 113), a structure of an oval form, 581 feet in length, 481 in breadth, and 1,616 in circumference; being the largest amphitheatre ever known. At a short distance from this, near the Viminal and Quirinal hills, stands a portion of the vast baths of Diocletian, now converted into a church. Of the triumphal arches of ancient Rome, the only one remaining entire is the arch of Constantine (Fig. 178), with its pillars, statues, and bas-reliefs, all of the finest marble. The arch of Septimius Severus is also of marble, but its bas-reliefs are much damaged. The arch of Titus has also suffered greatly. The Colonna Trajana, or Trajan's Pillar (Fig. 651), still stands on the spot where it was erected by that emperor, and is yet covered with admirable bas-reliefs. The pillar erected in honor of the Emperor Marcus Aurelius is of equal, or somewhat greater height, but of inferior execution. Of the ancient aqueducts, there remain only three; yet their supply of water is extremely copious. As to public baths, those great objects of Roman luxury, there remain of those of Caracalla little except the walls; but the baths of Titus are in better preservation. No city in Europe is superior to Rome in the number and magnificence of its churches. The church of St. Pietro, in Vincoli, is regarded as the most ancient in Rome, and is a noble hall, supported by 20 pillars of Parian marble, and adorned with elegant tombs. That of St. Martin and St. Silvester is built of part of the materials of the baths of Titus, and is a beautiful edifice. The church of St. Andrea, on the Monte Cavallo, though small, is highly finished; that of St. Cecilia, in Trastevere, as well as the churches of St. Maria in the same quarter, St. Sebastiano, and St. Pietro in Montorio, are all of great antiquity. The last contained the famous picture of the Transfiguration, by Raphael, now in the Vatican. Santa Maria Egiziaca is supposed to be the ancient temple of Fortuna Virilis, and Santa Maria sopra Minerva a temple of that goddess, while the church of Ara Coeli is considered as occupying the site of the temple of Jupiter Capitolinus. The Pantheon (*q. v.*) and the seven patriarchal basilice, or cathedrals, are all remarkable for their architecture. Of the cathedrals, Santa Maria Maggiore, a noble structure, is situate on the Esquiline Mt., and has two fronts, each of modern architecture. St. Giovanni, in Laterano, is the regular cathedral of the bishops of Rome. See fig. 1525. Of the remaining churches, many of them are remarkable for architectural beauty, and altogether they number 354. In the church of St. Peter's (Fig. 2089), the arts of architecture, sculpture, and painting are all exhibited in the highest perfection. The patriarchal chair of St. Peter is a throne, elevated to the height of 70 feet. The high altar has below it St. Peter's tomb, above it a magnificent canopy of brass, towering to the height of 132 feet (Fig. 273). There are three palaces of the Pope; viz., the Lateran (Fig. 1525), the Quirinal, and the Vatican. The first is close to the patriarchal church of that name, and is striking by its size and height. The Quirinal palace has become, since the unification of the kingdom of Italy, the residence of the king. Its exterior presents two long fronts, plain and unadorned. The palace of the Vatican stands on an eminence, to the north-west of the city, near St. Peter's. Its exterior presents neither magnificence nor symmetry, having been erected by different architects at different eras, and forming, not one, but an

assemblage of edifices. Its extent is immense, and the number of its rooms, great and small, is estimated at 4,422. Part of it is built with grandeur, and its walls are adorned with the cartoons of Raphael and Michael Angelo. Here also are collections of medals and other antiques, apartments cased with marble or paved with Roman mosaic, containing vases, candelabras, and altars, besides the celebrated statues of the Apollo Belvedere (Fig. 147), the Laocoön (Fig. 225), and the Antinous. The family mansions in Rome are termed *palazzi*, and are in great numbers; but the far greater part of them are less remarkable for their outward architecture, than for their size and internal decorations. The Palazzo Doria is one of the finest in the city, presenting three large fronts, inclosing a spacious court, surrounded with piazzas. It has a fine staircase, which leads to a magnificent gallery filled with pictures. The Palazzo Ruspoli has a still finer staircase, consisting of four flights, of thirty steps each, each step of a single piece of marble, nearly ten feet long and two broad. The Corsini palace is remarkable for its size, its furniture, and its gardens. The Palazzo Orsini, that of Giustiniani, of Altieri, and of Salviati, are all distinguished buildings. The Palazzo Farnese is of great size, and occupies one side of a handsome square. There are various others, some of which are rich in the paintings of the first masters. Rome is well supplied with hospitals, but they are conducted on an antiquated plan, and very deficient in interior order and arrangement. The Tiber, though deep, is only about 200 feet wide, and is crossed at Rome by several bridges. Rome is the seat of various seminaries. The University is of the first rank, and was founded in 1244. The Propaganda, or College for the diffusion of the Christian faith, is on an extensive scale, containing a number of youths of different nations, and a press for printing books in more than thirty languages. There are likewise several literary associations. In the Ripa Grande 800 children are instructed in arts and trades, and there are numerous schools of painting, sculpture, and architecture. Of the libraries, by far the largest is that of the Vatican. The other libraries are those of the Augustines, of the Dominicans, of the Barberini, Chigi, Colonna, and Corsini families; also the Collegio Romano, with its museum of antiquities and cabinet of natural history. The University library is called, from its founder Pope Alexander VII., the *Alexandrine Library*; and the Library del Emo contains a collection of medals and mathematical instruments along with a museum of natural history. *Manuf.* Few, and chiefly consisting of woollens, silks, velvets, hats, gloves, stockings, liqueurs, pomade, and artificial flowers. — The Romans were always remarkable for their superstition and idolatry, and invested nearly every event of life, whether political, social, or domestic, with some religious ceremony; to such an extent was this carried, that nearly all the evil and good omens and superstitions that have sat like an incubus on the intelligence of western Europe for the last 2,000 years, date their origin from the Roman conquerors. The manner in which they declared war and proclaimed peace was marked by the most solemn rites and religious ceremonies. Their religious opinions, however, were remarkably tolerant, for they not only had an unbounded faith in their own mythology, and confidence in each particular divinity, male or female, who appertained to their Pantheon, but had an equal trust in the good offices of any strange god or goddess whom their friends or enemies worshipped, and with open arms accepted the celestials from the regions of the Nile, the Tigris, or the Oxus, and approached with the same veneration the altars of the Libyan, the Olympian, or the Capitoline Jupiter. From the founding of the city by Romulus, for a space of 245 years, or till 509 B. C., the Roman people submitted their political destinies to the rule of a succession of seven kings, the line terminating with Tarquinius Superbus, who, with his family, was deposed and expelled from Rome. After the deposition of their kings, the consular form of government was established, and, with a few short interruptions, as during the supremacy of the Decemviri, several dictators, and two triumvirates, continued till the year of the city 724, or 30 B. C., or for a space of 479 years; from this time a line of about sixty emperors assumed dominion, and for a term of 506 years, or A. D. 476, swayed with absolute power the destinies of the Roman world. During the first of these three epochs, the Romans firmly established their infant state, the city was greatly enlarged, civil law and order were established, a religious code was instituted, several of the neighboring states were humbled, many cities taken, and, while the population of Rome greatly increased, most of the conquered cities were admitted to all the benefits of Roman citizenship. In the second period, those great undertakings were effected which have, through all time, made Rome so celebrated — the broad, well-paved highways, like the *Via Appia*, extending from the city to the extremity of Calabria, numerous aqueducts, the *cloacæ*, or common sewers, so vast in size and length as to have become the wonder of the ancients themselves; so extensive were these underground channels, that in the time of Augustus the whole of Rome was subterraneously navigable. After these followed the temples, circuses, and baths. The wars undertaken in this epoch were some of the most important in the whole history of the people. The three Punic wars were fought and Carthage was exterminated, the whole of Italy was incorporated in the republic, the states of Africa subjugated, Greece converted into Roman provinces, Mithridates of Pontus defeated, and the kingdoms of Asia Minor made tributary; Spain, Gaul, and Britain were conquered and advanced to the grade of provinces, the boundaries of the republic

extending from Hibernia in the Atlantic to the Euphrates in the East, while the wealth and splendor of the city had advanced in a ratio equal with its territorial aggrandizement; and what had once been a town of bricks became a city of marble palaces, that could boast 420 temples, five theatres for the drama, two amphitheatres, seven circuses of vast extent, sixteen public baths, fourteen aqueducts, besides pillars, triumphal arches, porticoes, and lofty obelisks. During the third period Germany was added to the imperial realms, and the conquering eagles of Rome only ceased their flight on this side the Indus. All Syria, Persia, and Parthia fell before the conquering Roman till the overgrown empire, too vast for its own strength, and weakened by vice, riches, and conquest, fell into decay, and then commenced that downfall which has had no parallel in the annals of nations. It had been predicted by the augurs, from an omen of twelve ravens seen together as Romulus was marking out his infant city, that the state would endure for twelve centuries; and as the termination of that cycle of ages approached, the physical disasters that overwhelmed the people in all parts of the empire, the hordes of barbarians who on every quarter burst like a deluge on the land, the crimes of the emperors, the constant civil wars, and dire reverses encountered in the field, too plainly indicated the coming ruin of the once mistress of the world. So enervated and weak had the troops become, so greatly had they degenerated, that in the reign of Theodosius, about the year 390, the legions were no longer able to bear the fatigues of their armor and heavy military weapons, and throwing them aside, assumed the light and ineffective arms of the effeminate Persians, while the barbarians, adopting the heavy weapons of the Romans, were everywhere victorious. The division of the empire into Eastern and Western by Constantine, in 325, was the first fatal

Fig. 2273. — ROMAN WOMAN.

blow to the strength of the empire, while the feuds of the rival emperors, and the irruption of the Goths, the sack and burning of Rome in 410, completed the dismemberment. A few weak princes prolonged for half a century the shadow of a W. empire, till Romulus Augustulus, the last, bearing the same name as the founder of the state, laid down the insignia of the Roman empire at the feet of Odoacer, the barbarian king of Italy. A. D. 476. The Eastern empire endured for nearly 1,000 years longer, until finally overthrown by the taking of Constantinople by the Turks, in 1453. In the eighth century Rome was ceded to the Pope, and henceforth became the great ecclesiastical centre, and, though frequently subject to assaults in those warlike times, escaped pillage till 1527, when the army of De Bourbon stormed and sacked it, committing frightful horrors. In 1809 it was taken by the French, and continued under their sway for five years. In 1848 an insurrection broke out compelling the Pope to fly, when a republican government was established; a French force, however, soon after invested the city, which, after a lengthened siege, was obliged to capitulate, upon which the Pope returned in triumph to his capital. In Sept. 1870, after the breaking out of the Franco-Prussian war, the Emperor Napoleon III. found it necessary to withdraw the French troops from Rome; whereupon the city was invested by an Italian army, which, after a slight resistance offered by the Pontifical Zouaves and the Body-guard, capitulated to the National government. The Pope, however, after delivering a solemn protest against this forcible dethronement of his temporal sovereignty, still remained in the Holy City, "committing his cause to God" in the absence of interference in his behalf on the part of the great Powers of Europe. In Dec., 1870, Rome was made the cap. of Italy. On May 13, 1871, the Italian parliament passed the act known as the bill of papal guaranties, by which the Pope was to remain in possession of the *Leonine City* (the Vatican and dependencies), the Lateran, and the Castel Gandolfo. On July 2, Victor Emmanuel made his entry into Rome, and took up his residence at the Quirinal. The sanitary condition of R. has been much improved, and the death rate reduced from 27.81 per 1000 from 1861-71, to 21.43 in 1871-81. It is now one of the most beautiful capitals of Europe. The healthiest part of R. is not, as has been popularly supposed, about the Trastevere and the Ghetto, but on the contrary, it is the new district, between Porta Pia and Santa Maria Maggiore and about the Piazza di Spagna. **Rouie**, in *Geo*, a city, cap. of Floyd co., abt. 170 m. N. W. of Milledgeville. It is the principal depôt for the cotton raised in that region.—In *Ill.*, a p. v. of Peoria

co., abt. 85 m. N. by E. of Springfield.—In *Ind.*, a v. of Jefferson co., abt. 9 m. E. by N. of Madison.—A p. v. of Perry co., abt. 45 m. E. of Evansville.—In *Iowa*, a p. v. of Henry co., abt. 36 m. W.N.W. of Burlington.—A twp. of Jones co.—In *Maine*, a p. twp. of Kennebec co.—In *Mich.*, a p. twp. of Lenawee co.

Rome, in *Missouri*, a village of Boone co., abt. 13 m. N. by E. of Columbia.

Rome, in *New York*, a city and township, semi-cap. of Oneida co., about 100 m. W.N.W. of Albany, and 14 m. N.W. of Utica, on the site of Fort Stanwix. It is a place of much business activity, and contains some extensive manufactories. Pop. (1897) 15,950.

Rome, in *Ohio*, a village of Adams co., abt. 84 m. S.E. of Cincinnati.—A post-village and township of Ashtabula county, about 190 miles north-east of Columbus.—A township of Athens county.—A village of Delaware county, about 22 miles north by east of Columbus.—A township of Lawrence county.—A village of Richland county, about 12 miles north of Mansfield.—A village of Seneca county, about 110 miles north of Columbus.

Rome, in *Pennsylvania*, a post-borough and township of Bradford co., about 9 m. N.N.E. of Towanda.—A township of Crawford co.

Rome, in *Wisconsin*, a post-village of Jefferson co., abt. 10 m. E. of Jefferson.

Rome, in *Tennessee*, a post-village of Smith co., abt. 45 m. E. of Nashville.

Roméine, n. (*Min.*) A native antimoniate of lime.

Roméio, in *Michigan*, a post-village of Macomb co., abt. 20 m. N.W. of Mount Clemens.

Romeo, in *Tennessee*, a post-village of Greene co., abt. 14 m. N.W. of Greenville.

Rom'ford, a town of England, co. of Essex, 13 m. E.N.E. of London: pop. 6,000.

Rom'ish, a. Pertaining, or relating, to Rome, or to the religion professed by the people of Rome; Roman Catholic; Papal; as, the *Rom'ish Church*.

Rom'ist, n. A Roman Catholic. (R.)

Rom'mahan Roy. See BRAHMO SOMAJ.

Rom'ney, in *Indiana*, a post-village of Tippecanoe co.

Romney, in *W. Virginia*, a post-vill., cap. of Hampshire co., abt. 120 m. S.E. by E. of Wheeling.

Romorantin, (*rom'o-ran-ta*.) a town of France, dept. of Loire-et-Cher, on the Sèvre, a tributary of the Loire, 24 m. S.E. of Blois: pop. 7,642.

Romp, n. [A different spelling of *rump*, q. v.] A rude girl, who leaps and frisks about, and indulges in boisterous play; a tomboy; a hoiden; a skittish lass.—Rude play; boisterous frolic; frisky recreation.

—v. n. To play rudely and boisterously; to leap and frisk about in sport; to act the tomboy.

Romp'ee, **Romp'u**, n. [*Fr. rompu*, from Lat. *rompere*, to break] (*Her.*) Cleft, as an ordinary; cut off, or broken at the top, as a chevron, bend, &c.

Romp'ingly, adv. In a romping, or rude and boisterous manner; rompsily.

Romp'ish, a. Inclined to romp; given to rude, boisterous sport.

Romp'ishly, adv. In a rude or boisterous manner; skittishly.

Romp'ishness, n. Quality of being rompish or tomboyish; disposition to boisterous play, or the practice of romping.

Rom'sey, or **RUMSEY**, a town of England, co. of Hants, on the Test, 6 m. N.W. of Southampton: pop. 6,000.

Rom'ulus, mythical founder and first king of Rome. According to the legends, he was the son of the vestal Rhea Sylvia by the god Mars, Sylvia being a daughter of Numitor, rightful heir of the King of Alba, but deprived by his brother. Exposed with his twin-brother Remus, the babes were suckled by a she-wolf, and afterwards brought up by a shepherd. Their parentage was discovered, and they determined to found a city on the banks of the Tiber, the scene of their exposure. The right to choose the site was acquired by R.; and Remus not acquiescing, in his disappointment, was slain. Inhabitants for the new city were found by establishing a refuge for murderers and fugitive slaves on the Capitoline hills, and by carrying off the Sabine maidens at a feast to which they were invited. This led to war with the Sabines, which ended, through the intervention of the Sabine women, in a union of Romans and Sabines, under their two kings, R. and Titus Tatius. The latter was soon slain, and R. reigned alone. He was regarded as the author of the fundamental division of the people into *tribes*, *curiæ*, and *gentes*, and of the institution of the senate and the *comitia curiata*. The date commonly assigned for the foundation of Rome is B. C. 753.

Rom'ulus, in *New York*, a township of Seneca county.

Rona, a small island in the Northern Ocean; Lat. 58° 32' N., Lon. 6° W.—Also, a small island of the Hebrides.

Ron'ald, in *Michigan*, a post-township of Ionia co.: pop. abt. 1,400.

Ronaldshay, (*North and South*), (*ron'ald-shai*.) two small islands of the Orkneys.

Roncesvalles, (*ronce'val*.) a village of Spain, in Navarre, 22 m. N.N.E. of Pamplona. Here the rear-guard of the army of Charlemagne was destroyed in 778, and Roland, the famous paladin, fell in the action.

Ron'da, a town of Spain, prov. of Granada, on the Guadaro, 40 m. N.W. of Malaga, and 48 m. N.N.E. of Gibraltar. *Manuf.* Silks, leather, &c. Pop. 19,334.

Rondache, (*rông-dash'*), n. (*Archeol.*) Anciently, a circular shield carried by foot-soldiers to protect the upper part of the person, which it entirely covered. It had a slit in the upper part for seeing through, and one at the side for the point of the sword to pass through.

Rond Bosse, n. [*Fr.*] (*Fine Arts*.) A term describing sculptured objects in their full forms, in contradis-

inction to those which are in *relief*, or attached more or less to a plane or ground.

Rondeau, **Rondo**, (*ron-dō*), n. [*Fr. rondeau*, from *rond*, round.] (*Pros.*) A kind of poetry which returns, as it were, to the same point, or in which part is repeated, thus containing a refrain. In French poetry, the rondeau is a little composition of 13 verses, divided into 3 unequal strophes, with two rhymes (5 lines masculine and 5 feminine, or *vice versa*). The first two or three words of the first verse serve as the burden, and recur in that shape after the 8th and 13th verses. There are also *double rondeaux* and *single rondeaux*; the latter an obsolete, but easier kind of verse.

(*Mus.*) A light form of composition, in which the subject or theme returns frequently; it usually forms the last movement of a symphony or sonata, but is also very common as a separate composition; a round.

Rondout, in *New York*, a post-village of Ulster co. Was annexed to Kingston in 1872.

Rondont Creek, in *New York*, enters the Hudson River from Ulster co.

Ronion, **Ronyon**, (*rün'yun*), n. A mangy or scabby animal; also, a fat, puffy, bulky woman; as, a rump-fed ronyon.

Rönne, (*ren'na*), a town of the Danish Island of Bornholm, in the Baltic, 93 m. S.E. of Copenhagen. *Manuf.* Woollens and tobacco. Pop. 4,500.

Ronneburg, (*ron'ne-boorg*), a town of Germany, in Saxe-Altenburg, 4 m. E.S.E. of Gera. *Manuf.* Woollens, porcelain, and leather. Pop. 6,000.

Rood, n. [A different orthography of *rod*, q. v.] A rod; a perch; a pole; a lineal measure of 5½ yards.—The fourth part of an acre, or 40 square yards or poles; as, a rood of land.

Rood, n. [*A. S. rode*, or *rod*.] A cross or crucifix; a figure consisting of one rod laid at right angles over another;—specifically, a name formerly given to the figure of Christ on the cross, erected in Roman Catholic churches; as, the holy rood.—By the rood, by the cross;—a phrase formerly employed in taking oath or asseveration.

Rood-beam, n. (*Arch.*) Formerly, the beam across the chancel, bearing the rood, in churches too poor to provide a screen.

Rood-free, a. Exempt from punishment. (R.)

Rood-loft, n. (*Arch.*) A gallery which was generally placed over the chancel-screen in parish churches, and contained the rood and its appendages.

Roof, n. [*A. S. hrof*, *raf*.] (*Arch.*) The external covering on the top of a building; sometimes of stone, but usually of wood overlaid with slates, tiles, lead, &c. The form and construction of the timber-work of roofs differ materially according to the nature of the building on which it is to be placed, and any attempt to notice all the varieties would far exceed the limits of this work. The main portion of the framing, which in most cases are placed at regular intervals, are each called a *truss*, *principal*, or *pair of principals*; these, in ornamented open roofs, are the leading features, and in some ancient

Fig. 2274. — 1. KING-POST ROOF. 2. QUEEN-POST ROOF.

A. King-post.
BB. Queen-posts.
CCCC. Braces, or struts.
DD. Tie-beams.
EEEE. Principal rafters, blades, or backs.
FF. Ridge-pieces.
GGGGG. Purlins.
H. Collar.
JJJJ. Common rafters.
KKKK. Pole-plates.
LLLL. Wall-plates.

roofs are contrived with an especial view to appearance. We give (Fig. 2274) two of the simplest kinds of modern roofs, which will serve to explain the names of the most important timbers: a *king-post* roof has one vertical post in each truss, a *queen-post* roof has two. Since the introduction of iron in the construction of roofs, spaces of almost any width can be roofed over.

—That which resembles, or corresponds with, the cover of a building; as, the *roof* of the mouth, the *roof* of the firmament, &c.

(*Mining*.) That part above the miner's head; that part of the strata lying immediately upon the coal.

—v. a. To cover with a roof; as, to *roof* a building.—To shelter; to inclose in a house.

Roof'er, n. One who sets on roofs.

Roof'ing, n. The act of covering with a roof.—The materials of which a roof is constructed, or materials for a roof; as, *roofing-slates*.—Hence, by implication, the roof itself; shelter; covering.

Roof'less, a. Without a roof; as, a *roofless church*.—Unsheltered; having no house or home; as, a *roofless vagabond*.

Rooflet, *n.* A small roof or covering.

Roof-tree, *n.* The beam in the angle of a roof; hence, the roof itself;—also, by implication, home; house; shelter; as, he sleeps under his own *roof-tree*.

Roofy, *a.* Possessing roofs. (*R.*)

Rook, *n.* [*A. S. hroc*; formed from the sound which the bird utters.] (*Zoöl.*) A European species of crow (*Corvus frugilegus*, Linn.), resembling in size and color the Carrion-crow, but differing in having the base of the bill whitish and scurfy, and bare of feathers. The rook is gregarious at all seasons, resorting constantly to the same trees every spring to breed, when the nests may be seen crowded one over another upon the upper branches. After their young have taken wing, they all forsake their nest-trees, returning to them again in October to roost; but as winter comes on, they generally select more sheltered places at night in some neighboring woods, to which they fly off together.

—*A* cheat; a trickster; a rapacious fellow;—also, one who acts as decoy-duck to gaming-houses.

—*r. n.* To cheat; to swindle; to defraud;—also, to decoy.

—*v. a.* To cheat; to defraud by cheating or trickery.

Rook, *n.* [*It. rocca*, from *L. Lat.*, a castle built on a rock.] (*Games.*) In chess, one of the four pieces placed on the corner squares of a chess-board; a castle.

Rookery, *n.* A place where rooks congregate and build their nests, as a wood, coppice, &c.

Rook-pie, *n.* (*Cookery.*) A pie made of young rooks dressed and seasoned;—a dish much esteemed by English gourmets.

Rook's Creek, in *Illinois*, a post-village and township of Livingston county, about 130 miles S.W. by S. of Chicago.

Rooky, *n.* Populated by rooks; as, a *rooky* wood.

Room, *n.* [*A. S. rum*; Goth. *rum*s, place, space; probably allied to the Heb. *rum*, to be afar off, remote.] Place; space; compass; extent of place, great or small, which has been set apart or appropriated to any purpose. — Particularly, space partitioned off in a building: an apartment in a house; as, they occupy different *rooms*. — Practicability of admission; possibility to allow; fit occasion; liberty to act; as, there is ample *room* for improvement. — Place unoccupied; as, to find *room* for a lady. — Place of another;stead; as, he took him in *room* of the other. — In British North America, a fishing station.

To give *room*, to withdraw; to leave space unfilled, for others to pass or to be seated. — To make *room*, to remove obstructions; to open a space, way, passage, or opportunity; as, make *room*, gentlemen! — *Room and space*. (*Ship-building.*) The technical expression for the distance from the joint or moulding edge of one floor-timber to the other, which, in all ships that have ports, should be so disposed that the scantling of the timber of each side of the port, and the breadth of the port fore and aft (the openings between the timbers of the frames, if any, included), be answerable.

Room, *n.* A dye of a deep blue color brought from Assam, and extracted from a plant of the genus *Ruellia*.

Room, *v. n.* To lodge; to occupy, as a room or apartment; as, he *rooms* at the Astor House.

Roomful, *n.*; *pl.* ROOMFULS. As much, or many, as will fill a room; as, a *roomful* of people.

Roomily, *adv.* Spaciously.

Roominess, *n.* State of being roomy; spaciousness; large extent of space or room.

Roomy, *a.* Having ample room; spacious; capacious; wide; large; as, a *roomy* house, a *roomy* ship between decks.

Room, *a.* Red; resembling the color of vermilion. (*R.*)

Roop, now WASHOE, in *Nevada*, an extreme N.W. co., adjoining Oregon and California; *area*, about 5,620 sq. m. The county contains several considerable lakes, of which Pyramid Lake is the largest. *Surface*, mountainous; *soil*, in some parts fertile. See WASHOE.

Roorbach, *n.* An American term for a false story or canard circulated for purposes of political intrigue.

Roo'sa Oil, *Roo'sa Grass-oil*, *n.* An oil distilled from the leaves of *Andropogon calamagrostis*. It has a strong rose scent, and is used for adulterating altar of roses.

Roost, *n.* [*A. S. hrost*; Ger. *rüste*; allied to *rest*.] The pole, or perch, or other support, on which birds rest at night. — A number of fowls reposing together. — *At roost*, in a state of repose and sleep; as, a cock *at roost*.

—*n. n.* To rest, sit, or sleep, as birds on a pole, perch, or tree, at night; to perch. — Hence, by implication, to lodge; as, where do you *roost*?

Roost-cock, *n.* The male of the domestic fowl; a rooster.

Rooster, *n.* An Americanism for a cock, or male of the domestic fowl.

Root, *n.* [*Dan. ro*; *Bot.*] The descending axis, or that portion of the axis of a plant which passes, at its first development, in an opposite direction to the stem, or ascending axis. The extension of this organ is effected by the addition of new matter, not at its base, or point of junction with the stem, but at that portion which adjoins the apex. *R.* are usually subterranean; but some merely float in water, and others hang loosely in the air. They have no leaves, and generally no buds, and they appear to divide and subdivide irregularly, unlike stems, which always ramify in a symmetrical manner. There are two classes of *R.*,—the *primary* or *true*, and the *secondary* or *adventitious*. The primary *R.* is produced by the direct elongation of the radicle. The part where the stem and primary *R.* unite is termed the *collum*, or *neck*; the portion of the latter organ adjoining this is called the *base*, and the opposite extremity the *apex*. The secondary root does not proceed from any definite point, and its development may

be said to depend upon favorable external circumstances. The branches from a primary *R.*, and the *R.* produced from the different modifications of the stem—as the rhizome, the sucker, and the runner—are all of the secondary class. (See ADVENTITIOUS and AERIAL ROOTS.) According to the duration of their existence, all *R.* have been divided into *annual*, *biennial*, and *perennial*. Annual *R.* are produced by those plants which spring from seed, and flower and die in the space of one year; as the oat and the balsam. Biennial *R.* are those of plants which live two years; as the carrot and the turnip. Perennial *R.* are those of plants which live for many years; in some such plants, as the dahlia and orchis, the roots are the only perennial portions, the stems dying every year. The *R.* assumes various forms, which are distinguished by special terms in descriptive botany. When the central axis of a plant goes deep into the ground without dividing, a *tap-root* is produced; the *R.* of the common Stock illustrates this generic form. If, instead of descending in a direct line, the tap-root takes a crooked curve, it is said to be *contorted*, or *twisted*, as in the bistort; if it ends abruptly, as though bitten off, it is termed a *truncated*, or *premorse R.*, as exemplified in the Devil's-bit *scabiosa sussica*. The *conical R.* may be described as a tap-root, rather broad at the base, and tapering towards the apex; the *R.* of the horse-radish, parsnip, and carrot, are familiar examples. The *fusiform*, or *spindle-shaped R.*, is another variety of the tap-root. It swells out a little below the base, and tapers upwards and downwards; it is seen in the common radish. The *napiform*, or *turnip-shaped R.*, has a globular form, being much swollen at the base; the common turnip is its type. When the descending axis is very short, and at once divides into slender branches or rootlets, a *fibrous R.* is produced, as in many of the grasses. When the branches are short and fleshy, as in the dahlia, the *R.* is said to be *fasciculated*; and when some of the divisions are so swollen as to become egg-shaped, as in many orchids, and especially in the jakup-plant, the *R.* is *tuberculated*. To *R.*, which expand only at certain points, the terms *nodulose*, *annulated*, and *necklace-shaped*, have been applied. A few other forms have received separate names, but they are unimportant.

—An edible or esculent root, particularly of such plants as produce a single root, as of a turnip.

—That which resembles a root as a source of nutrition or basis of support; that from which anything proceeds, as if by growth or development; as, the *root* of one's nails, teeth, &c.; particularly, (1.) The first ancestor or progenitor; hence, a stem; as, "Adam, the *root* of all mankind." (*Sir J. Davies*).—(2.) A primary form of speech; a radix; a radical, or whatever, in any language, cannot be reduced to a simpler or more original form, but serves as a common basis to words relating to the same emotion or idea, such as *ar*, *ak*, *frag*, &c. Roots are of two kinds, *roots demonstrative*, and *roots predicative*. The former are properly pronouns; the latter comprise all names whatever may be the form assumed by them, and express invariably some sensible or material idea. Thus the words *mill* and *meal*, *milk*, *mild*, *immortal*, &c., are traced back to a root, *mar* or *mul*, which expressed originally the sound of crushing or grinding. From this root have sprung words which have apparently nothing in common with each other.—(3.) The original occasion or cause of anything; as, "the love of money is the *root* of all evil."—1 *Tim.* vi. 10.

(*Mus.*) The fundamental note of any chord.—*Busby*.

(*Math.*) A number which, multiplied by itself a stated number of times, is equal to a given number; in other words, the number of which a given number is a stated power. Thus the fourth root of 16 is 2, and is denoted by the symbol $\sqrt[4]{16}$. In the most frequently occurring case of square root the index 2 is omitted, and the radical sign $\sqrt{\quad}$ alone used. The more general and algebraic definition of a root, is any value of an unknown quantity which satisfies a given equation. See CUBE ROOT, SQUARE ROOT.

—That which is like a root in position; the bottom or lower part of anything; as, to go to the *root* of a matter.

Aerial roots. (*Bot.*) See AERIAL.—*Primary roots*, the central, first-formed main root, from which branch off the rootlets.—*Root of a nail*. (*Anat.*) That part of a nail which is covered by the skin.—*To take root*, to become firmly implanted or established; as, an idea *takes root* in the mind.

—*v. n.* To fix the root; to enter the earth, as roots.—*To sink deep*; to be firmly fixed, implanted, or established; as, a *rooted* prejudice.

—*v. a.* To plant and fix deep in the earth by the roots;—used chiefly in the participle; as, *rooted* trees.—Hence, to impress deeply, durably, or radically; as, to *root* one's self in the estimation of another.—*To uproot*; to tear from the ground by the roots; hence, to exterminate; to extirpate; to eradicate;—used with a particle, as *up*, *out*, or *away*; as, to *root out* a nuisance, to *root up* a vegetable.

Root, *v. n.* [*A. S. wrotan*; *Dn. wrosten*.] To turn up, as earth with the snout, in the manner of swine.—Hence, by analogy, to favor in a servile manner; to play the lickspittle; to act as a mean sycophant.

—*v. a.* To turn up with the snout; as, hogs *root* everywhere.

Root, in *Indiana*, a township of Adams co. *Pop.* (1897) 1,450.—A village of Allen co., about 110 m. N.E. by N. of Indianapolis.

Root, in *New York*, a prosperous township of Montgomery co.

Root-crop, *n.* (*Agric.*) A crop of esculent or edible roots, particularly of such plants as yield single tubers, as beets, turnips, &c.

Root Creek, in *Wisconsin*, a post-village of Milwaukee co., abt. 11 m. S.W. of Milwaukee.

Root-eater, *n.* An animal that subsists on roots.

Root-edly, *a.* Deeply fixed or implanted; firmly; as, to hate a person *rootedly*.

Root-edness, *n.* State or condition of being rooted; as, *rootedness* of love or enmity.

Root'er, *n.* One who, or that which, roots, or takes up by the roots.

Root-house, *n.* A house constructed of roots; a place for keeping roots.

Rootless, *a.* Destitute of roots; as, a *rootless* tree.

Rootlet, *n.* A little root; a radicle.

Root River, in *Wisconsin*, rises in Waukesha co., and flowing S.E. enters Lake Michigan from Racine co.

Root-stock, *n.* (*Bot.*) Same as RHIZOMA, *q. v.*

Roots-town, in *Ohio*, a post-township of Portage co.

Rooty, *a.* Abounding with roots; as, *rooty* ground.

Roove, *v. a.* To scatter; to shred;—used as provincial English.

Ropal'ic, *a.* [From Gr. *ropalon*, a club.] Club-shaped; bulging out toward the end.

Rope, *n.* [*A. S. rap*; *Dn. reep*; *Irish rap*; *Icel. reip*; *Ger. reif*.] A large, stout, twisted cord of hemp, of not less, generally, than an inch in circumference. A certain proportion of hemp twisted together forms a *yarn*, and a number of yarns form a *strand*. Three strands twisted together form a *rope*. Rope is either *white* or *tarred*, the latter being the best if liable to exposure to wet, the former if not exposed. The strength of tarred rope is, however, only about three-fourths that of white rope, and its loss of strength increases with time. Rope is designated by its circumference, expressed in inches, and is issued in coils of 113 fathoms each; marline and hambroline in *skeins*, spun-yarn in *pounds*; the latter is made from old rope (junk). Government rope is distinguished by a colored thread,—red, blue, or yellow,—which runs through it. Rope used in the artillery service is coiled with the *sun*, *i. e.*, from left to right, in which direction the yarns are twisted so as to avoid *linking*. The strength of white hempen rope may be approximately calculated by the following rule, viz.: square the circumference, and divide by five for the number of tons *dead-weight* that the rope will bear. The strain, however, caused by a sharp jerk upon a rope is very much greater than that of a *dead-weight*. It is stated, in this respect, that the strain upon a rope loaded with a weight of 200 pounds, and suddenly checked after a fall of 8 feet, is nearly equal to that which is caused by a *dead-weight* of 2 tons.—Other materials beside hemp are used in the manufacture of rope, but to a smaller extent.—*Cair-rope*, which comes from Ceylon and the Maldiv Islands, is made from the fibrous husk of the cocoa-nut; *Manila-rope* from the fibres of a species of wild banana. *Wire-rope* both iron and steel, is also employed; on ship-board, particularly, to a considerable extent.—See CABLE, and CORDAGE.

—A row or string, consisting of a series of things connected; as, a *rope* of onions.

—*pl.* [*A. S. rappas*.] The entrails of birds.

Rope of sand, a metaphorical simile, denoting a frail or insecure union or tie, or band readily broken.

—*v. n.* (*imp.* and *pp.* ROPED,) (*rôpt.*) To be formed into rope; to draw out into a filament or thread, by means of any viscous, glutinous, or adhesive quality; as, *roping* icicles.

—*v. a.* To draw by, or as by, a rope.

To rope in, to encircle with a rope, or ropes; as, *to rope in* a ring for pugilistic encounters.—*To draw in* by force, and collectively, as partisans.

Rope-band, *Ro-band*, *n.* (*Naut.*) A small hank of marline or spun-yarn, used on shipboard to secure the head of the sail to the yard or gaff.

Rope-dancer, *n.* [Gr. *skoimobates*; Lat. *funambulus*.] One who walks or dances on a rope placed in an elevated position in the air.

Rope-ladder, *n.* A ladder formed of ropes.

Rope-maker, *n.* A roper; one whose business is to make ropes or cordage.

Rope-mat, *n.* A mat constructed of oakum or cordage.

Rope-pump, *n.* (*Hydraul.*) A machine for raising water by means of an endless rope, which passes through the well or fountain, and brings up the water by the momentum it acquires when put in motion.

Rop'er, *n.* A rope-maker; also, a packer.

Rop'ery, *Rope-walk*, *n.* A long covered walk, or building covering even ground, where ropes are manufactured.

Rope-trick, *n.* A trick that merits the halter; a villainous act.

Rope-yarn, (*-wauk*), *n.* See ROPERY.

Rope-yarn, *n.* Yarn consisting of a single thread, used in the manufacture of ropes.

Rop'ily, *adv.* In a ropy manner; in a viscous manner, so as to be stretched out like a rope.

Rop'iness, *n.* Stringiness, or aptness to draw out in a string or thread, without breaking, as of glutinous substances; viscosity; adhesiveness.

Rop'ish, *a.* Ropy; tending to ropiness.

Rop'y, *a.* Stringy; adhesive; that may be drawn in a thread; viscous; tenacious; glutinous; as, *ropy* molasses, *ropy* lees of wine.

Roque, (*rôk*), (*St.*) a popular saint of the Roman Catholic Church in France, who is especially considered the patron of those sick of the plague. He was born of a noble family in Montpelier, about the end of the 13th century, and having undertaken a pilgrimage to Rome, was surprised upon his way through Italy by an outbreak of the plague at Piacenza, where he devoted himself with generous zeal to the care of the victims of this

pestilence. Falling sick of the plague himself, and abandoned by man, he contrived to drag himself to a neighboring woods, where a dog used to lick his sores; and it pleased God to restore him to health. He returned to France; and after a life of great sanctity, died at Montpellier, probably in 1327.

Roque. (*St.*) a town of Spain, in Andalusia, 8 m. from Gibraltar; pop. 7,000.

Roquelaure. (*rôk'e-lôr.*) n. (Also written ROCKELAY.) [Fr., from the *Duc de Roquelaure*, reign of Louis XIV., who first introduced the garment.] A long, loose cloak, or surtout, made to button from top to bottom in front.

Roques. (*Los.*) (*loc. rôkes*), a group of islands in the Caribbean Sea off the coast of Venezuela; Lat. 11° 57' 40" N., Lon. 67° 40' W.

Roriferous. a. [Lat. *ros*, *roris*, dew, and *ferre*, to bear.] Generating or yielding dew. (r.)

(Med.) Pouring or depositing exhaled fluids like dew upon the surfaces of organs.—Also used in referring to certain vessels.

Rorotonga, an island in the S. Pacific Ocean, one of Cook's Islands group; Lat. 21° 16' 5" S., Lon. 159° 18' W.

Rorqual. (*-kwâl.*) n. (Zool.) See BALENIDÆ.

Rory. a. Dewy. (r.)

Rosa. n. [Lat., Ger. *rhodon*, a rose.] (Bot.) The Rose, a genus of plants, order *Rosaceæ*. The species and varieties are well known for the beauty and fragrance of their flowers. They are shrubs ranging from one foot to six or eight feet in height. The flowers in the wild species are usually single, but in the cultivated varieties semi-double, or double. The colors are red, white, purple, and rarely yellow; in numberless shades and mixtures. Botanists are not agreed as to the number of original species of *R.*; formerly all the cultivated *R.* were supposed to have a common origin, but they are now generally regarded as the descendants of numerous distinct species. *R. gallica*, a native of the south of Europe, is the species from which the greater number of garden varieties have been developed, particularly those with dark-red and purple petals. *R. damascena*, the Damask *R.* (Fig. 232), a native of the Levant, is another prolific species, having given the florist some lovely blush, white, and red roses. The so-called Monthly *R.*, the earliest to flower, are varieties of this species. The British species, *R. spinosissima*, or Scotch-rose, is the source of numerous choice, double *R.*, blush, red, marbled, white, and yellow. *R. centifolia*, the 100-leaved Provence, or Cabbage *R.*, a native of the south of Europe, is known under from 50 to 60 varieties, of which the beautiful Moss-rose is an especial favorite. *R. moschata*, the Musk-rose, a rambling shrub, native of N. Africa, has very fragrant white flowers, with the claws of the petals yellow. *R. indica*, the Chinese-rose, *R. semperflorens*, the ever-blooming rose, and other species from China, have also yielded beautiful varieties under the hand of the florist. The N. America species, and especially those of the U. States, are few. The Climbing-rose, *R. setigera*, is a fine species, sending up shoots

10 to 20 ft. high in a season; from it have originated numerous beautiful double-flowered varieties known in gardens as *Prairie-roses*, of which the Queen of the Prairies and the Baltimore Belle are instances. The Dwarf Wild-rose, *R. lucida* (Fig. 2275), has stems 1 to 2 feet high, and is common in dry soils, or on the borders of swamps, flowering in May and June. Other species are the Swamp-rose, *R. carolina*; the early Wild-rose, *R. blanda*; and the true Sweet-

brier, *R. rubiginosa*.—

In the culture of roses, much use is now made of the Dutch invention of forming standards, by budding on hardy woody stocks of the Dog-rose, *R. canina*, or the Tree-rose, *R. villosa*. The standards are budded at different distances from the ground, according to taste and the purposes in view, and form, after a few years, handsome round heads, which flower freely, and preserve the variety a longer time than in plants raised from cuttings or layers. They are particularly valuable for shrubberies and lawns, where the culture of the root required by dwarf-*R.* could not be given, and, if omitted, would occasion the degeneracy of the variety. New varieties of the *R.* are obtained from seed: but the usual mode of propagation is by layers. All will grow by cuttings, and some, as *R. sempervirens*, freely; but this mode is seldom resorted to. For preserving delicate varieties, the best plan is decidedly that of budding on hardier sorts. Most species of the *R.* in the wild state grow in sandy and rather poor soil, except such as are confined to woods, where the soil is comparatively rich and moist; but all cultivated *R.*, and especially the double-flowered kinds, require a rich loamy soil, inclining to clay rather than sand. The Dog-rose, or brier, *R. canina*, is the commonest European species, being found in hedges and thickets in almost every country of that continent. The fruits, commonly called *hips*, are employed in medicine for their refrigerant and astringent properties. The dried petals of the unexpanded flowers of *R. gallica* constitute the *red-rose leaves* of the shops; they are used medicinally as mild astringents and tonics. Rose-water is prepared by distilling the fresh petals of *R.*

centifolia with water, to which a little spirit of wine has been added. For the mode of obtaining the fragrant volatile oil of *R.*, see ATTAR OF ROSES.

Rosa. (*Mount.*) a peak of the Pennine Alps. See ALPS. **Rosa.** SALVATOR, a celebrated painter, poet, and musician, was b. near Naples, in 1615. After studying under Franciziani, and displaying his genius in many studies of wild landscape, he went to Rome. But his taste was formed more from the study of nature among the wilds of the Apennines, than from the lessons of other artists; and he delighted in delineating scenes of gloomy grandeur and magnificence. He also wrote plays, and performed parts in them; besides which he composed many cantatas. He was liberally patronized by the Grand-duke of Tuscany, and lived some years at Florence. *R.* executed many pictures for churches; but his principal merit lay in the representation of the wild scenery of nature, storms, &c. D. at Rome, 1673.

Rosaceæ. n. (Bot.) The Rose family, an order of plants, alliance *Rosales*. DIAG. Polypetalous flowers, and carpels both free from the calyx, and quite, or nearly so, from each other. They are trees, shrubs, or herbs, with alternate leaves and regular flowers; calyx 4-5-lobed—when 5, the odd lobe is posterior; petals 5 or none; stamens perigynous, distinct; anthers 2-celled; carpels generally superior, or occasionally more or less inferior; seeds 1 or few, exalbuminous; embryo straight. The order embraces abt. 500 species in 30 genera, the most numerous of which is *Rosa*, q. v.

Rosaceous. (*-zâ'shus.*) a. Rose-like; relating or pertaining to roses.

(Bot.) Composed of several petals arranged in a circular manner, as in the rose.

Rosales. n. pl. (Bot.) An alliance of plants, sub-class *Perigynous exogens*; monodichlamydeous flowers, distinct carpels, sutural placentæ, definite seeds, corolla, if present, polypetalous. The alliance includes seven orders: CALYCANTHACEÆ, CHRYSOBALANACEÆ, FABACEÆ, DRUPACEÆ, POMACEÆ, SANGUISORBALEÆ, and ROSACEÆ.

Rosaniline. (*roz-e-an'le-en.*) n. (Chem.) Under this name we propose to give a succinct analysis of the principal dyes derived from ANILINE (q. v.). The first dye ever manufactured from aniline on a large scale was that known as *mauve*, or *aniline-purple*, which is obtained by dissolving aniline in diluted sulphuric acid, and adding solution of dichromate of potash, when the liquid gradually becomes dark-colored, and deposits a black precipitate, which is filtered off, washed, boiled with coal-naphtha to extract a brown substance, and afterward treated with hot alcohol, which dissolves the mauve. The chemical change by which the aniline has been converted into this coloring-matter cannot at present be clearly traced, but the basis of the color has been found to be a substance which has the composition $C_{27}H_{12}N_4$, and has been termed *mauveine*. It forms black, shining crystals, resembling specular iron-ore, which dissolve in alcohol, forming a violet solution, and in acids, with production of the purple color. Mauveine combines with the acids to form salts; its alcoholic solution even absorbs carbonic acid gas. The hydrochlorate of mauveine, $C_{27}H_{12}N_4.HCl$, forms prismatic needles with a green metallic luster.—Very brilliant red dyes are obtained from commercial aniline by the action of dichloride (tetrachloride) of carbon, dichloride of tin, perchloride of iron, chloride of copper, mercuric nitrate, corrosive sublimate, and hydrated arsenic acid. It will be noticed that all these agents are capable of undergoing reduction to a lower state of oxidation or chlorination, indicating that the chemical change concerned in the transformation of aniline into aniline-red is one in which the aniline is acted on by oxygen or chlorine. The easiest method of illustrating the production of aniline-red, on the small scale, consists in heating a few drops of aniline in a test-tube with a fragment of corrosive sublimate (perchloride of mercury), which soon fuses and acts upon the aniline to form an intensely red mass composed of aniline-red, calomel, and various secondary products. By heating this mixture with alcohol, the red dye is dissolved, and a skein of silk or wool dipped into the liquid becomes dyed of a fine red, which is not removed by washing. On the large scale, *magenta* (as aniline-red is commonly termed) is generally prepared by heating aniline to about 320° F. with hydrated arsenic acid, when a dark semi-solid mass is obtained, which becomes hard and brittle on cooling, and exhibits a green metallic reflection. This mass contains, in addition to aniline-red, several secondary products of the action, and arsenious acid. On boiling it with water a splendid red solution is obtained, and a dark resinous or pitchy mass is left. If common salt be added to the red solution as long as it is dissolved, the bulk of the coloring matter is precipitated as a resinous mass, which may be purified from certain adhering matters by drying and boiling with coal-naphtha. The red coloring matter is a combination of arsenic acid with a colorless organic base, which has been called *rosaniline*, and has the composition $C_{20}H_{19}N_3$. If the red solution of arseniate of rosaniline be decomposed with hydrate of lime suspended in water, a pinkish precipitate is obtained, which consists of rosaniline mixed with arseniate of lime, and the solution entirely loses its red color. By treating the precipitate with a small quantity of acetic acid the rosaniline is converted into acetate of rosaniline ($C_{20}H_{19}N_3.HO.C_2H_3O_2$), forming a red solution, which may be filtered off from the undissolved arseniate of lime. On evaporating the solution to a small bulk, and allowing it to stand, the acetate is obtained in crystals, which exhibit the peculiar green metallic luster of the wing of the rose-beetle, characteristic of the salts of rosaniline. The salt is the commonest com-

mercial form of magenta; its coloring power is extraordinary, a very minute particle imparting a red tint to a large volume of water. Silk and wool easily extract the whole of the coloring matter from the aqueous solution, becoming dyed a fast and brilliant crimson; cotton and linen, however, have not so strong an attraction for it, so that if a pattern be worked in silk upon a piece of cambric, which is then immersed in a solution of magenta, and afterward washed in hot water, the color will be washed out of the cambric, but the red silk pattern will be left. If a boiling solution of the acetate of rosaniline be mixed with excess of ammonia, the bulk of the rosaniline will be precipitated; but if the solution be filtered while hot, it deposits colorless needles of rosaniline, which become red when exposed to the air, from absorption of carbonic acid, and formation of the red carbonate of rosaniline. For experimental illustration of the properties of rosaniline, the liquid obtained by boiling a solution of the acetate with a slight excess of lime diffused in water, and filtering while hot, is very well adapted. This solution has a yellow color, and may be preserved in a stoppered bottle without alteration. If air be breathed into it through a tube the liquid becomes red from production of carbonate of rosaniline. Characters painted on paper with a brush dipped in the solution are invisible at first, but gradually acquire a beautiful rose color. When the red solution of hydrochlorate of rosaniline is slightly acidified with hydrochloric acid, and placed in contact with zinc, the solution becomes colorless, the rosaniline acquiring two equivalents of hydrogen, and becoming leucaniline, $C_{20}H_{21}N_3$, the hydrochlorate of which ($C_{20}H_{21}N_3.HCl$) forms a colorless solution. Oxidizing agents reconvert the leucaniline into rosaniline. It has been observed that pure aniline does not yield aniline-red when heated with corrosive sublimate or arsenic acid, it being necessary that it should contain another organic base, *toluidine* (C_7H_9N), which is derived from toluole (C_7H_8) in the same way in which aniline is derived from benzole. Since the benzene obtained from coal-naphtha almost invariably contains toluole, the aniline obtained from it is very seldom free from toluidine. What share the toluidine has in the production of the red color is not understood, but if the aniline be prepared with benzole derived from benzoic acid, and therefore free from toluole, no red is obtained. A mixture of 70 parts of toluidine with 30 of aniline is said to answer best for the preparation of the red and violet coloring matters. Such a mixture would contain two equivalents of toluidine (C_7H_9N) and one equivalent of aniline (C_6H_7N), or $C_{20}H_{25}N_3$, only requiring the removal of H_6 by an oxidizing agent to yield rosaniline $C_{20}H_{19}N_3$.—*Aniline-yellow*, or *chrysianiline* [from Gr. *chrysos*, golden], is found among the secondary products obtained in the preparation of aniline-red. It forms a bright-yellow powder resembling chrome-yellow, and having the composition $C_{20}H_{17}N_3$. It is nearly insoluble in water, but dissolves in alcohol. Chrysianiline has basic properties, and dissolves in acids, forming salts. On dissolving it in diluted hydrochloric acid, and mixing the solution with the concentrated acid, a scarlet crystalline precipitate of hydrochlorate of chrysianiline ($C_{20}H_{17}N_3.HCl$) is obtained, which is insoluble in strong hydrochloric acid, but very soluble in water. A characteristic feature of chrysianiline is the sparing solubility of its nitrate. Even from a dilute solution of the hydrochlorate, nitric acid precipitates the nitrate of chrysianiline ($C_{20}H_{14}N_3.NO_3$) in ruby-red needles.—*Aniline-blue* is produced when a salt of rosaniline (the commercial acetate, for example) is boiled with an excess of aniline, which converts the rosaniline ($C_{20}H_{19}N_3$) into triphenylic rosaniline ($C_{20}H_{16}(C_6H_5)_3N_3$), which may be regarded as having been formed by the introduction of three equivalents of the hypothetical radical *phenyle* (C_6H_5) in place of three equivalents of hydrogen, the latter having been evolved in the form of ammonia— $C_{20}H_{19}N_3.HCl$ (hydrochlorate of rosaniline) + $3[(C_6H_5)_2N]$ (aniline) = $C_{20}H_{16}(C_6H_5)_3N_3.HCl$ (hydrochlorate of triphenylic rosaniline) + $3NH_3$. The hydrochlorate is an ordinary commercial form of aniline-blue; it has a brown color, refuses to dissolve in water, but yields a fine blue solution in alcohol. If it be dissolved in an alcoholic solution of ammonia, the addition of water causes a white precipitate of the hydrated base, triphenylic rosaniline, $C_{20}H_{16}(C_6H_5)_3N_3.2H_2O$, which becomes bluish when washed and dried. Just as rosaniline yields leucaniline when acted on with nascent hydrogen, so triphenylic rosaniline yields triphenylic leucaniline ($C_{28}H_{33}N_3$); this is not basic like leucaniline, but a colorless neutral substance, which is reconverted into blue by oxidizing agents.—*Aniline-violet* appears to be formed in a similar manner. Other compounds have been obtained from aniline, presenting almost every variety of color. A green dye is prepared by the action of a mixture of hydrochloric acid and chloride of potash upon aniline, and under particular conditions a black may be obtained with the same agents. Another green has been made by acting upon magenta with aldehyde. When a solution of acetate of rosaniline is treated with cyanide of potassium it gradually loses its red color, and deposits a white crystalline precipitate of a base which has been termed *hydrocyan-rosaniline*, having the formula $C_{21}H_{20}N_4$, and contains the elements of rosaniline and hydrocyanic acid; but this acid cannot be detected in it by the ordinary tests, leading to the belief that the new base should be regarded as leucaniline ($C_{20}H_{21}N_3$), in which one equivalent of hydrogen is replaced by an equivalent of cyanogen ($C_2H_2O(CN)_2$). The hydrocyan-rosaniline is almost insoluble in water, and sparingly soluble in

Fig. 2275. THE DWARF WILD-ROSE. (*Rosa lucida.*)

boiling alcohol. When precipitated from its salts by adding an alkali, it becomes pink on exposure to sunshine.

Rosario, a town of the Argentine Republic, on the Paraná River, abt. 190 m. N.W. of Buenos Ayres. It was founded in 1730, and has been the seat of the federal government since 1853. Pop. 10,000.

Rosary, (*rō-zā-ry*), *n.* [Lat. *rosarium*, from *rosa*.] A bed of roses, or place where roses grow;—usually written ROSERY, *q. v.*

(Eccl.) In the Roman Catholic Church, a devotional practice which consists in reciting 15 times the *Pater-noster*, or Lord's Prayer, and 150 times the *Ave Maria*, or angelical salutation; but as the computation is made by means of beads, the string of beads used for this purpose has acquired the popular name of a *rosary*. The rosary is thus three times the ordinary *chaplet*. It was instituted in honor of the 15 principal mysteries in the life of Christ and of the Virgin Mary. Some have attributed its institution to St. Dominic; others, among whom is Mosheim, give it a higher antiquity. The *Festival of the Rosary* falls on the first Sunday in October.

Rosas, DON JUAN MANUEL DE, ex-president of the Argentine Republic, b. at Buenos Ayres, 1793. He was descended from an old Spanish family, and having displayed bravery and capacity in some minor appointments, was, in 1831, nominated captain-general, or governor, of Buenos Ayres. In 1835 he became president of the Argentine Confederation; but by seeking to obtain for the province of Buenos Ayres a preponderating influence and advancement, he became embroiled with Brazil, and afterwards with France and England, in consequence of an attack made upon Monte Video. Defeated in 1845, he nevertheless offered an obstinate resistance until 1850, when the states under his rule revolted against his tyrannical measures. Urquiza was nominated president, and in 1851 he totally defeated Rosas, who was compelled to make his escape from the country, and to take refuge in England. D. 1873.

Roscins, (*rōsh'ē-us*), an illustrious Roman actor, who became the most famous performer of his age, and is said to have received about a thousand denarii per day (upwards of \$175) for his acting. Cicero, who speaks in the highest terms of his talents, undertook his defence against Fannius. The Roman state assigned him a considerable pension, which he appears to have deserved as much by his virtues as his abilities.

Roscoe, WILLIAM, an English historian, b. at Liverpool, in 1753. He was brought up to the law, and early evinced a decided taste and talent for literature and the arts, founding, in his native town, an academy of fine arts, and securing the friendship of Sir Joshua Reynolds, Fuseli, and others of the most distinguished artists of that time. His studies, however, gradually settled in the field of Italian history and literature, and, in 1796, the first fruits of such studies appeared in his *Life of Lorenzo de Medici*. In 1799 he retired to his estates, and devoted himself exclusively to literary labor, producing, in 1805, his second great work, *The Life and Pontificate of Leo X.* These works became immediately popular, and gave him a reputation throughout Europe and America. D. 1831.

Roscoe, in *Illinois*, a post-village and township of Winnebago co., abt. 12 m. N. of Rockford.

Roscoe, in *Iowa*, a village and township of Davis co., abt. 12 m. S.E. of Bloomfield.

Roscoe, in *Minnesota*, a post-village and township of Goodhue co., abt. 22 m. N.W. of Rochester.

Roscoe, in *Missouri*, a post-village and township of St. Clair co., 130 m. W. by S. of Jefferson City.

Roscoe, in *Ohio*, a post-village of Coshocton co., abt. 75 m. N.E. of Columbus.

Roscoff, (*rōs'kōf*), a seaport-town of France, dept. of Finistère, 13 m. N.W. of Morlaix; pop. 1,400.

Roscommon, an inland co. of Ireland, prov. of Connaught, having N. Leitrim and Sligo, E. and S.E. Longford, Westmeath, and King's co., from which it is separated by the Shannon, S.W. and W. Galway; area, 969 sq. m. The surface is generally flat and open, in portions covered with extensive bogs. The soil is generally light, but fertile, affording excellent pasturage. *Rivers*. The Shannon and Suck rivers. *Prod.* Oats and potatoes. *Manuf.* Linen and woollen stuffs. *Chief towns*. Roscommon, the cap., situate 78 m. N.W. of Dublin, pop. 3,300, Elphin. Boyle, Castlearea, Strokéstown, Ballinasloe, and Athlone.

Rose, (*rōz*), *n.* [A. S., Ger., Dan., and Fr.] (Bot.) See ROSA, and ROSACEÆ; and ROSE, in SUPPLEMENT.

—A rosette; a knot of ribbon in the form of a rose, used as an ornamental tie to a shoe.—A perforated nozzle, as of a spout, pipe, &c., for allowing water to issue forth in a sprinkling of small jets; a rose-head; as, the rose of a can or pot for watering flower-beds in gardens.—The color or hue of a rose; rose-red; pink.

(Naut.) The card of the mariner's compass.

(Arch.) The sculptured representation of a rose found in the centre of each face of the abacus in the Corinthian capital. Roses are also used to decorate the caissons in the soffits of coronas and ceilings.

(NOTE. *Rose* is occasionally employed in the construction of certain self-explaining compounds; as, *rose-lipped*, *rose-red*, *rose-dinted*, and the like.)

Rose of Jericho. (Bot.) *Anastatica hierochuntica*. A plant of the order *Brassicaceæ*, which grows in the sandy deserts of Arabia, Syria, and other parts of the East. It is a small, bushy, herbaceous plant, seldom more than six inches high, with small white flowers; and after it has flowered, the leaves fall off, and the branches become incurved towards the centre, so that the plant assumes an almost globular form, and in this state it is often blown about by the wind in the desert.

When it happens to be blown into water, the branches expand again, and the pods open and let out the seeds. Numerous superstitions are connected with this plant, which is called *Rosa Maritima*, or *Rose of the Virgin*. If taken up before it is quite withered, the plant retains its hygrometric property, of contracting in drought and expanding in moisture, for years.

Under the rose. [Lat. *sub rosa*.] Privately; in secret; in a manner to prevent disclosure; as, to make love to a girl *under the rose*;—a figurative expression, derived from the practice among the ancients of hanging up a rose at banquets as a symbol of secrecy, that nothing spoken under it should be divulged elsewhere.

Wars of the Roses, or *Wars of the Red and White Roses*. (Eng. Hist.) The well known feuds, or civil wars, that prevailed in the latter part of the 15th century between the rival houses of York and Lancaster, and so called from the badges adopted by their respective partisans; the adherents of the house of York exhibiting the *white*, and those of Lancaster the *red* rose, as their distinguishing emblem. These wars originated with the descendants of Edward III., and, after extending over a period of more than 80 years of bloodshed and devastation, were finally put an end to by the victory of Henry Tudor, Earl of Richmond (afterwards Henry VII.), over Richard III., at Bosworth Field, in 1485, the victor uniting in his own person the title of Lancaster through his mother, and that of York by his marriage with a daughter of Edward IV. Since that period the *rose* has been the national emblem of England, as the *thistle* and *shamrock* are respectively the symbols of Scotland and Ireland.

Rose, (*rōz*), *imp. and pp. of RISE*, *q. v.*

Rose, in *Illinois*, a township of Shelby co.

Rose, in *Michigan*, a post-village and township of Oakland co., abt. 18 m. N.W. of Pontiac.

Rose, in *Minnesota*, a township of Ramsey county.

Rose, in *New York*, a post-village and township of Wayne co., abt. 8 m. N.E. of Lyons.

Rose, in *Ohio*, a township of Carroll co.

Rose, in *Pennsylvania*, a township of Jefferson county.

Rose, in *Wisconsin*, a township of Waushara county.

Roseal, *a.* [Lat. *roseus*.] Like a rose in smell or color.

Roseate, (*rō-zē-āt*), *a.* [Fr. *rosat*; It. *rosato*, from Lat. *rosatus*.] Rosy; full of roses; as, *roseate* bowers.—Of a rose-color;—hence, blooming; as, *roseate* beauty, a *roseate* cheek.

Rosebay, *n.* (Bot.) The popular name of the genus *Rhododendron*.

Roseboom, or ROSEBOON, in *New York*, a post-township of Otsego co.

Rose-bug, ROSE-fly, *n.* (Zool.) The ROSE-CHAFER, *q. v.*

Roseburg, in *Indiana*, a village of Union co., abt. 19 m. S. by W. of Richmond.

Roseburg, in *Oregon*, a city, cap. of Douglas co., about 100 m. S. of Salem. It is the principal depot for the productions of the Umpqua valley, and is thriving rapidly. Pop. (1897) 2,350.

Roseburg, in *Pennsylvania*, a post-village of Perry co., abt. 38 m. W. of Harrisburg.

Rosedale, in *Indiana*, a post-town of Parke co., about 13 m. N.N.E. of Terre Haute.

Rose-bush, *n.* The bush, shrub, or plant whereon roses grow.

Rose-campion, *n.* (Bot.) A name common to several species of the genera *Agrastemma*.

Rose-chaffer, *n.* (Zool.) The common name of the genus *Macrodactylus*. The common American Rose-chaffer, *M. subspinosus*, is seven-twentieths of an inch in length, and is covered with very short and close ashen down; legs pale-red. It is one of the greatest scourges with which the gardens and nurseries in the states are afflicted, feeding indiscriminately on leaves, flowers, and fruits of the vine, cherry, plum, garden vegetables, and corn.

Rose-color, *n.* The hue or color of a rose; rose-red; pink.—Hence, a beautiful tint, or attractive appearance, as of a rose; imagined beauty, promise, or allure-ment; as, to see a thing in *rose-color*.

Rose-colored, (*-kūl-līz*), *a.* Exhibiting the color of a rose; as, *rose-colored* silk.—Brilliantly beautiful or resplendent in aspect;—hence, extravagant; exaggerated fine, pleasing, promising, or alluring; as, *rose-colored* expectations.

Rosecrans, WILLIAM STARK, major-general in the U. States army, b. in Kingston, Delaware co., Ohio, 1819, graduated at West Point Academy in 1842; joined the U. S. army; was chosen Acting Assistant Professor of Engineering at West Point, which post he held for several years. In April, 1854, he was obliged to resign, through ill-health, an appointment he held in the Navy-yard at Washington, and commenced practice as a civil engineer at Cincinnati. In June, 1855, he was chosen superintendent of the Cannel Coal Company, and president of the Coal River Navigation Company, but resigned both appointments in 1857, and commenced the manufacture of paraffin oil and prussiate of potash, in which he was engaged when the Civil War broke out, and in April, 1861, he was chosen by Gen. McClellan as his aid and chief engineer, with the rank of major. In June, he was made colonel of the 23d Ohio Volunteers, and contributed materially to the victory gained by General McClellan at Rich Mountain, Virginia, July 11, for which service he was appointed Brig.-Gen. of the U. S. army; assumed command of the Army of Western Virginia July 24, and defeated Gen. Floyd at Gauley, Nov. 20. In March, 1862, he was promoted to the rank of Major-Gen.; commanded

at the battles of luka, Sep. 19; Corinth, Oct. 4 and 5; Murfreesboro', Dec. 31; and received the thanks of Congress for his conduct on that occasion. In Jan., 1863, his department was enlarged, and his force divided into four army corps, under Generals McCook, Thomas, Crittenden, and Granger. As an engineer, R. ranked very high, and his construction of an intrenched camp at Murfreesboro' was pronounced a model of engineering and military artistic skill. He resigned his commission in 1867. He was U. S. minister to Mexico (1868-69); member of Congress from California (1881-85); register of the U. S. Treasury (1885-93). Died March 11, 1898.

Rose-cut, *a.* Cut with a smooth, round surface, in contradistinction from those presenting a number of facets;—said of certain gems; as, a *rose-cut* ruby.

Rose-diamond, *n.* A diamond nearly hemi-spherical in form, one surface of which is flat, and the other cut into 24 triangular planes in two ranges.

Rose-drop, *n.* A rose-lozenge, or confection of sugar, flavored with an essence resembling that of roses.—An ear-ring.

(Med.) A reddish eruption, or grog-blossom, upon the nose, occasioned by the frequent inhibition of ardent liquors.

Rose-engine, *n.* (Mech.) An appendage to the turning lathe, by which a surface of wood or metal, as a watch-case, is engraved with a variety of curved lines. The assemblage of these lines presenting some resemblance to a full-blown rose, is called by the French *rosette*; and hence the apparatus by which the ornamentation is produced is termed a *rose-engine*.

Rosefield, in *Illinois*, a township of Peoria county.

Rose-fish, *n.* Another name for a Norway haddock.

Rose-fly, *n.* (Zool.) See ROSE-BUG.

Rose-gall, *n.* An asperity found on the Dog-rose.

Rose Grove, in *Iowa*, a twp. of Hamilton co.

Rose-head, *n.* A perforated nozzle. See ROSE.

Rose Hill, in *Illinois*, a post-village of Jasper co., abt. 7 m. N. by W. of Newton.

Rose Hill, in *Iowa*, a post-town of Mahaska co., about 10 m. E. by N. of Oskaloosa.

Rose Island, one of the Bahama group, W. Indies, lying E. of New Providence.

Rose-knot, (*-nōt*), *n.* A rosette.

Rose-lake, **Rose-madder**, *n.* (Paint.) A rich pigment obtained from lac and madder precipitated on an earthy basis.

Rose-lite, *n.* [Fr., from *Rose*, a German mineralogist, and Gr. *lithos*, stone.] (Min.) A deep rose-red variety of Cobalt Bloom, containing lime.

Rose-mallow, *n.* (Bot.) A proper name of the genera *Hibiscus*.

Rose-mary, *n.* (Bot.) See ROSMARINUS.

Rose-mond, or ROSAMOND, in *Illinois*, a post-village of Christian co., abt. 5 m. W.S.W. of Pana.

Rose-mouut, in *Minnesota*, a post-village and township of Dakota co., abt. 15 m. S. of St. Paul.

Rosenan, a town in N. Hungary, on the Sajo, 104 m. N.E. of Pesth. *Manuf.* Woollens, stone-ware, leather, and paper; and iron, copper, antimony, and lead mines, are in operation. Pop. 9,000.

Rosendale, in *New York*, a post-village and twp. of Ulster co., abt. 60 m. S. by W. of Albany.

Rosendale, in *Wisconsin*, a post-village and township of Fond du Lac county, about 77 miles north-west of Milwaukee.

Roseneath, in *N. Carolina*, a village of Halifax co., abt. 112 m. N.E. of Raleigh.

Rose-noble, *n.* (Numis.) An English gold coin of the value of \$1.60, formerly current, and first coined in the reign of Edward III.

Rosecobaltin, *n.* (Chem.) See COBALT.

Rose-ola, ROSE-RASH, *n.* [N. Lat. dim. of *rosa*, a rose; Fr. *roséole*.] (Med.) A rash, so-called from its rosy color. It is frequently symptomatic of different febrile complaints, of disordered stomach and bowels, of teething, and of any constitutional irritation. Acidulated drinks, mild aperients, and sudorifics, and strict dietary attention, with caution against the application of, or exposure to, cold, so as to cause a retrocession, are the principal points to be attended to.

Rose-pink, *n.* (Paint.) A coarse kind of lake, produced by the dyeing of chalk or whiting with a decoction of Brazil-wood, &c. It is a pigment much used by paper-stainers, and in the commoner kinds of distemper paintings, &c., but is too perishable to merit the attention of artists.

—*a.* Having a pink color resembling that of the rose, or that of the pigment termed *rose-pink*.—Inclined to look at everything through a roseate medium;—hence, sentimentally sanguine; as, *rose-pink* enthusiasm.

Rosery, (*rōz'e-ry*), *n.* A rose-garden; a nursery or other place set apart for the cultivation of roses;—sometimes, but improperly, written *rosary*.

Roset, (*rō-zet*), *n.* [Fr. *rosette*, from Lat. *rosa*.] A red color in use among painters.

Rosetta, or ROSETTA. [Arab. *Rashid*.] A seaport-town of Egypt, on the W. branch of the Nile, near its embouchure, 36 m. E.N.E. of Alexandria; Lat. 31° 24' 34" N., Lon. 30° 28' 35" E.; pop. 4,000.

Rosetta-stone, *n.* See STONE.

Rosetta-wood, *n.* A good-sized East Indian wood, imported in logs, 9 to 14 inches in diameter; it is handsomely veined, and its general color is a lively red-orange. The wood is close, hard, and very beautiful when first cut, but soon becomes darker by exposure to the air.

Rosette, (*rō-zet'*), *n.* [Fr.] A red color; roset.—An imitated form of a rose made of ribbons, and used as an ornament or badge; as, a white *rosette*;—also, a shoe ornament.

(Arch.) A rose-shaped ornament. See *ROSE*.

(Mech.) The French term for *ROSE-ENGINE*, *q. v.*

Rosette, in Iowa, a post-village of Cedar co., abt. 32 m. N.W. of Davenport.

Rose-water, *n.* Water tintured with roses by the process of distillation.

—*a.* Possessing the odor of rose-water; — hence, squeamishly nice; affectedly delicate; excessively maudlin or prudish; as, *rose-water sentimentalism*.

Roseville, in Illinois, a post-township of Warren co.

Roseville, in Indiana, a post-village of Parke co., abt. 70 m. W. of Indianapolis.

Rose-window, *n.* (Arch.) A circular window with a series of mullions diverging from the centre to join the cusps around, forming divisions with a general resemblance to the leaves of an open rose.

Rosewood, *n.* The wood of various species of the genus *Triptolomea*, growing in the Brazils, the Canary Islands, the East Indies, and Africa. It is exported in very large slabs, or the halves of trees, that average 18 inches wide. The colors of rosewood range from light-hazel to deep-purple, or nearly black; the tints are sometimes abruptly contrasted, at other times striped or nearly uniform. The wood is very heavy, and most largely used for cabinet furniture. The true *R.* has been lately attributed to the gen. *Dalbergia* and *Macharinnom*.

Rosheim, (*ros'hime*), a town of France, dept. of Bas-Rhin, 14 m. from Strasburg; pop. 4,000.

Rosiclare, (*ro-ze-klaire*), in Illinois, a post-village of Hardin co., abt. 22 m. S.W. of Shawneetown.

Rosicrucians, *n. pl.* (*Philos.*) A sect of visionary speculators in Germany, whose existence became first known to the public in the 17th century. In 1614, a work appeared at Cassel containing an account of Christian Rosenkreuz (or Rosy Cross), a German noble of the 14th century. After a long sojourn in the East, he returned to Germany and founded a secret society of a few adepts who lived together in a building called Sancti Spiritus, where he died at the age of 106. The society renewed itself from time to time by the admission of new members in silence and obscurity, according to the last injunction of its founder. The Rosicrucians have not been heard of as a separate order since a little after the middle of the 18th century. The *R.* appear to have pretended to know all sciences, and chiefly medicine, of which they professed themselves the restorers. They also asserted that they were masters of important secrets, and among others, that of the philosopher's stone, all of which they affirmed that they had received by tradition from the ancient Egyptians, Chaldeans, the Magi, and Gymnosophists. They have been distinguished by several names, accommodated to the branches of their doctrines. As they pretended, for instance, to protract the period of restored youth, they were called *Immortales*; as they pretended to know all things, they were called *Illuminati*; and because they have made no appearance for some time, they have been called the *Invisible Brothers*. Their society is frequently signed by the letters F. R. C., which by some are translated *Fratres Roris Cocci* (Brothers of Concocted Dew), because it was pretended that the matter of the philosopher's stone is dew concocted or exalted. Others have asserted that the name is derived from the arms of the reformer Luther, which were a cross placed upon a rose. Some writers on the subject maintain that the *R.* are but a branch or affiliation of the Freemasons.

Rosied, (*roz'ed*), *a.* Adorned with roses, or denoting or exhibiting the color of roses.

Rosin, (*roz'in*), *n.* A different orthography of *RESIN*, *q. v.* — *v. a.* To rub or cover over with rosin; as, to *rosin* the bow of a violin.

Rosiness, (*roz'i-ness*), *n.* Quality of being rosy, or of resembling the color of the rose; as, *rosiness* of the cheeks.

Rosin-oil, (*roz'in-oil*), *n.* An oil obtained from the resin of the pine-tree.

Rosiny, (*roz'in-y*), *a.* Resiny; like rosin, or partaking of its qualities; as, *rosiny* sand.

Rosland, (*roz'-*), *n.* [*W. rlos*, a moor.] Moor-land; a heathery tract.

Roslin, in Wisconsin, a post-village of Marquette co., abt. 97 m. N.W. of Milwaukee.

Roslyn, formerly HEMPSTEAD HARBOR, in New York, a post-village of Queen's co., abt. 23 m. E.N.E. of Brooklyn.

Rosmarinus, *n.* [*Lat. ros*, dew, *marinus*, bordering on the sea.] The Rosemary, a gen. of the order

Lamiaceae. *R. officinalis*, the common Rosemary, is a well-known herb, formerly much used in domestic medicine as a remedy for the headache. It was supposed to have the power of strengthening the memory; hence the allusion of the poet: "There's rosemary, that's for remembrance." The flowery tops contain a volatile oil, which imparts to them stimulant and carminative properties. These are, however, seldom used medicinally at the present time, but are largely employed in perfumery. The flavor of Narbonne honey is said to be due to the bees feeding on the flowers of this plant. The dried leaves are occasionally used by country folks as a substitute for China tea. *R.* is so called because, growing on the shore, it is said to appear early in the morning like dew.

Ross, *n.* The indurate, scaly substance found on the bark of trees. — The rubbish of plants, vegetables, &c.

Ross, Sir JOHN, a distinguished English navigator, b. at Baltharroch, in Wigtonshire, 1777. Entering the navy when a mere boy, he was promoted to a lieutenantcy in 1801, and during the war with France earned great distinction in all parts of the world. In 1818 he was associated with Sir Edward Parry, in the expedition to Baffin's Bay, and on his return published his *Voyage of Discovery in Search of a North-west Passage*. In 1829, aided by the munificence of Mr., afterwards Sir Felix, Booth, he fitted out a steam-vessel with the view of prosecuting researches in the same direction, and after spending four winters in the Arctic regions, during which he made very valuable discoveries, he returned to England in 1833, and published his *Narrative of a Second Voyage*. In 1839 he was appointed British consul at Stockholm, which office he held till 1845. In 1850 he made a last expedition to the Arctic Ocean in search of Sir John Franklin, and returned in 1851. Besides the works above specified, Sir John Ross was the author of *Letters to Young Naval Officers*; a *Treatise on Navigation by Steam*, &c., &c. D. 1856.

Ross, a co. of Scotland, forms a marit. dist. of great extent, having N. the co. of Sutherland, E. the friths of Dornoch and Moray, S. Inverness, and W. the Atlantic; area, 2,953 sq. m. The surface is irregular and mountainous, and the coast is indented by numerous lakes and friths. On the E. coast the soil is fertile. *Rivers*. Carron, Orrin, Beaul, and Oich rivers. *Lakes*. Loch Marce, Loch Fannich, Loch Monar, and Loch Lichart. *Prod.* Wheat and timber. Cattle-raising is the principal occupation. *Chief towns*. Dingwall, the cap., Fort-rose, and Tain.

Ross, a town of England, co. of Hereford, on the Wye, 15 m. S.W. of Gloucester; pop. 4,200.

Ross, a seaport-town of Ireland, co. of Cork, on the bay of Ross, 25 m. S.W. of Cork; pop. 1,200.

Ross, in Illinois, a township of Edgar co.

—A township of Vermilion co.

Ross, in Indiana, a township of Clinton co.

—A post-village and township of Lake co., abt. 37 m. E. of Joliet.

Ross, in Iowa, a township of Fremont co. — A township of Taylor co.

Ross, in Michigan, a township of Kalamazoo co.

Ross, in Ohio, a S. co.; area, about 658 sq. m. *Rivers*. Scioto River, and Paint Creek. *Surface*, agreeably diversified; *soil*, extremely fertile, producing abundant crops of all the fruits and cereals of that latitude, especially corn and wheat. *Cap.* Chillicothe. Pop. (1897) 41,540.

—A post-township of Butler co.

—A township of Greene co.

—A township of Jefferson co.

Ross, in Pennsylvania, a post-township of Allegheny county.

—A township of Luzerne county.

—A township of Monroe county.

Rossano, (*ros-san'o*), a town of Italy, prov. of Calabria-Citeriore, near the Gulf of Taranto, 17 m. W.N.W. of Cariati; pop. 7,500.

Rossbach, a town of Prussian Saxony, 16 m. S. of Halle, celebrated for the victory of Frederick the Great over the French and Imperialists in 1757.

Rossburg, in Indiana, a post-village of Decatur co., abt. 55 m. S.E. of Indianapolis.

Rosset, *n.* [*From rosland*.] A provincial Anglicism for light land.

Ross Grove, in Illinois, a post-village of De Kalb co., abt. 70 m. W. by S. of Chicago.

Rossi, PELLEGRINO, an Italian publicist and patriot, b. at Carrara, 1787. In 1812, being 25 years of age, he was appointed Professor of Law in the University of Bologna. In 1815, King Joachim Murat having proclaimed Italian independence, *R.* sided with him. On the fall of Murat, *R.* was exiled. He took refuge at Geneva, and afterwards, 1833, in France, where Louis-Philippe appointed him Professor of Political Economy, naturalized him, and made him a member of the Chamber of Peers. Protected by Guizot, the prime-minister, *R.* was sent to Rome as ambassador in 1845. There he witnessed all the events of 1848, and took part in them, having again become an Italian subject after the fall of Louis-Philippe. When called to the ministry by Pius IX., *R.* wished to oppose the party favorable to the house of Savoy, and devised an alliance with the King of Naples, which had for its object a confederation of Italian princes, with the Pope as their president. This roused the hatred of the Romans, and *R.* was stabbed by an unknown hand on the 15th of November, 1848. His two principal works are the *Droit Penal*, published during his stay in Geneva, and his *Cours d'Economie Politique* (1840).

Rossie, in New York, a post-village and township of St. Lawrence county, about 25 miles south-south-west of Ogdensburg.

Rossiena, (*ros-se-ai'na*), a town of Russia, govt. of Wilna, on the Duhissa, 100 m. W.N.W. of Wilna; pop. 6,000.

Rossignol, (*ros-seen'yol*), *n.* [*Fr.*] The French term for the NIGETINGALE, *q. v.*

Rossignol, (*ros-seen-yol'*), a lake of Nova Scotia, in Queen's co., abt. 30 m. S.S.E. of Annapolis. It is abt. 11 m. in length, and gives rise to the Mersey river.

Rossini, GIOACCHINO, (*ros-sé'ne*), one of the most popular, and, perhaps, the greatest Italian dramatic composers of this cent., was b. at Pesaro, 1792, where his parents happened to be staying with a strolling operatic company to which they belonged. He began his career by playing second horn to his father when he was only ten years old. Having a fine voice, his father had him taught singing by an eminent professor, and he took the treble parts as a chorister in the Bologna churches, and soon became an excellent singer and accompanist. The breaking of his voice put an end to his occupation as a chorister, and at the age of fifteen he was admitted into the Lyceum at Bologna, and received lessons in counterpoint from Padre Mattei. But his ardent nature turned restive under the strict discipline and dry studies of Mattei, and, conscious of the possession of genius, he set to work assiduously to educate himself — studying intently the best models, Italian and German. He produced some light operatic pieces, the only one of which juvenile efforts that has lived is the *Inganno Felice*, which came out in 1812. *Tancredi*, brought out at Venice in 1813, when he was scarcely more than twenty years of age, all at once made his name famous. Thus encouraged, *R.* produced a number of other works in quick succession, generally inferior to the work which brought him into popularity. In 1816 he produced his world-famous *Barber of Seville* at Rome. Those of his other works, which still keep the stage are, *Otello*, *Mosé in Egitto*, *Semiramide*, *La Cenerentola*, *La Gazza Ladra*, *La Donna del Lago*, *Le Comte Ory*, and *Guillaume Tell*. This last, the greatest and most original of his works, was written at the age of 37, and with it closed the career of Rossini as a composer. "An additional success would add nothing to my fame," he said; "a failure would injure it." After holding the post of manager of the Italian Opera at Paris during some time, he, in 1836, returned to his native country, where he continued to reside till 1856, when he repaired to Paris once more. He seemed, however, to have totally forgotten the enthusiasm of his younger days for music; even so far as never to visit the theatres. His only important work since the production of *Guillaume Tell* is his well-known *Stabat Mater*. D. at his villa in Passy, near Paris, 1870.

Ross, (*New*), a seaport-town of Ireland, co. of Wexford, on a large navigable stream formed by the Nore and Barrow, 12 m. N. of Waterford; pop. 9,500.

Rosston, in Pennsylvania, a post-village of Armstrong co., abt. 4 m. S. of Kittanning.

Rossville, in Illinois, a post-village of Vermilion co., abt. 20 m. N. of Danville.

Rossville, in Indiana, a post-village and township of Clinton co., abt. 53 m. N.W. of Indianapolis.

Rossville, in Iowa, a post-village of Allamakee co., abt. 13 m. S.W. of Lansing.

Rossville, in New York, a post-village of Richmond co., abt. 20 m. S.W. of New York city.

Rossville, in Pennsylvania, a post-village of York co., abt. 14 m. N.W. of York.

Rosswein, (*ross'vine*), a town of Saxony, on the Mulde, 5 miles W.N.W. of Nossen, and 24 m. W. of Dresden. *Manuf.* Woollens. Pop. 6,000.

Rost, *Roust*, *n.* A strong current running through a narrow channel.

Rostel, **Rostellum**, *n.* [*Lat. rostellum*, dim. of *rostrum*, a beak; *Fr. rostelle*.] (*Bot.*) An elevated and rather thickened portion of the stigma of orchidaceous plants, from which the peculiar gland separates, by which the pollen masses of some species of that order are eventually laid together.

(*Zool.*) The name of the mouth of the louse and similar apterous insects, in which the ordinary trophi are replaced by an exarticulate retractile tube, from which a retractile siphuncle is protruded. The uncinate proboscis of the tape-worms (*tania*) is also so called.

Rostellate, *a.* [*From Lat. rostellum* — *rostrum*, a beak.] (*Bot.*) Denoting any part terminating in a hard, long, straight point, resembling a beak, as the pod of a radish, the capsule of many mosses, &c.

Rostelliform, *a.* Beak-shaped.

Roster, *n.* [*Corrupted from register*.] (*Mil.*) A term implying the seniority list, from which officers are detailed for duty in regular succession; — hence, occasionally, a list showing the turn or rotation of service or duty, as in the case of military officers and others who relieve or succeed each other.

Rostock, a seaport-town of N. Germany, Grand-duchy of Mecklenberg-Schwerin, on the Warnow, 9 m. from its mouth in the Baltic, and 40 m. N.E. of Schwerin. *Manuf.* Canvas, linen, ships' anchors, soap, and vinegar. Pop. 26,396.

Rostoff, a town of European Russia, govt. of Ekaterinoslavl, on the Don, 22 m. from its mouth in the Sea of Azoff. It is the principal entrepôt of the trade of the vast countries traversed by the Don. Pop. 9,598.

Rostov, a town of European Russia, government of Jaroslavl, on Lake Nero, 37 m. S.S.W. of Jaroslavl; pop. 11,000.

Rostrail, *a.* [*Lat. rostralis*, from *rostrum*, a beak, a ship's prow.] Resembling, or pertaining to, a rostrum, or the beak of a ship. — Belonging to the beak.

Rostrated, *a.* [*Lat. rostratus*.] Having, or ornamented with, beaks; as, a *rostrated* galley.

Fig. 2276. — ROSEMARY.

(*Bot.* and *Conch.*) Beaked; having a projection resembling a bird's beak.

Rostra'ver, in *Pennsylvania*, a post-township of Westmoreland co.

Ros'triform, *a.* [*Lat. rostrum*, and *forma*, form.] Rostelliform; beak-shaped.

Ros'trum, *n.* [*Lat.* from *rodo*, to gnaw.] The beak or bill of a bird.—The beak, prow, or head of a ship or galley.

(*Rom. Antiq.*) A name applied metaphorically to the pulpit, or orator's seat, in the Roman Forum, which was decorated with the paws of vessels taken from the enemy;—hence, a platform or elevated stand from which a speaker addresses his audience.

"Myself shall mount the rostrum in his favor."—*Addison*.

Rosulate, (*rō'zu-lāt*), *a.* (*Bot.*) Denoting those collections of petals or leaves which overlap each other after the manner of rose-blossoms.

Ros'well, in *Georgia*, a post-village of Cobb co., abt. 13 m. N.E. of Marietta.

Rosy, (*rō'zy*), *a.* (*comp. ROSIER*; *superl. ROSIEST*.) Resembling a rose; blooming; roseate; blushing; charming—also, exhibiting the freshness of a rose; as, a *rosy*-cheeked lass.

"Celestial rosy red, Love's proper hue."—*Milton*.

(*NOTE.* *Rosy* is frequently employed, in composition, in the formation of self-explaining compounds; as, *rosy*-cheeked, *rosy*-lipped, *rosy*-colored, *rosy*-fingered, *rosy*-tinted, &c.)

Rot, *v. n.* [*A. S. rotian*; *Du. rotten*.] To putrify; to grow corrupt; to decay; to spoil; to lose the natural cohesion and organization of parts, as animal or vegetable substances; to be decomposed and resolved into its original component parts by the natural process, or by the gradual action of heat and air.

"And then from hour to hour we rot and rot."—*Shaks.*

—*v. a.* To make putrid; to cause to putrify; to bring to corruption; to cause to be wholly or partly decomposed by the natural operation of heat and air.—To macerate flax by retting.—See *RET*.

—*n.* Putrefaction; putrid decay; process of rotting;—specifically, (1) a fatal distemper incident to sheep, usually supposed to be owing to wet seasons and moist pastures. The signs of rot are sufficiently familiar to persons about sheep. They first lose flesh; and what remains is flabby and pale. They also lose their vivacity. The naked parts, as the lips, tongue, &c., look livid, and are alternately hot and cold in the advanced stages. The eyes look sad and glassy; the breath is fetid; the urine small in quantity, and high-colored; and the bowels are at one time costive, and at another affected with a black flux. The wool will come off on the slightest pull in almost all cases. The disease has different degrees of rapidity, but is always fatal at last. This difference in degree occasions some rotted sheep to thrive well under its progress to a certain stage, when they suddenly fall off, and the disease pursues the same course as with the rest.—(2.) A form of decay which affects timber. See *DRY-ROT*.—(3.) A disease incidental to the potato, attended with decay of the tubers, the causes of, and remedy for, which, are as yet undetermined;—otherwise known as the *potato-disease*.

Ro'ta, *n.* [*Lat.*, a wheel.] (*Ecccl.*) An ecclesiastical court at Rome, consisting of 12 prelates, who take cognizance of all suits by appeal, and of all matters beneficiary and patrimonial.

(*Eng. Hist.*) A political coterie, which, in the reign of Charles I., conceived the idea of an equal government by rotation.

Ro'ta, a seaport-town of Spain, prov. of Cadiz, 6 m. N.N.W. of Cadiz; *pop.* 8,000.

Ro'tacism, (*-sizm*), *n.* A vicious articulation of the letter *r*, popularly known as the Northumbrian *bur*, or *burr*.—See *BUR*.

Ro'tal, *a.* Having reference to rotary motion. (*R.*)

Ro'tary, *a.* [From *Lat. rota*, a wheel.] Rotatory; turning, as a wheel on its axis; as, *rotary* motion.

Rotary motion. (*Mech.*) The rotation or motion of any body round an axis or centre. The velocity of this motion of bodies is proportional to their distance from such centre.

Ro'tate, *a.* [*Lat. rotatus*, from *rotare*—*rota*, a wheel.] (*Bot.*) Wheel-shaped; as, a *rotate* corolla.

—*v. n.* [*Lat. roto, rotatus*—*rota*, a wheel=Sans. *ratha*, a chariot.] To revolve or move round a centre or axis, as a wheel.—To quit an official position, and be succeeded by another, or by others.

—*v. a.* To cause to revolve, as round an axis.

Ro'tated, *a.* [*Lat. rotatus*.] Turned round, as a wheel; rotate.

Ro'tate-plane, **Rota'to-plane**, *n.* (*Bot.*) Wheel-shaped and flat, without a tube; as, a *rotate-plane* corolla.—*Lee*.

Rotation, (*-tū'shun*), *n.* [*Fr.* from *Lat. rotatio*—*rota*.] Act of turning, as a wheel or solid body, on its centre or axis; as, the *rotation* of the earth on its axis.

—Vicissitude of succession: any return or succession in a sequence; as, political offices are vacated and refilled by *rotation*.

(*Geom.*) The circumvolution of a plane surface round a fixed line, called the *axis of rotation*, by which certain regular solids are generated.

Rotation of crops. (*Agric.*) In agricultural operations, it is found that the same annual crop cannot be advantageously cultivated on the same soil (except, indeed, it be virgin soil,) for more than one or two years; and hence, one kind of crop is made to succeed another. The number of cultivated crops being limited, when the whole course has been gone through once, the series is again repeated;—hence, the use of the term *rotation*. As the same kind of crops are not, however, always

grown in regular succession, a change being frequently made according to general principles, the term used in that case is *succession of crops*. The principle on which the succession of crops is founded is, that every plant or seed extracts nourishment from the soil, and leaves it deficient of that which proves untriforous to another species. As a general principle of guidance in determining the succession of crops, it is considered advantageous that a crop cultivated for its leaves or roots should succeed one cultivated for its ripened seeds; that the cereal grasses should be succeeded by leguminous plants; tap-rooted plants, or those bearing tubers, by fibrous-rooted plants; plants which form a compact covering on the surface, such as grain and legumes sown broadcast, by plants which only partially cover the surface, such as crops grown in rows sufficiently wide to admit of cultivation between; and plants which may be said, by their abundant leaf, to feed the soil with what they take from the air, by plants which are almost wholly dependent upon the stores of food for them contained in the soil and sub-soil. It may also be adopted as a rule, that where land is to be subjected to a crop of the same plants for a number of years, as in permanent pasture, the plants composing the crop should be of several different kinds, seeking a different kind of aliment. Hence, the propriety of sowing clover, rib-wort, and other tap-rooted, dicotyledonous herbage-plants among pasture-grasses.

Rotative, *a.* [*Fr. rotatif*, from *Lat. rota*.] Rotary; having the motion of a wheel. (*R.*)

Rota'tor, *n.* [*Lat.*] (*Anat.*) A muscle of the lower extremity, whose function is to roll the thigh outward.

Ro'tatory, *n.* (*Zoöl.*) A rotifer. See *ROTIFER*.

—*a.* [From *Lat. rota*, *rotator*, one who turns round, from *rota*, a wheel.] Rotary; turning on an axis, as a wheel; as, *rotatory* action.—Following in succession; going in circular series; as, a *rotatory* assembly.

(*Optics.*) Producing rotation of the plane of polarization; as, the *rotatory* power of bodies on light.

Rote, *n.* [*O. Fr.* from *Lat. rota*, a wheel.] (*Mus.*) An old musical instrument, somewhat resembling the ordinary hurdy-gurdy.

Rote, *n.* [From *Lat. rota*.] Properly, a round of words; in modern application, a frequent repetition of words or sounds, without attending to the signification, or to principles and rules; a practice that impresses words on the memory, without an effort of the understanding, and without the aid of rules; as, to learn a lesson by *rote*.—The swishing sound made by the dashing of the surf of the sea upon the shore, or the noise made by breakers.

Rot-gut, *n.* Bad beer, or any kind of adulterated liquor; as, *rot-gut* whisky.

Roth'enburg, a town of Bavaria, circle of Middle Franconia, on the Tauber, 40 m. W. of Nuremberg. *Manuf.* Woollen stuffs. *Pop.* 6,000.

Roth'erham, a town of England, co. of York, at the confluence of the Rother and Don, 6 m. E.N.E. of Sheffield, and 142 m. N.N.E. of London; *pop.* 7,598.

Roth'erithe, or *REDRIFF*, a district of London, co. of Surrey, on the Thames, $2\frac{1}{2}$ m. S.E. of St. Paul's Cathedral. It is noted for its numerous dockyards. *Pop.* 18,000.

Roth'er-nail, *n.* [*A. S. rôdhen*.] (*Ship-building*.) A large-headed nail, used in securing a ship's rudder; a rudder-nail.

Roth'er-soil, *n.* The excrement of black cattle, which were formerly called *rother-beasts*.

Roth'say, or *ROTHESAY*, a seaport-town of Scotland, cap. of the co. of Bute, on a bay at the E. side of the island, 30 m. S.W. of Glasgow; *pop.* 7,300.

Rothschild, (*rôs'child*), [*Ger.* "red shield,"] the name of a Jewish family of European bankers and capitalists, the enormousness of whose aggregate wealth has passed into a proverb. The founder of this race of financiers, MEYER ANSELM R., b. at Frankfurt-on-the-Main, in 1743, d. there in 1812, after having accumulated the most gigantic fortune ever possessed by a single individual in modern times. Commencing the world as a small trader, he, by his probity, frugality, and superior business qualifications, eventually became the banker of monarchs and the creditor of states. Of the five sons who succeeded to the vast inheritance he bequeathed them, the eldest, ANSELM, (b. 1773, d. 1855,) was his father's partner and successor at Frankfurt. The second, SOLOMON, (b. 1774, d. 1855,) became established as the representative of the house of R. at Vienna. The third, NATHAN MEYER, (b. 1774, d. 1836,) settled as the London partner, and became the leading member and ablest financier of the family. The fourth, CHARLES, (b. 1788, d. 1855,) filled the representation of the firm at Vienna. Lastly, JAMES, (b. 1792, d. 1869,) eventually took up his residence in Paris, where he died, leaving a fortune estimated at \$200,000,000. Within a period of less than twelve years, the Rothschilds advanced in loans, as follows: to England, \$200,000,000; Austria, \$50,000,000; Prussia, \$40,000,000; France, \$80,000,000; Naples, \$50,000,000; Russia, \$25,000,000; Brazil, \$12,000,000; besides some \$5,000,000 to smaller states; or, altogether, the almost incredible amount of \$462,000,000. The colossal financiering operations of the house are now conducted by the sons of the above-mentioned brothers, and the firm has banking-houses and representatives in all the leading cities of the civilized world.

Rothweil, (*roth'vile*), a town of Wurtemberg, on the Neckar, 42 m. from Constance. *Manuf.* Linens. *Pop.* 4,000.

Roti'fer, *n.* (*Zoöl.*) One of the ROTIFERA, *q. v.*

Roti'form, *a.* Wheel-shaped.

(*Bot.*) Having a very short tube and spreading limb;—said of a monopetalous corolla.

Rotifera, **Rotatoria**, *n.* [*Lat. rota*, a wheel, *fero*,

to bear.] (*Zoöl.*) Wheel-animalcules, a class of microscopic animals of the branch

Protozoa, placed by Ehrenberg among the Infusoria under the name *Rotatoria*, (see Figs. 131 and 2277). They have acquired these names on account of the apparent rotation of the wheel-like organs which surround their mouths, and which are covered by cilia. They are extremely minute, but some of the larger forms can be seen with the naked eye. The *R.* are very widely diffused on the surface of the earth. They inhabit both salt and fresh waters, and are found in the cold, temperate, and tropical parts of the earth. Although capable of swimming freely, they are generally found near or attached to the leaves of plants. They have no true circulating or respiratory organs, though in most of the species minute vessels can be seen which terminate in blind sacs or cæca.

Fig. 2277. HEPHANOCEROS EICHHORNII, (a Rotifer magnified 200 times.)

Rot'tee, an island of the Eastern Archipelago, off the S.W. extremity of Timor: *Lat.* 10° 40' S., *Lon.* 123° E. *Ext.* 50 m. long and 20 broad. The principal village, Rangong, has an excellent harbor.

Rot'ten, *a.* [From *rot*.] That which has become rotten; putrid; decayed; corrupt; as, a *rotten* potato;—hence, offensive to the smell; fetid; noxious; as, a *rotten* tooth.—Unsound; having some defect in substance; not to be depended on; as, *rotten* ice, a *rotten* plank.

Rot'tenburg, a town of Germany, in Würtemberg, on the Neckar, 12 m. W. of Rentlingen; *pop.* 6,500.

Rot'tenly, *adv.* In a rotten or unsound manner; putridly; fetidly; defectively.

Rot'teness, *n.* State of being rotten, decayed, or putrid; cariousness; unsoundness; defectiveness.

Rot'ten-stone, **TRIPLI**, *n.* (*Min.*) A mineral consisting chiefly of alumina, with about ten per cent. of carbonaceous matter, and a little silica. It is supposed to be formed by decomposition of shale. It is found near Albany, N. Y. It is brown; either grayish, reddish, or blackish. It is soft, and easily scraped to powder, and is well-known to housewives, being much used for cleaning and polishing brass and other metals.

Rot'terdam, a city of Holland, prov. of S. Holland, on the Meuse, at the junction of the Rotte, 35 m. S.S.W. of Amsterdam; *Lat.* 51° 55' 3" N., *Lon.* 4° 29' 5" E. It is traversed by the Rotte, a broad canal, which here joins the Maas, and is, even more than other towns in Holland, intersected by canals, which divide the half of it near the river into several insulated spots connected by drawbridges. These canals are almost all bordered with trees. The row called the *Boompjes* is the finest in the city, as well in regard to buildings as for its pleasant prospect across the Maese. Next to the Boompjes comes the Haringvliet. The other streets are, in general, long, but narrow. The houses on the whole are rather convenient than elegant; their height is four, five, or six stories. Of the public buildings, the principal are the Exchange, the church of St. Lawrence, several other churches, the town-house, the admiralty, the academy, the theatre, the central prison of the Netherlands, charitable institutions, and schools. *Manuf.* Tobacco, soap, leather, paper, distilleries of gin or Hollands, and sugar and salt refineries. *R.* is a place of considerable antiquity. Maximilian I. captured it in 1489, after a siege of six months. It was treacherously taken by the Spaniards in 1572. The French occupied it in 1795. It is the birth-place of Erasmus.

Rot'terdam, in *New York*, a township of Schenectady co.

Rot'tle'ra, *n.* (*Bot.*) A genus of plants, order *Euphorbiaceæ*. The fruit of *R. tinctoria* is covered by a red powder, which has long been employed as a dye for silk; it produces, with suitable mordants, a beautiful orange or flame-color. It is found in the Indian bazaars under the name of *kamala*, and is known at Aden by the names *waras* or *wurris*.

Rot'nlar, *a.* [From *Lat. rota*, a wheel.] (*Anat.*) Relating or appertaining to the patella or knee-cap.

Rot'und, *a.* [*Lat. rotundus*, from *rota*.] Round; circular; spherical; as, a *rotund* body;—Hence, full; complete; entire; as, a *rotund* purse of money.

(*Bot.*) Orbicular.

Rot'und'a, **Rot'und'o**, *n.* [*Lat. rotundus*—*rota*.] (*Arch.*) An appellation that is given to any building that is circular both within and without, whether it be a church, theatre, pavilion, &c.

Rot'undifolious, *a.* [*Lat. rotundus*, and *folium*, leaf.] (*Bot.*) Round-leaved.

Rot'und'ity, **Rot'und'ness**, *n.* [*Fr. rotundité*, from *Lat. rotunditas*.] State of being round; roundness; circularity; sphericity; as, the *rotundity* of a globe.

Rouanne, (*roo'an*.) *n.* [Fr.] A branding-iron.
Ronbaix, (*roo'bai*.) *n.* A manufacturing town of France, dept. Nord, 7 miles N.E. of Lille. *Manuf.* Woollens, Turkish satins, canlets, and serges. In the town, and country immediately adjacent, about 30,000 hands are alternately employed in the manufacture of cotton and woollen goods. *Pop.* 65,091.

Rouble, Ruble, *n.* In Russia, a current silver coin, equivalent to 100 copecks, or about 76 cents American. — Gold coins of nominally five roubles (demi-imperials, really worth 5 roubles, 15 copecks,) and three roubles (imperial ducats) are also in circulation. The present Russian state paper-money is at par with the coinage.

Rouche, (*roosh*.) *n.* Same as *RUCHE*, *q. v.*

Roné, (*roo'ā*.) *n.* [Fr.] A rake; a debauchee; a sensualist; a libertine.

Rouen, (*rou'ong*.) *a city of France*, cap. of the dept. of Seine-Inférieure, and formerly of the prov. of Normandy, on the Seine, 44 m. from its mouth, and 67 N.W. of Paris. It is situated on the right bank of the Seine, in a fertile, pleasant, and varied country. The streets, though in general straight, are narrow and dirty, and some of the houses are of wood. The most agreeable part of the town is that which adjoins the Seine. The public buildings of interest are, the Cathedral, containing many old monuments, and said to be one of the finest specimens of Gothic architecture in France; the church of St. Owen, likewise a fine Gothic building, situate nearly in the centre of the town; and that of St. Maclou, considered a master-piece of its kind. There are two bridges over the Seine, one of stone and another of iron, con-

Fig. 2278. — STATUE OF JOAN OF ARC.
(On the Square of La Pucelle.)

necting the town with the suburb of St. Sever; also various literary societies and schools, an academy of belles-lettres, a society of agriculture and the arts, a central school, classes for medicine and surgery, a navigation and drawing school, together with a public library, a collection of paintings and natural history, and a botanical garden. *Manuf.* Cotton goods, woollens, linens, iron-ware, paper, hats, pottery, wax, cloth, and sugar refineries. Dyeing, both of woollens and cotton, is also conducted with care and success. Rouen has frequently been taken and retaken. In 1418 it was taken by Henry V., and Joan of Arc was, in 1431, burned here. A statue to her memory has been erected on the spot (Fig. 2278). It is the birthplace of the two Cornilleus, and of Fontenelle and Boieldieu. *Pop.* 100,670.

Ronet, (*roo'ā*.) *n.* [Fr.] (*Mil.*) A small, solid wheel formerly fixed to the pan of firelocks, for discharging them.

Rouge, (*rūzh*.) *n.* [Fr., red.] Jewellers' rouge is made by calcining protosulphate of iron until nothing is left but the anhydrous sesquioxide, which is afterwards submitted to fine levigation. It is extensively used for polishing glass and for cleaning polished metal-work. — The cosmetic known as *rouge*, is made by mixing carmine with calcined salt in various proportions. In some instances it is replaced by spreading the coloring matter of cochineal or safflower on thick paper, and is applied to the lips and cheeks with a piece of moistened cotton-wool. Common theatrical rouge is made from Brazil-wood, lake, or bole-Armenian.

—*v. n.* To paint the cheeks, &c., with rouge.

—*v. a.* To paint or tint with rouge.

Rouge-dragon, *n.* (*Her.*) In England, an officer of the Herald's College; a kind of pursuivant.

Rouge-et-noir, (*ā-nvār*.) *n.* [Fr., red and black.] (*Games.*) A game at cards in which persons play against the banker, or owner of the table; — so called because the table is divided into two small compartments, colored red and black.

Rouge River, (*roogh*.) in Michigan, is formed in Wayne co., by the union of the North, West, and South branches, and flowing E., enters Detroit River abt. 5 m. S. of Detroit.

Rough, (*rūf*.) *a.* [A. S. *hroeg*, *hroech*; Ger. *rauch*, *roh*.] Uneven; not smooth; having small ridges, points, or asperities on the surface; rugged; as, a rough stone, a rough piece of wood; rough cloth; — hence, (1.)

Not level; uneven; — said of a road or tract of land; as, a rough country, a rough pathway. (2.) Uncut; not wrought or polished; — said of precious stones; as, a rough diamond. (3.) Thrown into huge waves; boisterous; turbulent; violent; agitated; as, a rough sea. (4.) Characterized by coarseness; rugged; shaggy; disordered in appearance; as, a rough coat, rough hair. — Hence, figuratively, wanting gentleness, polish, elegance, or refinement; as, (1.) Rugged of manner; harsh in temper; coarse in speech or action; rude; uncivil; unmannerly; austere; not courteous, kind, or delicate; as, rough usage, rough language.

"A surly boatman rough as seas and wind." — *Prior*.

— (2.) Harsh to the ear; grating; jarring; loud and hoarse; not harmonious; as, a rough tone of voice. (3.) Austere; acrid; harsh; — said of taste; as, this wine has a rough smack about it. (4.) Stormy; boisterous; tempestuous; as, rough weather. (5.) Manifesting violence or severity; hard; harsh; imperpetrative; coercive; — applied to measures, acts, &c.

In the rough, in a crude or unwrought condition, or in the original substance or material; as, to take people in the rough. — *Rough customer*, a colloquialism implying a tough or troublesome antagonist; a person difficult to manage or conquer; as, I found him a rough customer to tackle. — *Rough draught*, sketch, or plan, a draught, sketch, or plan in a sketched or unfinished state, or having the outlines only filled in.

—*n.* A rude, coarse, boisterous fellow; a loud, swaggering bully; a rowdy; as, they were attacked by a set of roughs.

—*adv.* In a rough manner; coarsely; rudely; as, he acted quite rough.

—*v. a.* To make rough, or give a rugged appearance to; to roughen.

(*Manue.*) To break in for military purposes; as, to rough a horse.

To rough it, to encounter and undergo hardships or difficulties; to pursue, or be reduced to, a rough or rugged course of life; as, they roughed it in the bush. — *Roughing rollers*, (*Metal.*) In smelting, rollers for roughly reducing a bloom of iron to bars.

Rough-and-Ready, in California, a post-village of Nevada co., abt. 8 m. S. by W. of Nevada City.

Rough-and-Ready, in Georgia, a post-village of Clayton co., abt. 11 m. S. of Atlanta.

Rough-and-Ready, in Illinois, a village of Hancock co., abt. 33 m. N.N.E. of Quincy.

Rough-cast, (*rūf'-kást*.) *v. a.* (*imp.* and *pp.* ROUGH-CAST.) To mould or form in a rudimentary manner, without revision, correction, or polish; as, "rough-cast poetry." (*Dryden*). — To mould without nicety or elegance, or to form with asperities or inequalities. — To plaster with a mixed preparation of lime and shells, or pebbles; as, to rough-cast a wall.

—*n.* A rude model; the form of anything in its first rudiments, or while incomplete; as, the rough-cast of a statuette. — Among builders, a kind of plaster intermixed with pebbles, and consequently presenting a rough surface.

Rough-caster, *n.* One who rough-casts.

Rough-diamond, (*rūf'-di-mond*.) *n.* An uncut diamond; — hence, by analogy, a person possessing intrinsic worth, but rude and unpolished in manners.

Rough-draw, (*rūf'-dā*.) *v. a.* To draw or delineate roughly, or by giving the mere outlines.

Roughen, (*rūf'n*.) *v. a.* To make, or render, rough or rugged.

—*v. n.* To grow or become rough; as, the sea roughens.

Rough-footed, (*rūf'-*.) *a.* Feather-footed, as a dove. (*R.*)

Rough-hew, (*rūf'-hū*.) *v. a.* (*imp.* ROUGH-HEWED; *pp.* ROUGH-HEWEN.) To hew coarsely, without smoothing or trimming; as, to rough-hew a log of wood. — To give the first shape or form to a thing; to fashion rudely or imperfectly.

"Nature does but rough-hew and design,
Leaving art to polish and refine." — *Hudibras*.

Rough-hewer, (*rūf'-hū-er*.) *n.* One who rough-hews.

Rough-hewn, (*rūf'-hūn*.) *p. a.* Hewn rudely, without smoothing or perfecting; as, rough-hewn timber. — Rude; homespun; coarse-mannered; rugged; unrefined; as, a rough-hewn rustic. — Unpolished; not elaborated or finished with nicety; as, a rough-hewn discourse.

Roughings, (*rūf'ings*.) *n. pl.* In some parts of England, a term applied to the stubble or aftermath of grass, &c.

Roughish, (*rūf'ish*.) *a.* Somewhat rough.

Rough-legged, (*rūf'-lēgd*.) *a.* With the legs covered with feathers; — said of a bird.

Roughly, (*rūf'ly*.) *adv.* With an uneven surface; harshly; severely; uncivilly; rudely; without delicacy or tenderness; austere to the taste; boisterously; tempestuously; harshly to the ear; violently; inharmously.

Roughness, (*rūf'nes*.) *n.* State or quality of being rough; asperity; unevenness; coarseness; harshness; rudeness; boisterousness; severity.

Rough-rider, (*rūf'-rīder*.) *n.* One who breaks horses in; — especially, in military language, a non-commissioned officer of cavalry, whose duty is to act as assistant to the riding-master.

Rough-scutt, (*rūf'-skūt*.) *n.* A rough, boisterous fellow; one of the rabble or riff-raff. (An American colloquialism.)

Rough-shod, (*rūf'-*.) *a.* Shod with pointed shoes; as a rough-shod horse.

To ride rough-shod, to domineer; to hector; to carry on a course without regard to the feelings or opinions of another, or of others; as, I am not to be ridden rough-shod over.

Rough-strings, (*rūf'-*.) *n.* (*Carp.*) Pieces of rough

timber placed under the steps of a wooden stairs for their support.

Rough-work, (*rūf'-wūrk*.) *v. a.* To work over in a rough or coarse manner, without respect to nicety, smoothness, or finish.

Rouk, *n.* Same as *ROKE*.

Roulade, (*roo'lād*.) *n.* (*Mus.*) A rapid running of notes, extemporaneously introduced into a piece of vocal music by way of embellishment.

Rouleau, (*roo-lō*.) *n.*; *pl.* ROULEAUX, (*roo-lōz*.) [Fr., from *rouler*, to roll.] A little roll; — specifically, a little roll of coin; as, a rouleau of guineas.

Roulers, or ROUSSELAER, a town of Belgium, prov. of W. Flanders, on the Mandelbecke, a tributary of the Lys, 26 m. S.W. of Ghent. *Manuf.* Linens, leather, soap, and oil. *Pop.* 11,500.

Roulette, (*roo-lēt*.) *n.* (*Games.*) A game of chance, wherein a small ball is made to revolve rapidly on a circle divided into colored spaces (generally red and black), and, as it stops on the one or the other, the player wins or loses.

(*Engraving*.) A small instrument used by engravers to produce a series of dotted lines on a plate. It takes two forms, one like a spur-rowel, which is rolled over the surface of the plate when covered with the etching-ground; and another, which rolls at right angles with the shaft of the tool, the rowel being thick in the centre, and diminishing to the sides, which are notched and sharpened to a series of fine points; they act upon the etching-ground by carrying off minute portions.

(*Math.*) The curve traced by any point in the plane of a given curve when the latter rolls, without sliding, over another fixed curve. *R.* includes a great number of well-known curves, among which are epitrochoids, hypotrochoids, epicycloids, hypocycloids, the common and curate cycloids, involutes, &c. Pedal curves may also be regarded as roulettes.

Roumania, a kingdom of southeast Europe, including the former principalities of Moldavia and Wallachia, with the D. Brucja; located between N. Lat. 43° 38' and 48° 20', E. Lon. 22° 20' and 30° 15'; area, 48,307 sq. m. *R.* is naturally divided into 3 regions, viz.: alluvial lowlands, along the Pruth and Danube; hilly, devoted to grazing and vine culture; and mountainous, abounding in forests and mines. The government is a hereditary constitutional monarchy; there is a legislature consisting of 120 senators and 183 deputies. The extreme military strength is about 250,000 men, and a navy of 34 vessels of all kinds. *Pop.* (1897) 5,222,500.

Roumelia. See EAST ROUMELIA.

Rounee, (*rouns*.) *n.* [Fr. *ranche*, a step, a rack.]

(*Print.*) The handle of a printing-press by which the carriage on which the form to be printed is laid is run in under the platen and out again; — sometimes applied to the whole apparatus by which the form is moved under the platen.

Round, *a.* [Gr. and Swed.; Goth. *rund*; Fr. *ronde*, from Lat. *rotundus*, round, from *rota*, a wheel.] Spherical; circular; globular; orbicular; with every part of the surface or of the circumference equi-distant from the centre; as, a round ball. — Cylindrical; possessing the form of a cylinder; as, the tube of a pipe is round. — Curved in form; not angular or pointed; shaped like the arc of a circle or an ellipse; as, a round arch. — Full; whole; complete; not broken or fractional; as, round numbers. — Fair; candid; open; honest; frank; straightforward; having reference to conduct or demeanor. — Large; not inconsiderable; as, he paid a round sum of money, he asked a round price for the article. — Smooth; flowing; not defective or abrupt; as, a round and comprehensive style of composition. (*Fell.*) — Quick; brisk; lively; as, the horse broke into a round gallop. — Boldly or positively stated; plumply or explicitly affirmed; peremptory; positive; decided; without ambiguity or reserve; — referring to an assertion, statement, narration, &c.

R. bodies, [Fr. *corps ronds*.] (*Math.*) In geometry, the sphere, right cone, and right cylinder. — *R. game*, a game, as of cards, in which each person plays on his, or her, own account, as in *Loo*, *Speculation*, &c.

R. robin, [Fr. *ronde*, round, and *ruban*, a ribbon.] A written petition, memorial, remonstrance, or instrument signed by names in a ring or circle, so as not to reveal who signed first. — *R. shot*, (*Guns*.) In artillery practice, spherical shot of cast-iron or steel.

R. number, a complete or entire number; or, a number that terminates with a cipher, and is divisible by 10 without a remainder, as 30 is a round number.

R. trot, in equestrianism, a full, sharp, brisk trot.

"Sir Roger heard them upon a round trot." — *Addison*.

R. turn, (*Naut.*) One turn of a rope round a stanchion. At a round rate, quickly; rapidly; as, to travel at a round rate.

—*n.* That which is round, as a circle, a globe, a sphere, a cylinder, an orb. — A cycle; a periodical resolution; a series of events ending at the point of commencement; a series of similar events recurring continuously; as, "Life's dull round." (*Shenstone*). — Action or performance in a circle, or passing through a series of hands or things, and coming back to the starting-point; or, the time of such action; as, the bottle went the round of the table. — Rotation in office; succession in vicissitude; as, government patronage went the round of the party. — A series of duties demanding performance in turn, and repetition of such performance; as, in the round of business. — That which goes round an entire circle or company; as, a round of applause. — The rung, rime, or step of a ladder; a rundle.

(*Mil.*) A volley of musketry. — Also, a walk or circuit performed by a guard or an officer round the rampart of a fortified place or garrison, or among sentries, to see

that the latter are on the alert, and that all is well; as, to make, or go, the *rounds*.—A brewer's utensil for holding beer; a vat.—A vessel filled with liquor, as for imbibing. (R.)

(Mus.) A short vocal composition in three or more parts, resembling a catch in the unison.

(Naut.) Same as ROUND-TOP, q. v.

Round of beef, a cut of the thigh of an ox or steer, through and across the bone.—**Round of ball** or **blank-cartridges**. (Mil.) One cartridge per man; as, to serve out fifty rounds of cartridges.

—**adv.** Around; on all sides; as, he looked *round* him.—Circularly; in a circular direction, form, or manner; as, a top spins *round*.—From one side or party to another; as, to go, or come, *round*; i. e., to change sides or views.—Circuitously; not in a direct line; by a course more extended than the direct course; back to the point of starting; roundabout; as, he took a *round* road homeward.—Extending through a circle, as of individuals or dwelling-houses; as, he sent circulars *round*.—All *round*, on all sides; in every direction; over the entire place or neighborhood; as, the story has passed *all round*.

—**prep.** In a circular course, or in all parts of; on every side of; as, the mob gathered *round* him.—About; as, to walk *round* the town, to wrap a shawl *round* one's body.—To come or get *round*, colloquially, to circumvent; to bamboozle; to derive advantage over by wheedling, artifice, or deception; in Ireland, to obtain by blarney; as, to get *round* a girl, i. e., to engage her affections.

—**v. a.** To make round, spherical, globular, orbicular, or cylindrical; as, to *round* a billiard-ball.—To bring to completion or entirety; to make full.—To make round, rotund, or protuberant; to invest with a round form or convex figure.—To go round; to move about; as, the sun *rounds* the horizon.—To mould into fulness and flowing smoothness;—said of composition or language.

"A florid style, *rounded* into periods or cadences."—Swift.

To *round in*, (Naut.) to haul upon the weather-braces.

To *round up*, to haul up; usually, to haul up the slack of a rope through its leading block, or to haul up a tackle which hangs loose, by its fall.

—**v. n.** To grow or become round, or full, in form or substance; to appear as if pregnant.

"The queen, four mother, *rounds* apace."—Shaks.

To *round to*, (Naut.) To turn a ship's head to windward.

Roundabout, *a.* Going round; indirect; loose; as, a *roundabout* road.—Extensive; ample; as, a *roundabout* sense. (Addison.)—Incompassing; surrounding; encircling.

—*n.* A sort of frock or surtout.—A lounge with a rounded back.—A go-cart, fixed on a horizontal wheel, in which children ride for amusement.—In the U. States, a close-fitting jacket; a jersey.

Roundaboutness, *n.* Quality of being roundabout; circuitousness.

Round-backed, **Round-shouldered**, *a.* Having a round back or shoulders.

Roundel, *n.* [Fr. *rondelle*, a circular shield.] Any circle, or round form or figure; specifically,

(Archæol.) The small circular shield carried by soldiers in the 14th and 15th centuries. It was held in the hand to ward off a blow, and was sometimes not more than a foot in diameter.

(Her.) An ordinary in the form of a circle. It is improper to say a *roundel* or, gules, &c., describing it by its tincture; unless, first, in case of counter-changes; secondly, where the roundel is of fur, or of equal tinctures, as a *roundel ermine*, a *roundel chequy* of or and azure, &c.; otherwise, roundels have distinctive names, according to their tinctures. A roundel or is called a *bezant*, from the gold coins of the Greek or Byzantine empire; a *roundel argent*, a *plate*; gules, a *tortois*, a kind of cake; azure, *hart*, a species of flower; vert, *pomme*, an apple; sable, *pellet*; purple, *golpe*. A field, or charge, with equi-distant roundels, is said to be *bezanty*, *platy*, &c., according to the tincture.

(Fortif.) A circular bastion.

(Mus.) A roundelay. See ROUNDELAY.

Roundelay, *n.* [O. Fr. *roundelet*, dimin. of *rondo*.] (Poet.) Same as RONDEAU, q. v.

(Mas.) A simple, short, and lively strain; a pastoral song; as, a *roundelay* of love;—also, a kind of circular rustic dance; as, "the nymphs did dance their *roundelays*."—Howell.

—A roundel; anything circular in form.

Round'er, *n.* One who rounds.

Round Grove, in Illinois, a post-village of Whitesides co., abt. 21 m. W. of Dixon.

Round Grove, in Indiana, a township of White co.

Round Grove, in Iowa, a p. v. of Scott co.

Round Grove, in Missouri, a township of Marion co.—A post-village of Lawrence co.

Round-hand, *n.* (Callig.) A style of penmanship in which the letters are written round and full.

Round Head, in Ohio, a post-village and township of Hardin co., abt. 14 m. S.W. of Kenton.

Round-headed, *a.* With a round head, top, or summit; as, a *round-headed* bolt.

Round-heads, *n. pl.* (Eng. Hist.) A nickname given to the Puritans during the Civil War (time of Charles I.), by the Cavaliers, from their custom of wearing the hair closely cut to the head.

Round Hill, in Connecticut, a post-village of Fairfield co., abt. 50 m. S.W. by W. of New Haven.

Round-house, *n.* A lock-up; a temporary prison for night-offenders.

(Naut.) A cabin in the after part of a ship's quarter-deck, roofed by the poop;—also, a house of convenience placed in the bows.

Round'ing, *a.* Round; nearly round; roundish.

—*n.* (Naut.) Same as SERVICE, q. v.

Round'ish, *a.* Somewhat round; nearly round; as, a *roundish* figure.

Round'ishness, *n.* State of being roundish.

Round'let, *n.* A small circle.

Round'ly, *adv.* In a round form or manner.—Boldly; openly; plainly; fully; without reserve; as, he was *roundly* given to understand that he was not wanted.—Briskly; with speed or celerity; as, to walk *roundly* on.—Completely; to the purpose; vigorously; in earnest; as, to do a thing *roundly*, to set to *roundly*.

Round'ness, *n.* State or quality of being round, spherical, globular, orbicular, or cylindrical; sphericity; circularity; as, the *roundness* of the globe, of a ball, of an orb, &c.—Fulness; plumpness; rotundity; as, the *roundness* of the female form.—Fulness and smoothness of flow; as, *roundness* of a sentence in composition.—Openness; plainness; boldness; positiveness; peremptoriness; as, the *roundness* of a lie, or of an asseveration.

Round Pond, in Arkansas, a township of Independence co.

Round Prairie, in Iowa, a township of Jefferson co.

Round Prairie, in Missouri, a post-village of Vernon co., abt. 82 m. S.W. of Jefferson City.

Round'ridge, (-rij), *v. a.* (Agric.) To form into round ridges by ploughing, as land.

Round-shouldered, (-shol'derd), *a.* See ROUND-BACKED.

Round Table, (Knights of the.) (Chivalry.) According to tradition, there reigned in Britain, towards the end of the 5th century, a Christian king, the British Uther-Pendragon, who had for a counsellor a powerful, wise, and benevolent enchanter, named Merlin, who advised him to assemble all his knights distinguished for piety, courage, and fidelity towards him, at least about a round table, which should be sufficiently large to receive fifty knights, but at which at first only forty-nine should be seated, room being left for one yet unborn. This was Arthur, or Artus, son of the King by Igerna, whom the King, by the magic power of Merlin, was permitted to enjoy under the form of her husband. Merlin had exacted a promise that the education of the prince should be entrusted to him, and he accordingly instructed him in everything becoming a brave, virtuous, and accomplished knight. Arthur in due time occupied the empty seat at the Round Table; and under him it became the resort of all valiant, pious, and noble knights, admission to it becoming the reward of the greatest virtues and feats of arms. According to another account, Arthur himself established the Round Table at York. In the year 1344, Edward III., anxious to attract around him the most noble knights from all parts of Europe, proclaimed, as well in Scotland, France, Germany, Hainault, Spain, and other foreign countries, as in England, that he designed to revive the Round Table of King Arthur, offering free conduct and courteous reception to all who might be disposed to attend the splendid jousts to be held upon that occasion at Windsor Castle. This solemn festival, which Edward purposed to hold annually, excited the jealousy of Philip de Valois, king of France, who not only prohibited his subjects to attend it, but proclaimed an opposite Round Table to be held by himself in Paris. In consequence of this interference, the festival of Edward lost some part of its celebrity and splendor; and this induced the English monarch to establish the memorable order of the Garter.

Round-top, *n.* (Naut.) A top; a platform at the masthead of a ship;—sometimes called the *round*.

Round-trade, or BUNDLE-TRADE, *n.* (Com.) A kind of barter practised on the Gaboon River, Africa, and its neighborhood, comprising a large assortment of miscellaneous articles.

Round Valley, in California, a post-village of Plumas co., abt. 17 m. N. of Quincy.

Roup, (rôop), *v. a.* [A. S. *hrēpan*, to cry out.] To call or cry out; to shout;—hence, in Scotland, to cry goods for sale by auction.

—*n.* An outcry;—hence, a sale of goods by auction; as, to be sold by public *roup*. (A Scotticism.)—A disease among domestic fowls.

Rous'ant, *a.* (Her.) Rising;—said of a bird in the attitude of rising; as, a falcon *rousant*.

Rouse, (rouz), *v. a.* (imp. and pp. ROUSED.) (rouzd.) [Of the same origin as *raise*, q. v. Also see RISE.] To wake or call from sleep or repose; as, *rouse* me early.—To awaken into vigorous action; as, to *rouse* one's attention, to *rouse* indignation or sympathy, or any passion, emotion, or faculty.—To excite to active thought or action from a state of idleness, lassitude, depression, stupidity, or inattention.—To agitate; to put into brisk motion; as, to *rouse* the waves.—To startle; to surprise; to scare; as, to *rouse* a lion from his lair.

—*v. n.* To awake from sleep or repose; as, he *roused* himself with difficulty.—To be excited to vigorous thought or action from a state of indolence, sluggishness, languor, depression, inattention, or insensibility; as, the people were *roused* to rebellion.

Rouse, (rouz), *v. n.* (Naut.) To haul together, as on a cable, by sheer manual power; as, heave, ho! *rouse* away, boys!

Rouser, (rouz'r), *n.* One who, or that which, rouses or stirs up;—hence, something very great or exciting; as, that speech was a *rouser*.

Rouse's Point, in New York, a post-village of Clinton co., at the head of Lake Champlain, and in the N.E. extremity of the State, abt. 160 m. N. of Albany.

Rouseville, in Pennsylvania, a post-village of Venango co., abt. 5 m. N. of Oil City.

Rousing, (rouz'ing), *a.* Having power to awaken, stir up, or excite; as, a *rousing* proposition, appeal, or suggestion;—hence, colloquially, great; violent; beyond what is common; as, a *rousing* cheer, a *rousing* fire.

Rousingly, *adv.* In a rousing manner; excitingly; violently.

Rousseau, (ru-sô), JEAN JACQUES, a French philosopher and miscellaneous writer, was the son of a watch-maker at Geneva, where he was b. in 1712. *R.* learnt little at school; but the frequent reading of *Pindarch's Lives* supplied him with noble ideas of human character, and kindled a passionate admiration of them. On leaving school, he was first placed with an attorney, who soon dismissed him for negligence. He was then apprenticed to an engraver, from whom he ran away before he was 16, and wandered about for some time in Savoy, where he was saved from starving by a priest, who sent him to Annecy, to be under the care of the noted Madame de Warens, a recent convert to the Catholic Church. This kind-hearted lady caused him to be instructed in science and music, and procured him admission to a school at Turin, where he professed himself a Catholic. After a very short stay, he was a wanderer again, entered the service of the Comtesse de Vercellis, then of the Comte de Gouvion, and again returned to Madame de Warens. She renewed her kind attentions and services; and her house was for many years open to him as a home. In the pleasant retreat near Chambéry to which she removed, the restless wanderer found repose for a time, and applied himself more steadily than he had done to the study of philosophy. A more intimate relation had sprung up by this time between him and his protectress. In 1740, jealousy led him to quit the house of Madame de Warens; and in the following year he went to Paris to try his fortune as a musician. He failed, but obtained the place of secretary to the French ambassador in Venice, in 1742. But it was not till 1750 that he manifested his splendid literary talents. In that year he gained the prize offered by the Academy of Dijon on the question, *Whether the Revival of Learning has contributed to the Improvement of Morals*, taking the negative side of the question, it is said, at the suggestion of Diderot. From this period, he became fertile and popular. He soon after brought out his *Devin du Village*, a comic opera, which was received with general favor; but the appearance of his celebrated *Letter on French Music* (1753), in which he pointed out its defects, excited a general storm. Singers and connoisseurs who could not wield the pen contributed to spread calumnies, pasquinades, and caricatures against the author, who retired to Geneva. He now again embraced Protestantism, and was formally reinstated in the privileges of a free citizen of Geneva. *R.* had recently published his essay, *Sur l'Origine de l'Inégalité parmi les Hommes*, which excited still more sensation than his first prize essay. Soon after, he went again to Paris, and there accepted the offer of Madame d'Épinay,—whose friendship he had enjoyed for several years,—of her house, called the *Hermitage*, for his residence. His mistress, Thérèse Levasseur, ultimately his wife, accompanied him. In 1760, he published *Julie, ou la Nouvelle Héloïse*, a romance of the most seductive description. This was followed, in 1762, by *Emile, ou de l'Éducation*, which was anathematized by the Archbishop of Paris, and ordered to be burnt by the Parliament of Paris and the authorities of Geneva. His famous *Contrat Social* appeared soon afterwards; and his bold, though superficial, speculations on the condition and destiny of man and society alarmed and irritated men still more. Obligated to flee from France and Switzerland, the author took refuge in Neuchâtel, where he published his *Letters to the Archbishop of Paris*, and *Lettres de la Montagne*, a remonstrance against the proceedings of the Genevese republic, the citizenship of which he renounced. Thenceforth his existence was passed in frequent changes of place, to escape real or fancied persecution, for his mind was now completely under the tyranny of the morbid habit of suspecting all his friends of insulting and conspiring against him. His last days were spent at Er-

Fig. 2280. — TOMB OF J. J. ROUSSEAU AT ERMENONVILLE.

menonville, where he died suddenly, in 1778. — *R.* was the author of many works besides those we have noticed, all of them exhibiting his peculiar warmth and energy of style and vigor of thinking. That he exercised a great influence over the opinions of the age at the

Jean Jacques Rousseau

1712-1778

period of the French Revolution there can be no doubt; but his works, with all their fascination of splendid and passionate eloquence, have no place among the lights that men love and walk by. His social and political theories have no basis more solid than his personal feelings; and these he interpreted falsely. His *Confessions*, one of the most singular books of its kind, appeared soon after his death.

Rousseau, **LOVELL H.**, a brigadier-general in the U. S. army, b. in Lincoln co., Kentucky, Aug. 4, 1818, settled in Greene co., and obtained a license to practice law. Entering into politics, and becoming a leader of the Whigs, he succeeded in defeating the regular Democratic nominee for the State Legislature, and returned to Lincoln co. in 1849, when his practice at the bar greatly increased, and he gained a reputation as a criminal lawyer. His opposition to the neutrality of Kentucky brought him into prominence in 1861, and long before the other Unionists thought it politic to have U. States troops quartered in Kentucky, Rousseau, who had served in the Mexican war, had raised two regiments, with which he afterwards went to the relief of Louisville. He was engaged in the campaign and battle of Shiloh, was commandant of the district of North Alabama, succeeding Gen. O. Mitchell, and pursued Gen. Bragg through Kentucky, engaging him at Perryville. He took part in the campaign of Tullahoma, Chickamanga, and Chattanooga, and in 1864 commanded the District of Tennessee, made a raid into Alabama, destroying the Montgomery and Atlanta lines of railroad, and performed other services. In Aug., 1865, he was elected from the Louisville (Kentucky) district, to Congress by a large majority. In 1867 he was appointed brigadier-general in the regular army, and was dispatched to take possession of Alaska in the name of the U. States. President Johnson afterwards assigned him to the command of the Gulf Department, where his administration gave little satisfaction to any party. D. in New Orleans, 1869.

Roust, *n.* Same as **ROST**, *q. v.*
—*v. a.* To rouse; to stir up; to disturb; to ferret; as, to roust a fox out of cover. (Prov. Eng.)

Rout, *n.* [O. Fr. *route*, a crowd; Ger. *rotte*, from *rotten*, to rot.] A fashionable assembly, or large evening party; a drum, attended by people of bon-ton; as, I have a card for Lady Mary's *rout*.—A rabble; a mob; a clamorous multitude; a tumultuous crowd; a turbulent assembly of the common people.—An uproar; a rumpus; a racket; a confused noise; as, what is all this *rout* about? (*Law*.) The unlawful assembling of three or more persons to do an unlawful act upon a common quarrel, and make some advances towards it.

Rout, *n.* [O. Fr. *route*, an overthrow; Fr. *dérouté*, from *lat raptus*, from *rumpo*, to break.] The breaking or defeat of an army, or body of troops, or the disorder and confusion of troops thus defeated and put to flight; as, a total *rout*.

—*v. a.* To break, as the ranks of troops, and put them to flight in disorder; to cause defeat and throw into confusion, as troops; to defeat; to discomfit; to conquer; to overthrow; as, we *routed* the enemy with heavy loss.

Route, (*rot*), *n.* [Fr., from Lat. *rota*, a wheel.] The road, course, or way which is travelled or passed, or to be travelled or passed; a course; a march; a principal or leading road; as, which is the nearest *route* from Philadelphia to New Orleans?

(*Mil.*) In military parlance, the document issuing to troops, as an order to move from one place to another; as, the *route* has come, we're off to-morrow.

Routine, (*roo'teen*), *n.* [Fr. dimin. of *route*, from Lat. *rota*.] A round of business, exercise, or amusement, daily or frequently pursued;—particularly, a course of business or official duties regularly or frequently recurring; as, the dull *routine* of daily life.—Any regular practice, or procedure, not accommodated to circumstances, but strictly adhered to by sheer force of habit; red-tapism; maintenance of executive formalities; as, a government office is the embodiment of *routine*.

Routously, *adv.* (*Law*.) With that violation of law called a *rout*; in the manner of a *rout*.

Rove, *v. n.* [A. S. *roefjan*; Du. *rooven*; Ger. *rauben*, to rob, strip, despoil.] To go, move, or pass, without certain purpose or direction, in any manner—by walking, riding, sailing, flying, or otherwise; to range; to wander; to ramble; to roam.

—*v. a.* To wander over; to roam about; as, *roving* abroad at night in search of game.

—*n.* Act of roaming; a ramble; a wandering. (*R.*)

Rove, *v. a.* To card, as wool; to draw through an eye or interstice; as, to *rove* a thread.

—*n.* A roll of wool, drawn out and partially twisted, preparatory to being further spun into thread or yarn.

Rove, *imp.* and *pp.* of **REEVE**, *q. v.*

Rover, *n.* One who roves or ranges about; a wanderer; a roamer; a Rambler.—A fickle or changeable person; an inconstant;—particularly, an unfaithful husband.—A pirate; a corsair; a freebooter; a buccaneer; one who roams the seas in quest of plunder.

Rovere'do, a town of Tyrol, on the Italian frontier, on the Lens, near its junction with the Adige, 13 m. S.W. of Trent. *Manuf.* Silks, tobacco, and leather. *Pop.* 8,108.

Rovigno, (*ro-veen'yo*), a seaport-town of Austrian Illyria, on the coast of Istria, 39 m. S.S.W. of Trieste. *Manuf.* Ship-building and cables. *Pop.* 9,500.

Rovi'go, a town of N. Italy, prov. of Venice, on the Adigetto, a branch of the Adige, 36 m. S.W. of Venice, and 17 m. N.E. of Ferrara; *pop.* 9,543.

Rev'ing, *n.* The process of forming a rove, or partially twisted thread, from a roll of wool, by means of an apparatus called a *roving-frame*, or *roving-machine*.—A rove.

Rov'ing-frame, **Rov'ing-machine**, *n.* A machine for winding roves or slubs on small bobbins for the creels of the spinning-machine.

Rov'ingly, *adv.* In a wandering or roving manner.

Rov'ingness, *n.* State of roving or wandering.

Rov'ing-shot, *n.* A hap-hazard or random shot.

Row, (*ro*), *n.* [A. S. *rawa*; Ger. *reihe*.] A rank; a file; a series of persons or things arranged in a continued line; as, a *row* of trees or houses, a *row* of teeth, a *row* of columns, a *row* of scholars.—A distinctive appellation given to a public thoroughfare; as, Pater-noster *Row*, London.

Row culture, (*Agric.*) The husbandry of crops by means of drills.

—*v. a.* [A. S. *rowan*; Du. *raefjan*, formed from the sound.] To row or impel, as a boat or vessel along the surface of water by oars; as, to *row* an outrigger.—To transport by rowing; as, to *row* passengers to a ship in a shore-boat.

—*v. n.* To exercise the oar; to perform labor with the oar; as, the Cantabs *rowed* well this year.

—To be impelled by oars; as, this boat *rows* badly.

Row, (*rou*), *n.* [An abbreviation of *roul*, *q. v.*] A noisy or violent disturbance or commotion; a wordy altercation; a riotous proceeding; a shindy; a rumpus; as, to get into a *row* is easier than to get out of one.

Rowan, in Kentucky, a N.E. co.; *area*, abt. 375 sq. m. *Rivers*, Licking River and Triple Creek. *Surface*, hilly; *soil*, generally fertile. This co. is interspersed with extensive forests. *Cap.* Morehead.

Rowan, in N. Carolina, a W. central co.; *area*, abt. 450 sq. m. *Rivers*, Yadkin and South Yadkin rivers. *Surface*, somewhat undulating or hilly; *soil*, generally fertile, and adapted to all the fruits and cereals of that region. *Cap.* Salisbury.

Rowan-tree, *n.* [Norse. *runa*, a charm.] A Scottish name for the *Pyrus aucuparia*.

Row'-boat, *n.* A boat urged forward or backward by means of oars.

Rowdy, (*rou'dy*), *n.* [From *row*.] An Americanism for a riotous, turbulent, disorderly fellow; a blackguard; one given to rows or rioting; a ruffian; a ready operator with pistol, bowie-knife, or black-jack.

Rowdyish, (*rou'dy-ish*), *a.* Belonging or having reference to, or characterized by, the manners or practices of a rowdy; as, *rowdyish* threats.

Rowdyism, (*rou'dy-izm*), *n.* Noisy bullying, or black-guardism; manners or practices of a rowdy; ruffianism.

Rowe, in Massachusetts, a post-village and township of Franklin co., abt. 108 m. N.W. of Boston.

Rowel, (*rou'el*), *n.* [O. Fr. *rouelle*, dimin. of *roue*; Lat. *rota*, a wheel.] The little wheel attached to a spur, armed with sharp points;—also, a little, flat ring or wheel of plate, or iron, on horses' bits.

(*Sur.*) A roll of hair or silk, passing through the flesh of horses, corresponding to the *teton* in surgery.

—*v. a.* (*Sur.*) To insert a rowel in.

Rowen, (*rou'en*), *n.* Same as **ROUGHINGS**, *q. v.*

(*Agric.*) Same as **AFTERMATH**, *q. v.*

Row'er, *n.* One who plies or manages an oar in rowing.

Row'ing, (*ro'ing*), *n.* [From *row*.] (*Naut.*) The propulsion of a boat by oars. Rowing is esteemed the most favorable application of human strength for obtaining motion in the water, though the full force is not effective on the oar, that part of it called the *blade*, (which is the actual fulcrum,) being held back by the resistance of the water. In rowing, the power is applied at the handle of the oar, and the weight of the boat is encountered at the rowlock. The rower sits *before* his oar, with his back to the boat's bow, and in taking his stroke supplements the strength of his arm with the weight of his body thrown backwards toward the bow. American oarsmen generally row the *short, quick stroke*; English rowers, the *long, steady pull*, known as the *Oxford stroke*, (36 to 46 per minute,) as practised by the famous boating-clubs of that university.

Rowlandville, (*ro'lands-vil*), in Maryland, a post-village of Cecil co., abt. 73 m. N.E. of Annapolis.

Row'ley, in Massachusetts, a post-village and township of Essex co., abt. 29 m. N.E. of Boston.

Rowley, in Wisconsin, a township of Manitowoc county.

Row'ley-ragg, *n.* Same as **RAGSTONE**, *q. v.*

Rowlocks, (*ro'l-locks*), *n. pl.* [*row* and *lock*.] (*Naut.*) The apparatus on the sides of a boat for keeping the pressure of the oar constantly at one point. So many and various are the different kinds of *R.* in use, that we refer the reader to technical works on nautical matters.

Row'-port, *n.* (*Naut.*) A small, square hole cut in the sides of some vessels of inferior tonnage, above the water-line, for the purpose of rowing during calms at sea.

Rox'abel, in Ohio, a post-village of Ross co., abt. 13 m. W.N.W. of Chillicothe.

Roxana, in Delaware, a post-village of Sussex co.

Roxana, in Michigan, a post-township of Eaton co.

Rox'borough, in N. Carolina, a post-village, cap. of Person co., abt. 60 m. N.N.W. of Raleigh.

Roxborough, in Pennsylvania, a former township of Philadelphia, now included within the incorporated limits of the city of Philadelphia, abt. 7 m. N. by W. of the State-House.

Rox'burgh, an inland co. of Scotland, having N. the co. of Berwick and a small portion of Mid-Lothian, E. Northumberland, S. Cumberland, and W. Dumfries and Selkirk; *area*, 670 sq. m. The surface is mountainous on the S and W., but level and fertile on the E. and N. *Rivers*, Tweed, Teviot, Gala, Leader, Allan, Eden, Hermitage, and Liddel rivers. *Prod.* Wheat, oats, potatoes, &c. Among the hills large numbers of Cheviot sheep are raised. *Min.* Coal, lime, and freestone. *Manuf.* Principally woollen goods. *Chief towns*, Jedburgh, Kelso, Hawick, and Melrose.

Roxburghia'ceae, *n.* (*Bot.*) An order of plants, class *Dictyogens*. *Diag.* Bisexual flowers, solitary simple many-seeded carpels, with long-stalked anatropal seeds, and a basal placenta. They are shrubs with tuberous roots; broad, leathery, net-veined leaves; and large showy flowers. The plants are native of the hotter parts of the E. Indies. The order contains only 1 genus and 4 species.

Rox'bury, in Connecticut, a post-village and township of Litchfield co., abt. 35 m. S.W. by W. of Hartford. The twp. is drained by the Shepaug River.

Roxbury, in Kansas, a post-village of McPherson co.

Roxbury, in Maine, a post-township of Oxford co.

Roxbury, in Massachusetts, a former city of Norfolk co., now incorporated with Boston, abt. 3 m. S. of the State House.

Roxbury, in New Hampshire, a township of Cheshire co.

Roxbury, in New Jersey, a village of Warren co., abt. 4 m. S. of Belvidere.

Roxbury, in New York, a post-twp. of Delaware co.

Roxbury, in Ohio, a post-village of Morgan co., on the Muskingum River.

Roxbury, in Pennsylvania, a post-village of Franklin co., abt. 14 m. N. of Chambersburg.

Roxbury, in Vermont, a post-village and township of Washington co., abt. 17 m. S.S.W. of Montpelier.

Roxbury, in Wisconsin, a post-township of Dane county.

Rox'o, in Wisconsin, a village of Marquette co., abt. 79 m. N.W. of Milwaukee.

Royal, *a.* [Fr., from Lat. *regalis*, from *rex*, *regis*, a king.] Kingly; regal; pertaining to a king, or to the crown; as, the *royal* prerogative, the *royal* family, &c.—Becoming or suitable to a king, sovereign, or monarch; as, *royal* state, *royal* dignity.—Noble; illustrious; magnificent; august; majestic; as, the blood-*royal*.—A title affixed to any institution, or body of individuals, that is more especially in the service, or under the patronage, of the Crown; as, the *Royal* Society, a *royal* household, *royal* tradesmen, &c.

Royal Academy of Art, an institution which originated in a society of painters, who obtained a charter in 1765, under the title of the "Incorporated Society of Artists of Great Britain." This Society took a new form in 1768, and became the *Royal Academy of Art*. It consists of 40 artists, bearing the title of *Royal Academicians*, of 18 *Associates*, and six associate engravers, and three or four honorary members; there is an annual exhibition of paintings, sculptures, and designs open to all artists. This exhibition is so well frequented that the Royal Academy draws almost all its funds from the money paid by the public for tickets of entry. The Edinburgh *Royal Academy of Painting* was founded in 1754. A similar institution, called the *Royal Hibernian Society*, was established in Dublin about 1832.

Royal blue, [*Fr.* *bleu du roi*.] (*Paint.*) A rich deep blue, prepared from smalt, and used for enamel or portrait-painting. It was first introduced in the royal factory at Sevres, France, and received its name in compliment to Louis XV.

—*pl.* **Royal family**. The princes and princesses of the blood-royal.

Royal Society. An English society incorporated by Charles II. in 1662-23, under the title of "The President, Council, and Fellows of the Royal Society of London for Promoting Natural Knowledge." The first number of the *Philosophical Transactions*,—as the work which the Society published was called,—appeared in March, 1665. At present every candidate for admission into the Society must be recommended by a certificate in writing signed by six or more Fellows, of whom three at least must certify that the recommendation is from personal knowledge; and the name, qualifications, &c., of the candidate must be entered in a book kept for the purpose.

—*n.* A large kind of paper, usually 20 × 25 inches or more.

—One of the shoots of a stag's head.

(*Ord.*) In ancient ordnance, a small mortar.

(*Naut.*) The sail and mast above the top-gallant sail and top-gallant mast respectively.

—*pl.* (*Mil.*) The distinctive appellation given, in England, to the first regiment of infantry of the line; as, an officer of the *Royals*.

Roy'al Center, in Indiana, a post-town of Cass co., about 11 m. N.W. of Logansport.

Royalism, *n.* [*Fr.* *royalisme*.] The principles of royalists; attachment to the cause of royalty, or to a royal government.

Royalist, *n.* An adherent to a king, or one attached to a kingly government;—specifically, in English history, one who espoused the royal cause against that of the Parliament in the great Civil War; a Cavalier.

Royalize, *v. a.* To make or render royal.

Roy'ally, *adv.* In a royal or kingly manner; in regal style; as becomes a king or scion of the blood-royal.

Royal Oak, in Michigan, a post-village and township of Oakland co., abt. 12 m. N.W. of Detroit; *pop.* abt. 1,800.

Royalston, in Massachusetts, a post-village and township of Worcester co., abt. 65 m. W.N.W. of Boston;

Royalton, in Indiana, a post-village of Boone co., about 14 m. N.W. of Indianapolis.

Royalton, in Kentucky, a post-village of Russell co.

Royalton, in Michigan, a post-village and township of Berrien co., about 3 m. S. of St. Joseph.

Royalton, in Minnesota, a post-village of Morrison co.

Royalton, in New York, a post-town of Niagara co.

Royalton, in Ohio, a township of Cuyahoga co.—A post-village of Fairfield co., about 24 m. S.E. of Columbus.—A township of Fulton co.

Royalton, in Vermont, a post-village and township of Windsor co., about 34 m. S. of Montpelier.

Roy'alton, in *Wisconsin*, a post-township of Waupaca co.

Roy'alty, *n.* [O. Fr. *royauté*; Fr. *royauté*; It. *regald*; L. Lat. *regalitas*.] State or quality of being royal; regality; character, state, or office of a king; kingship; as, "the *royalty* of England's throne." (*Shaks.*)—Person of the king or sovereign, or of any member of the royal family; as, to be ushered into the presence of *royalty*.—That which pertains to a king as his indefeasible right or prerogative.—Hence, kingdom; domain; jurisdiction; realm; as, the *royalty* of science.—A tax or duty, of the nature of a ground-rent, paid to the crown revenues, as on the produce of a mine leased in a royal domain.

(*Com.*) A duty paid by a person who applies the patent of another, at a certain scale of compensation for each article fabricated; or, a per-centage paid to the proprietor of an article by the hirer of the use of it.

Rshev-Wlad'imirov, a town of European Russia, gov't. of Tver, on the Volga, 144 m. N. of Moscow; pop. 16,000.

Rt. Hon. Abbreviation of *Right Honorable*.

Rt. Rev. Abbreviation of *Right Reverend*.

Rua'tan, or **Roatan**, an island of Central America, in the Bay of Honduras; Lat. 16° 24' N., Lon. 86° 19' W.; area, abt. 240 sq. m. Surface, somewhat elevated and well wooded; soil, fertile. The shores abound in fish and turtles, and near the S. extremity is a good harbor. Pop. 4,000.

Rub, *v. a.* (*imp.* and *pp.* RUBBED.) (*rūbd.*) [Ger. *ruben*; Heb. *ruph*, to rub.] To move something along the surface of with pressure; as, to *rub* the hand over another part of the body;—hence, to wipe; to clean; to scour; as, to *rub* one's hands together.—To touch by friction, so as to leave something of that which touches behind; as, to *rub* pomatum into the hair.—To spread over; to polish; to retouch;—with *over*; as, to *rub over* a picture with varnish.—To fret; to tease; to worry; to thwart; to annoy; to provoke (*R.*)

To *rub down*, to comb or curry; to clean by friction; as, to *rub down* a horse.—To *rub off*, to remove off impurities, or make clean, as by rubbing; as, to *rub off* a smut on one's nose.—To *rub out*, to erase; to expunge; to obliterate; to cause to disappear; as, to *rub out* pencil-marks, to *rub out* grease from cloth.—Hence, to remove, as by death; to slay; as, he was *rubbed out* by a bullet. (*Vulgar.*)—To *rub up*, to furbish; to burnish; to polish; to give a lustre or gloss to; as, to *rub up* a hat.—To incite to action; to awaken; to rouse up; as, to *rub up* the imagination.

—*v. a.* To move along the surface of a body and impart friction or pressure; to grate; as, two ships in collision *rub* one against the other.—To gall; to chafe; to fret; as, to *rub* upon a boil.—To move, pass, or go by or through with difficulty; as, to *rub* through a crowd of people.—To *rub against*, to meet or stumble across by accident; as, to *rub against* a friend in the street.

—*n.* Act of rubbing; pressure; friction.—That which rubs, or which renders motion or progress arduous or difficult; collision; obstruction; hindrance; obstacle; notably, a sudden difficulty hard to be obviated; a pinch; an emergency.

"To sleep; perchance to dream; aye, there's the *rub*."—*Shaks.*

(*Games.*) In whist, a rubber;—used colloquially; as, to play for one dollar a *rub*, and five dollars the game.—A whetstone. See RUBSTONE.

Rub-a-dub, *n.* The tan-ta-ra sound of the drum; hence, a clatter; a rattling or repeated sound; as, the *rub-a-dub* of a scolding woman.

Ruba'to, *a.* [It.] Pilfered; pirated; borrowed without leave or license.

Tempo rubato. (*Mus.*) Borrowed time;—a term denoting unequal duration of time in relation to tones.

Rubber, *n.* One who, or that which, rubs; as, (1.) A rubstone; a whetstone.—(2.) A coarse file, or the rough part thereof.—(3.) The cushion of an electrical machine.—(4.) That which grates or jars upon the feelings or sensibilities; a rub.—A familiar colloquialism for INDIA-RUBBER, *q. v.*

(*Games.*) In whist, two games out of three, or the game that decides the contest; or a contest consisting of three games; as, to play the *rubber*, to win the *rubber*; to make a *rubber*, that is, to compose a party of four players at whist.

Rubidge, (*rūb'ij*), *n.* Rubbish; garbage;—a vulgar rendering of RUBBISH, *q. v.*

Rub'bish, *n.* [O. Fr. *rubhouses*, filth.] Literally, that which is rubbed off; generally, fragments of buildings or their materials; ruins;—hence, waste or rejected matter; anything worthless; debris; valueless stuff; garbage; refuse; trash.

"He saw the towns one half in *rubbish* lie."—*Dryden.*

Rub'bisny, *a.* Pertaining, or having reference, to rubbish;—hence, trashy; worthless; as, a *rubbishy* book, a *rubbishy* bargain.

Rubble, (*rūb'bl*), *n.* (*Masonry.*) Coarse walling constructed of rough stones, small, and irregular in size and shape;—also, a mixture, or the refuse of several kinds of building-stone used for walls exteriorly, or between walls, to fill up;—also called *rubble-wall* and *rubble-work*. See ASHLAR.

—The entirety of the bran of wheat, before it is sorted into pollard, bran, &c.;—used as provincial English.

Rub'bly, *a.* Belonging or relating to, or composed of, or containing, rubble.

Rubefacient, (*-fū-shent*), *n.* [From Lat. *rubere*.] (*Med.*) A medicine which, when applied to or rubbed upon the skin, renders a redness or blush upon the part not followed by a blister.

a. (*Med.*) Making—producing redness.

Ru'bellite, *n.* (*Min.*) Red tourmaline containing a considerable proportion of manganese, to which it owes its color. It generally occurs in closely aggregated crystals, varying in color from a slight tinge of red to a fine pink.

Rubens, PETER PAUL, (*roo'bans*), the most distinguished painter of the Flemish school, born at Siegen, in Westphalia, 1577. When he was ten years old, his mother, then a widow, returned to her native place, Antwerp. He received an excellent education; and after studying in his own country, especially under Otto Van Veeu, he went to Italy, where he improved himself by copying the works of the best masters, but chiefly Titian. While in Italy he was employed by the Duke of Mantua, not only as an artist, but on an embassy to Madrid. He re-

Fig. 2281. — RUBENS.

turned to Antwerp in 1608, and was soon after made court-painter to the Archduke Albert, Spanish governor of the Low Countries. In 1620 he was employed by the Princess Mary de Medici to adorn the gallery of the Luxembourg with a series of paintings, illustrative of the principal scenes of her life. While thus engaged, he became known to the Duke of Buckingham, who purchased his museum. He was afterwards employed by the Infanta Isabella, and the King of Spain, in some important negotiations, which he executed with such credit as to be appointed secretary of the Privy Council. Rubens acquired immense wealth, and was twice married, the second time, in 1631, to a lovely girl of sixteen. He d. at Antwerp, in 1640. Rubens, Fig. 2282.—HOUSE OF RUBENS, (Antwerp.)

Fig. 2282.—HOUSE OF RUBENS, (Antwerp.)

beyond all comparison, was the most rapid in execution of all the great masters, and was incontestably the greatest perfecter of the mechanical part of his art that ever existed. His works are very numerous, and very diversified in subject. There are nearly a hundred in the Picture Gallery at Munich. *The Descent from the Cross*, at Antwerp, is perhaps his master-piece. It is a composition remarkably similar to the fine fresco of the same subject, painted by Daniele di Volterra, in the preceding century. The 300th anniversary of *R.*'s birth was held at Siegen, 1877.

Ru'bens'-brown, *n.* [After the painter *Rubens*, who used it extensively.] (*Paint.*) A rich brown pigment, of a warmer and more ochreous color than Vandyke-brown.

Rube'ola, *n.* [Lat., from *rubere*, red.] The MEASLES, *q. v.*

Rubescence, (*-bēs'sens*), *n.* A flush; a reddening; a ruddiness.

Rubesc'ent, *a.* [Lat. *rubescens*, *rubesco*, from *rubere*, to be red.] Growing or becoming red; tending to a red color; ruddy.

Ru'bia, *n.* [Lat. *rubere*, red.] (*Bot.*) A genus of plants, order *Galiceæ*. The species *R. tinctorum* was largely cultivated in Europe for the root, which constitutes the dye-stuff madder, but the same coloring principle now obtained from coal tar. (See *Aniline* p. 106 and *Rosau-line*, p. 2096.) The cultivation of *R.* is becoming extinct. The entire roots from the Levant are called *Turkey roots*. In the living state, madder-root contains only a yellow coloring, but no less than five distinct coloring matters are made, called respectively *madder-purple*, *red*, *orange*, *yellow*, and *brown*. The First

two, which have received the chemical names *purpurin* and *alizarin*, are by far the most important. Besides being used as a dye-stuff, madder has long been employed in medicine as a tonic and diuretic, and has been regarded as a valuable emmenagogue. The roots of *R. cordifolia*, or *munjistia*, a native of India, are employed for dyeing in Bengal, and are occasionally imported into this country under the name of *munjet*. The roots of *R. reboun* are similarly employed in Chili.

Ru'bican, *a.* [Fr., from Lat. *rubere*, red.] Red intermixed with, but predominating over, gray, in the color of a horse; a grayish-ecreel.

Ru'bicon, *n.* (*Anc. Geog.*) A stream of Central Italy, falling into the Adriatic, which has obtained a proverbial celebrity from the well-known story of its passage by Cæsar, who, by crossing this river—which, at the outbreak of the civil war between him and Pompey, formed the southern boundary of his province—virtually declared war against the republic. Hence the phrase, "to cross the *Rubicon*," has come to mean, to take an irrevocable step. The modern Luso, called by the peasants on its banks *Il Rubicone*, has claims to being considered the ancient *Rubicon*; but arguments preponderate in favor of the *Fiumicino*.

Rubicon, in *Michigan*, a township of Huron county.

Rubicon, in *Wisconsin*, a small river flowing into Rock River from Dodge co.—A post village and township of Dodge co., about 39 miles north-west of Milwaukee.

Ru'bicund, *a.* [Lat. *rubicundus*, from *rubere*; Fr. *rubicund*.] Ruddy; inclining to redness; as, a *rubicund* nose.

Rubicund'ity, *n.* [L. Lat. *rubicunditas*.] State of being rubicund; ruddiness; disposition to redness; as, *rubicundity* of the face.

Rubid'ium, *n.* [From Lat. *rubidus*, red.] (*Chem.*) A metal much resembling *cæsium*, with which it was discovered in 1860, by Bunsen and Kirchhoff, during the analysis of a certain spring water which contained these metals in minute quantities (see *CÆSIUM*). *R.* has since been found in small quantity in other mineral waters, in lepidolite, and in the ashes of many plants. This metal is closely related, in properties, to potassium, but is more easily fusible and convertible into vapor, and actually surpasses that metal in its attraction for oxygen, rubidium taking fire spontaneously in air. It burns on water with exactly the same flame as potassium. Its oxide, *rubidia* (*RbO*), is a powerful alkali, like potash, and its salts are isomorphous with those of potassium. The double chloride of platinum and potassium, however, is eight times as soluble in boiling water as the corresponding salt of rubidium, which is taken advantage of in separating these two allied metals. *Equiv.* 85; *Symbol*, *Rb*.

Ru'bific, *a.* [Lat. *rubere*, red, and *facere*, to make.] Making red; as, *rubific* rays.

Rubification, (*-kū'shun*), *n.* [Fr.] Act of making red or ruddy.

—That which reddens or makes rubicund.

Ru'biform, *a.* [Lat. *rubere*, red, and *forma*, form.] Possessing the form or properties of red; as, the *rubiform* rays of the sun.

Ru'bify, *v. a.* (*imp.* and *pp.* RUBIFIED.) (*rū'bi-fid.*) [Fr. *rubifier*; Lat. *rubificare*.] To redden; to make red, ruddy, or rubicund.

Rubignous, (*ru'bij'ius*), *a.* [Fr. *rubigineux*.] Rusty; affected by rust; presenting rust.

Ru'binsk, or **Ry'binsk**, a town of European Russia, gov't. of Jaroslavl, on the Volga, 418 m. E. S. E. of St. Petersburg. It is the great centre of the corn trade of the Volga. Pop. 8,643.

Ru'bric, *n.* [Fr. *rubrique*; Lat. *rubrica*, from *rubere*, red.] In the language of the old copies of manuscripts, and of modern printers, any writing or printing in red ink; the date and place in a title-page being frequently in red ink, the word *rubric* has come to signify the false name of a place on a title-page. Thus, many books printed at Paris bear the *rubric* of London, Geneva, &c. (*Law.*) The title of a statute;—so called as being formerly written in red letters.

(*Eccl.*) In MS. missals, the directions prefixed to the several prayers and offices formerly written in red;—hence, an ecclesiastical or episcopal injunction;—also the *rubric* familiarly signifies the order of the liturgy, in the Roman Catholic and Protestant Episcopal churches.—Hence, also, that which is definitely fixed, or authoritatively established; as, the *rubric* of the planetary system.

—*v. a.* To set forth in red; to rubricate. (*R.*)

Ru'bric, **Ru'brical**, *a.* Set forth in rubrics; colored in red.

—Pertaining, or relating, to the rubric or liturgy.

Ru'bricate, *v. a.* [Lat. *rubricare*, *rubricatum*.] To mark with red; to set forth in red; to dispose, as in a rubric; to establish in a fixed or inflexible form; as, a *rubricated* system.

—*a.* Distinguished with red; as, *rubricate* letters.

Rubrician, (*ru-brish'yan*), **Rubricist**, (*-sist*), *n.* One learned in, or rigidly adhering to, the rubric.

Rubric'ity, *n.* Ruddiness; redness; rubicundity.

Rub'-stone, *n.* A whetstone. See RUB.

Ru'bus, [Lat. *rubus*, red.] (*Bot.*) The Bramble, a genus of the order *Rosaceæ*. Several species yield edible fruits. *R. idæus* is the Raspberry-plant (Fig. 23), which is much cultivated in gardens. Raspberries are either red or amber colored, and have an agreeable sub-acid taste; they are much used for preserves and tarts, either alone or mixed with currants. *R. fruticosus* produces the Blackberry, which children seek with such eagerness in hedges and thickets. *R. canadensis* yields the Dewberry so called from the dew-like bluish bloom which

covers the fruit. It abounds in dry, stony fields from Canada to Virginia, and its fruit is delicious. *R. chamæmorus* is the Cloud-berry. The root of *R. villosus* is much employed as an astringent in some parts of the American continent.

Ruby. (*ru'be*.) *n.* [*Fr. rubis.*] (*Min.*) This term is applied popularly to two distinct minerals—the *pyrope* and the *spinel* ruby, both of which are much valued as gems. The *pyrope* is a silicate of magnesia and alumina, with varying admixtures of iron, chromium, manganese, and lime. It occurs chiefly at Zöblitz, in Saxony; at Mittelgebirge, in Bohemia; and at Elie, in Scotland. The *spinel* ruby and its varieties, the orange-red *rubicelle*, and the violet or brown *almandine*, are aluminates of magnesia, with different proportions of iron and chromium. They mostly occur in Ceylon at Ava, and in other parts of the East Indies. *R.* are wonderfully imitated. That which bears resemblance to a ruby: a red color; anything red or ruddy, as wine. Hence, a grog-blossom; a reddish blotch; a carbuncle.

Fig. 2283. — DEWBERRY.

"He's said to have rubies about his nose." — Jones.

(*Print.*) A kind of type smaller than Nonpareil, and next larger than Pearl; — so called in England; in the U. States it bears the name of AGATE, *q. v.*

—*v. a.* (*imp.* and *pp.* RUBIED,) (*ru'béd.*) To redden; to make red; to rubefy. (*n.*)

—*a.* Of the color of the ruby; red; as, *ruby* lips.

Ruby, in Michigan, a post-village of St. Clair co., abt. 12 m. W.N.W. of Port Huron.

Ruby City, in Idaho, a village, former cap. of Owyhee co., about 60 m. S.W. of Boise City. There are rich gold and silver mines in the vicinity.

Ruby-tail, *a.* Possessing a tail of a red or ruby color. *Ruby-tail fly.* (*Zöbl.*) A name sometimes given to the insects comprising the family CHRYSIDIDÆ, *q. v.*

Ruby-wood, *n.* (*Bot.*) Red-sanders wood. See PTEROCARPUS.

Ruche, Rouche, (*rôosh.*) *n.* [*Fr.*] A kind of goffered quilling, made of blonde, net, ribbon, lace, &c., and chiefly used for trimming the inside of ladies' bonnets, flounces, &c.

—*v. a.* To trim or adorn with ruches.

Ruck, *v. a.* (*imp.* and *pp.* RUCKED,) (*rûkt.*) [*Icel. hrueka,* to wrinkle.] To crease; to wrinkle; to draw into folds or plaits; to gather; as, to *ruck* up a carpet or piece of matting.

—*v. n.* To be drawn into wrinkles, puckers, or folds, as the sleeve of a coat. — To set, squat, or crouch, as a hen while hatching eggs; as, a *rucking* pheasant.

Ructation, (*ruk-tâ'shun.*) *n.* [*Fr.*, from *Lat. ruclare,* to belch.] Act of eructating, or the belching of wind from the stomach.

Rud, *n.* [*A. S.*; *W. rhudd,* ruddy.] Blush; flush; redness; ruddy bloom. — Red ochre.

—*v. a.* To redden; to make ruddy. (*n.*)

Rudd, Rud, Red-eye, *n.* [*A. S. rud.*] (*Zöbl.*) *Cyprinus erythrophthalmus*, a European fish of the family Cyprinidæ. It is 8 to 10 inches long, and is very common in lakes and rivers.

Rud dell, in Arkansas, a township of Independence co.

Rud'der, *n.* [*A. S. rothere*, probably from *rowan*, to row; *Ger. ruder.*] (*Naut.*) Primarily, an oar; specifically, the instrument by which the ship is steered, being that part of the helm which consists of a piece of timber which enters the water, and is attached to the stern-post by hinges, on which it turns. The action of the *R.* may be thus explained. While it remains in line with the keel, the force of the water gliding past the dead-wood, or narrow portion of the stern, is equal on both sides of the *R.*, and equilibrium is maintained; but, if the rudder be forced to one side, the pressure is taken off on the opposite side, while from acting at a less angle the water exercises an increased pressure on the side to which the rudder is turned. The effect is to force the stern round on the centre of gravity as a pivot, the ship's head, of course, turning to the same side as that on which the *R.* is. When the head has sufficiently deviated from its former line, the *R.* is permitted to resume its straight position. In sailing on a wind, the *R.* is kept permanently on one side to counteract the tendency to make lee-way.

Hence, analogically, that which resembles a rudder in guiding or governing properties.

Rud'der-coat, *n.* (*Naut.*) A covering of tarred canvas, used on shipboard to prevent water from getting in at the rudder-hole.

Rud'der-head, *n.* (*Naut.*) The upper part, or head, of the rudder-post, into which the tiller is inserted.

Rud'der-iron, (*-ïr'n.*) *n.* (*Naut.*) Same as PISTLE, *q. v.*

Rud'derless, *a.* Without a rudder; as, a *rudderless* ship; — hence, by analogy, without government or guidance; as, a *rudderless* state.

Rud'der-nail, *n.* (*Naut.*) A nail serving to secure the pintle to the rudder.

Rud'der-pendants, *n. pl.* (*Naut.*) Strong pieces of rope, ending in chains, by which the rudder, if unshipped, is held to the ship's quarter.

Rud'der-stock, *n.* (*Naut.*) The main part of the rudder, connected by irons to a ship's stern-post.

Ruddied, (*rûd'éd.*) *a.* Made red or ruddy.

Ruddiness, *n.* State or quality of being ruddy; redness, or, rather, a lively flesh-color; that degree of redness which characterizes high health; as, "The ruddiness upon his lip is wet." — Shaks.

Rud'dle, *n.* [*W. rhuddel.*] (*Min.*) Red ochre.

Rud'dle-man, *n.*; *pl.* RUDDLEMEN, *n.* A digger of ruddle.

Rud'dock, Rad'dock, *n.* [*A. S. ruddoc.*] (*Zöbl.*) The Robin-redbreast. — That which is red or ruddy, as a gold coin.

Ruddy, *a.* (*comp.* RUDDIER; *superl.* RUDDIEST.) [*A. S. rûde, rad, redd.* See RED.] Red; of a red color. — Of a lively flesh-color, or the color of the human skin in perfect health; as, a *ruddy* complexion. — Of a color resembling reddish-yellow; as, a crown of *ruddy* gold. — *v. a.* To redden; to make ruddy.

Rude, *a.* (*comp.* RUDER; *superl.* RUDEST.) [*Fr.*; *Lat. rudis.*] Characterized by rudeness or roughness; crude; raw; coarse; unpolished; destitute of refinement or delicacy; as, *rude* art, *rude* work. — Hence, specifically, (1.) Unformed by art, taste, or skill; having roughness; not elaborated in surface or appearance; not smooth or polished; — applied particularly to material things; as, *rude* workmanship, *rude*, unwrought stones, &c. — (2.) Coarse; impudent; uncivil; impolite; ignorant; unpolished; unrefined; vulgar; raw; of coarse, clownish, untaught manners; — said of persons, behavior, application, &c.; as, *rude* in speech, a *rude* fellow, *rude* in one's profession, &c. — (3.) Tumultuous; violent; boisterous; turbulent; inclement; severe; — said of the weather, winds, &c.; as, *rude* winter. — Barbarous; uncivilized; undisciplined; as, *rude* aborigines. — Fierce; bloody; savage; as, *rude* warfare. — Rough; coarse; rugged; inelegant; wanting in good taste, or lacking chasteness or elegance; incorrect or faulty in style or treatment; as, a *rude* language, a *rude* composition, a *rude* translation.

Rudely, *adv.* In a rude manner; with roughness or crudity; violently; fiercely; tumultuously; without exactness or nicety; coarsely; unskillfully; without polish or elegance; as, a building *rudely* constructed, work *rudely* performed, a woman *rudely* assaulted, advances *rudely* repulsed, language *rudely* spoken, &c.

Rudeness, *n.* Quality or condition of being rude; a rough, raw, or broken state; unevenness; wildness; coarseness of speech or manners; incivility; rusticity; vulgarity; ignorance; unskillfulness; coarseness; inelegance; violence; impetuosity; storminess; as, the *rudeness* of a people, a country, a building, a storm, an attack, manners, speech, workmanship, &c.

Rudenture, (*ru'den-tûr.*) *n.* [*Fr.*, from *Lat. rudens*, a rope.] (*Arch.*) The figure of a rope or staff, sometimes plain, sometimes carved, with which the third part of the flutings of columns are frequently filled up.

Rudiment, *n.* [*Fr.*, from *Lat. rudimentum*, from *rudis*.] The original of anything in its first imperfect form or state; the principle which forms the germ of any development; the unshaped beginning of anything. "Moss is but the rudiment of a plant." — Bacon.

— A first principle or element; that which is to be first learned or acquired; — hence, plurally, the first elements or principles of a science or art; elementary instruction; as, to study the *rudiments* of a language. (*Nat. Hist.*) An imperfectly-formed organ.

Rudimental, Rudimentary, *a.* Pertaining or relating to, or consisting in, first principles; initial; as, *rudimentary* forms, *rudimentary* essays.

(*Nat. Hist.*) In embryo; imperfectly developed.

Rudish, *a.* Somewhat, or more or less, rude; as, *rudish* language, *rudish* workmanship, *rudish* weather.

Rudity, *n.* [*Lat. ruditas*, from *rudus*, rude, ignorant, illiterate.] State or condition of being rude; rudeness; illiterateness; ignorance. (*n.*)

Rudolph, See RODOLPH.

Rudolph, in Wisconsin, a post-township of Wood co. Pop. (1897) 1,140.

Rudolstadt, (*ru'dol-stat*), a town of Germany, on the Saale, 18 m. S. of Weimar; pop. 6,000.

Rue, (*rôo.*) *v. a.* [*A. S. hreowan*; *Ger. reuen.*] To lament; to deplore; to regret; to grieve for; as, he *rued* the day he first met with her. — To cause to grieve; to afflict; to make sorrowful. — To repent and get quit of, as a bargain. (*Prov. Eng.*)

—*v. n.* To sorrow; to have compassion. (*n.*)

Rue, (*rôo.*) *n.* [*Fr.*] See RUTA.

Rueful, *a.* [*rue* and *full.*] Woful; mournful; doleful; sorrowful; lamentable; piteous; as, a *rueful* event. — Marking or expressing sorrow or dole; as, a *rueful* voice, a *rueful* cast of countenance.

Ruefully, *adv.* Dolefully; mournfully; sorrowfully. **Ruefulness,** *n.* State or quality of being rueful; dolorousness; mournfulness; lamentableness; sorrowfulness.

Rueil, (*roo'il.*) a town of France, dept. of Seine-et-Oise, at the base of Mont Valerian, 5 m. W. of Paris; pop. 5,000.

Ru'ell-bones, *n. pl.* (*Archæol.*) Small rings or studs of bones, &c., affixed to the girdle or head-dress.

Rufescent, (*ru-fes'sent.*) *a.* [*Fr.*, from *Lat. rufescere*, to grow reddish, from *rufus*, red.] Tinged with red; rufescent; reddish.

Ruff, *n.* [*Armor. roufen*, a wrinkle, a ply.] A piece of plaited or goffered linen worn around the neck; — specifically, the large, puckered collar of lace or muslin

worn around the neck by both sexes at the close of the 16th and beginning of the 17th centuries. See Fig. 930. — Something puckered, plaited, or fluted, like the collar bearing the same name; as, a paper *ruff*. — Manifestation of pride, pomp, or haughtiness. — Tumultuous behavior; noisy or racy course of procedure; as, a riotous *ruff*. (*Latimer.*) — The low rumbling beat of a drum, not so noisy as a roll; a ruffle.

(*Arch.*) An annulated ridge formed on a shaft, or other piece of machinery, to prevent it from moving endwise.

(*Zöbl.*) A genus of birds family Scolopacidae. The *Ruff*, *Philomachus pugnax*, is a bird of a very pugnacious character, the female of which is called the *Reeve*. It is about a foot in length, and is principally distinguished by a very remarkable circle of long feathers round the neck, whence it receives its name; in some birds these feathers are black, in others white, yellow, or ferruginous; and even in the same bird they frequently differ in color. It is only the male, however, that is furnished with this appendage, which he does not gain till the second year. These birds are migratory, and, though native of Europe, they are so often killed on Long Island, that they may properly be ranked among N. American birds.

Fig. 2284. — RUFF, (*Philomachus pugnax.*)

(*Games.*) A game of cards, formerly in favor, and the immediate precursor of whist; — also, in card-playing, the act of trumping, instead of following suit.

—*v. a.* To ruffle; to crumple; to set in disorder. — To beat with the *ruff*, as a drum.

(*Games.*) In whist, &c., to trump, as a card, instead of following suit; as, to *ruff* an opponent's lead when second player.

(*Falconry.*) In hawking, to strike, as the quarry, without fixing it.

Ruffed, (*rûft.*) *a.* Adorned with a ruff.

Ruffec, (*rooff'ek.*) a town of France, dept. of Charente, 25 m. N. of Angoulême; pop. 4,000.

Ruffed Grouse, *n.* (*Zöbl.*) See GROUSE.

Ruffian, (*rûf'fi-an.*) *n.* [*Fr. rufien*; *It. ruffiano*, a pimp; *L. Lat. ruffiani*, panders; *A. S. rufian*, to plunder. According to Du Cange, frequenters of *ruffæ*, loose women, who wore red or yellow, whereas matrons wore black.] A low, boisterous, brutal fellow; a man fitted for the commission of any desperate crime or savage act; a desperado; a rowdy; a robber; a cut-throat; a vicious, irreclaimable lully and blackguard.

—*a.* Brutal; rowdy; viciously boisterous; savage; as, *ruffian* rage.

Ruffianish, *a.* Like a ruffian; having the qualities, manners, or characteristics of a ruffian; as, *ruffianish* conduct.

Ruffianism, *n.* Act, conduct, or qualities of a ruffian; rowdiness; brutal blackguardism; unmitigated scoundrelism.

Ruffian-like, Ruffianly, *a.* Like, or after the manner of, a ruffian; viciously bold or boisterous in crime or conduct; violent; licentious; as, *ruffianly* behavior.

Ruffle, *v. a.* [*Du. ruyfelen.*] To pucker; to corrugate; to draw or contract into wrinkles, open plaits, or folds. — To furnish or adorn with ruffles; as, to *ruffle* the bosom of a shirt. — To disorder by disturbing a smooth surface; to make undulating or uneven by agitation or commotion. — To discompose by disturbing a calm state of; to agitate; to disturb; to vex; as, something *has ruffled* his temper. — To fling into disorder or confusion; as, a *ruffled* foe. — To throw together promiscuously or disorderly; as, to *ruffle* up acorns in a heap.

—*v. n.* To become rough, turbulent, or boisterous. (*n.*)

"The rising winds a ruffling gale afford." — Dryden.

— To float loosely; to flutter, as a horse's mane in the wind. — To jar; to be in altercation or contention; — hence, to swagger; to put on jaunty airs; to play the gallant.

—*n.* That which is ruffled; — specifically, a strip of plaited cambric, linen, or other fine cloth, attached to some border of a garment, as to the wrist-band or shirt-bosom; a frill. — State of being ruffled, agitated, or disturbed; commotion; excitement; agitation; as, to put the mind in a *ruffle*.

Ruffle of a boot, the top turned down, and plaited or scolloped.

Ruffle, *n.* (*Mil.*) A ruff.

—*v. a.* (*Mil.*) To beat with the ruffle, as a drum.

Ruffleless, *a.* Without ruffles; as, a *ruffleless* wrist-band.

Rufflingment, *n.* Act of ruffling.

Ruffler, *n.* A swaggering bully; a noisy braggadocio; a roisterer; a swashbuckler; a desperado; a ruffian.

Rufous, *a.* [*From Lat. rufus*, red.] Of a brownish or russet-red color.

Ruft, *n.* Eructation; belching.

Rug, *n.* [*A. S.*] A rough, coarse, nappy, or shaggy textile material, used variously, as for the covering of a bed; as, a blanket *rug*; for protecting the carpet

before a fire-place; as, a hearth-rug; for guarding the legs against the cold when riding or travelling; as, a railway rug; anything of a warm, woolly substance and coarse texture, serving for purposes of rest and covering; as, "to sleep as snug as a bug in a rug." (*Old saying*).—A shaggy, hirsute dog; as, "a water rug." *Shaks.*
 —*v. a.* To despoil; to plunder; to leave. (*A Scottishism*).
Ru'gate, *a.* [*Lat. rugatus*, from *ruga*, a wrinkle.] Wrinkled; puckered; having alternate ridges and hollows.
Rug'by, a town of England, co. of Warwick, on the Avon, 28 m. E.S.E. of Birmingham, and 75 m. N.W. of London; famous for its great public school, esteemed one of the first in England; *pop.* 7,818.
Rugeley, (*rū'ly*), a town of England, co. of Stafford, on the Trent, 8 m. E.S.E. of Stafford; *pop.* 4,362.
Ru'gen, an island in the Baltic, belonging to Prussia, opposite Stralsund, separated from Pomerania by a narrow channel, between $1\frac{1}{2}$ and 2 m. in breadth; *Lat.* $53^{\circ} 41' 12''$ N., *Lon.* $13^{\circ} 31' 27''$ E.; *area*, 386 sq. m. It is fertile and well wooded. *Prod.* Corn; and numerous cattle are raised. *Cap.* Bergen. *Pop.* 46,746.
Rugenwalde, (*roo'gen-wald*), a town of Prussian Pomerania, on the Wipper, 20 m. N.N.E. of Koslin; *pop.* 5,000.
Rug'ged, *a.* [From the root of *rug*, *rough*, *q. v.*] Full of superficial asperities; broken into sharp, or irregular points or crags, or otherwise jagged or uneven; rough; as, a rugged country, a rugged road, a rugged bark.—Uneven; not neat or regular; as, a rugged mane, a rugged beard—Rough with hair or stiff points; unevenly hirsute; shaggy; as, a rugged bear.—Rough in temper, character, or manner; harsh; hard; rigid; austere; as, a person of a rugged nature.—Stormy; turbulent; tempestuous; as, rugged winds, rugged weather, rugged seasons.—Rough to the ear; strident; grating; harsh; dissonant; as, a rugged line in poetry.—Sour; surly; crabbed; puckered; wrinkled; frowning; as, rugged looks, a rugged visage.—Robust; hearty; hardy; vigorous; as, a rugged physique. (*An American colloquialism*).
 (*Bot.*) Scabrous, as a leaf or stem.
Rug'gedly, *adv.* In a rough or rugged manner.
Ruggedness, *n.* State or quality of being rugged; roughness; asperity of surface; roughness of temper; surliness; harshness; storminess.
Rugging, *n.* A coarse cloth, for wrapping-blankets, &c.
Rug'gles, in *Ohio*, a post-township of Ashland co. *Pop.* (1897) 695.
Rug'gown, *n.* A gown of coarse material.
Rugine, (*ru'jeen*), *n.* [*Fr.*, from *Lat. runcina*, a plane.] An instrument used for rasping bones to detach the periosteum, either in certain surgical operations or for anatomical purposes.
 —*v. a.* [*Fr. ruginer*.] To scrape; to rasp. (*R.*)
Rugolose, *a.* [From *Lat. ruga*, a wrinkle.] Partially wrinkled.
Rugose, **Rugous**, (*ru-gō's*), *a.* [*Lat. rugosus*, from *ruga*, a wrinkle.] Wrinkled; full of wrinkles; rough with wrinkles; as, the rugose bark of an oak-tree.
 (*Bot.*) Covered with reticulated lines separated by convex spaces, as the leaves of sage.
Rugosity, *n.* [*Fr. rugosité*; *Lat. rugositas*.] State of being rugose or wrinkled.
Rugons, *a.* Same as *Rugose*, *q. v.*
Ruhmkorff's Coil, *n.* (*Elect.*) See *INDUCTION*.
Ru'in, *n.* [*Fr. ruine*, from *Lat. ruina*, from *ruo*, *rutum*, to rush down.] That change of anything which destroys it, or entirely defeats its object, or unfits it for use; destruction; prostration; subversion; overthrow; defeat; as, the ruin of a cause or country, the ruin of one's hopes or expectations, &c.—The state of being decayed, or having become valueless; as, he has gone to ruin, a building in ruins, &c.—That which decays, deteriorates, or destroys; mischief; bane; pest; as, drink was the poor fellow's ruin.
 —*pl.* The remains of a decayed or demolished city, house, fortress, or any work of art or other thing; also, the decayed or enfeebled remains of a natural object; as, the ruins of Iona, the ruins of an originally fine constitution, &c.
 —*v. a.* [*Fr. ruiner*.] To bring to ruin; to pull down, burn, or otherwise destroy; to subvert; to demolish; to bring to an end; to counteract; to defeat; to deprive of felicity or fortune; to impoverish; to bring to everlasting misery; to damage irretrievably; to cause to perish; as, he was ruined by his wife's extravagance, a ruined girl, a ruined temple, &c.
 —*v. n.* To perish; to become decayed or dilapidated; to fall in ruins. (*R.*)
 "If we are idle . . . we shall ruin the faster."—*Locke*.
Ruinable, *a.* That may be ruined; susceptible of ruin.
Ruinate, *a.* Ruined; involved in ruin.
Ruination, (*-ā'shun*), *n.* [*L. Lat. ruinatio*.] Utter ruin; subversion; demolition;—used colloquially; as, this would be the ruination of everybody.
Ruiner, *n.* One who ruins, subverts, or destroys.
Ru'inform, *a.* [*Fr. ruinforme*, from *Lat. ruina*, and *forma*, form.] Having resemblance to ruins, or to the ruins of houses;—said of certain minerals.
Ruinous, (*ru'in-us*), *a.* [*Fr. ruineux*; *Lat. ruinosus*.] Entirely gone to decay; dilapidated; demolished; fallen to ruin; as, a building, bridge, &c., in a ruinous state.—Bringing, or tending to bring, certain ruin; pernicious; destructive; baneful; as, a ruinous storm, ruinous expenditure, a ruinous sacrifice, the ruinous practice of gambling, &c.—Composed of, or consisting in, ruins; as, a ruinous heap.
Ruinously, *adv.* In a ruinous manner; destructively; perniciously; as, he is ruinously addicted to women.

Ru'inousness, *n.* A ruinous state or quality.

Rukh, (*rōk*), *n.* See *Roc*.

Ru'fable, *a.* That may be ruled; susceptible of, or subject to, rule; in conformity with, or accordant to, rule; as, a *ru'fable* temper or disposition.

Rule, *n.* [*Fr. règle*; *Lat. regula*, a ruler, from *rego*, to keep or lead in a straight line.] An instrument by which lines are drawn, or short lengths measured; as, a carpenter's rule.—Supreme command or authority; government; empire; sway; control; power.

—That by which anything is to be adjusted or regulated, or to which it is to be conformed; that which is established for guidance and direction in anything; a regulation; a direction; a precept; a statute; a law; a canon; a maxim; an order; a method; a uniform course of things; as, rules and regulations for the maintenance of public order.—Established mode or course of procedure prescribed in private life; order; method; as, he makes it a rule to rise early, to live by rule, &c.

(*Law*.) An order of one of the three superior courts of common law. Rules are written *general* or *particular*; the former being such orders relating to matters of practice as are laid down and promulgated by the court for the general guidance of the suitors; the latter are such orders as are confined to the particular case in reference to which they have been granted. The term is often used generally to denote a legal doctrine.

(*Ecccl.*) In a monastic sense, a system of laws and regulations by which monasteries and other religious houses are governed, and which the monks, nuns, and novices vow, on their entrance, to observe.

(*Arith.*) A certain prescribed series of numerical operations, adapted to discover, from the given conditions to which an unknown number is subjected, what that number is. They are generally distinguished by particular names, according to the purposes for which they are given, or the particular nature of the business for which they are required; as, the rules of interest, the rules of fellowship, &c.

Rule of Three, (*Arith.*) The rule by which, when three numbers are given, a fourth is to be found, so that the four shall be in direct or inverse proportion, as the case may require.

(*Building*.) A term applied to the screeds, or portions of plastering executed on the face of a wall for the purpose of floating the works in order to retain their perpendicularity, or their evenness of surface.

(*Fine Arts*.) Those laws and maxims, founded on the general and fundamental truths of nature, by which artists are guided in their compositions.

(*Gram.*) The statement of a general law, or analogy, in respect to the forms of words, the construction of sentences, the dependence which one word or one sentence has over another, &c.—*Worcester*.

Brass rules, (*Print.*) Pieces of brass of different thicknesses, made letter-high, to print with type.

—*v. n.* To bring into and keep in a straight line; to mark with lines by a ruler; as, to rule a sheet of paper.

—To regulate; to direct; to govern; to control, as the will and actions of others, either by arbitrary power and authority, or by established laws; to manage or conduct in almost any manner; as, to rule a state, a people, a wife, or one's self.

"A wife who, while she rules him, never shows she rules."—*Pope*.

—To settle, as by a rule; to establish by decree or decision; to lay down, as an imperative condition of obligation.

(*Law*.) To command by rule; to enter a rule against; to determine judicially or magisterially; as, his honor ruled that an appeal be granted.

—*v. n.* To have power, command, or control; to exercise supreme authority;—generally preceding *over*.

(*Law*.) To decide; to lay down and settle, as a rule or order of the court, to enter a rule.

(*Com.*) To maintain an average; as, cotton rules a cent per pound higher than yesterday's quotations.

Ruleless, *a.* Without rule;—hence, lawless.

Ruler, *n.* A rule; an instrument of wood or metal with straight edges or sides, by which lines are drawn; a rule.—One who rules or governs; any one who exercises supreme power over others; one who makes or executes laws in a limited or free government.

"O Winter, ruler of the inverted year."—*Couper*.

Rul'ing, *p. a.* Marking with lines, or as with a ruler.—Having predominance or control; governing; reigning; as, a ruling monarch, a ruling passion, a ruling feature.

Rul'ingly, *adv.* In a ruling manner; with authority; so as to control.

Rullichies, (*rū'li-chīz*), *n. pl.* [*Dn.*] Chopped meat stuffed into small bags of tripe, which are cut in slices and fried.

Ru'lo, in *Nebraska*, a post-village and township of Richardson county, about 14 miles N.W. of Iowa Point, Kansas.

Rulsk, or **Rylsk**, a town of Russia, gov't. of Kursk, 62 m. W.S.W. of Kursk; *pop.* 6,000.

Rum, *n.* [*A word of West Indian origin*.] A spirituous liquor distilled from cane-juice, or from the skimmings of the juice from the boiling-house, or from the molasses which drains from sugar. This liquor is made in its greatest purity in the W. Indies and at Demerara; it is also distilled in the United States. Its flavor is due to the presence of a peculiar volatile oil, and its average proportion of alcohol fluctuates between 50 and 56 per cent.—Also, in the U. States, a cant term for rye whisky.

—*a.* [*Low Ger. rummel*, lumber.] Odd; queer; quaint; old-fashioned; as, a rum old fellow, he's a rum customer, &c.
Ru'ma, in *Illinois*, a post-village of Randolph co., abt. 14 m. N. of Kaskaskia.

Rum'ble, *n.* [*O. Fr. rommeler*; *Du. rommelen*; *Ger. rum-*

meln.] A hoarse, low, heavy, continued sound; as, the rumble of thunder at a distance.—A seat for servants behind a carriage.

—*v. n.* To make a low, heavy, repeated sound; as, the rumbling of an earthquake.

Rum'bler, *n.* One who, or that which, rumbles.

Rum'blingly, *adv.* In a rumbling manner.

Rum'-bud, *n.* A grog-blossom; a fiery eruption on the face, caused by excessive drinking of bad liquors; a ruby on the nose.

Rumburg, (*room'berg*) a town of Bohemia, 42 m. N.N.W. of Buntzlau. *Manuf.* Woollens, lineus, cottons, and damask. *Pop.* 5,000.

Ru'men, *n.* [*Lat.*, the throat.] The upper stomach of ruminant animals.—The end of a ruminant animal.

Rum'ex, *n.* (*Bot.*) A gen. of plants, ord. *Polygonaceæ*, including the different kinds of Sorrel and Dock. Several species possess acid properties, owing to the presence of oxalic acid, especially *R. acetosa*, the common Sorrel, *R. acetosella*, *R. scutellus*, *R. patientia*, and *R. pulcher*, the Fiddle-dock. They have been employed as pot-herbs and for salads. In France, the first species is largely cultivated, a sauce made from it being a regular addition to many dishes. It is sometimes used medicinally, for its refrigerant, diuretic, and antiscorbutic properties. The root of *R. hydrolapathum*, the great Water-dock, is a stringent and antiscorbutic; that of *R. alpinus* is purgative, and was formerly used as a substitute for rhubarb, under the name of *Monk's rhubarb*.

Rum'ford, BENJAMIN THOMPSON, COUNT, an American natural philosopher and philanthropist, b. at Woburn, Mass., 1753, was at first engaged in mercantile pursuits, afterwards studied medicine, and then became a school-master at Rumford, in New Hampshire. In the contest between England and America he espoused the royal cause, and, having married a wealthy widow, was enabled to raise a regiment of dragoons. He repaired to England in 1784, and was created a knight. Afterwards, proceeding to Bavaria, he obtained a distinguished position in the service of that state, where he was engaged in several schemes of social amelioration, and was created a lieutenant-general and a count, taking his title from Rumford, now Concord, N. H. About 1797, he returned to England, where he distinguished himself by his experiments in the science of natural philosophy, and in assisting to found the Royal Institution. In 1802, he took up his residence at the French capital, where he married his second wife, the widow of the celebrated chemist Lavoisier. After being separated from this lady, he fixed his residence near Paris, and remained there until his death. In Bavaria and in England, he projected many important improvements in social economy, accounts of which are contained in his *Essays Political, Economical, and Philosophical*. His projects for relieving the condition of the poor were as sound as they were benevolent. As a philosopher, his fame partly rests upon his papers on natural philosophy and mechanics, contributed to the "Transactions of the Royal Society." He left a fund for awarding Medals for important discoveries, called the "R. Medal." D. near Paris, 1814.

Ru'minal, *a.* Ruminant. (*R.*)

Ru'minant, *a.* [*Fr.*; *Lat. ruminans*—*rumino*, from *rumen*, the gullet.] Chewing over again;—specifically, chewing the cud; having the property of chewing again what has been swallowed; as, oxen are ruminant beasts.

—*n.* One of the Ruminantia.

Ruminantia, *n. pl.* [*Lat.*] (*Zool.*) A name applied by Cuvier to those even-toed or artiodactyl ungulates which "chew the cud," that is, masticate a second time their food, which they return into the mouth after a previous deglutition—a power which is the result of the structure of their stomachs, of which they always have four. The animals possessed of this power have nearly all the air of being constructed on the same model, the camels alone presenting some small exceptions to the common character. The first of these characters, according to Cuvier, is the possession of incisor teeth in the lower jaw only, these being nearly always eight in number, and replaced above by a callous rim. Between the incisors and the molars is a wide space, where are found, in one or two genera only, one or two canines. The molars, nearly always six in number on each side of the upper and lower jaws, have their crowns marked with two double crescents, the convexity of which is turned inwards in the upper, and outwards in the lower teeth. The four feet are terminated by two toes and two hoofs, which oppose to each other a flattened surface, so that they have the appearance of a single hoof which has been split. The first stomach is much the largest in the adult animal, but not so in the recently-born calf or lamb. It is divided outwards into two bag-like appendages at its extremity, and it is slightly separated into four parts on the inside. The internal coat of the stomach is beset with innumerable flattened papillæ. It is very capacious, and fitted to receive a large quantity of grass, or other matter on which the animals feed; but no gastric fluid, or any other solvent fluid, enters it, and thus it is simply a receptacle. From this stomach the herbage, rudely broken up by the first mastication, is transferred to the second stomach, or "king's-hood," which is of a very peculiar construction. It is very muscular in its walls, and the interior of it consists of cells, which are larger or smaller, according to the size of the animal and the nature of the food upon which it habitually subsists. The walls of these cells have the faculty of standing erect at the same time that there is a vermiform or twisting motion of the entire organ. By means of these cells and this motion, the food is compressed into small balls, which are one by one returned to the mouth for remastication.

During this operation, the animal remains in a state of repose until all the herbage swallowed has undergone the action of the molar teeth a second time. The aliment thus remasticated is passed into the third stomach, or "manyfold," so called because it consists of parallel laminae, bearing some resemblance to the leaves of a book, which lie lengthwise, and vary in breadth in regular alternate order, amounting to some forty in the sheep, and about a hundred in the cow. This is the stomach in which the drink of the animal mingles with its food. From the "manyfold," the food and drink, combined and reduced to a pulp, upon which the real digestive process can be exercised, are conveyed to the fourth, or truly digestive stomach of the animal, which is the only one that secretes gastric juice, and is commonly known by the name of "the red." It is next in size to the first stomach, or *paunch*, of an elongated, pyriform shape, and with an internal villous coat, similar to that of the human stomach, with large longitudinal wrinkles. The *R.* may be divided into three great groups: those with solid and usually deciduous horns, as the deer, and called the *Cervidae*, or deer family; those with permanent horns, consisting of an exterior hollow horn, enclosing a bony process of the skull, as the antelopes, goats, sheep, and oxen, and called the *Cavicornia* family; and those which have no horns, as the camels and llamas, and called the *Camelidae*, or camel family.

Ruminantly, *adv.* By chewing over again; in a ruminant manner.

Ruminate, *v. a.* [Fr. *ruminer*; Lat. *rumino*, *ruminatus*, from *rumen*, the gullet.] To re-pass the food from the stomach through the gullet, for the purpose of chewing it over again; to chew the cud; to chew again what has been slightly chewed and swallowed.—To nurse; to meditate; to ponder; to think again and again; as, he *ruminates* on the past.

—*v. n.* To chew over again.—To meditate upon over and over again.

"Mad with desire, she *ruminates* her sin."—Dryden.

Ruminate, **Ruminated**, *a.* [Fr. *ruminé*.] (Bot.) Having a hard albumen, as the nutmeg and some other seeds, penetrated by irregular channels filled with softer matter.

Rumination, (*-ā'shun*), *n.* [Fr.: Lat. *ruminatio*.] Act of ruminating, or of chewing the cud; power or property of chewing over again.—A pleasing or continued thinking on a subject; deliberate meditation or reflection; state of being disposed to ruminate.

Ruminator, *n.* [Lat.] One who ruminates, muscs, or meditates.

Rumley, in *Ohio*, a township of Harrison co.; *pop.* abt. 1,600.

Rummage, (*rām'āj*), *n.* [From *room*; formerly *romage*, to find room or space for.] A searching carefully by prying into every corner, and by tumbling things over; as, to make a *rummage* among odds and ends.

Rummage sale. A clearance sale of unclaimed goods in a public store, or of odds and ends which have accumulated in a shop.

—*v. a.* To search scrutinizingly by looking into every corner of, and turning over or removing first one thing and then another.

"Our greedy seamen *rummage* every hold."—Dryden.

(*Naut.*) To remove, as goods or baggage, from one place to another, especially from the ship's hold, in order to their being handsomely stowed and placed.

—*v. n.* To search a place narrowly by looking among things; as, he often *rummages* for old books.

Rummager, *n.* One who rummages.

Rummer, *n.* A goblet; a drinking-cup; as, fill me a *rummer* of punch.

Rummy, *a.* Pertaining, or relating, to rum; as, a *rummy* flavor;—hence, hilarious; jovial; companionable; as, a *rummy* fellow.

—*n.* One who drinks rum; a toper; a tippler: one who does not adulterate his dram of spirits with water. (A colloquialism.)

Rumney, in *New Hampshire*, a post-village and township of Grafton co., abt. 59 m. N.N.W. of Concord; *pop.* abt. 1,200.

Rumor, *n.* [Fr. *rumour*, from Lat. *rumor*.] Flying or popular report; a current story passing from mouth to mouth, without any known authority for the truth of it; as, there ran a *rumor* of his death.—Report of a fact; a story well authenticated; as, "this *rumor* of him went forth." (Luke vii. 27.)—Fame; reputation; reported celebrity.

"Great is the *rumor* of this dreadful knight."—Shaks.

—*v. a.* (imp. and pp. *rumored*, or *rumoured*.) (*rum'ored*.) To report; to tell or circulate a report; as, it is *rumored* that she is about to be married.

Rumor, *n.* One who circulates rumors. (*R.*)

Rump, *n.* [Ger. *rumpf*, probably from Lat. *rumpe*, *ruptus*, to break.] The termination of the backbone of an animal, with the parts adjacent.—The buttocks.

The Rump, or **Rump Parliament**. (*Eng. Hist.*) The remnant, or fig-end, of the Long Parliament, which was assembled on the 6th of May, 1659, and dissolved on the 15th of October, in the same year;—so called from the general contumely and derision with which it was treated by the English nation at large.

Rumper, *n.* One who had been a member of the Rump Parliament.

Rump-fed, *a.* Fat in the breech; fed or fattened in the rump.

Rumple, *v. n.* [Du. *rimpelen*; Ger. *rümpfen*, to become crumpled.] To wrinkle; to crumple; to make uneven; to form into creases or irregular inequalities; as, *rumpled* paper.

—*n.* [A. S. *hrympelle*.] A wrinkle; a pucker; a rimple; a fold or plait.

Rumpless, *a.* Short of a rump; destitute of buttocks; as, a *rumpless* chicken.

Rump-steak, (*-stāk*), *n.* A choice quality of beef-steak, cut from the thigh near the rump; as, he dined off *rump-steak*, with oyster sauce.

Rumpus, *n.* Noise and confusion; a commotion; a disturbance; a row; a racket; a shindy; as, to kick up a *rumpus*. (Colloq.)

Rumsey, in *Kentucky*, a post-village of McLean co., abt. 160 m. S.W. of Frankfort.

Rum-swizzle, (*-swiz'zl*), *n.* A kind of fabric made in Dublin from undyed foreign wool, which possesses the property of resisting wet, while having the qualities of common cloth.

Run, *v. n.* (imp. *RAN* or *RUN*; pp. *RUN*.) [A. S. *rennan*; Ger. *rennen*; Sans. *rn*, *ran*, to go.] To go, move, or pass with a lighter or more rapid gait than by walking; to go or move in a quick, hurried manner; to step quickly or with alertness;—hence, in application to inanimate things, to move freely and rapidly, to proceed without let or hindrance.

—To move, pass, or go;—expressing voluntary or personal action; as, (1.) to hurry; to hasten;—particularly, in circumstances of alarm or danger; as, she *runs* about with the sad story.—(2.) To retreat; to flee; to withdraw;—implying a sense of confusion or disorder; as, the troops fairly *run* away.—(3.) To quit clandestinely; to steal off; to depart; as, that apprentice has *run* from his master.—(4.) To enter into a contest; to become a candidate or competitor; as, to *run* for governor of a State.—(5.) To become; to change one state for another; as, to *run* into dissipation or debt.—(6.) To exercise unremitting activity; to proceed; to go on with; as, he *runs* through his fortune rapidly.—(7.) To pass in meditation or conversation from one theme or subject to another; as, to *run* into a dissertation irrelevant to the case in point.—(8.) To debate or discuss; to continue to think or speak about some matter; as, he still *runs* on his old idea.—(9.) To demand instant payment;—implying numerous demands; as, they *run* on the bank without intermission.—(10.) To creep or crawl, as lizards, &c.

—To pass; to go; to be moved;—expressing involuntary motion; as, (1.) to flow, as a liquid; to fall, as a stream; as, the wine *runs* round rapidly, ice *runs* when dissolved.—(2.) To spread; to extend; to embrace a certain surface; as, fire *runs* far among dry timber.—(3.) To fuse; to melt; to come into a state of fluidity; as, certain ores *run* freely in process of smelting.—(4.) To revolve on an axis, or a centre or pivot; to describe revolutions; as, a wheel *runs* almost imperceptibly round.—(5.) To exercise action on wheels or runners; as, an express-train on English railroads *runs* sixty miles an hour.—(6.) To reach; to pass through, or extend over a period of time; as, my recollections *run* back to boyhood.—(7.) To go to and fro, as from one place to another; as, the tidal steamers *run* from Dieppe to New-haven, and *vice versa*.—(8.) To proceed; to pass; to undergo progression; as, time *runs* swiftly by.—(9.) To be sustained or kept in action or motion; to continue in active application; as, the engine *runs* night and day.—(10.) To be inclined to a certain course or direction; as, a line *runs* north or south.—(11.) To be formed thus, as a combination of words:

"The king's ordinary style *runneth*, 'Our sovereign lord the king.'"—Sanderson.

—(12.) To have general acceptance; to be publicly or popularly known; as, he *runs* on the prestige of his political bias.—(13.) To undergo growth or development; as, girls *run* to puberty before boys.—(14.) To tend; to have result or consequence; to incline; as, his taste *runs* to literature.—(15.) To combine; to unite; to become blent together; as, the colors of this print will *run* in the washing.—(16.) To continue in force, effect, or operation; to attach; to follow; to join in company; as, mortgages *run* with the estate.—(17.) To hold good; to remain without falling due; as, my note of hand has still ten days to *run*.—To suppurate; to exude pus or matter; as, a *run* *run*.

To let run. (*Naut.*) To slacken or let loose; to permit to pass or move freely; as, *let run* the guy.—**To run after**. To pursue, chase, or follow; to search or seek for; to endeavor to obtain; as, to *run after* a good-looking girl.—**To run amuck**. See *AMUCK*.—**To run the gantlet**. See *GANTLET*.—**To run at**. To drive at foremost; to attack with the horns, as a bull.—**To run away**. To abscond; to depart; to flee; to elope; as, she *ran away* with her father's footman.—**To run away with**. To carry or convey away surreptitiously; as, the butler *ran away with* his master's wife.

—*v. a.* To cause to go; to drive or push; to force; to cause to be driven; as, to *run* a horse, an engine, or a business; to *run* a ship aground, &c.—To pierce; to stab; as, to *run* one through the body.—To melt; to fuse; as, to *run* lead into bullets.—To incur; to encounter; to fall into; to venture; to hazard; as, to *run* a risk.—To smuggle; to import or export without paying the duties required by law; as, to *run* contraband goods.—To pursue in thought; to carry in contemplation; to trace by reflection.—To cause to pass; to cause to ply; to maintain in running or passing; as, to *run* a line of packets.—To found; to shape, form, or make in a mold; to cast.—To discharge; to pour forth in a stream.

(NOTE. This is one of those words which serve for use when other words are wanted, and has, therefore, obtained a great multiplicity of relations and applications; but it may be observed always to retain much of its primitive sense, and to imply progression, and for the most part, progressive violence.)

—*n.* Act of going; act of running; course; motions; flow.—Course or process; continued series; way; will;

uncontrolled course.—General reception; continued success.—Mobish or popular clamor.—A general or uncommon pressure on a bank or treasury for payment of its notes.—The distance sailed by a ship.—A voyage.—Prevalence.

Runaway, (*run'a-wā*), *n.* One who flies from danger or restraint; one who deserts lawful service; a fugitive.

Runcitrade, *a.* [Lat. *runcina*, a large saw.] (Bot.) Having lobes hooked back, or curved in a direction from the apex to the base; as the lobes of the leaf of the dandelion.

Rundel, *n.* A circle; a runlet.

Rundle, *n.* A rung; a step of a ladder.—The wheel of a peritrochium;—also, something put round an axis.

Runes, *n. pl.* [Goth. *runa*; A. S. *runion*.] (Philology.) The letters of the ancient Goths, Danes, and other northern nations. The word *runes* is said by some authorities to be derived from a word in the ancient Gothic language, signifying to cut, while others assert that it is *ryn*, a furrow, or *ren*, a gutter or channel; and others, again, derive it from *rumman*, to whisper. The time when this alphabet began to be used is only matter of conjecture; and, while some have advanced the opinion that Runic characters were used by the Germanic nations long before the Christian era, others suppose that they were the invention of a much later age. The alphabet consisted of only sixteen letters, and the fact that some of them bear a great similarity to the Greek and Roman characters, supports the opinion entertained by some philologists, that this alphabet was originally introduced among the inhabitants of the coasts of the Baltic by Phœnician merchants, and that, with some modifications, it was kept a secret by their priests, and applied to various magic purposes. The Runic characters are found cut on stones, which were either sepulchral monuments or land-marks, and which are frequently met with in all countries inhabited by natives of the Teutonic race during the fourth and fifth centuries of our era. The accompanying figure shows Runic characters and ornaments from the Runic cross at Rothwell, Scotland.

Fig. 2285.

Rung-heads, *n.* (*Naut.*) The upper ends of the floor timbers of a ship.

Rungpoor, (*roong-poor*), a town of British India, presidency of Bengal, cap. of a dist. of the same name, on the Gogot River, 125 m. N.E. of Moorshedabad; Lat. 25° 43' N., Lon. 89° 22' E.; *pop.* 20,000.

Runic, *a.* Relating to the ancient Goths, Scandinavians, and other Teutonic nations, or to their language, or to the characters in which their language was written. See *RUNES*.

Runlet, *n.* [Dimin. from *round*.] A small barrel of no certain dimensions;—so named from its shape. It most usually contains 14½ gallons.

Runlet, **Rumlet**, *n.* A little stream; a brook.

Runner, (*rūn'er*), *n.* One who runs; that which runs; a racer; a messenger.—A thread-like stem in certain plants, running along the ground, and taking root.—A rope used to increase the power of a tackle.

Runnet, *n.* Same as *RENNET*, *q. v.*

Running, *a.* Moving or going with rapidity; flowing; as, *running* waters.—Kept for racing; as, a *running* horse.—In succession; without any intervening day, year, &c.—Discharging pus or other matter; as, a *running* ulcer.

—*n.* Act of running or passing with speed.—That which runs or flows.—The discharge of an ulcer or other sore.

Running-fire, *n.* (*Mil.*) A rapid succession of firing.

Running-rigging, *n.* (*Naut.*) All that portion of a ship's rigging which passes through the blocks, to dilate, contract, or traverse the sails.

Runion, *n.* A paltry, scurvy wretch;—also written *ronyon*.

Runt, *n.* [Du. *runte*, a bull or cow.] Any animal small below the natural growth of its kind;—used in contempt.

Rupee, *n.* A gold and silver coin which is current in several parts of Asia, and in the islands of the Eastern Archipelago. Its value not only varies with the course of exchange, but is altered in different localities. In calculation, however, the *silver rupee* current in the East Indies may be taken as representing \$0.48, the *Sicca rupee* of account as \$0.60, and the *gold rupee* at \$7.08. A *lac* consists of 100,000 rupees.

Rupert, in *Pennsylvania*, a post-village of Columbia co., abt. 10 m. N.E. of Danville.

Rupert, in *Vermont*, a post-vill. and township of Bennington co., abt. 86 m. S.W. of Montpelier.

Rupert River, rises in Lake Mississinny, British N. America, and flowing W. enters James' Bay of Hudson's Bay. Length, abt. 300 m.

Rupert's-drop, *n.* See *GLASS*.

Rupia, *n.* [Gr. *rupos*, filth.] (*Med.*) An eruption of flatish vesicles, succeeded by an ill-conditioned discharge, which concretes into scabs easily rubbed off and regenerated; they sometimes occur as a consequence of poor diet and weak habit of body; but there is a *rupia* which constitutes one of the most painful sequelæ of syphilis. Light nutritious food, tonics, and alteratives are the remedies.

Ruption, *n.* [Lat. *ruptio*, a breaking.] Breach; severance of continuity.

Ruppin, (*New*), (*roop'pin*), a town of Prussia, prov. of Brandenburg, govt. of Potsdam, on the lake of Ruppin, 37 m. N.W. of Berlin. *Manuf.* Woollen goods, gloves, and leather. *Pop.* 11,098.

Rupture, (*rūpt'ūr*) *n.* [Fr., from Lat. *rumpo*, *raptus*, to break.] Act of breaking or bursting; the state of being broken or violently parted. — Fracture; dislocation; disruption; a breach of peace or amity; open hostility. (*Surg.*, See HERNIA.)

—*v. a.* To break; to burst; to part by violence.

—*v. n.* To suffer a breach or disruption.

Ru'ral, *a.* [Fr.; Lat. *ruralis*, from *rus*, *ruris*, the country.] Pertaining to, or belonging to, the country, as distinguished from a city or town; suiting the country or resembling it; rustic; pertaining to farming or agriculture; bucolic.

R. economy. A general term applied to the management of landed property, either by the proprietor or his agent. The term includes whatever conduces to the improvement of land for purposes of agriculture or grazing, either by arrangement of the crops, or by fertilizing the soil with manure, or by the management of the produce. *R. E.* also comprehends the keeping of farm-stock and their breeding; the general rearing of domestic fowls, geese, ducks, pigeons, &c.; also the management of the garden.

Ru'ral, in *Wisconsin*, a post-village of Waupaca co., abt. 40 m. N.W. of Oshkosh.

Ru'ralist, *n.* One who leads a rural life.

Rurality, **Ru'ralness**, *n.* The quality of being rural.

Ru'ral Village, in *Pennsylvania*, a post-village of Armstrong co., abt. 12 m. E. of Kittanning.

Ru're'monde, a town of Holland. See RERMOND.

Ru'ric Islands, a group in the Pacific Ocean, discovered by Kotzebue in 1816; Lat. between 15° 10' and 15° 30' S., Lon. 151° E.

Rus'comb Manor, in *Pennsylvania*, a township of Berks co.

Ruscus, *n.* (*Bot.*) A genus of plants, order *Liliaceæ*. The species *R. aculeatus*, commonly called Butcher's-broom and Horse-tongue, has aperient and diuretic roots, which were formerly much employed medicinally in visceral diseases. The roasted seeds have been used as a substitute for coffee.

Ruse, *n.* [Fr., from Lat. *re*, intensive, and *usus*, experience.] Finesse; means employed to deceive; artifice; trick; stratagem; wile; fraud; deceit.

Ruse de-guerre, (*rūz' dē-gar*) [Fr.] A trick of war; a stratagem.

Rush, *n.* [*A. S. rics*, *risc*.] (*Bot.*) The common name of the genus *Juncus*. See JUNCACEÆ.

Rush, *v. n.* [*A. S. hrōsan*, *reosan*; Ger. *ranschen*; Heb. *raash*, to be moved, to be shaken.] To fall or tumble down with rapidity, as a stream or cascade; to move with the force and quickness of anything falling; to move with violence; to push on; to press on; to move forward with impetuosity, violence, and tumultuous rapidity; to enter with undue eagerness, or without due deliberation, and preparation; —followed by *on* or *upon*.

—*n.* A falling or tumbling down; a driving forward with eagerness and haste; a violent motion or course.

Rush, BENJAMIN, a celebrated American physician, and one of the signers of the Declaration of Independence, b. 1741, at Poqueston Creek, near Philadelphia. He was educated at Princeton College; took his degree at Edinburgh, in 1768; was chosen a member of Congress for Pennsylvania, in 1776; was appointed Professor of Medicine and Clinical Practice at the University; planned in 1785 the Philadelphia Dispensary, the first in the U. States; was a member of the Convention which ratified the Federal Constitution; and died in 1813. During the devastation caused by the yellow fever in 1793, Dr. Rush highly distinguished himself, and his history of that epidemic is considered a work of great value. He also wrote, *Medical Inquiries and Observations*; and *Essays Literary, Moral, and Philosophical*.

Rush, RICHARD, an American statesman and diplomatist, son of the preceding, b. in Philadelphia, 1750. He was graduated at Princeton College, 1797, studied law in Philadelphia, was appointed Attorney-General of Penna. in 1811, and was Attorney-General of the U. S. from 1814 to 1817. In 1817 he was temporary Secretary of State under President Monroe, and was by him appointed minister to England, from whence he was recalled in 1825 by President Adams, who made him Secretary of the Treasury. In 1828 he was candidate for the vice-presidency on the same ticket with President Adams, who was nominated for reelection, and received the same number of electoral votes. In 1836, President Jackson appointed him commissioner to obtain the Smithsonian legacy, then in the English Court of Chancery, in which he was successful, and returned, in 1838, with the entire amount, \$515,169. In 1847 he was appointed minister to France. At the close of President Polk's term he asked to be recalled, and spent the rest of his life in retirement. *L.* 1859. He has left *Memoranda of a Residence at the Court of St. James*, 2 vols. (1833-1845); *Washington in Domestic Life* (1857); *Occasional Productions, Political, Diplomatic, &c.*, while the Author resided as Envoy Extraordinary from the U. S. at Paris, published by his sons, 1860.

Rush, in *Illinois*, a post-village and township of Jo Daviess co., abt. 150 m. W.N.W. of Chicago.

Rush, in *Indiana*, a S.E. central co.; area, abt. 410 sq. m. *Rivers*. Blue River, and Flat Rock Creek. *Surface*, level or slightly undulating; *soil*, very fertile, and yielding large crops of grain, particularly corn. *Cap.* Rushville.

Rush, in *Michigan*, a township of Shiawassee co.

Rush, in *Missouri*, a township of Buchanan co.

Rush, in *New York*, a post-village and township of Monroe county, abt. 12 m. S. by W. of Rochester, on Honey Creek

Rush, in *Ohio*, a twp. of Champaign co.—A twp. Scioto co.—A post-twp. of Tuscarawas co.

Rush, in *Pennsylvania*, a township of Centre co.—A township of Dauphin co.—A township of Northumberland co.—A township of Schuylkill co.—A post-township of Susquehanna co., 36 m. N.W. of Scranton.

Rush-buckler, *n.* A bullying and violent person.

Rush City, in *Minnesota*, a p. v. of Ruskoba twp., Chicago co.

Rush Creek, in *Ohio*, enters Hockhocking River from Fairfield co.—Another enters the Scioto River from Marion county.—A township of Fairfield co.—A township of Logan county, containing Rushsylvania a post-village, abt. 125 m. N.N.E. of Cincinnati.—A post-village of Union co.

Rushed, (*rūshd*) *a.* Abounding with rushes.

Rushen, (*rūsh'ā*) *a.* Made of rushes.

Rushford, in *New York*, a village of Allegany co., about 50 m. S.E. of Buffalo.

Rushford, in *Wisconsin*, a township of Winnebago co.

Rushiness, *n.* State of being rushy.

Rushing, *n.* A violent driving of anything; a rapid or tumultuous course.

—The act of one who, or that which, rushes; any commotion or violent course.

Rush Lake, in *Iowa*, a township of Palo Alto county.

Rush Lake, in *Wisconsin*, a small sheet of water in Winnebago co., covering an area of abt. 10 sq. m.—A village of Fond du Lac co., abt. 22 m. N. of Wauwaton.

Rush River, in *Wisconsin*, enters Lake Pepin from Pierce co.—A post-twp. of St. Croix co.

Rush Tower, in *Missouri*, a village of Jefferson co., abt. 36 m. S. by W. of St. Louis.

Rush town, in *Pennsylvania*, a post-village of Northumberland co., abt. 65 m. N. of Harrisburg.

Rushville, in *Illinois*, a post-village and township, cap. of Schuyler county, about 60 miles W.N.W. of Springfield.

Rushville, in *Indiana*, a town, cap. of Rush co., abt. 40 m. E.S.E. of Indianapolis. It contains many handsome buildings, and is a place of much business activity.

Rushville, in *Missouri*, a post-village of Buchanan co., abt. 17 m. S.W. of St. Joseph.

Rushville, in *New York*, a post-village of Yates county, abt. 205 m. W. of Albany.

Rushville, in *Ohio*, a post-village of Fairfield co.

Rushville, in *Pennsylvania*, a post-village of Susquehanna co., abt. 150 m. N.N.E. of Harrisburg.

Rushy, *a.* Abounding with rushes; made of rushes.

Rusk, *n.* (*Cooking*.) A kind of biscuit, but thicker, made of the best flour, and baked in a very quick oven. Rusks make an excellent food for children and invalids, and can be prepared in the form of puddings, for which they are well adapted.

Rusk, in *Texas*, an E. co.; area, about 930 sq. m. *Rivers*, Sabine and Angelina rivers. *Surface*, pleasantly diversified; *soil*, remarkably fertile. *Cap.* Henderson. *Pop.* (1897) 19,250.

Rus'kin, JOHN, an able, original, and copious English author, b. in London, 1819. After leaving Oxford, where he gained the Newdigate prize for poetry, in 1839, he practised painting. In 1843 he published the first vol. of *Modern Painters*. After the completion of this work, he wrote *The Seven Lamps of Architecture*, and *The Stones of Venice*, illustrated by himself. Besides these works, he has written several others on artistic subjects, and is the champion of pre-Raphaelism and Gothic architecture. In 1875, he pub. *Deucalion and Val d'Arno*, and in 1881, *Arrows of the Chace*. Died Jan. 20, 1900.

Russ, *n.* A native of Russia; a Russian.—The language of the Russians.—*a.* Relating to Russia; Russian.

Russa, (*roos'sā*) a town of Russia, govt. of Novgorod, on the Polista, 38 m. S. of Novgorod; *pop.* 6,000.

Russell, JOHN, EARL, a celebrated English statesman, and scion of a noble family which has given several illustrious names to English history, was the youngest son of the 6th Duke of Bedford, was b. in London, 1792, and received his education at the University of Edinburgh. In 1813 he first entered the House of Commons, in which he held for many years a conspicuous position, and became a prominent leader of the Whig party. When severe measures were taken to repress the commotions of the people desirous of Reform, Lord John earnestly resisted, and, but for the influence of Thomas Moore, would have retired in disgust from public life. Instead, however, he took up the question of Parliamentary Reform, which he continued to press forward until he carried the Reform Bill of 1832. Meantime, he aided in repealing the Test and Corporation Acts, and passing the Roman Catholic Emancipation Acts, thus proving himself the successful advocate of civil and religious liberty. In 1830 he became Paymaster-General of the Forces. By carrying the appropriation clause in the Irish Tithe Bill against Sir Robert Peel, Lord John brought in the Melbourne ministry, in which he was Home Secretary from 1835 to 1841, during which time measures of municipal and ecclesiastical reform, and others of a liberal character, were passed. From 1841 to 1846 Lord John was leader of the opposition, but in the latter year he became Premier, and held the seals of office until 1852, when he resigned them. Under Lord Aberdeen he was Secretary for Foreign Affairs and President of the Council, in which capacity he introduced another reform bill. Resigning office, in view of the impending censure of ministers on account of the conduct of the Crimean war, Lord John accepted the seals of the Colonial Office from Lord Palmerston; but in consequence of dissatisfaction with his management at the Vienna Conference of 1855, he threw up office.

He resumed it, as minister for Foreign Affairs, in 1859 with Lord Palmerston again as Premier, and continued to act in that capacity until the death of the latter, in 1865. During this time many difficult questions arose, and the policy which Lord Russell pursued was not successful, and was described by the Earl of Derby as a policy of "meddle and muddle." Among the most important questions were those arising out of the American Civil War. On the death of Lord Palmerston, Lord Russell became Prime-Minister for the second time; but resigned in 1866. Since then, Earl Russell has been without office, but has been generally an active supporter of Mr. Gladstone's ministry in the Upper House. He was created an earl in 1861, having for the previous twenty years represented the City of London. Earl Russell appeared as an author as far back as 1819, when he published *The Life of Lord W. Russell*, and his autobiographical *Recollections* appeared in 1875. *D.* 1878.

Russell, an E. co. of prov. of Ontario; area, abt. 379 sq. miles. *Rivers*, Petit Nation, and Ottawa rivers. United with co. Prescott.

Russell, in *Alabama*, an E. by S. co., adjoining Georgia; area, about 670 sq. m. *Rivers*, Chattahoochee river and Uchee, Wacoochee, and Cowee creeks. *Surface*, uneven; *soil*, in some parts fertile, and well adapted to the cultivation of rice. *Cap.* Seale. *Pop.* (1897) 24,890.

Russell, in *Illinois*, a township of Lawrence co.

—A post-village of Lake co.

Russell, in *Indiana*, a township of Putnam co.

Russell, in *Iowa*, a post-town of Lucas co.

Russell, in *Kansas*, a central co.; area, 900 sq. m. *Surface*, undulating; *soil*, fertile. It is intersected by the Union Pacific R. R. *Cap.* Russell. *Pop.* (1895) 7,470.

Russell, in *Kentucky*, a S. co.; area, about 260 sq. m. *Rivers*, Cumberland and Greene rivers. *Surface*, hilly and broken; *soil*, near the rivers, very fertile. *Cap.* Jamestown. *Pop.* (1897) 8,136.

Russell, in *Massachusetts*, a post-village and township of Hampden co., about 116 m. W. by S. of Boston.

Russell, in *New York*, a p. v. and twp. of St. Lawrence co.

Russell, in *Ohio*, a township of Geauga co.

—A post-village of Highland co.

Russell, in *Virginia*, a S.W. co.; area, about 453 sq. m. *Rivers*, Clinch and Guest rivers, and the West Fork of Sandy River. *Surface*, much diversified, the S.E. boundary being formed by Clinch Mountains; *soil*, not generally fertile. *Min.* Iron, coal, and marble. *Cap.* Lebanon. *Pop.* (1897) 17,260.

Russell, in *Wisconsin*, a prosperous township of Sheboygan co.

Russellburg, in *Pennsylvania*, a village of Warren co., about 7 m. N. of Warren.

Russellville, in *Alabama*, a post-village, cap. of Franklin co., about 220 m. N.N.W. of Montgomery.

Russellville, in *Georgia*, a post-village of Monroe co., about 24 m. W. of Macon.

Russellville, in *Indiana*, a post-town of Putnam co.

Russellville, in *Kentucky*, a post-village, cap. of Logan co., abt. 143 m. W. of Louisville.

Russellville, in *Louisiana*, a village of Claiborne parish, abt. 210 m. N.W. by W. of Baton Rouge.

Russellville, in *Missouri*, a post-village of Cole co., abt. 15 m. W.S.W. of Jefferson City.

Russellville, in *Ohio*, a post-village of Brown co., abt. 100 m. S. by W. of Columbus.

Russellville, in *Pennsylvania*, a post-village of Chester co., abt. 65 m. E.S.E. of Harrisburg.

Russellville, in *Tennessee*, a post-village of Hamblen co., 48 m. E.N.E. of Knoxville.

Rus'set, *a.* [O. Fr. *rousset*, from Lat. *russus*.] (*Painting*.) Of a reddish-brown color, derived from the mixture of the three primary colors in equal strength, but in unequal proportions, consisting of two parts of red and one part each of blue and yellow.—Coarse; homespun; rustic.

—*n.* A country dress.—A kind of apple of a russet color and rough skin.

Russia, the most extensive, and one of the most powerful empires, either of ancient or modern times. It comprises the most N. portion of the Eastern hemisphere, from the frontiers of Posen and the Gulf of Bothnia on the W., to the Pacific Ocean and Behring's Strait on the E., or from Lon. 17° 38' E. to abt. 170° W., being a distance, on the 60th deg. of Lat., of nearly 6,000 m. Its extent from N. to S., though less vast, is still very great, stretching from near the 30th to the 70th, and in some parts to the 77th deg. of N. Lat., exhibiting an average breadth of about 1,500 m. The superficial extent of the empire is: Russia in Europe, including Finland, 2,095,504 sq. m., and Russia in Asia, 6,564,778 sq. m.; total, 8,660,282 sq. m., the density of population being in Europe 46 and in Asia 3 to the sq. m. The Russian empire comprises one-sixth of the territorial part of the world, and about one twenty-sixth part of its entire surface. *Face of the Country.*—*Mountains.* *R.* is in general level, and comprises some of the most extensive plains in the world. It is naturally parcelled into the two great divisions of *European* and *Asiatic R.* by the Ural Mountains, which stretch in a N.N.E. direction from the Caspian Sea to the Arctic Ocean, forming, through the greater part of their course, the boundary between Europe and Asia. The highest points in this chain have an elevation of about 6,500 feet above the level of the Caspian Sea. In all the vast country, extending on the W. side of this central chain to the confines of Poland and Moldavia, there is hardly a single hill. The Valdai hills, or elevated grounds, between Novgorod and Tver, where the Wolga, the Don, and the Dnieper, have their sources, are nowhere more than about 1,200 feet above the level of the sea, the country exhibiting a waving surface, and without any considerable elevations. There is nothing

in fact, save the forests, to break or interrupt the course of the wind in all the immense space interposed between the Ural and the Carpathian Mountains. The only great chain of mountains in W. R. is that of Caucasus, between the Euxine and Caspian seas, and this is almost at the S. extremity of the empire. *Siberia*, or Asiatic R., consists principally of a vast plain, slightly inclining to the N. Towards the S. and E., however, it is in parts mountainous, being separated from Mongolia and Manchuria by high and little-explored ridges, in which the great rivers that flow through it to the Arctic Ocean have their sources. The most distinguishing feature in the appearance of R. is her vast forests. Tegoborski estimates that about two-fifths of the surface of European R. are occupied by forests. They are so very prevalent in the govts. of Novgorod and Tver, between St. Petersburg and Moscow, that it has been said a squirrel might travel from the one city to the other without ever touching the ground. The forest of Volkonsky, at the source of the Wolga, is the most extensive of any in Europe. In the government of Perm, on both sides the Ural Mountains, containing 130,000 Eng. sq. m., no fewer than 120,000 are covered by forests. The forests of Asiatic R. are also of vast size. In extensive districts, however, the surface is quite free from wood. This is particularly the case in the vast *steppes*, or plains, in the governments of Astrakhan and Omsk, which, in many parts, indeed, are a mere sandy desert. — *Rivers and Lakes.* The rivers of R. are usually divided into five groups or systems, corresponding to the seas in which they have their embouchure, viz., the Arctic Ocean, the Baltic, the Black Sea, the Caspian, and the Pacific Ocean. The first division is by far the largest. It comprises, in Europe, the Dvina, Mezen, and Petchora; while in Asia it includes, among a host of others, the Obi, Yenisei, Lena, and Amoor, four of the largest rivers of Asia. The rivers which fall into the Baltic, though of far greater importance in a commercial point of view, are of very inferior magnitude. The principal are the Neva, which has St. Petersburg at its mouth, the Duna, and the Niemen. The rivers which fall into the Black Sea equal those falling into the Baltic in commercial importance, and far exceed them in length of course and volume of water. Among others are the Dniester, Dnieper, Bug, Don, and Kuban. The basin of the Caspian has, however, to boast of the largest and most important of the rivers of R., the Wolga. This great river has its source in the government of Tver, about 180 m. S. by E. from St. Petersburg; including sinuosities, its course is about 2,400 miles. It is of vast consequence to the internal navigation of the empire. The Caspian Sea also receives the Ural and the Emba. Owing to the flatness of the country through which they flow, and the vast length of their course, the rivers of R. are but little interrupted by cataracts, flow with a tranquil stream, and afford great facilities to internal navigation. The severity of the climate, no doubt, prevents, during a considerable portion of the year, all intercourse by water, and renders the rivers falling into the Arctic Ocean of comparatively little value. Luckily, however, the frost, which interrupts navigation, affords the greatest facilities to land travelling. The lakes, as well as the rivers, of R. are upon a gigantic scale. The lakes of Baikal, in the government of Irkutsk, in Asiatic R., is one of the most extensive in the world. In European R., the lakes of Ladoga, Onega, Peipus, Timen, and Bielo Ozero, are also of great extent, particularly the first. The Duchy of Finland is almost everywhere interspersed with lakes, and they are very abundant in other provinces, particularly in that of Olonetz. — *Soil and climate.* R. is divided into two great parts by the Ural Mountains, which form an uninterrupted barrier through its whole breadth, and separate Siberia from European R. That part of R. which lies on the W. side of the Ural Mountains presents an immense plain, declining westward by an easy descent. This plain, from its vast extent, has a great variety of climates, soils, and products. Its N. part, which sensibly declines towards the White and Frozen seas, is covered with forests, marshy, and but little fit for cultivation. The other, and more southerly portion of this vast plain, includes the whole district along the Wolga, as far as the *steppes*, or deserts, between the Caspian and the Sea of Azov, and constitutes the finest part of Russia; generally it has a fertile soil, the arable and meadow land preponderating over the woods and marshes. The part of the country which extends towards Voronje, Tambov, Pensa, and Simbirsk, as far as the deserts, is most remarkable for the superior quality of every kind of fruit and other produce. It has everywhere an excellent soil, consisting of black earth, strongly impregnated with saltpetre. But the tract which commences between the Sea of Azov and the Caspian, and extends near the shores of the latter, and between the Wolga and Ural, as far as the Emba, is little better than a desert, being level, dry, high, barren, and full of salt lakes. The country lying on the other side of the Ural Mountains, known by the name of Siberia, is generally a flat tract of vast extent, declining imperceptibly towards the Frozen Ocean, and rising thence by equally imperceptible degrees towards its southern border, where at last it is lost in the immense mountain ranges which separate the Russian and Chinese empires. It is unnecessary to notice in detail the different great divisions of this vast territory. In general, it may be stated that the more S. portion of Siberia, or that between the S. frontier of the empire and the 57th or 60th deg. of latitude, as far E. as the river Lena, has, for the most part, a fertile soil, and that, notwithstanding the severity of the climate, it produces most kinds of grain. But, owing to the increase of cold and the nature of the soil, the more N. portion of the region now noticed, or

that extending from the 57th or 60th deg. of latitude to the Frozen Ocean, and the whole country E. of the Lena, from the frontier of Manchuria northwards, is wholly, or almost wholly, unfit either for cultivation or for the grazing of cattle. In the E. a portion of this vast tract is mountainous, but it mostly consists of immense levels, full of swamps and bogs, covered with moss, which would be totally impassable were it not that the ice, which never thaws deeper than a few inches, gives a firm under-footing. Notwithstanding the heats that usually prevail during summer, especially in the S. provinces, cold, speaking generally, predominates very decidedly in R. With the exception, indeed, of the Crimea and the Trans-Caucasian provinces, no part of R. can be said to be generally hot; and even in them the frost in winter is often very severe. The climate of R. is, in fact, proverbial for its severity; and this increases not only as we advance towards the N., but also as we advance towards the E.; the cold being decidedly greater in Siberia than in the same latitudes in European R., a difference which is also sufficiently perceptible in the provinces of the E. and W. sides of the latter. This, no doubt, is owing to various causes; but principally, perhaps, to the vast extent of frozen sea and land traversed by the winds from the N.E. Beyond the 65th deg. of latitude the ground is covered with snow and ice for about nine months in the year; and during the other three months ice is always found at a little distance below the surface. Corn crops cannot be depended upon in European R. beyond the 62d deg. of latitude; and the great agricultural provinces lie to the S. of the 58th deg. The fruits of temperate climates are seldom met with beyond the 52d deg. At St. Petersburg, in Lat. 59° 56', the mean maximum of cold is about 25°, and the mean maximum of heat 84° F. The Neva is commonly frozen over before the end of November, and the ice never breaks up before the end of March. At an average of ten years it is calculated that there are annually at St. Petersburg 97 bright days, 104 rain, 72 snow, and 93 unsettled. At Moscow, in Lat. 55° 42' 3", the cold is more severe than at Stockholm in Lat. 59° 20' 1/2". At Astrakhan, in Lat. 46° 21', the Wolga is sometimes frozen over so as to bear loaded wagons. The Sea of Azov is usually frozen over from November to the beginning of April. But this severe cold is not unhealthy, and is much less inconvenient than might be supposed. While

Fig. 2286. — CHURCH OF ST. NICHOLAS. (MOSCOW.)

the frost lasts the air is pure and bracing, and its severity is guarded against by warm clothing, and by having the houses properly constructed and heated. At St. Petersburg and Moscow the winter is, in fact, the finest season. The Russian peasants care only for warm covering for their legs and feet. At St. Petersburg, in a frost of 22° F., it is common to see women standing for hours together washing their linen through holes dug in the ice over the Neva. Spring can hardly be said to have any place in the Russian calendar. The transition from frost to fine weather is usually very rapid. In a brief period after the snow and ice have disappeared, the fields and trees are clothed in the livery of summer, and vegetation makes extraordinary progress. At St. Petersburg the summer is as mild and agreeable as in Pennsylvania; but there, and in all the N. provinces, it is very variable. As we advance towards the S. it becomes steadier, and the heats increase. At Astrakhan the mercury in the thermometer sometimes rises to 103½° F.; and in the Trans-Caucasian provinces it rises still higher. The autumn, or the period of transition from summer to winter, is the most unpleasant season in Russia. The sky is generally cloudy, and rains and storms are very prevalent. The Crimea, from its high S. lat., and its being embosomed in the Euxine, has the most agreeable climate in the empire. — *Divisions and Population.* Russia is distributed into the following political divisions: — 1. *Northern provinces*, embracing the governments of Archangel, Olonetz, and Vologda. 2. *Great Russia*, into Petersburg, Novgorod, Pskov, Smolensk, Moscow, Tver, Yaroslav, Kostroma, Nijni Novgorod, Vladimir, Riazan, Tambov, Tula, Kaluga, Orel, and Koursk. 3. *Baltic Provinces*, into Esthonia, Livonia, and Courland. 4. *White Russia*, into Witepsk, Mohilev, and Minsk. 5. *Lithuania*, into Wilna, Grodno, and Kowno. 6. *Little Russia*, into Volhynia, Podolia, Kiev, Tchernigoff, Pultawa, Kharkoff, Voronesh, and the Don Cossacks. 7. *New Russia*, into Ekaterinoslav, Kherson, Taurida, and Bessarabia. 8. *Wolga and Caspian Provinces*, into Kasan, Pensa, Simbirsk, Saratof, Astrakhan, and Caucasus. 9. *Ural Provinces*, into Orenbourg, Perm, and Viatka. 10. *Siberia*, into Tobolsk, Tomsk, Irkutsk, Yakutsk, Kamtschatka, Okhotsk, and Yeniseisk.

11. *Trans-Caucasia*. 12. *Grand-duchy of Finland*. 13. *Kingdom of Poland*. These provinces comprise more than three-fourths of the area of the empire though they contain less than one-sixth its population. The area and population in 1900 were given as follows: European Russia, 1,902,202 sq. m., 94,258,324 pop.; Poland, 49,159 sq. m., 9,455,943 pop.; Finland, 144,255 sq. m., 2,592,778 pop.; Caucasus, 180,843 sq. m., 9,248,695 pop.; Siberia, 4,833,496 sq. m., 5,727,000 pop.; Kirghiz Steppe, 755,793 sq. m., 2,461,278 pop.; Turkestan, 409,434 sq. m., 4,888,183 pop.; Transcaspian Territory, 214,237 sq. m., 372,193 pop.; total, Asia, 6,564,778 sq. m., 22,697,469 pop.; Europe, 2,095,616 sq. m., 106,264,136 pop.; grand total, 8,660,395 sq. m., 129,004,514 pop. The annual rate of increase of population is estimated to be about 1,500,000. — *Animal and Vegetable Products.* Goats are found in many provinces; and in the south the export of their skins forms a branch of commerce, being covered with a kind of silky hair adapted to the manufacture of shawls. Hunting and fishing occupy a considerable proportion of the inhabitants of particular districts. The most profitable objects of chase are the beaver, the ermine, the martin, the musk-deer, and the musk-rat. Among the other wild animals are the chamois, the antelope, the elk, the wild goat, the reindeer, the bear, and the sable. The polar bear and reindeer are found only in the N.; also wild sheep and boars, and wild fowl, especially the goose and the eider duck. All sorts of grain succeed in Russia. Fruits of all kinds are abundant in the S. provinces. The vine is cultivated in the Crimea, and in the Caucasian provinces. The pasture in general is good. *Min.* Coal, iron, copper, salt, and marble. The most extensive mines are in the elevated region of the Ural and other mountains, which form the boundary between Europe and Asia; others, however, are less remote. Salt is found in great abundance in the S.E. — *Agric.* By an imperial decree of March 3, 1861, coming into execution on March 3, 1863, serfdom was abolished, under certain conditions, within the whole of Russia. Of actual serfs emancipated there were about 23,000,000, while the peasants on the Crown lands, already practically free, numbered about 21,000,000. The owners were compensated by a payment regulated as follows: The previous labor of the serf was estimated at a yearly rental of 6 per cent., so that for every six roubles which the laborer earned annually, he had to pay 100 roubles to his master as his capital value to obtain his freedom. Of this sum, the serfs had to give immediately 20 per cent., while the remaining 80 per cent. were disbursed as an advance by the government to the owners, to be repaid, at intervals extending over forty-nine years, by the freed peasants. According to an official report, the whole of these arrangements were completed at the end of July, 1865, so that from this date serfdom ceased to exist in Russia. The government, as a consequence of the emancipation of the serfs, took measures in 1864-65 for the diffusion of instruction among the agricultural population. Up to the present time, nevertheless, agriculture is at a very low ebb. But it differs materially in different provs.; and some estates, even in the most backward provs., have been greatly improved. In Livonia, and the provs. bordering on the Baltic, and also in parts of the Ukraine, the husbandry is very superior, and the implements quite equal to the best that are to be met with in most parts of Germany. But, with the exception of a few estates, it is quite otherwise in the rest of the empire. The plough, owing to the high price of iron, is usually a wretched implement drawn by one horse, and calculated rather to scratch than to turn up the soil. The harrow is made of wood, and rollers and hoeing-machines are almost unknown. Were it not that the soil is generally light, friable, and very easily wrought, it would be impossible to cultivate it by such means. But those suffice to make it produce more than enough for the wants of the inhabitants. There is not, indeed, another country, at least in Europe, where grain crops may be raised at so little expense of labor as in R. The products vary, of course, with the difference of soil and climate. All sorts of grain are raised; but rye being the common food of the peasantry, it is produced in much greater quantities than any other sort of cereal. Flax and hemp are very extensively cultivated, and largely exported. Tobacco is confined to the S. provinces, where it is an important article. The agricultural territory of R. has been greatly extended by the acquisition of Turkestan, with its large and fertile oases. Much attention is being given to the cultivation of cotton in that region, so as to gain independence of American and other foreign sources of this indispensable material. Cotton produced there has the advantage to R. of cheapness and of a monopoly of the crop, since the only outlet for the Central Asian products is over Russian soil. The completion of the Transcaspian Railway has opened communication from the Caspian Sea to and beyond Samarcand, through the heart of Turkestan, and already a large freight business, in cotton and other products, is being done, while the acquisition of a new and large market has stimulated the agriculturists of the oases to active industry in forming operations. The rapid extension of the Transsiberian Railway is also stimulating agriculture in the fertile districts of southern Siberia, and causing a flow of population in that direction. This great region promises to be very productive and to add greatly to the food supply of the empire. Grazing is a natural occupation in almost every province of the Russian empire, and sheep and oxen are reared in immense numbers on the steppes. The rearing of bees is an important industry, some having as high as 1,000 hives in the

forest. — *Manuf.* The manufactures of the empire are not generally in an advanced state. The principal are linens, woollens, hardware, leather, soap, oil, potash, and mats. Most of the yarn employed in the cotton manufacture is imported from England. As to hardware, Tula, to the south of Moscow, is the "Sheffield" of Russia. Of woollens, the coarser qualities are made in various parts, the finer almost solely at Jamburg, in the province of St. Petersburg. Moscow contains some silk-works, and, along with St. Petersburg, the chief manufactures of the empire. The principal trading ports are St. Petersburg and Riga, on the Baltic; Archangel on the White Sea; Odessa, on the Black Sea; Tanagerog, on the Sea of Azov; and Astrakhan and Baku, on the Caspian Sea. The trade with China is mostly carried on through Kiachta; and the fair of Nizhni Novgorod is celebrated all over Europe. — None but native Russians were allowed to engage in the internal trade of the country; and hence a foreigner who imported goods in *R.* had to sell them to Russians only, and at the port where they arrived. A few foreigners, indeed, settled in Russia, and having connections with the natives, trade with the interior; but it is contrary to law, and the goods are liable to be seized. — *Exp.* The principal are hemp, flax, seeds, leather, tallow, potash, wax, soap, timber, pitch, tar, train-oil, linen, ropes, thread, peltry, and iron in bars. — *Imp.* Sugar, coffee, cotton, and other colonial goods, superfine woollens, cotton cloths, silks, dye-stuffs, wine, and brandy. — *Money, Weights, and Measures.* Accounts in *R.* are kept in *roubles* and *copecks*, *q. v.* The only gold coin is the *demi-imperial*, value 5 *roubles*.

Fig. 2287. — WAYSIDE INN IN RUSSIA. (See also Fig. 1487.)

The Russian lb. is rather larger than the avoirdupois lb.; the last = 13.8 quarters; the *chétvert*, the measure for corn, = 5.75 Eng. bushels; the *deciatine*, land-measure, = abt. 2.7 of an acre; the *verst* of 1045 to a geog. degree = 1.67 yards, 3 *versts* being about equivalent to 2 Eng. m. — *Government.* The government of *R.* was until 1905 an absolute monarchy, the whole legislative, executive, and judicial power united in the emperor, whose will alone was law. The administration of the empire is intrusted to four great boards, or councils, possessing separate functions, but centring in the "Private Cabinet of the Emperor." The first of these boards is the *Council of the Empire*, consisting of an unlimited number of members nominated by the Emperor, and whose chief functions is that of superintending the actions of the general administration, of watching over the due execution of the laws of the realm, and of proposing modifications of the same whenever necessary. The second is the *Directing Senate*, or "*Pravitelstvujuschii Senat*," which is a high court of justice for the empire, controlling all the inferior tribunals. It also examines into the state of the public revenue and expenditures, and has power to inquire into public abuses, to appoint to a great variety of offices, and to make remonstrances to the emperor. The third college is the *Holy Synod*, and to it is committed the superintendence of the religious affairs of the empire. It is composed of the principal dignitaries of the church. All its decisions run in the emperor's name, and have no force till approved by him. The fourth board of government is the *Council of Ministers*, divided into 12 departments. The empire is divided into general governments, or *vice-royalties*, governments, and districts. At the head of each general government is a viceroy, or general-governor, the representative of the emperor, who as such commands the forces, and has the supreme control and direction of all affairs, whether civil or military. The government of each parish, and part of the local administration, is intrusted to the people, to the extent of leaving them free in matters of social interest. For this purpose the whole country is divided into communes, denominated "*mir*" — which means both "the village" and "the world" — and these again are united into districts, or "*volosti*," embracing a population of about six thousand souls. Each communal administration is presided over by an elder, or "*starshina*," who, in case the commune consists of several villages, has under him a "*starosta*," or head of each hamlet, as also a tax-collector or superintendent of public stores. All these officers are elected by ballot at annual assemblies by the peasants, and from among themselves. The offices are more or less honorary, the emoluments connected with some of them being so small as to be scarcely more than nominal. — The nobles of the empire possess a representation of their own, due to Catherine II. They form in each province a corporation under an elected president, to whom is joined a government commissioner. They assemble at regular intervals of three years, with liberty to deliberate on any subject they choose. The rights and privileges enjoyed by these states-general are very exten-

sive, but the chief object of all their political actions has been to uphold the privileges and rights of their class. The Russian nobleman can only be deprived of his life, property, or honor, by judgment of law; he can only be tried by his peers, and the judgment must be specially confirmed by the emperor. No corporal punishment can be inflicted upon him; he is free from personal taxes, recruitment, and having soldiers quartered upon him; he can freely establish manufactures and industrial undertakings of all kinds on his estate; but in the towns, in such cases, he must enter the respective guilds. He is at liberty to sell his own products and manufactures. More than one-half of all the cultivated land belong to the nobility in fee-simple, and more than one-half of the population of Russia Proper, until recently, were not only their dependents, but serfs. The power of this large class, which partly governed the empire, has suffered a heavy loss by the great work of Serf Emancipation, which leaves the emperor more than ever Autocrat of *R.* — *Religion.* The established religion is the Greco-Russian, officially called the *Orthodox-Catholic Faith*. The Russian Church separated from the See of Rome in 1054, and from the Byzantine patriarchate in 1589. It has its own independent synod, but maintains the relations of a sister church with the four patriarchates of Constantinople, Jerusalem, Antioch, and Alexandria. The *Sacred Synod*, the board of government of the Church, was established with the concurrence of the Russian clergy and the four Eastern patriarchs. There have been three epochs in the government of the Russian Church. At first it had a foreign head, the patriarch in Constantinople, who appointed the Metropolitan of Kiev, and afterwards of Moscow; during the second period, commencing in 1589, it was governed by a patriarch appointed by the Czar, but nearly independent; lastly, the direction of the Church was transferred to the emperor. He is however not the head of the Church in the same sense as the Pope of Rome. The emperor exercises the external functions in a still greater degree than the pontiff; he appoints to every office in the Church, and is restricted only so far as to leave to the bishops and prelates the privilege of proposing candidates; and he transfers and dismisses persons from their offices in certain cases. But he has never claimed the right of deciding theological and dogmatic questions. In the case of any new heresy springing up in Russia requiring a judgment, the emperor cannot pronounce a decision, but this duty appertains to the Synod, and, if the question is critical, the opinion of the four Eastern patriarchs must be consulted, and finally a council has to be convened. The judgment of the Church being once given, the emperor must command its execution. In official documents the emperor never calls himself the Head, but only the *Protector or Defender of the Church*. The points in which the Greco-Russian Church differs from the Roman Catholic faith, are, its denying the spiritual supremacy of the Pope, its prohibiting the celibacy of the clergy, and its authorizing all individuals to read and study the Scriptures in their vernacular language. The prohibiting of celibacy is carried to such an extent that no priest can perform any spiritual functions before he is married, nor after he becomes a widower; and as, by the rules of the Church, he is not allowed to remarry, the death of his wife occasions the cessation of his clerical functions. The priests may, however, on the death of their wives, enter into a convent, and enjoy the privilege of becoming eligible to be dignitaries of the Church. With the exception of the restraints laid on the Jews, who were not allowed to settle in Russia Proper, all religions may be freely professed in the empire. No member of the Russo-Greek Church is, however, permitted to renounce his creed; and when a marriage takes place between one of its members and a person belonging to another faith, the children must all be brought up in the established faith. There are no reliable religious statistics, though the great bulk of the Russians belong to the Orthodox Catholic or Greco-Russian Church, or to one of the numerous sects of dissenters, who comprise about one-third of the so-called Orthodox. In addition there are 8,500,000 Roman Catholics in Poland and Lithuania; about 4,000,000 Protestants, most Lutherans, including the Finns, Estonians, Swedes, and Germans; 3,500,000 Jews, in western Russia and Poland; and a large number of Moslems, Buddhists, Shamanists, fetich worshippers, &c., in the Asiatic provinces. — *Educ.* After the emancipation of the serfs, in 1861, the higher classes set in train an active movement for the extension of education among the peasantry, and a large number of day, evening, and Sunday-schools were started, new methods of teaching introduced, and an abundance of class-books and works suitable to popular instruction prepared. The universities were made free to students of both sexes. This movement alarmed the government, and

Fig. 2288. — GREEK PRIEST RECEIVING A CONFESSION.

soon received a severe check, all educational matters being placed under the control of the Ministry of Public Instruction, which laid severe restraints on the methods of the liberals. At a later date, on the organization of the *zemstoes*, or elective provincial governments, a new educational movement was started, various grades of schools being organized in the rural districts. This movement also was opposed by the ministry, which devoted itself to the promotion of classical education among the privileged classes, while neglecting elementary, technical, and scientific education. The only governmental favor shown has been to the parish schools, in which education is in the hands of the clergy. Some progress has, no doubt, been made since the date of emancipation in the education of the people, but popular education is still at a low ebb, only about one in six of the army recruits being able to read and write. At present there are in the empire about 50,000 elementary schools, with an attendance of some 2,250,000 pupils. The empire is divided into a certain number of districts, each of which has a university, with a system of schools for young men intended to fill civil offices, also gymnasiums, high schools, and elementary schools. The universities are 8 in number, with some 23 other institutions for higher education, and about 1,000 intermediate schools (high schools, &c.). — *Inhabitants.* More than a hundred tribes, with as many different languages, are comprised within the circuit of the Russian empire, but nearly all these live on the frontiers of the country; the interior is inhabited by a homogeneous race, the Russians numbering about 90,000,000, whereas all the other tribes of the empire united do not exceed 40,000,000. The Russians are generally subdivided into Great Russians, numbering about 70,000,000; Little Russians, or *Ruthenes*, to the number of 15,000,000; and White Russians, about 5,000,000. The dialect of the Little and the White Russians slightly differs from that of the Great Russians, but not so much as to prevent a mutual understanding. Of other races, the most important are the Slavonians of Poland and Lithuania, numbering some 10,000,000; the Finns and Lettones, some 3,000,000; and the Caucasians and Armenians, numbering 8,000,000. These figures, however, are mere estimates; for there exist no official returns regarding the various nationalities inhabiting the empire. — *Army.* The land forces of Russia are formed of two descriptions of troops, different from each other in many respects — the regular troops, properly so called, and the feudal militia of the Cossacks and similar races. Some corps of the latter have been brought into regular form and training, and are occasionally employed like the rest of the army, although in many respects they differ entirely from the regular troops. The regular army is recruited from the classes of peasants and artisans, partly and principally by means of a conscription, partly by the adoption of the sons of soldiers, and partly by voluntary enlistment. Nobles, magistrates, clergymen, and students are exempted from the service. Merchants and traders enrolled in the different guilds are also exempted, as are the only sons of peasants, and peasants with more than three children. The levies furnished by the Cossacks are regulated by particular treaties; and many half-savage tribes are excused, partly on account of their diminutive size, and partly because of their great aversion to a military life. Under the military system adopted in 1874, service in the army is obligatory upon all able-bodied citizens between 21 and 45 years of age, though education has the effect of shortening the term of service of the conscript. But of those liable for conscription only about one-third are required to serve for 5 years in the active army, the remainder being enrolled in the reserve (*Landwehr*) or the militia. The army, therefore, in time of peace, consists of about 1,160,000 men distributed throughout the empire, with 170,000 horses and 3,200 guns. In time of war the total of men available for army service is estimated at nearly 6,000,000 men, with 488,000 horses and 8,000 guns. As for the actual availability of such a host of men, however, much doubt may be entertained. The strength of the active army is given at 1,188,000 men and officers. The service with the army is for 18 years, divided into 5 years with the colors and 13 years in the reserve. The remainder of the population capable of bearing arms, and not exempted, between the legal ages, constitutes the militia. — *Navy.* The Russian navy has been greatly strengthened of late years and consisted in 1904 of 52 armored and 35 unarmored ships and gunboats, with 178 torpedo boats, the total number of guns being 4,888. These ships were manned by 66,209 seamen and marines and 2,411 officers, making a total active list of 68,621. The fleet was nearly annihilated in the war with Japan. — *Hist.* The ancients had very little acquaintance with the vast countries included in the empire of *R.* The monarchy is usually regarded as having been founded by Rurik, about anno 862, his dominions and those of his immediate successors, comprising Novgorod, Kiev, and the surrounding country. In 980–1015, Vladimir introduced Christianity, and founded several cities and schools. But, from this period down to 1237, when the country was overrun by the Tartars, *R.*, with few exceptions, was the theatre of civil war. In 1328 the seat of govt. was transferred to Moscow; and in 1481 the Tartars were finally expelled. In 1613 the house of Romanoff, whence his present majesty is descended, was raised to the throne; and from this period the empire acquired strength and consistency. Under Alexis Mikhailovitch (1645–1676), White *R.* and Little *R.* were conquered from the Poles, and the Cossacks of the Ukraine acknowledged the supremacy of the Czar, various internal improvements were effected, and the power of *R.* began to be felt and feared by all her neighbors. At

length, in 1696, Peter the Great ascended the throne, and the destinies of *R.* and of the northern world were immediately changed. That prince gave to the arms of *R.* a decided preponderance in the N. of Europe; he also gave her a fleet, conquered large provinces on the Baltic, laid the foundations of the noble city which bears his name, and introduced among his people the arts, the literature, the customs, and, to some extent also, the laws and institutions of the more civilized European nations. From this period *R.* has progressively advanced in power and civilization. Under Catherine II. (1762-1796), *R.* acquired a great accession of power by her acquisitions in Poland and on the Black Sea. *R.* took an active part in the European struggle with Napoleon, and his invasion of the empire led to his overthrow. Wars with Turkey followed, and in the Crimean War of 1853 *R.* suffered severe losses. In the war of 1877 Turkey was decisively defeated. *R.* has moreover made great advances in Asia, conquering the Caucasus and subduing the great area of Turkestan, immensely extending her area in that continent. The growth of Nihilism (*q. v.*) led, in 1881, to the massacre of Alexander II. The great railways in Siberia and Turkestan are among the most important engineering enterprises of *R.* For a description of these see *SIBERIA*, in SECTION II. *R.* acquired the seaport of Port Arthur, in Southern Manchuria, after the Japan-China war, and extended the Siberian railway southward to this point. During the Boxer outbreak in China Manchuria was occupied by Russian troops. The promise to China to give up this occupation by October 8, 1903, was not kept, Russia's failure to do so leading to a war with Japan in 1904. See *JAPAN-RUSSIAN WAR*.

—The defeat of Russia in this war led to an intense excitement in the kingdom, which soon developed into a revolutionary outbreak. A meeting of the Zemstvos in November, 1904, which demanded a representative government and other reforms, was followed in 1905 by a general uprising among the people, attended by much violence and bloodshed and threatening a complete overthrow of the government. Nicholas II, the Emperor, responded by agreeing to the calling of a *duma* or legislative body, with law-making powers, and by granting liberty of the press, of person, etc. to his subjects. In the election for the *Duma* the revolutionary forces were in the ascendant, and when this body met in May, 1906, its action and demands were so radical that it was quickly prorogued by the Emperor and the election of a new legislature ordered. This met March 5, 1907.

Rust, n. [*A. S. rost.*] (*Chem.*) The yellowish coat of peroxide which forms on the surface of iron exposed to a moist atmosphere. To prevent the rusting of iron utensils, oil, paint, varnish, plumbago, grease, or any substance which will protect the metal from the moist air, may be employed. Under all ordinary circumstances, iron decomposes water, abstracts the oxygen, and combines with it, thus forming rust.

—Any foul matter contracted; foul, extraneous matter; also, loss of power by inactivity.

(*Bot.*) A disease of plants, which shows itself on the stems and leaves of many plants, and on the ears of grasses, both of the cereal grasses and of many pasture or forage grasses, in brown, yellow, or orange-colored spots, and after destroying the epidermis of the plant, assumes the form of a powder, which soils the fingers when touched. *R.* seems to consist at first of a small fungi of one cell, sometimes divided by a transverse wall, belonging to the genera *Uredo* and *Puccinia*, which, finally, breaking through the diseased epidermis, form a colored dust consisting of mere spores. *R.* is sometimes very injurious to crops. No remedy is known for it; but it is certain that rank manures tend to produce or aggravate it.

—*v. n.* [*A. S. rustian.*] To contract rust.—To become dull by inaction; to degenerate in idleness.—To gather dust or extraneous matter.

—*v. a.* To cause to contract rust.—To impair by time and inactivity.

Rust'chuk, or Rutz'chuk, a fortified town of European Turkey, prov. of Bulgaria, on the Danube, 56 m. N.E. of Nicopolis, and 62 m. N.W. of Shumla. *Manuf.* Woollen, silk, and cotton stuffs, and tobacco. *Pop.* 24,000.

Rust'ic, a. [*Lat. rusticus*, from *rus*, the country.] Pertaining to the country; rural.—Having the manners of those who live in the country: plain; simple; undorned; artless; rude; unpolished; untaught; awkward; rough; coarse.

—*n.* A countryman; a swain; a peasant; a hind; a clown. (*Arch.*) Masonry employed in basements with large joints to mark the different courses of stones. It is applied to work left with an irregular surface, or jagged out in an irregular manner.

Rust'ically, adv. Rudely; coarsely; without refinement or elegance.

Rust'icate, v. n. [*Lat. rusticor.*] To dwell or reside in the country.

—*v. a.* To compel to reside in the country.—To banish from a town or college for a time.

Rustication, n. Act of rusticating; state of being rusticated; residence in the country.

(*Arch.*) Same as *RUSTIC, q. v.*

Rusticity, n. [*Fr. rusticité.*] State or quality of being rustic; uncivil manners; rudeness; coarseness; simplicity; artlessness.

Rust'ily, adv. In a rusty state.

Rust'iness, n. State of being rusty.

Rustle, (rú'sl.) v. n. [*A. S. hrístlan.*] To make the noise of certain things shaken, agitated, or rubbed, as silk, straw, dry leaves, &c.

Rustle, n. The noise of certain things shaken; a rustling. **Rustling, (rú'sl-ing.) n.** A quick succession of small sounds, as a brushing among dry leaves or straw.

Rust'y, a. Covered or affected with rust.—Dull; impaired by inaction or neglect of use; covered with foul or extraneous matter; rough; hoarse; grating.

Rut, n. [*Fr.*, from *Lat. rugitus*, a roaring, from the noise which deer make when they desire to come together.] The copulation of deer.

—*v. n.* To lust, as deer.

Rut, n. [*Fr. route*, from *Lat. rota*, a wheel.] The track of a wheel; a line cut in the soil with a spade.

—*v. a.* To cut or penetrate in ruts, as roads; to cut a line in the soil with a spade.

Ru'ta, (Bot.) A gen. of the ord. *Rutaceæ*. *R. graveolens* is the common Rue, a native of Europe. It has a very powerful, disagreeable, peculiar odor, which is due to the presence of a volatile oil. Its taste is bitter and nauseous. It is used in medicine as an anti-spasmodic, anthelmintic, emmenagogue, stimulant, and carminative.—This plant is supposed to be identical with the *pegamon* of the New Testament (*Luke xi. 42*). The species *R. montana* possesses very acid properties.

Fig. 2289.—RUTA GRAVEOLENS.

Ruta'ceæ, n. (Bot.) The Rue family, an order of plants, alliance *Rutales*. *DIAG.* Few-seeded fruit, which finally becomes apocarpous, and separates its pericarp into 2 layers, sessile pendulous ovules, and perfect flowers.—They are trees or shrubs, very rarely herbs, chiefly found in the temperate regions. They are characterized by a powerful odor and a bitter taste. Several species are used medicinally. The order contains 47 genera and 400 species. See *BAROSMA*, *GALIEPA*, and *RUTA*.

Ru'tales, n. pl. (Bot.) An alliance of plants, sub-class *Hypogynous exogens*. *DIAG.* Monodichlamydeous symmetrical flowers, axile placentae, an imbricated calyx and corolla, definite stamens, and an embryo with little or no albumen. The alliance includes 13 orders.—*AURANTIALEÆ*, *AMYRIDACEÆ*, *CEDRELACEÆ*, *MELIACEÆ*, *ANACARDIACEÆ*, *CONNARACEÆ*, *RUTACEÆ*, *XANTHOXYLACEÆ*, *OCNACEÆ*, *SIMARUBACEÆ*, *ZYGOPHYLLACEÆ*, *ELATINACEÆ*, and *PODOSTEMACEÆ, q. v.*

Rutersville, in Texas, a post-village of Fayette co., abt. 6 m. N.E. of La Grange.

Ruth, (Book of.) (Script.) One of the books of the Old Testament, inserted between the book of Judges and the books of Samuel, as forming a sequel to the former and an introduction to the latter. Among the ancient Jews it formed part of the book of Judges; but the modern Jews separate it, and make it the second of the five Megillot. It takes its name from *Ruth*, a Moabitess, who, having married a Jew and lost her husband by death, proceeds with her mother-in-law to Bethlehem, where she leads a blameless life of poverty, and becomes the wife of a relative named Boaz, through whom she is an ancestor of David. It consists of four chapters, and may be divided into three sections:—1. An account of Naomi from her going into Moab with her husband, Elimelek, to her return to the land of Israel with her daughter-in-law, Ruth (*ch. i.*); 2. Boaz's interview with Ruth and their marriage (*ii.-iv. 12*); 3. The birth of Obed, the son of Boaz by Ruth, from whom David was descended (*iv. 13-18*). The genealogy with which it concludes is evidently incomplete, probably because the leading members only are mentioned. The date and authorship of this book are alike unknown. It was evidently written some time after the events to which it refers, for the expression, "when the judges ruled," evidently implies that in the writer's time the kings had begun to reign. The general opinion is that it was written by Samuel. The canonical authority of the book has never been questioned, Ruth, the Moabitess, being mentioned in the genealogy of Christ (*Matt. i. 6*). The scope of the book is evidently to show how a heathen, belonging even to the hated Moabitish stock, was honored to be the progenitor of the great King David, because she placed her reliance on the God of Israel.

Ruthenium, n. (Chem.) In the process for extracting osmium from the residue left on treating the platinum ore with *aqua regia*, by heating in a current of air, square prismatic crystals of *binoxide of ruthenium* (RuO_2) are deposited, nearer to the heated portion of the tube than the osmic acid, for the binoxide is not itself volatile, being only carried forward mechanically in company with the osmic acid. When *binoxide of ruthenium* is heated in hydrogen, *metallic ruthenium* is obtained as a hard, brittle, almost infusible metal, which is scarcely affected even by *aqua regia*. This metal was discovered by Claus in 1864. *Sp. gr.* 12.3; *equiv.* 103.5; *symbol*, Ru.

Ruth'erford, in New Jersey, a post-borough of Bergen co.

Rutherford, in North Carolina, a S.W. co., adjoining South Carolina, area, about 498 sq. m. *Rivers.* Broad and Congaree rivers. *Surface*, hilly or mountainous; *soil*, in some parts fertile. *Cap.* Rutherfordton. *Pop.* (1897) 19,950.

Rutherford, in Tennessee, a central co.; area, about 580 sq. m. *Rivers.* Stone river. *Surface*, diversified; *soil*, extremely fertile. *Cap.* Murfreesboro. *Pop.* (1897) 38,220.

Rutherfordton, in North Carolina, a post-village, cap. of Rutherford co., on Seaboard Air-Line and the Ohio River & Charleston R.Rs., 78 m. N. by W. of Charlotte; has some local industries and a good trade with the surrounding agricultural region. *Pop.* (1897) 520.

Ruth'erville, in New York, a village of St. Lawrence co., abt. 15 m. N. of Canton.

Ruth'less, a. Void of pity or compassion; cruel; pitiless; barbarous; insensible to the miseries of others.

Ruth'lessly, adv. Without pity; cruelly; barbarously.

Ruth'lessness, n. State or quality of being ruthless; want of compassion; insensibility to the distresses of others.

Ruthsburg, in Maryland, a village of Queen Anne co., abt. 42 m. E. of Annapolis.

Rutigliano, (roo-teel-ye-a'no), a town of S. Italy, prov. of Terra-di-Bari, 7 m. S.W. of Conversano; *pop.* 4,500.

Ru'tile, n. [*Lat. rutilus*, red.] (*Min.*) Native crystallized titanate acid; composed, when pure, of 60.98 titanium and 39.02 oxygen.

Rut'land, an inland co. of England, having N. and E. the co. of Lincoln, S.E. and S. Northampton, and W. Leicester; area, 152 sq. m. The surface is undulating, and the soil generally fertile. *Rivers.* Welland, Wreak, Wash, and Charter rivers. *Prod.* The usual cerealia; but it is particularly celebrated for its wheat, cheese, and sheep. *Cap.* Oakham.

Rutland, a small island near the W. coast of Ireland, co. Donegal.

Rutland, in Illinois, a post-township of Kane co.—A township of La Salle co.

Rutland, in Iowa, a twp. of Humboldt co.—A twp. of Woodbury co.

Rutland, in Kan., a twp. and p. v. of Montgomery co.

Rutland, in Maryland, a p. v. of Anne Arundel co.

Rutland, in Massachusetts, a post-township of Worcester co.

Rutland, in Michigan, a township of Barry co.

Rutland, in New York, a post-township of Jefferson co.

Rutland, in Ohio, a post-village and township of Meigs co., abt. 95 m. S.E. of Columbus.

Rutland, in Pennsylvania, post-township of Tioga co.

Rutland, in Vermont, a S.W. co., adjoining New York; area, abt. 960 sq. m. *Rivers.* Otter Creek. Lake Champlain forms a portion of the W. boundary, while numerous smaller lakes intersperse the co. *Surface*, elevated, and in some parts mountainous; *soil*, fertile and finely adapted to grazing. *Cap.* Rutland.

—A town and township, cap. of the above county, about 55 m. S.S.W. of Montpelier. The town contains a handsome court house, and other fine buildings. The township contains several thriving manufacturing villages and rich marble quarries.

Rut'ledge, in Illinois, a township of De Witt co.

Rutledge, in Tennessee, a post-village, cap. of Granger co., abt. 216 m. E. of Nashville.

Rut'ter, n. One who ruts.

Rut'tish, a. Wanton; libidinous; salacious; lustful.

Rut'tishness, n. State or quality of being rutlish.

Rut'ty, a. Full of ruts; cut by wheels.

Ruvo, (roo'vo), a town of S. Italy, prov. of Terra-di-Bari, 20 m. W. of Bari; *pop.* 6,500. It is the *Rubi* of Horace.

Ruysselede, (rois'se-lade), a town of Belgium, 14 m. S. of Bruges; *pop.* 6,000.

Rye, (ride), a seaport-town of England on the N. coast of the Isle of Wight, 5 m. E.N.E. of Newport; *pop.* 9,269.

Rye, n. (Bot.) See *SECALE*.

Rye, (ri), a town of England, co. of Sussex, on the Rother, 3 m. from its mouth; *pop.* 8,202.

Rye, in New Hampshire, a post-township of Rockingham co.

Rye, in New York, a post-village and township of Westchester co.; abt. 27 m. N.E. of New York city.

Rye, in Pennsylvania, a twp. of Perry co.

Rye'gate, in Vermont, a post-village and township of Caledonia co., abt. 23 m. E. by S. of Montpelier. The township is on the Connecticut river.

Rye'grass, n. (Bot.) A popular name of the genus *Lolium*.

Ry'erson's, in New Jersey, a village of Passaic co., abt. 9 m. N.W. of Patterson.

Ry'erss, in Pennsylvania, a village of Tioga co., abt. 4 m. S.S.E. of Blossburg.

Ry'land's Depot, in Virginia, a village of Greenville co., abt. 54 m. S. of Petersburg.

Rylsk, a town of Russia. See *RULSK*.

Rynd, n. A piece of iron that goes across the hole in an upper mill-stone.

Ry'ot, n. [*Ar. raaya*, to pasture, to protect, to govern.] In Hindostan, a reuter of land; a cultivator or peasant.

Rys'wick, (Peace of.) (Hist.) A treaty concluded in 1697, at Ryswick, a Dutch village between Delft and the Hague, which was signed by France, England, and Spain, on Sept. 20, and by Germany on Oct. 30. It put an end to the sanguinary contest in which England had been engaged with France.

Rzes'zow, a town of Austrian Poland, on the Wisloka, 43 m. E. of Tarnov; *pop.* 5,000.

R.—SECTION II.

RAIK

Radcliffe College. (*Educ.*) A non-sectarian institution for the education of women only. In 1878, some men and women of Boston and Cambridge organized under the title of "A Society for the Collegiate Instruction of Women." As the society employed such instructors of Harvard College as were willing to give young women the instruction already given in the college to young men, it soon came to be spoken of as "The Harvard Annex." In 1893 the legislature granted a charter and the right to give Harvard degrees, whereupon the institution became a department of Harvard University, and received the name of Radcliffe College, after Anne Radcliffe, Lady Monson, the founder of the first scholarship in Harvard College. In 1896 the college had 90 instructors, 353 students, and more than 9,700 volumes in its library. Its income, in the same year, was in excess of \$70,000.

Radford, in Virginia, a post-town of Montgomery co. Pop. (1897) 2,140.

Radiant Energy. See UNDULATORY THEORY.

Radiometer, *n.* A philosophical toy for converting radiant energy into mechanical motion, invented by the physicist, William Crookes. Within a glass bulb, from which the air has been exhausted, he places 4 sheets of mica on a needle point, arranged as a vane to turn circularly in a horizontal plane. On one side the sheets are blackened and on the other white. When placed in the sun or other field of light, so that it may act against the surfaces of the vanes, rotation results as a consequence of the blackened disks absorbing more of the radiant energy than the white faces. The actual propulsion is supposed to be caused by the molecules of residual air, which are given greater energy against the black sides when exposed to the light. The tasimeter, thermopile, thermo-galvanometer, &c., are also properly classed as radiometers, being in a sense measurers of radiant energy. The sound-radiometer is a form of vane whose cardboard sails are perforated, and may be set in motion by vibrations of sound from a tuning-fork or the like.

Radium, *n.* A newly discovered mineral substance of remarkable properties. Of late years several kinds of radiation, differing from ordinary light and heat, have been discovered. Among these are the Roentgen ray and the Becquerel ray. The latter is given off freely by uranium, and this induced Madame S. Curie, a chemist of Paris, in 1898, to seek for the source of this radiation in pitchblende, an uranium mineral. By decomposing a large quantity of this, a minute quantity was obtained of a substance whose radiant power was several thousand times that of uranium. To this was given the name of Radium. In practice a salt of this substance is employed, usually the bromide. The peculiar property of *R.* is that it gives off continuously an emanation—a gas which shines in the dark, and can be seen through an inch of marble, a pile of copper coins, and other opaque substances. It can be condensed by cooling and is capable of discharging a loaded electroscope. In addition a quantity of the rare gas helium is given off. The *R.* emanation has the dangerous property of producing painful and persistent ulcers in human flesh, and is capable of paralyzing and killing small animals. The most wonderful property of *R.* is that it seems able to yield this gas indefinitely without loss of weight, and that it maintains constantly a temperature of nearly 3° F. above that of surrounding substances, and this even at the very lowest temperature producible. *R.* yields light with little heat and may possibly become a source of illumination. It can melt its own weight of ice in less than an hour, and do this continually. It is known only in minute quantities, and is very costly. A ton of pitchblende yields only a few grains of it. In appearance it resembles common salt. It has attracted wide attention from its apparent reversal of the ordinary laws of nature. Several other substances are radio-active in a less degree, and the property may be universal.

Raiders, *n. pl.* (*Zoöl.*) The Ray or Skate family, order *Plagistomi*, comprising fishes with the body very much flattened, the mouth, nostrils, and branchial openings below, and the dorsals, when present, upon the tail. The eggs are brown, coriaceous, and rectangular, with the angles extended into points. Members of this family are found in all seas, and more than a hundred species are known, from two to six feet or more in length.

Baikes, ROBERT, originator of Sunday-schools, was born at Gloucester, Eng., Sept. 14, 1735; founded a

system of schools in London in 1781. Died April 5, 1811.

Rail, (*räl*), *n.* [A. S. *hrægel*, a covering; Ger. *riegel*.] That which serves as a fence or palisade; a piece of timber, or of iron or other metal, extending from one post or support to another, as in fences, balustrades, staircases, &c.—The horizontal part in any piece of framing or panelling. Thus, in a door, the horizontal pieces between which the panels lie are called *rails*, while the vertical pieces, between which the panels are inserted, are called *styles*.

—A woman's upper garment;—retained in the word *night-rail*, sometimes used for *night-dress*.

(*Railroad Eng.*) A bar of iron, forming the upper part of the superstructure on which the wheels of vehicles roll. It is shaped with reference to vertical strength, and is held in place by chairs, splices, &c.—*Webster*.

pl. (*Naut.*) The moulding ornaments in the topside, likewise in the head and stern of a ship.—A narrow plank nailed for security on a ship's upper works.

By rail, by railroad or railway; as, to travel *by rail*.

[Fr. *râle*; Ger. *rulle*.] **RAIL-BIRD.** (*Zoöl.*) See **RALLIED**.

—*v. a.* To enclose with rails; as, to *rail* a staircase.

—*v. n.* [Fr. *railer*, frequent. from *rire*, Lat. *rideo*, to laugh.] To make persons or things the objects of reproach or ridicule; to scoff; to use insolent and reviling language; to censure in opprobrious terms;—preceding *at* or *against*.

"Why rail at arts he did not understand?"—*Dryden*.

Rail-car, *n.* A railroad car.

Railer, *n.* One who rails; a scoffer; a reviler; one who insults, censures, or reproaches with opprobrious language.

"Cease, rude Boreas, blustering *railer*."—*Dibdin*.

Rail-fence, *n.* A fence composed of wooden rails.

Rail-guards, (*guards*), *n. pl.* (*Mach.*) In locomotive engines, strong iron rods reaching down within about two inches of the rails, to catch and throw to one side any obstruction which may be on the rails. (In the U. States, often termed *cow-catcher*.)

Railing, *a.* Uttering reproach; insulting.

—*n.* Reproachful, censorious, or insolent language.—A series of rails; a fence; a balustrade.—Rails in general, or the materials for their construction.

Railingly, *adv.* With scoffing, reproachful, or insolent language.

Rail-joint, *n.* A splice connecting the adjacent ends of rails, in distinction from a *chair*, which is merely a seat.

Railery, (*räl'ler-y*), *n.* [Fr. *railerie*, from *railer*.] Light ridicule or satire; satirical merriment; banter; jesting language; persiflage; sarcastic picaresque; chaff; as, to treat a serious subject with *railery*.

Railleur, (*räl'yâr*), *n.* [Fr.] A banterer; a persiflage; a jester; one who uses railery. (*r.*)

Railway Construction. (*Engin.*) The methods of road-bed construction for railways have been worked out somewhat differently in the United States and Europe as a result of dissimilar prevailing conditions. In the Old World railways were built to accommodate the wants of thickly settled countries. In America they were largely built to aid the development and building up of territory, bringing in a population. A substantial road-bed, with few and slight grades and scarcely any curves, was the aim of European railway constructors, while a light and inexpensive road-bed, with steep grades and short curves, was obligatory with American engineers. It was found cheaper to go round a hill or over it than to go through it in new countries where there were no settled highways that could be utilized. By means of the swivelling-truck, locomotives were enabled to make curves of short radii, and there grew up a system of light road-beds, cheaply constructed. As traffic increased it became necessary to lay heavier rails and use more road-metal. Double tracks became common, and four tracks not infrequent. This resulted in the reconstruction of road-beds, and brought American railways to a par with the English

RAIL

as far as stability is concerned and ability to make speed and haul heavy trains. As a matter of convenience, however, the difference in curves and grades remains, to a considerable extent, though some of the United States roads doing a heavy passenger traffic have straightened and levelled their lines to give greater comfort in riding to travellers. In planning a railway route the engineers are obliged to arrange the cuttings and embankments so as to utilize, as far as possible, the material from one to fill the other. The drainage must be considered, and a flow provided for water coming in during heavy rainstorms. In forming a cutting the nature of the soil has to be considered, and slopes given to the sides which will not allow any material to be washed onto the tracks. If there is danger of washings, walls of local stone must be built

Fig. 3043.—PAPER CARWHEEL.
t, tire; q, bolt; p, paper filling; h, hub; s, steel plate.

to protect the rails in the cutting. An embankment cannot be constructed by simply throwing in the loose soil removed from a cutting. It must be so ballasted with stone that it will not wash away. Soft earth answers only for filling. Running streams can be piped through embankments, but if the waterways are of any size it is best to bridge them by means of piles, or, in some cases, with steel bridges. In arranging grades the engineer requires to know what sort of rolling-stock is to be run on the road, for it must be possible for every engine stopping on a grade to start its load again. By calculating the tractive power of the locomotives, and making note of the weight they bear on the driving-wheels, he can figure how much of a load they will draw on a 2 per cent. or a 5 per cent. grade, and he will be governed by the restrictions placed upon him as to what is expected of the locomotives that are to do the hauling. Tunnelling is always avoided as expensive, yet it is often obligatory. About 1,000 of the 1,152 tunnels in the world have been excavated for the use of railways. The most remarkable railway tunnels in the United States are the Hoosac, on the Fitchburg division of the Boston and Maine Railroad, and the Stimpede or Cascade tunnel, on the Northern Pacific. (See **TUNNEL**; also **HOOSAC TUNNEL**.)

RAILS AND TRACK.—Railway ties are almost wholly made of wood. Various metal ties have been patented, but owing to cost have never been generally adopted. The first rails used were of cast-iron, made in very short lengths of three to five feet. Birkensaw, of Bedlington, Durham, invented the rolled iron rail, which came into use about 1820. These have been made in many forms, the tendency in America having been toward a broader base and heavier top, until the standard pattern arrived at is that shown in the accompanying illustration, which also serves to show the arrangement of the fish-plates or angle-irons used to couple the rails. This is the style of rail commonly used in the U. S., with ties about 2 feet apart. In England the double-headed or "bullhead" rail is the common form, being set on chairs, or small iron supports, with ties 3 feet apart. This double-headed rail is shaped at the base just like the top, and cannot stand by itself, hence the use of chairs to maintain it in position. The first steel rails were made in 1857, being rolled from Bessemer steel in Derby, England. They have gradually supplanted iron rails as they became lower in price and proved more durable. The distance between the rails of a track constitutes the gauge. The standard in the United States, as well as England, is 56½ inches. Widths below that, commonly from 48 to 56, are called narrow-gauge. If more than 56½ they are broad-gauge. The tendency is to keep to the standard gauge, as more convenient. At crossings frogs are substituted for rails, these being heavy steel or iron castings in which are shaped the necessary grooves for allowing the wheels to cross other tracks without bumping or danger of derailment.

SWITCHES.—For running a train from one track to another, switches are used, or "points," as the name is

Fig. 3042.
STANDARD FORM OF AMERICAN RAIL.

in England. The common point-switch consists of the addition, at the point where the rails of the two tracks converge, of two parallel rails coupled so as to be shifted together, and coming to a point, so that they may be thrown against a pair of fixed rails when closed, and lead the rolling-stock to the other track; or, if open, will permit the rolling-stock to continue on the same track. Misplaced switches have been a constant source of danger, and numerous devices are employed to insure their accurate working. They are commonly moved separately by means of a switch-stand, which bears a signal called a target on an upright post, the position of the target being such that an engine-driver can see from a distance how the switch is set. The best switches are now made with plates under the points, of sufficient strength to keep the switch-points to accurate gauge, and various connections are set in beds of concrete to prevent displacement by settling of the ground. Where several important switches are placed in proximity it is usual to provide a little tower or elevated cabin, from which they are worked by a switchman, who is given control of the whole series. The interlocking system for operating switches has been introduced for convenient manipulation from such a tower. It was first used in the U. S. in 1874 by the New York Central & Hudson River Railroad, at Spuyten Duyvil Junction, and the Pennsylvania Railroad tried them shortly afterward at East Newark, N. J., since which time they have been generally introduced. The Saxby & Farmer system (first employed in England) is generally used. The point-switch is provided with a detector-bar and locking-rod operable by a rack-and-pinion movement, whose function it is to first withdraw a lock-pin from the lock-rod of the switch, and simultaneously raise the detector-bar above the level of the rails, afterward moving the switch to the opposite position, and forcing the lock-bolt into a second hole in the lock-rod, thus returning the detector-bar to its normal position below the level of the rails. This detector-bar is a ponderous affair, being about 40 feet in length. It prevents the throwing of a switch while any rolling-stock is passing, and its position shows when a switch is incompletely set. The Johnson lock and signal movement, an improved form of Saxby & Farmer, is so constructed that any breakage or displacement of any part of the mechanism always results in leaving the switch at safety position. The safe running of trains is maintained largely by use of the block system (*q. v.*). The semaphore was introduced about 1841 in England. This consists of a post carrying one or more pivoted arms, the position of which serves to inform the engineer of the condition of the block into which he is entering, or as to the position of switches, drawbridges, &c. Two semaphores are commonly employed to guard a point, one being called the home signal, the other the distant signal.

ROLLING-STOCK.—The wheeled transportation equipment of a railway is known as the rolling-stock. It comprises every form of car and locomotive. (See LOCOMOTIVE.) Cars may be divided into passenger, freight, baggage, and palace-cars. In all forms they are mounted upon trucks which may consist of two or four wheels, but so connected as to allow of swivelling. By this means the cars are able to take short curves. Car-wheels are made of cast-iron, wrought-iron, and steel, or of wrought-iron center with steel tire, or with cast-iron center, connected with steel tire by double steel plates, between which is a filling of paper crowded in under tremendous pressure, this last being the so-

called paper car-wheel. The wheels are forced on the axles, the latter turning in boxes provided with oil and cotton waste. The form of the face or tread of car-wheels has furnished some material for discussion. By slightly coning them so that the diameter close to the inner flange is greater than at the outer edge, they take more readily to the rounding of curves, as the outer wheels in such case work over and ride on the larger diameter, while the inner wheels ride on the smaller diameter, thus avoiding slippage and making easier riding on curves. Wheels so coned are better in theory than in practice, however, as they tend to produce too much side motion when running on a straight track. There is also a further difficulty in a tendency to the wearing of a groove in the base of the cone. As a consequence the coning of wheel-tires is not practiced as much as formerly. In Europe, where coning is more common than in America, the wearing of a groove in the wheel is largely avoided by slightly inclining the rails outward, so that their top surfaces fit the cone of the wheels. The coupling of cars in the U. S. is productive of numerous accidents, mainly through the adherence of companies to the link-and-pin form of coupling, in which the link is held up by hand by a brakeman, while the cars are run together, and then the pin is dropped in by hand. Passenger-cars are usually provided with the Janney automatic car-coupler, which

Fig. 3044.—PLAN OF A PULLMAN PARLOR CAR.

patented. European passenger-cars are commonly united by a hooked drawbar, and freight-cars make use of the same device, or use a coupling-chain. Freight-cars are mostly either box-cars, roofed, with sliding doors on either side, or flat cars, having a platform

Fig. 3045.

SAXBY & FARMER INTERLOCKING SWITCH MACHINE.

mounted on trucks for carrying lumber, stone, &c.; or coal-cars, having but one truck, quite short, with sides three or four feet in height, and no top. There are numerous other special forms, as cattle-cars, dumping

sills are being introduced to some extent. The illustration shows a plan of one of these. The brake-mechanism and signal-pipes are lying under the floor. (See AIR-BRAKE.) The roofs are provided with a clearstory, or elevated central portion, in the sides of which are placed

Fig. 3046.—PLAN OF AN OFFICER'S CAR.

called paper car-wheel. The wheels are forced on the axles, the latter turning in boxes provided with oil and cotton waste. The form of the face or tread of car-wheels has furnished some material for discussion. By slightly coning them so that the diameter close to the inner flange is greater than at the outer edge, they take more readily to the rounding of curves, as the outer wheels in such case work over and ride on the larger diameter, while the inner wheels ride on the smaller diameter, thus avoiding slippage and making easier riding on curves. Wheels so coned are better in theory than in practice, however, as they tend to produce too much side motion when running on a straight track. There is also a further difficulty in a tendency to the wearing of a groove in the base of the cone. As a consequence the coning of wheel-tires is not practiced as much as formerly. In Europe, where coning is more common than in America, the wearing of a groove in the wheel is largely avoided by slightly inclining the rails outward, so that their top surfaces fit the cone of the wheels. The coupling of cars in the U. S. is productive of numerous accidents, mainly through the adherence of companies to the link-and-pin form of coupling, in which the link is held up by hand by a brakeman, while the cars are run together, and then the pin is dropped in by hand. Passenger-cars are usually provided with the Janney automatic car-coupler, which

cars, &c. Box-cars are commonly 38 to 40 feet in length, and weigh from 25,000 to 36,000 pounds, the heaviest of them being able to carry a load of 80,000 pounds. In England a freight-car is termed a goods-wagon or goods-van. Passenger-cars in the U. S. have doors at each

Fig. 3047.—STEEL UNDERFRAME OF PASSENGER CAR.

S S, sills; t t, truss-bars.

end, and seats for two on either side. In Great Britain and most Continental countries the doors are on the sides, and the cars are cut into compartments. Passenger-cars in America are built with wooden frames, strengthened with iron rods. Frames with steel girder-

small ventilating windows. The seats are made reversible. Toilet conveniences are provided, and lamps, usually the Pintsch light, burning gas compressed in a reservoir. Sleeping-cars were first introduced in America in 1854, being invented by Theodore T. Woodruff, whose patents were afterward acquired by the Wagner Company. The Pullman Company went into the business in 1864, and now manufacture a line of palace-cars, known as private-cars, hotel- or dining-cars, parlor-cars, combination baggage and smoker, sleeping-cars, officers'-cars, compartment-cars, observation-cars, hunting-cars, library-cars, &c. These cars are often 70 feet in length, and are of extremely solid construction. The ends are usually provided with vestibules for connecting the cars with a continuous roof, avoiding all danger and discomfort in passing from car to car, and giving opportunity for top as well as bottom buffers, to reduce the concussions. The steel plates in the floors are made in two-foot widths, running across the car, and being bolted to the sills between them and the platform-timbers. Other continuous angle-plates are placed in the walls and roof, and at the ends, so that a shell of metal protects the whole car, rendering it strong enough to withstand the shock of a collision without telescoping. The Pullman cars are provided with electric lights, and water in basins and closets delivered from a tank under pressure, and furnished either hot or cold. The electric plant is usually placed in the baggage-car of a Pullman train, and consists commonly of a coupled engine and dynamo, on a single foundation, secured to the car-floor, the wires being carried out through the sides of the car. Single circular chairs are used in the parlor-cars, and settees and mirrors are placed conveniently. In the dining-cars kitchens and refrigerators are provided, with all modern conveniences, and the bills-of-fare served rival those of the best hotels. The sleeping-cars often contain ten double-berth sections. Many sleepers are so constructed that the berths fold away, and allow seats to be used during the daytime. The decorations in all these palace-cars are very elaborate. Trains made up of three or five Pullmans are now common on all long lines of railway in America.

STATIONS.—Railway stations, popularly but less properly called depots, commonly consist of a central ticket office and telegraph office, with a waiting-room on either side, one for women and one for men, while at one end is found a baggage-room and at the other a freight-room. At more important points, the freight is taken care of in a separate building. At termini, especially in large cities, the stations assume much grander proportions, and contain offices for the transaction of the business of the company, and numerous tracks and platforms, commodious waiting-rooms, dining-rooms, &c. At these the incoming trains are usually accommodated on parallel tracks, with a platform between each pair of tracks, and an enormous arched roof of iron and glass protecting the whole. The Pennsylvania Railway Station in Philadelphia, and the Grand Central Station in New York, and the Euston Station in London of the Northwestern Railway are among the finest specimens of railway architecture.

ACCIDENTS.—Railway travel is comparatively safe for passengers, the number of accidents being confined largely to employees and trespassers on railway property. Collisions and derailments are by no means uncommon, however, especially in the U. S. Considerably more than 800,000,000 persons as passengers are carried annually by the railways of the U. S., and during the past 6 years from 280 to 600 of these have been killed, the yearly average being about 480, or about 1 passen-

ger for every 1,650,000 carried. The number of passengers injured is about 20 times as great. There are about 1,700,000 railway employees in the U. S. and more than 4,000 of them are killed annually, and over 80,000 maimed. This means that 1 man in 45 following rail-

roading for 20 years will be killed, and that 1 man in 30 is injured every year. Great as is this mortality, it is exceeded by that of persons killed about stations, crossings, in stealing rides, &c. Over 6,000 a year of these are killed and over 10,000 injured. The most of them are trespassers on the property of railway companies, and are wholly to blame for their misfortunes. The total number of killed each year is about 12,000, and of injured 100,000. The accidents to employees come mainly from two causes—coupling and uncoupling of cars, and falling from trains and engines. Station accidents, collisions, and derailments are almost equally fatal to passengers, although a few more are killed at stations than in either of the other ways. The number of collisions and derailments on U. S. railways has averaged much the same every year for the past 25 years, the improvements in safety nearly offsetting the increased travel. About 800 collisions, 900 derailments, and 100 other accidents is the yearly average. On railways of the United Kingdom of Great Britain there were 1,024 persons killed and 4,021 injured in 1895 in the course of

Fig. 3048.—CONSTRUCTION OF AN ELEVATED RAILWAY.

public traffic, while 66 more met death and 5,297 injury from accidents not connected with the rolling-stock. As these railways carry 800,000,000 passengers yearly, or 60 per cent. more than the railways of the U. S., and kill only one-sixth the number of persons, and injure but one-fourth as many, the comparison is very unfavorable to the States.

SPEED.—Express train speeds have shown a tendency to increase within the past 8 or 10 years, both as to record runs and schedule time. The Empire State Express, New York to Buffalo, covers 440 miles daily at an average speed of 53.98 miles an hour. The Baltimore & Ohio express makes 53.33 miles per hour between Washington and Baltimore. The Reading road has run schedule trains to Atlantic City which made 157.4 miles in 131 minutes, or an average of 71 miles an hour. The following are the fastest recorded short runs:

Railroads.	Date.	Distance, Miles.	Time, M. S.	Miles per Hour.
Northeastern, Eng..	Jan., 1890	86

Plant System.....	Mch., 1901	5	2:30	120

FARE AND FREIGHT CHARGES.—The average passenger fare in England is 3 cents per mile, about seven-eighths of the travel being third-class. Many of the roads have dropped the second-class fare, but practically reintroduced it by adopting American Pullman drawing-room and sleeping-cars at an extra charge. The average fare in the U. S. is 2½¢. Reduced to American money, the fare in France averages 3¢. per mile; in Germany, 2¾¢.; in Italy, 2¾¢., and in Belgium, 2½¢. In the last two countries, however, baggage is charged extra, which brings up the cost of travelling so that it may be said to average 2¾ to 3¢. all over Europe. Freight rates have varied a great deal, but are generally lower in the U. S. than in Europe. Alternate rate-cutting and forming of pools to maintain prices have been prominent features of American railway management. Large shippers have been usually credited with receiving advantages in the way of rates not accorded to smaller shippers. An Act to prevent the giving of rebates was passed in Congress in 1906. The amount of freight carried yearly by the U. S. railways averages about 1,700,000,000 tons.

STREET RAILWAYS.—The growth of mileage of street railways from 1895 to 1896 was 3,514 miles, nearly all of this being electric lines. The most remarkable feature about this growth is that it considerably surpassed that of the steam railways during the same period, the mileage of the latter increasing but 1,629, or less than any year since 1850. Since the date named the length of street railways has increased with accelerated rapidity, and electric cars have become practically universal. In 1890 the U. S. had 3,000 miles of electric railway to 5,400 of horse car lines. In 1902 it had 22,063 of electric to 332 of horse car mileage. At the former date the capital invested in trolley lines was \$108,000,000. At the latter date it was conservatively estimated at \$1,500,000,000. Statistics of the status of the steam railways of the U. S. in 1908 is given in the following table:

STEAM RAILWAY MILEAGE OF THE UNITED STATES IN 1908.

States and Territories.	Official	Unofficial	Total
Alabama	4,776.06	77.46	4,853.52

ELEVATED RAILWAYS.—There are in many localities steam railways constructed on different lines from

tion is sometimes of plate-girders and sometimes of trusses, according to conditions. New York was the first city to adopt the elevated structure, the Ninth Avenue line being begun in 1868. New York city's system of elevated railways covers Second, Third, Sixth, and Ninth Avenues, from the Battery to points in Harlem, the longest route being a little over 11 miles for a five cent fare. Nearly a million passengers are carried daily. The five elevated roads in Brooklyn all culminate at the East River Bridge. The cost of the New York system up to 1895 was over \$73,000,000, of which \$52,000,000 represented the expense of building. The cost per mile was a trifle over \$2,000,000. The Brooklyn elevated roads are not built to carry so heavy a traffic as those of New York, and cost less than \$1,500,000 per mile, or a total of over \$12,000,000. The Chicago steam elevated roads cost \$34,000,000, or a little more than \$2,000,000 per mile. The total cost of elevated street railways in the U. S. is \$182,000,000, the cost per mile being 30 times that of steam roads built on the level. Numerous inclined railways are run by steam power. (See INCLINE.)

ELECTRIC RAILWAYS are described and illustrated elsewhere under that title.

CABLE RAILWAYS have been employed to a considerable extent on mountain railways and for street railways. The first street railway to use this system was in San Francisco. Later, Philadelphia established a comprehensive system of cable roads, which have since been supplanted by the trolley. In New York city, Broadway, Third Avenue and 125th Street were formerly equipped with cable lines, but these have now been replaced by underground trolleys. The method of operating the cable is to construct an underground conduit between the rails, with an open slot communicating with the street. A steel-wire cable is run on sheaves within the conduit by means of power-stations placed at convenient points along the route. The cable is endless, but each section is separate from the next, and when the cars pass from one section to another they are obliged to drop the cable, while retaining enough speed to carry them on to the next section. The cars are each provided with gripping mechanism that extends through the slot, and can be made to pick up the cable and grip it by the operation of wheels or levers from the car platforms. The cable system is costly of installation, involving an expenditure of \$350,000 per mile, as against \$88,000 per mile for the average street railway. It is more expensive to operate than the trolley, but is cheaper to run than the horse-railway. It was introduced first as an economy over horse-traction, and has been retained in some places because of its advantages in overcoming grades, and in others because it avoided the erection of overhead wires. Under some conditions, however, it is quite economical to operate, as on the New York and Brooklyn bridge, where there is a noticeable incline from the center to the entrances. Here the cars going down one side of the incline help to pull up the ascending cars, and materially reduce the demands upon the power.

EXPERIMENTAL RAILWAY SYSTEMS.—Compressed air has been frequently tried as a motive power for street and suburban railways. It is used on a short line

Fig. 3049.—A NEW YORK ELEVATED RAILWAY.

the standard railways here described. Conspicuous among these are the elevated railways of New York, Brooklyn, and Chicago. These are raised in order that trains may be run at a speed which would endanger other travel if done on the street level, and also to relieve the street below of a certain amount of travel. The supports are trussed posts of steel, and the construc-

tion between Paris and Nogent-sur-Marne, and between the Louvre and St. Cloud; also at Berne, Switzerland. In the United States its use has been experimental only. The Parisian line carries six large tanks under each car, in which the air is charged from stations at one and a half mile intervals. The pressure in the tanks at starting is 2,000 pounds per square inch. The smokeless

and nearly noiseless operation of these cars recommends them for city use, but the cost of operation is greater than that by means of the trolley. The Harle and the Hoadley compressed-air systems have been tried in New York city. These use the air at a pressure of about 150 pounds and heat it to gain further expansion. Mine-locomotives are made and operated on similar principles. (See *LOCOMOTIVE*.) Gas-power propulsion is still in an experimental stage. Three systems have been devised, the Lohrig, Guillion, and Amrein, the first being in operation on a line in Dessau, Germany. Two tandem Otto gas-engines, of 7 horse-power each, are mounted in the base of a short street car, the fly-wheels being allowed to project slightly to the exterior of the car. The gas is compressed in a tank to save space. Ordinary illuminating gas is used, and the cost of compressing it is said to be trifling. The gas consumption is about 35 feet per mile of travel. The speed can be altered by means of pedals under the feet of the motor-man. About 10 miles an hour is the best speed attained, with a car made to seat 16 passengers. Among proposed systems of railway propulsion or construction which have attracted some notice is the hydraulic sliding-railway system. With this the cars are mounted on broad iron shoes or runners in place of wheels, the shoes being made to slip along the track easily by forcing water to their under surfaces through minute holes, so that they glide on a thin sheet of water. Under the car is placed a row of buckets, against which streams of water are directed from fixed nozzles that are opened and closed by the train in passing. The friction on the rails is much less than with wheels, but the system is very wasteful of water.

PNEUMATIC RAILWAY.—A form of atmospheric railway, in which the propelling power was the pressure of the atmosphere on one side of a piston or diaphragm, and a partial vacuum on the other side, was tried experimentally about 1865, in the grounds of the Crystal Palace, London. It was about 600 yards long. A brickwork tunnel, about 10 feet high by 9 in width, and capable of admitting the largest broad-gauge carriage, was constructed, with a single line of rails along the bottom. The tunnel had a hinged valve at each end. The route was purposely laid with severe curves and gradients, to test the principle more completely. A small stationary steam-engine worked a fan 22 feet in diameter, which was so arranged as either to condense or to rarefy the air in the tunnel according to the adjustment of certain valves. In the one case, air rushed in from the circumference to the center of the disk; in the other, it rushed out from the center to the circumference, there being an open channel from the center of the fan to the tunnel. A long, roomy carriage, like an omnibus, adapted for 30 passengers, travelled to and fro in the tunnel, being blown in one direction and sucked in the other. Fixed behind the carriage was a framework nearly as wide and high as the tunnel, and a fringe of bristles round the edge of this framework pressed like a brush against the interior of the tunnel, forming a sort of air-tight piston. The motion was steady and equable; and a good speed was attained with a pressure of only $2\frac{1}{2}$ oz. to the square inch. In the U. S., in 1867, a tube of sufficient size for the transit of passengers was erected in the Armory building, Fourteenth Street, New York. It was operated by A. E. Beach, and was worked for several weeks during the exhibition of the American Institute. The car carried 14 persons, and about 100,000 visitors enjoyed the atmospheric ride.

UNDERGROUND RAILWAYS, OR SUBWAYS.—Of recent years the exigencies of street travel have rendered it necessary to construct great underground electric railway systems, known popularly as subways. This has been especially the case in New York City, where the congestion of travel on Manhattan Island has become enormous. This island has been tunneled through its entire length, the subway system extending under the Harlem River and northward as far as Bronx Park. This subway, following the line of Broadway in the lower city, has a total length of 20.81 miles, though only about half this length is now in operation. The work started in 1900, and the opening to travel took place in 1904, the cost to that time being \$30,000,000. Since the opening various extensions have been made and a large number of others are in contemplation, which will greatly extend the facilities of travel. The congestion of travel continues, however, and a far more extensive system of subways is in contemplation which will cost a vast sum of money and take many years to build. In connection with the subways is a system of tunnels under the East and North rivers, the former connecting with a subway system in Brooklyn and aiding much to relieve the press of travel at the bridges and ferries. The most ambitious of these projects was to tunnel the Hudson, but this has been successfully accomplished by tunnels of concrete and steel, connected by branch subways with the New York system of underground travel. To these has been added the twin tunnels of the Pennsylvania Railroad, extending under the Hudson and East rivers and connected with a subway under Manhattan, making a complete underground railroad route from Jersey City, under the Hudson, New York City and East River to Long Island. This is one of the greatest and most notable of railroad enterprises.

Raines, John, lawyer, was born at Canandaigua, N. Y., May 6, 1840; served in the Federal Army (1861-65); in the New York Assembly and Senate from 1886 to 1889; elected to Congress in 1889 and 1891. He was the author of the Raines' Liquor Law of New York.

Rainier, Mount. One of the highest mountains in the U. S. (14,444 feet), in Washington, near the head of

Puget Sound, and a part of the Coast Range. It is an extinct volcano, having a well-defined crater, and now carrying several living glaciers. It was first ascended in 1870, and frequently since, the route up the western slope being now well marked, and one from the eastern base having been explored. In 1897, an Alpine club of the Pacific coast, the Mazamas, ascended it with a party of 73 members and prominent guests, one of whom, Prof. Edgar McClure, was killed. It is occasionally called Mount Tacoma.

Rains, in Texas, a N.E. co.; area, 270 sq. m.; bounded S. and S.W. by Saline river. Surface, undulating; soil, fertile. Pop. (1897) 5,000.

Raison d'être (*rā-zon' (g) dā'tr*). [Fr., a reason for being.] A reason or excuse for existence (of anything).

Ralston, William Ralston Shelden, archaeologist, was born in 1828; graduated at Trinity College, Cambridge (1850); published several books on Russian folk-lore, and translated works from that literature; was a frequent contributor to current magazines. Died Aug. 8, 1889.

Ramie (*rām'y*), *n.* [From *ramee*, its Javanese name.] (*Agric.*) The last-fibers derived from the ramie plant (*Bahmiera nivea*), a species of the fiber-yielding family of the *Urticaceae*. In India it is known as rhea, or sometimes as China-grass, and is woven into a fabric called grass-cloth. Ramie is notable among other fibers for its superior luster and strength, and its quality of resisting moisture to an unusual degree. It can be reduced to the fineness of flax, and used in the place of long-staple wool or cotton. The plant is perennial, sending up tall, herbaceous shoots after each cutting; a native of China and the neighboring tropical countries, preferring moist lands. It has been introduced into British colonies, and into the U. S., even so far north as New Jersey. Unfortunately its remunerative production is somewhat hampered by the cost of separating the fiber from the bark, and although large rewards were offered by the Indian government in 1869 and 1877, no one has discovered a way to make its extensive use profitable.

Ramsey, Alexander, statesman, was born in Pennsylvania, Sept. 8, 1815; was governor of Minnesota (1860-63), and U. S. senator from that State (1863-75), and for a short time secretary of war.

Ramsey, William, chemist, was born in Glasgow, Oct. 2, 1852; has been professor of Chemistry at Glasgow, Bristol, and London. His most important work is the description of argon (*q. v.*), which he discovered simultaneously with Lord Rayleigh.

Ramsey, in North Dakota, a N.E. co.; area, 936 sq. m. Its southern boundary is formed principally by Lake Minni Wakan (Devil's Lake), which lies between it and Benson co. Surface, rolling; soil, very fertile. Cap. Devil's Lake. Pop. (1897) 5,000.

Ran'dall, James Ryder, journalist and song-writer, was born in Baltimore, Md., Jan. 1, 1839; in 1861 he became famous by the publication of his song, *Maryland, My Maryland*. Other poems followed in the same vein. In 1866 he became editor-in-chief of the *Constitutionalist*, at Augusta, Ga.

Randall, Samuel J., politician, was born in Philadelphia, Pa., Oct. 10, 1828. He was a merchant, and held important municipal offices; was elected State Senator in 1858; in the Union army (1861-62); elected to Congress (1862); served in the army in 1863, at Gettysburg; was Speaker of the House (1876-81); a member of Congress to the end of his life, and a prominent leader in the protectionist wing of the Democratic party. Died April 12, 1890.

Ran'dleman, in North Carolina, a post-village of Randolph co. Pop. (1897) 1,820.

Ran'dolph, Theodore Frelinghuysen, politician, was born at New Brunswick, N. J., June 24, 1826; was governor of New Jersey (1869-72); and U. S. Senator from that State (1875-81). Died Nov. 7, 1883.

Randolph, in Maine, a post-town of Kennebec co. Pop. (1897) 1,310.

Randolph, in Wisconsin, a post-village of Dodge co., 25 m. N. W. of Juneau. Pop. (1895) 588.

Randolph-Macon College was founded in 1832 by the Virginia and Baltimore conferences of the Methodist Episcopal Church South. It was at first in Mecklenburg co., Va.; but suffered severely during the Civil War, and in 1866 was removed to Ashland, Hanover co., Va., and re-endowed. In 1896, it had 41 instructors, 489 students, and 12,500 volumes in its library, and its income was \$89,700.—*Randolph-Macon Woman's College*, at Lynchburg, Va., is an endowed institution for women, with courses parallel to those for men at Ashland, with 15 instructors, and about 125 students.—*Randolph-Macon Academy*, at Bedford City, Va., was established in 1889 as a preparatory school for the college, and *Randolph-Macon Academy*, at Front Royal, Va., was similarly organized in 1891. All four institutions are under the control of one board of trustees.

Range-finder, n. Any form of telemeter or distance-meter may be termed a range-finder, but the term has come into prominence within a few years as a popular name for what is more properly styled position-finder, for locating the position—that is, both the direction and the distance—of a moving object, as a hostile war-vessel. All position-finders are based on the principle that if 2 sides of a triangle are known, the other can be calculated, fixing the position of the object. Large guns, having an effective range of many miles, and being often placed behind an embankment, from which they are elevated only at the instant of firing, require that the gunner should possess some means of

quickly and accurately determining the position of any object which is to become a target. The instrument invented by Lieutenant Bradley A. Fiske, U.S.N., is among the best known position-finders. Two telescopes are placed on either side of the gun, being separated by a known distance, which serves as a base-line for the automatic calculation of the triangles. One end of each telescope is made so as to be in continual contact with each of a pair of wires arranged in arcs. An electric current being applied to the arcs, they constitute a form of the Wheatstone's bridge or electric balance, and the difference in length of the wires passed over hears a definite mathematical relation to the distance of the target, so that the line is measured, and forms one side of a triangle, of which the base-line between the telescopes is the second line. If the apparatus is stationed at a battery commanding a harbor, of which charts have been made, the observers at the telescopes adjust electrical pointers over the maps, which are preferably inscribed on a brass plate, and connect them electrically with pointers beside the gun, or the gun itself may serve as a pointer, so that the gunner in charge of the training (or side-motion) of the gun has only to keep it pointed so that the needle of his galvanometer is at zero to make sure that it is trained on the target. The elevation of the piece is directed by another galvanometer similarly operated. This position-finder was tested at Sandy Hook a few years ago, with the result that 10 consecutive shots were all dropped within a space $8\frac{1}{2}$ yards wide, and less than 200 yards long.

The range-finder of Lieutenant Isaac N. Lewis, U.S.A., has been adopted by the United States Army for battery use in coast defence. It requires to be elevated to a height of at least 30 feet, as it makes use of the elevation as a base-line to assist in calculating the angle. It consists of a pivoted telescope-holder, mounted centrally on a round table. The telescope being pointed at a ship, the range may be read from a scale, the distance on the sea level forming a second side of the triangle. Other devices are provided for taking the angular direction of the ship, and making the corrections necessary to compensate for the change of the base-line caused by the rising and fall of the tide.

A more simple form of range-finder is that of F. J. B. Codeiro, which furnishes information as to the desired two sides of an angle, leaving the other to be figured out mathematically. It is a form of telescope, upon the tube of which is mounted perpendicularly an arm about 1 yard in length. Prisms are placed at the extremity of the arm, and at the object-glass. These being adjusted to reflect the image into a telescope, a vernier-scale gives the angle, and the arm constitutes a base-line for the second angle.

Rangoon, the largest city in Burma, and the third port in importance in British India. It stands on the Hlaing or Rangoon river, the eastern arm of the Irrawadi river, about 20 m. from its mouth. Two railways run northward from it; one to Prome, the other to Mandalay. The existing city is almost entirely of modern construction, built since the British took possession of it in 1852. It is provided with street cars, fire brigades, and other modern improvements; is well lighted, and has an excellent water supply, but is badly built. The narrow streets, though laid out regularly, are intersected by canals, and the sanitation is bad. There are extensive teak forests in the region about it, which formerly furnished the material for a large amount of ship-building. This industry, however, has declined. The principal articles of export are cotton, rice, skins, spices, and teak. The population has increased from 25,000, in 1852, to 181,210, in 1891. Something less than one-half are Burmese, and the natives of India are about as many. In 1889-90, the total imports (excluding coasting trade) were valued at £5,686,244, and the total exports at £5,047,268. There are an Anglican cathedral (of which the foundation stone was laid by Lord Dufferin, in 1886), other European churches, the Payre Museum in the horticultural gardens, and St. John's College. Behind the town is a fortified hill (166 ft.), on which stands the Shway-Dagon pagoda, an imposing structure, with a tower 321 feet high, capped by an enormous gilded crown, and containing a bell weighing 30 tons. Tradition says that it was erected in the 6th century B. C. It is the repository of eight hairs from the head of Gautama Buddha, and is "the most venerated object of worship in all the Indo-Chinese countries," frequent pilgrimages being made thereto. Grouped round the hill on which the pagoda stands is a large British military cantonment. Up to 1753, the city was named after the pagoda; then King Alompra selected the town as the capital of Pegu, and gave it its present name, *Ran-km*, or, "end of the war." It was occupied by the British in 1821, but soon returned to the Burmese. In 1852 it was again taken by the British, and has since been held by them.

Ranke, Leopold von, historian, was born in Wiehe, Saxony, Dec. 21, 1795; educated at Leipzig; was made professor extraordinary of History in Berlin University (1825), a position directly due to the distinction he had won the preceding year by his first historical work, *A History of Latin and Teutonic Nations*. In 1847 he published *Nine Books of Prussian History*. Several other works followed at intervals; and at the age of 80 R. began his *History of the World*, and lived to complete 12 volumes, receiving the cordial aid of the government in facilitating his work. In 1865 he was ennobled; in 1867 he was made chancellor of the order *Pour le Mérite*; in 1882 was made a privy counselor; and in 1885, his 90th birthday was made a national holiday, the Emperor

William calling on him at his residence, and congratulating him. He wrote with undiminished power until within a few days of his death. He was especially strong in the development of obscure or doubtful points of history, to which he applied a critical analysis. His style has had many imitators, who are usually characterized as the "School of Ranke." Died May 23, 1886.

Ran'son, MATTHEW WHITAKER, politician, was born in Warren co., N. C., Oct. 8, 1826; educated at the University of North Carolina, and became a lawyer and planter; elected attorney-general of his State (1852); member of the legislature (1858-60); peace commissioner from N. C. to the congress of Southern States at Montgomery (1861); entered the Confederate army; served throughout the war, reaching the rank of major-general; surrendered at Appomattox; was elected to the U. S. Senate in 1872; reelected in 1876, 1883, and 1889; appointed minister to Mexico in 1895.

Ransom, in *North Dakota*, a S. E. co.; area, 864 sq. m.; drained by Cheyenne river. *Surface*, rolling prairie land; timber abundant along streams; soil, deep rich black loam, with clay subsoil. *Cap.* Lisbon. *Pop.* (1897) 7,150.

Rap'id City, in *South Dakota*, a city, cap. of Pennington co., 40 m. S. E. of Deadwood; in the mining district of the Black Hills, with gold, tin, and mica mines in vicinity. Seat of the Dakota School of Mines. *Pop.* (1895) 1,787.

Ras'sam, HORMUZD, archaeologist, was born in Mosul, in northern Mesopotamia, in 1826. In 1845 he joined Layard to assist him in his Assyrian researches; returned with him to England and studied at Oxford; in 1847 was sent out by the British Museum authorities to assist Layard in his second undertaking; succeeded Layard in the management of the expedition; has since been actively employed in archaeological researches for the British government in Abyssinia, Assyria, Armenia, Babylonia, &c., making many valuable discoveries.

Raton, in *New Mexico*, a post-village of Colfax co., 110 m. N. E. of Las Vegas. *Pop.* (1897) 2,100.

Raven'sa, in *Nebraska*, a city of Buffalo co., 30 m. W. of Grand Island. *Pop.* (1897) 1,100.

Raw'lins, JOHN AARON, soldier, was born in East Galena, Ill., Feb. 13, 1831; admitted to the bar (1854). During the Civil War, was aid-de-camp to Gen. Grant; in 1865, was brevetted major-general, U. S. A. In 1869 he was made secretary of war, holding that office until his death, which occurred Sept. 9, 1869.

Raw'lins, in *Kansas*, a N. W. co.; area, 1,080 sq. m.; drained by Beaver creek and the North, South, and Middle Forks of Sappa creek. *Surface*, prairie; timber along streams. *Cap.* Atwood. *Pop.* (1895) 5,702.

Raw'lins, in *Wyoming*, a city, cap. of Carbon co., 136 m. W. N. W. of Laramie; has railroad machine shops and roundhouses, coal, quarries of limestone and building-stone, and a medicinal sulphur spring in the vicinity. Here is the State Penitentiary. *Pop.* (1897) 2,510.

Raw'linson, GEORGE, Oriental historian, was born at Chadlington, Oxfordshire, Nov. 23, 1815; educated at Oxford, where he afterward became Camden professor of Ancient History (1861); canon at Canterbury (1872); rector of All Hallow's, London (1888). His lectures and historical writings are characterized by a conservative defence of orthodoxy. He is best known by the *Five Great Monarchies of the Eastern World* (1882); *The Kings of Israel and Judah* (1889).

Raw'linson, SIR HENRY CRESWICK, soldier, diplomatist, and archaeologist, was born at Chadlington, Oxfordshire, April 11, 1810; served with distinction as soldier and diplomat in India, Turkey, and Persia; in 1835, while stationed at Kermanshah, he began to study cuneiform inscriptions in Persia, contributing to the Royal Asiatic Society in London the results of his archaeological and Biblical researches, besides other works on the same subjects. He was knighted in 1856, and made director of the East India Company; was special envoy to the Shah of Persia in 1859. He sat in Parliament as a Liberal, where he took an active interest in foreign affairs. In 1876 he was nominated vice-president of the Council of India, and received a baronetcy in 1891. Died March 5, 1895.

Ray'leigh (JOHN WILLIAM STRUTT), BARON, the third of the title, was born in Essex, Nov. 12, 1842, and succeeded to the title in 1873; educated at Trinity College, Cambridge, where he was professor of Experimental Physics from 1879 to 1884. In 1888 he succeeded Prof. Tyndall as professor of Natural Philosophy in the Royal Institution, London. He shares with Ramsey the credit of discovering the element argon (*q. v.*), for which he was awarded the Barnard medal "for meritorious service to science," by Columbia College, New York.

Ray'mond, HENRY JARVIS, journalist, was born in Livingston co., N. Y., Jan. 24, 1820; educated at the University of Vermont; in 1841 was associated with Horace Greeley, editor of the *New York Tribune*; was editor of the *Courier and Enquirer* (1843); founder of the *Times* (1851); member of the New York legislature (1849); lieutenant-governor (1854); member of Congress (1864). He was among the organizers of the Republican Party, in 1856. His chief work is *Life and Public Services of Abraham Lincoln* (1865). Died June 18, 1869.

Raymond, JOHN T. See JOHN O'BRIEN.

Raymond, in *Illinois*, a post-village of Montgomery co., 50 m. S. W. of Decatur.

Rayne, in *Louisiana*, a post-village of Arcadia parish, 15 m. W. of Lafayette. *Pop.* (1897) 648.

Read, JOHN MEREDITH, diplomatist, was born in Philadelphia, Pa., Feb. 27, 1837; educated in a military school; appointed adjutant-general of New York (1860);

went to Paris (1869) as consul-general in France and Algeria. During the Franco-German war he acted as consul-general of Germany; also for nearly two years conducted all the consular affairs of that country, including the protection of German citizens during the two sieges of Paris (1870-72). From 1873 to 1880 he was U. S. minister to Greece. Died Dec. 27, 1896.

Read, OPIE, author, was born in Nashville, Tenn., Dec. 22, 1852; devoted himself for several years to journalism; has written several clever stories of Southern life, the most conspicuous title being *A Kentucky Colonel* (1890), which has been successfully dramatized. Other stories are: *A Kentucky Judge* (1893); *The Wives of the Prophet* (1894), and *The Jacklins* (1896).

Read, THOMAS BUCHANAN, poet and artist, was born in Chester co., Pa., March 12, 1822. In 1846 he opened a studio in New York; in 1850, and again in 1853, he visited Europe, and finally took up his residence in Rome, visiting the U. S. occasionally. During the Civil War he spent much time visiting the camps and reciting his verses. His poem, *Sheridan's Ride*, was written immediately after the event, and was recited a few hours later at a mass meeting in Cincinnati by James E. Muddock. As a companion to this poem, he afterward executed the painting of *Sheridan's Ride*. Of his other poems, the best known is *Drifting*. Died May 11, 1872.

Reap'ing Machines. (*Agric.*) Automatic machines for the cutting and gathering of standing grain may be said to have become practical with the invention of Cyrus H. McCormick, in 1831. His machine contained the principles on which almost all the varieties of harvesting machines are now constructed, whether known as binders, harvesters, mowers, reapers, or by some other name. (See *MOWING AND REAPING*, in the body of this work.) The type of machine commonly designated as a reaper is mounted on wheels and drawn by horses. It has a cutter-bar like a mower, and back of the cutter-bar a platform on which the cut grain falls. If the machine is of the self-binding type, the platform carries a canvas travelling-apron, which draws the grain to one side, where it is drawn in, with curved hooks to a binding-deck, where it is automatically tied and dropped. For a time wire was used in the binding, but was afterward discarded for cord, as the wire occasionally made trouble later in grinding the grain. In order that the standing grain may be held up to the cutter-bar of the reaper, and not lost by crushing down, a reel, or a set of rakes, is provided for descending on the grain in advance of the cutter, and pressing the grain backward against the reciprocating blades. Where the binding attachment is not used, the revolving rakes are commonly made to draw the grain on the platform, and drop it in bulk at regular intervals.

Record'ing and Reg'istering Devices. It is desirable to make a printed record of the performance of a great many machines and instruments, or to register certain events or proceedings in the conduct of business. For such purposes a vast number of mechanisms and contrivances have come into use, under a variety of names, "recorder" and "register" being applied without much discrimination, although, properly speaking, a recording device is one that leaves a permanent record, as a printing or tracing that can be preserved, while a registering device is one that performs some action, as the exposing of figures, or the adjustment of some part to a certain position, where it remains only temporarily. A most common form of recorder is a drum or cylinder, arranged to rotate slowly about its axis, and at the same time to advance endwise still more slowly by means of an internal screw. Such a drum is covered with a smoked paper, or the like, and brought in contact with a style, as a sharp point, bristle, or other scratching device, attached to the thing whose movements are to be recorded. If the drum is moved by clockwork, or other means of producing a regular motion, the style will leave an even spiral line on the smoked paper as long as the style remains stationary, but every movement of the part to which the style is attached will cause a waving or other alteration of the spiral line, leaving a record of all variations of position. This principle is made use of in the steam-engine indicator, in the pluviometer, and a great variety of scientific instruments. The phonographic record is made by similar mechanism, the only difference being that tinfoil is substituted for the smoked paper, and that the irregularities produced by the sound-waves serve to indent the tinfoil rather than to wave the lines of the record. A continuous paper tape, running from one reel to another, is used with many machines to preserve a record. The telegraph recorder is a familiar instance, and the stock-ticker another, each imprinting a record on the paper as it passes through. Other recorders are made in the form of a disk, bearing circular and radiating graduations. The disk being rotated, as by the hand of a clock, it is possible to read any scratches or marks made thereon by a pointer fixed to the mechanism whose operation is to be recorded, and to read the time at which the pointer made the scratch. This principle is made use of in some watchmen's detectors. A recorder for giving indications of varying pressures of gas is manufactured with a disk of this sort.

One of the simplest mechanisms for registering figures consists of gear-wheels, numbered from 0 to 9, and arranged in a row, with gearing by which the first wheel turns the second one-tenth at each rotation, the second the third at the same proportional speed, and so on. A common form of these is seen in the fare-indicators used on street-cars, the counters on printing-presses,

&c. A similar mechanism, with a printing face on the figure-wheels, is used for printing numbers, as in paging blank-books or numbering tickets. More complicated mechanisms of wheels, as in epicyclic trains, serve for calculating operations, as in some forms of cash-registers. A very simple form of register is a dial or graduated sector, about which a pointer moves, as in the compass or steam-gauge. A time-register is made by arranging figure-wheels geared to drive by clockwork, so that they always represent the time of day. Suitable inking and stamping mechanism being provided, an employee's time-card, a telegram or the like may be inserted and stamped at any time with the assurance of recording thereon the time of day.

CASH REGISTERS.—These machines are much used in mercantile houses to keep a record of the cash received, and verify the returns of cashiers and clerks. Several different forms are manufactured, the most general arrangement being the unlocking of a drawer, containing the cash used to make change, by the depression of a key or keys marked 10, 15, 20, or the like, to the amount of the customer's purchase. The machine makes record of the amounts represented by the keys struck, and adds them up, so that at the close of the day's business it exhibits the amount of money which should be added to what was previously in the drawer, as the result of the day's receipts. By the use of these machines, a cashier cannot readily steal cash without allowing the customer to see that he is doing so, by striking keys of a less amount than the customer's purchase.

Rec'tor, in *Arkansas*, a post-town of Clay co., 178 m. N. E. of Little Rock. *Pop.* (1897) 530.

Red Cloud, in *Nebraska*, a city, cap. of Webster co., 41 m. S. of Hastings; has railroad repair shops, flour mills, marble and granite works, creamery, &c. *Pop.* (1897) 2,750.

Red Cross Soci'eties. All civilized nations have now acceded to the Geneva Treaty of 1864, which provides for the formation in each country of a committee to supplement the army sanitary service by furnishing surgeons and trained nurses, preparing and furnishing hospital stores, and investigating the sanitary conditions of the army, and which assures the neutrality of hospitals, of the officials of the sanitary service, of the unpaid surgeons and nurses, of the wounded, and of the inhabitants of any non-combatant nation which shall send aid to the wounded. All committees, societies, and orders which have been formed to carry out the purposes of this treaty are known as Red Cross Societies, and have adopted a red Swiss cross (in token of Geneva) on a white field as a flag, and a red cross as a badge. The international organization is now complete; it has a permanent committee at Geneva, forming a center of communication between different states and facilitating the action of the different societies whenever war is declared anywhere. Among the prominent Red Cross Societies are the English Order of the Hospital of St. John of Jerusalem, the National Society for Aid to the Sick and Wounded in War, the French Société de Secours aux Militaires Blessés, and the Austrian Samaritan Verein. The American Red Cross Society was organized in 1881 by Miss Clara Barton, and joined the international union. Miss Barton had worked with the military hospital service during the Civil War, and was consequently thoroughly acquainted with the organization and scope of the U. S. Sanitary Commission, which worked exactly along the lines afterward laid out by the Geneva Treaty. During the Franco-Prussian War, Miss Barton helped the Grand Duchess of Baden in the organization of hospitals, and afterward superintended the supplying of work to the poor in Strasburg in 1871, and the relief of the destitute of Paris in 1872. It occurred to her that the Red Cross Societies might be useful in times of flood, famine, pestilence, and disaster, as well as in war, and she organized the American society upon a character which covered this entire field. This broader idea was approved by the international and other national societies, and was included in many of the organizations under the name of the "American Amendment." The American National Red Cross has collected and distributed aid, amounting to millions of dollars, for the relief of suffering after the Johnstown flood, the various floods in the Mississippi valley, the Galveston overflow, the San Francisco earthquake, and the Sicilian earthquake of December, 1908.

Red Jack'et, in *Michigan*, a post-village (P. O. CALUMET) of Houghton co., 15 m. N. of Houghton; an important mining place. *Pop.* (1891) 4,664.

Red Key, in *Indiana*, a post-town of Jay co., 18 m. N. of Muncie. *Pop.* (1897) 1,150.

Red Lake Falls, in *Minnesota*, a post-village of Polk co., 20 m. N. E. of Crookston. *Pop.* (1895) 1,003.

Red Li'on, in *Pennsylvania*, a post-borough of York co. *Pop.* (1897) 620.

Red Lodge, in *Montana*, a post-village, cap. of Carbon co., 40 m. from Laurel. Gold, silver, and coal mines in vicinity. *Pop.* (1897) 1,250.

Red Oak, in *Iowa*, a city, cap. of Montgomery co., 50 m. S. E. of Council Bluffs; has some manufactures. *Pop.* (1895) 4,224.

Red River, in *Louisiana*, a N. W. parish; area, 386 sq. m.; drained by Red river. *Surface*, level; soil, fertile. *Cap.* Conshatta. *Pop.* (1897) 12,770.

Red Wil'low, in *Nebraska*, a S. co.; area, 720 sq. m.; intersected by Republican river and Beaver creek. *Surface*, undulating; timber scarce. *Cap.* Indianola. *Pop.* (1897) 10,220.

Red'ding, in *Alabama*, a post-town of Jefferson co. *Pop.* (1897) 550.

Redfield, in *South Dakota*, a city, cap. of Spink co., 40 m. N. of Huron. Pop. (1895) 900.

Redlands, in *California*, a post-village of San Bernardino co., 8 m. E. of San Bernardino. Pop. (1897) 2,155.

Redon'do Beach, in *California*, a post-town of Los Angeles co., 18 m. from Los Angeles. Pop. (1897) 850.

Redpath, JAMES, author and journalist, was born in England, Aug. 14, 1833; emigrated with his parents to Michigan in 1848; was an editor of the *New York Tribune* at the age of 19—a radical abolitionist. He travelled through Ireland during the famine of 1881, as correspondent of the *Tribune*; lectured in Ireland and in the U. S., and published *Redpath's Weekly*, in behalf of the Irish cause. In 1886 he became editor of the *North American Review*. He published several works relative to the two great causes of freedom to which his life has been mainly devoted; among them, *Talks with Slaves in Southern States* (1859); *Guide to Haiti* (1869); and *Talks about Ireland* (1881). Died Feb. 10, 1891.

Reed, JOSEPH, Colonial statesman, was born in Trenton, N. J., Aug. 27, 1741; was a delegate to the Continental Congress in 1775; aid-de-camp and secretary to General Washington; adjutant-general in 1776; brigadier-general in 1777; signed the articles of Confederation in 1778; and was president of the Supreme Executive Council of Pennsylvania from 1778 to 1781. Died March 5, 1785.

Reed, THOMAS BRACKETT, politician, was born at Portland, Maine, October 18, 1839; graduated at Bowdoin (1860), and studied law. In 1864 he entered the navy as acting assistant paymaster for one year; returned to the practice of law; held various State offices; was elected to Congress in 1876, and re-elected continuously for over twenty years; was speaker of the Fifty-first, Fifty-fourth and Fifty-fifth Congresses, controlling the House with unswerving energy and intrepidity. He resigned August, 1899, and engaged in law business in New York. Died Dec. 1, 1902.

Reed, WILLIAM BRADFORD, diplomatist, grandson of Joseph Reed (1741-1785), was born in Philadelphia, Pa., June 30, 1806; graduated at the University of Pennsylvania; studied law, and became attorney-general of the State in 1838; was minister to China in 1857, and negotiated the treaty of June 18, 1858; was editor of the *New York World* during the Civil War. Died Feb. 18, 1876.

Reed City, in *Michigan*, a post-village of Osceola co., 69 m. N. of Grand Rapids; has water power. Pop. (1894) 2,247.

Reeves, JOHN SIMS, tenor singer, was born near London, England, October 21, 1822. He received early training in music from his father, and at 14 became an organist; made his first appearance as a public singer at the age of 18; in 1847 made a distinct success in opera, but soon left the stage, and thereafter was heard in oratorio and ballad-singing, in which field he was unsurpassed in his day. In 1892 he became professor in Guildhall School of Music, London.

Reeves, in *Texas*, a W. co.; area, 2,390 sq. m.; drained by the Rio Pecos, which bounds it N.E. Surface, rolling; soil, a very rich loam; mesquite timber abundant. Cap. Pecos. Pop. (1897) 3,000.

Referendum, *n.* (*Polit.*) In Switzerland they have a peculiar institution called by this name, by means of which all legislative acts passed in the Federal and cantonal assemblies may be referred to the people *en masse*. It is of two kinds, compulsory and optional, both as regards Federal and cantonal matters. In those cantons where all laws adopted by the representative body of the canton must be submitted to the people it is compulsory; in those cantons where it may be demanded by a certain number of votes it is optional. In the majority of cantons, 5,000 signatures are required in order to obtain a referendum for cantonal laws. The Federal Constitution of 1874 contains an article extending the exercise of the popular vote, when demanded by 30,000 citizens, or eight cantons, to all laws and resolutions of a general nature passed by the General Assembly. Since this optional referendum was established in 1874, it has been put in operation on an average not more than once a year; the votes have shown a conservative rather than a radical tendency on the part of the people.

Reformed Church in America (formerly known as Reformed Protestant Dutch Church of North America). In 1628 the Rev. Jonas Michaelius organized the first Reformed Dutch Church among the settlers of New Amsterdam, and the organization which still lives upon this foundation is the oldest Protestant church in the Western Hemisphere. The first place of worship was a loft over a horse-mill; 50 Walloon and Dutch communicants assembled at the first Lord's Supper, and the membership increased with the growth of the colony. Dominic Everard Bogardus, who came to America in 1633, is often spoken of as the founder of the church, having been its first prominent pastor, but his important work was in seeing to the erection of the first church edifice, a wooden building in the Old Slip, where worship was carried on for eight years. The congregation was able to put up a substantial stone church in the fort at the southeast corner of the Battery; this was named in honor of St. Nicholas, and was used for fifty years, at the end of which time a third church was built, which stood in Garden Street, although that was considered too far out of town, and became the first of the collegiate churches; for in 1729 a new congregation was organized in association with it, building a church at the corner of Nassau and Cedar Streets. Meanwhile, in 1696, a regular charter

had been obtained for the Church, which had previously held property under the general laws, and that charter is still retained by the Collegiate Church. The Cedar Street Church, long known as the New Dutch, then as the Middle, and subsequently as the South Church, was cleared of its pews by the British soldiers during the Revolutionary War and turned into a prison, and afterward into a riding-school for the cavalry. After the evacuation of the British, the building was refitted as a church, but in 1844 it was converted into the government post-office, continuing in that use until 1877, after which it was pulled down to make room for a modern office-building. Franklin conducted electrical experiments in the wooden steeple of this old church, and it was one of the noted buildings of the town. In 1769 the North Church, which stood on Fulton Street, near William Street, was built, adding another member to the college of the Reformed Dutch Church; like the Middle Church the old North Church has long since disappeared, but the same church organization still has a chapel at 113 Fulton Street, where it holds the well-known *Fulton Street Noonday Prayer Meeting* every day. The collegiate organization has twenty-seven churches and chapels in New York and its suburbs, and is one of the strongest organizations in the Church. In 1895 the whole Reformed Church of America had 4 particular synods and 34 classes, with 618 churches, 652 pastors, and 117,260 members. Its property was valued at over \$10,000,000. The government, confession of faith, and forms of worship of the American Church are identical with those of the Reformed Church of Holland, to which the founders of the American Church had belonged, and to which it remained in subordination until 1747. The Heidelberg Catechism is its manual of religious instruction and unquestionable authority in matters of doctrine; this catechism, which dates from 1563, teaches the natural depravity of man, salvation by grace, spiritual presence in the symbols of the Lord's Supper, infant baptism, and election, discarding the doctrine of reprobation. The Church adheres to the Nicene, Apostles', and Athanasian creeds, the Belgic Confession, and the Canons of Dortrecht. Its polity is Presbyterian, yet it may be counted among liturgical churches, as it not only provides forms of public worship which may be used or not, according to choice, but also imperatively prescribes offices for the sacrament, ordination, and discipline. In most of the Reformed Dutch churches, the Dutch language was used until the latter part of the 18th century, when English was adopted; the word "Dutch" in the formal title of the Church was not dropped until 1867. The denomination is wealthy, being very strong in those parts of the country occupied by the descendants of the old Dutch settlers, and also extending into Pennsylvania, Michigan, Illinois, Wisconsin, Iowa, and Dakota, but it must not be confused with the *Reformed Church in the U. S.* (*q. v.*), which extends over somewhat the same territory, and is so similar in government and doctrine that frequent efforts have been made to unite the two, but so far without success. Four colleges have been founded by this denomination: Rutgers, at New Brunswick, N. J.; Hope, at Holland, Mich.; Northwestern Classical Academy, at Orange City, Ia.; and Pleasant Prairie College, at German Valley, Ill.; there are also seminaries at Rutgers, Hope, and in India.

Reformed Episcopal Church. In Dec., 1873, a number of clergymen and laymen, chiefly, if not entirely, composed of members of the Protestant Episcopal Church, met in New York, presided over by Rt. Rev. George D. Cummings, assistant bishop of Kentucky. They formed an organization, now known as the Reformed Episcopal Church, and they declared the following as forming their belief: The Holy Scriptures as the word of God and the sole rule of faith, accepting the creed commonly called the Apostles' Creed, the divine institution of Baptism and the Lord's Supper, and the doctrine of grace as set forth in the Thirty-nine Articles. An adherence to episcopacy, not as Divine right, but as an ancient and desirable form of church government; accepting the Book of Common Prayer practically as revised in 1785, with full liberty to alter the same, if not in conflict with the faith. They condemned the following, viz.: The existence of the Church in any one form of ecclesiastical polity. That ministers are priests, save so far as all believers are members of the great priesthood. That the presence of Christ in the Lord's Supper is a presence in the elements only. That regeneration and baptism are inseparable, the latter being simply a form of admission to the Church. Charles E. Cheney, D. D., of Chicago, was elected missionary bishop. Bishop Cummings, the first presiding bishop, died in 1876. Accessions to its numbers have been received from other churches beside the Episcopal, attracted by its liberal spirit and open communion to all Christians. Its governing body, styled the General Council, was first held in New York city in 1874. It is composed of bishops, clergymen, and laymen, meeting on equal ground. This council has authority over all parishes in America, the synods of Canada, New York, Philadelphia, and Chicago, and the various missionary jurisdictions holding power under it. A branch of this organization was extended to Great Britain, in 1877, but in 1883 the British division became independent, and in 1894 it joined itself to the Reformed Church of England. The Reformed Episcopal Church in America now has a theological seminary in Philadelphia, and owns property valued at \$1,500,000; it embraces 112 parishes and missions, with 8 bishops, 90 presbyters, and 11,000 communicants.

Reformed Presbyterian Church. See PRESBYTERIAN CHURCH.

Refrigeration, *n.* The manufacture of artificial cold has assumed considerable proportions within recent years. There are several systems, but the forms of apparatus most widely used depend upon the expansion into gas of a previously liquefied vapor cooled during its compression. Anhydrous ammonia is the liquid most commonly employed, because its boiling point is so low, 27° to 28½° below zero F., that it is very readily converted into gas, or back into a liquid. The reader should understand that all fixed gases are but forms of matter, capable of being brought to a liquid state by the application of sufficient pressure or exposure to a very low degree of temperature; or pressure and cold together may be used to condense and liquefy a gas. The application of pressure to a gas raises its boiling-point, and at the same time enormously increases its heat. If ammonia gas be subjected to pressure and then cooled by circulating cold water about the vessel containing the compressed gas, the ammonia becomes liquefied, and may be kept in that condition as long as it is under pressure. If this liquid ammonia be released in a set of pipes and allowed to expand, it withdraws heat from its surroundings in the process of returning to gaseous form. In other words, it seeks to regain the heat of which it was robbed in liquefying, and in so doing disseminates cold in its vicinity. To produce good results, however, the expansion of the ammonia must be rapid, or its effect is largely wasted. In both Denver and St. Louis are established large plants for distributing cold by this system, and selling it as gas or electricity is sold. A triple set of pipes is maintained, the outgoing pipe being called the liquid line, and carrying the ammonia, which has been compressed and cooled, to the premises of customers. Each customer has a more or less extensive system of expansion-coils, and when he wants cold turns a cock or valve, admitting a very small stream, which at once begins to evaporate in the coils, and lowers the surrounding temperature. If

Fig. 3050.—ECLIPSE REFRIGERATING MACHINE.
S, suction pump; C, compressor pump.

the consumer desires to make ice, he is supplied with a brine-tank, in which cans of water may be frozen. After expansion the vapor returns to the central station by means of a large pipe called the vapor line, being pumped back by suction. A third line is termed the vacuum line. This parallels the others, and each of the three being divided into sections by valves, while connections are provided at the commencement of each section. The vacuum line, which is normally empty, may be used to replace either of the other lines throughout one or more sections whenever repairs are required, thus preventing the inconvenience of shutting down the operation of the plant. The ordinary form of ammonia frigorific machine consists practically of three parts—the evaporator or condenser for vaporizing the ammonia; a pump for aspirating or sucking in the gas from the evaporator as fast as formed, and a liquefier or condenser, into which the pump forces the gas and compresses it, the work being aided by a circulating current of cold water. The liquefied ammonia thus produced may be used either by the means already described, which is known as the direct-expansion system, or by means of cooled and circulating brine. The advantages claimed for the brine system are that the cost of ammonia is reduced, because less is employed, and that leakage of ammonia is avoided, its escape being not only a loss, but a frequent damage to goods stored in rooms where the leakage occurs. The brine used is made with common salt and water, and hence is inexpensive. The brine-tanks are cooled by means of evaporating-coils, and a pump is used to circulate the cold brine through the rooms that are to be cooled. Refrigeration by these methods is much employed by cold-storage warehouses, for the preservation of meats, vegetables, &c., also for the preservation of furs and garments from moths. Hotels and large office-buildings are often supplied with such plants for cooling the rooms, maintaining cold water in the

drinking-fountains, &c. The mechanism and piping of a refrigerating system require very careful construction to insure tightness of joints, as a liquid under pressure is hard to retain. The pipes are often laid in beds of cement in order to prevent any changes of position, which are liable to strain joints and start leaks.

The first ammonia refrigerating machines were made in France about 1860 by Carre & Co., on the absorption system. Ammonia is very soluble in water, and the method was to place a solution of ammonia in water in a chamber from which the air was pumped, and then to apply heat, thus driving out the ammonia gas, which passed to a condensing cylinder surrounded with cold water. The gas, thus volatilized, condensed into a liquid under the pressure of its own expansion, and was used for refrigeration by later expansion. Blythe & Southby, Reece, Stanley, and Kropff, all built refrigerating apparatus on a somewhat similar principle, but these machines have been mostly discarded, being more dangerous, complicated, and less productive than the ammonia-compression method. Some machines on this principle are still used, however, owing to low first cost. Various gases besides ammonia have been used in frigorific machines, as carbonic acid, chloride of methyl, ethylene, and sulphuric acid. The manufacture of ice may be carried on with any form of refrigerating plant. (See FREEZING-MACHINES.) In a very recent form of ice-machine the freezing takes place on a cylinder, which is kept cold, and supplied slowly with water by sprinkling. As a coating of ice is thus formed, it is scraped off and packed in cakes, renniting by regelation. In appearance this ice resembles frozen snow, the structure being so broken up as to entirely destroy the transparency.

Regelation, n. The freezing together of two bodies of ice at a temperature not lower than the freezing point. It is regarded by many physicists as due to pressure, being most noticeable when pressure is exercised, as in the forming of a snowball. It is well known that pressure develops heat, and Barker says that it lowers the fusing or melting point, so that the ice is liquefied or turned to water at the point of contact, but that when that pressure is removed regelation, or re-freezing, follows, because such water is below the freezing point and the pieces of ice are thus joined together. Faraday explains the phenomena by cohesion, claiming that the particles on the exterior of a block of ice are held by cohesion on one side only. When the temperature is at 0° C., these exterior particles, being partly free, are the first to pass into the liquid state, and a film of water covers the solid. But the particles in the interior of the block being bounded on all sides by the solid ice, the force of cohesion is here a maximum, and hence the interior ice has no tendency to pass into a liquid even when the mass is at 0°. If the block be now split in halves, a liquid film instantly covers the fractured surfaces, for the force of cohesion on the broken surfaces has been lessened by the act. By placing the halves together, so that their original position shall be regained, the liquid films on the two fractured surfaces again become bounded by ice on both sides. The film being excessively thin, the force of cohesion is able to act across it; the consequence of this is the liquid particles pass back into the solid state, and the block is reunited by regelation. Not only do ice and ice freeze together, but regelation also takes place between moist ice and any non-conducting solid body, as flannel or sawdust. A similar explanation to that just given has been applied here, substituting another solid for the ice on one side. An example on an immense scale is the phenomenon of a moving glacier, whose crevasses close and disappear.

Regent-bird, n. (*Ornith.*) A bower-bird (*Sericornis melinus*) of eastern Australia, remarkable for the beautiful plumage of the male, which is deep golden-yellow and velvety-black. The "bower" of this bird does not seem to be so elaborate as are the structures raised by its allies (see CHLAMYDODERA), but has the same purpose, while the nest proper is built in a tree. The name is a compliment to the Prince of Wales, afterward George IV. of Great Britain.

Register, Cash. See RECORDING AND REGISTERING DEVICES.

Re'han, ADA, actress, was born in Limerick, Ireland, April 22, 1860; removed to America in 1866; made her debut in *L'Assommoir* at the age of 16; acted for a time with Edwin Booth; in 1879 joined Augustin Daly's company; in 1888 was especially successful in London, in the role of *Katherine* in the *Taming of the Shrew*. She appeared in plays of Shakespeare and Tennyson, in 1893, one of her best impersonations being that of *Maid Marion* in Tennyson's *Foresters*.

Reich'stadt, DUKE OF. See NAPOLEON II.

Reid, WHITE-LAW, editor, was born in Xenia, O., Oct. 27, 1837; educated at Miami University; became editor of the *Xenia News* (1857); was Washington correspondent of the *Cincinnati Gazette* during the Civil War; also accompanied the Union army southward, writing descriptions of battles and marches. In 1865 he joined the editorial staff of the *New York Tribune*, and, upon the death of Horace Greeley, succeeded to the ownership and control of that paper. He was minister to France, under President Harrison, and in 1892 was the Republican nominee for Vice-President. He was a member of the Peace Commission in Paris after the Spanish-American war of 1898. In January, 1902, he was appointed by President Roosevelt, with two colleagues, to represent the United States at the coronation of King Edward VII.

Reinhart, CHARLES STANLEY, artist and illustrator, nephew of B. F. Reinhart, was born at Pittsburg, Pa.,

May 16, 1844; studied in Paris in 1867, and in Munich in 1868; returned to America in 1870; went to Europe in 1881, and during the next eight years became a conspicuous exhibitor in the saloons and galleries of Paris and London; as an illustrator his work was in constant demand. Died August 30, 1896.

Remen'yi, EDOUARD, violinist, was born in Hungary in 1830; student under Joseph Böhm, at the Conservatory of Vienna, June, 1842, to 1845; took part in the insurrection against Austrian rule in 1848, and was compelled to leave Hungary. He made several tours through the United States, the last one during the year 1893.

Rem'ington, FREDERICK, artist and illustrator, was born in St. Lawrence co., New York, Oct. 4, 1861; studied at the Yale Art School for two years, and in 1880 went to the cattle ranges of Montana and Wyoming, where he studied the details of life on the plains. He has painted several very realistic pictures; among them *The Dash for the Timber*; *Past all Surgery*; *The Last Stand*; and *The Last Lull in the Fight*. He has also done clever work as a sculptor, in *The Broncho Buster*, and *The Wounded Bunnie*. As an illustrator his scenes are those of wild Western life, his latest work in this line being the illustrations in General Miles' *Personal Recollections* (1896). Mr. R. also published a book, *Pony Tracks*, descriptive of his frontier experience. He has shown a rare genius for selecting picturesque titles.

Rem'sen, in Iowa, a post-village of Plymouth co., 35 m. N.E. of Sioux City. Pop. (1895) 724.

Rend'ville, in Ohio, a post-village of Perry co. Pop. (1897) 980.

Ren'ick, in Missouri, a post-town of Randolph co. Pop. (1897) 580.

Ren'selaer Polytech'nic In'stitute. See TECHNICAL SCHOOLS.

Re'no, in Kansas, a S. central co.; area, 1,260 sq. m.; intersected by Arkansas river. Surface, nearly all undulating prairie. Cap. Hutchinson. Pop. (1895) 26,492.

Renouf, EMILE, painter, was born in Paris, June 23, 1845; studied under Carolus Duran and Lefevre, and devoted himself to genre, landscape, and marine pictures. He received a first-class medal at the Paris Exposition (1889), and the Cross of the Legion of Honor the same year.

Ren'ville, in Minnesota, a post-village of Renville co., 20 m. N.W. of New Ulm. Pop. (1895) 720.

Repoussé (râ-poo-zâ') Work. Metal work beaten into relief by striking a thin sheet or form of metal from behind with a hammer or punch, roughly shaping a design which is afterward finished on the outside surface by chasing or otherwise. Although it is not thought to be as old a form of metal work as casting, it was used for large pieces by primitive nations before the art of casting on a large scale had been perfected. The earliest method was to hammer a thin sheet of metal over a wooden core which had been carved into the general shape required; this method was superseded by the plan of laying the sheet of metal, face downward, on a bed of elastic cement and then hammering the relief into the yielding cement, until the whole design was rudely executed; the metal is then turned, the cement removed from the face and applied to the back, so that the final modelling and finish may be given to the work. Stamping with a die produces work somewhat similar to repoussé, but less free in execution, and the hammered iron, or grill work, is more properly forging. Gold, silver, and bronze are the metals most used in repoussé, and beautiful examples of it may be found in the metal work of ancient Greece, Assyria, Egypt, and other cultured nations of antiquity, as well as in Roman and mediæval Italy, in Germany, France, Spain, and England. The bronze gates of Shalmaneser II., 859-824 B. C., from Balawat, and the "Siris" bronzes, both in the British Museum, are noted examples of ancient work of this sort, while specimens of beautiful mediæval repoussé work in gold and silver plate are often seen, though very expensive. In France there was a revival of this art about the middle of the present century, and some good modern work has been done both there and in England.

Repub'lie, in Kansas, a N. co.; area, 720 sq. m.; intersected by Republican river. Surface, undulating, prairies and groves; soil, fertile. Cap. Belleville. Pop. (1895) 16,676.

Republican City, in Nebraska, a post-village of Harlan co., on Republican river, 12 m. W. of Bloomington. Pop. (1897) 770.

Republican Par'ty. A party name which has been used at various times in the history of American politics, and now applied to one of the two leading parties. It was first adopted, at the suggestion of Thomas Jefferson, as the name of the party which grew out of the Antifederalists, and advocated State rights in opposition to a centralized government. During 1794-95 this became known as the Democratic-Republican, and after 1824 as the Democratic party, while in 1828 a new party—the National Republican—grew up, in favor of high tariff and public improvements by the national government. This party became known, after 1836, by the name of the Whig party. Subsequently a number of parties arose, known as the Liberty, the Free Soil, and the American, the two former opposed to the institution of slavery, the latter to office-holding by foreigners. The passage of the Kansas-Nebraska bill in 1854, in abrogation of the Missouri Compromise, gave rise to strong opposition throughout the country, and in the succeeding election the opponents to the extension of slavery gained a majority in the House of Representatives. These became known as Anti-Nebraska men, and their supporters soon organ-

ized into a party, to which the name of Republican was given—it is said in response to a suggestion from Horace Greeley. The new party absorbed the remnants of the Free Soil and American parties, the Northern Whigs, and, in general, all who opposed the extension of slavery. It at once gained a strong following, and in 1856 nominated John C. Fremont for President and William L. Dayton for Vice-President, demonstrating its strength by an electoral vote of 114 for its candidates, in opposition to 174 for the Democratic candidates. The new party thus became ranged in vigorous opposition to the pro-slavery advocates, and during the succeeding four years gained much strength through Northern indignation against the Dred-Scott decision, the assault on Charles Sumner, &c. A division in the Democratic party increased its opportunities, this party in 1860 nominating two candidates—Douglas in the North and Breckinridge in the South—while John Bell was nominated as a third by the Southern wing of the Whig party. The Republicans met in convention and chose Abraham Lincoln and Hannibal Hamlin as their candidates. The ensuing election demonstrated their great growth in strength, their candidates being elected by an electoral vote of 180, while the three opponents gained in all 123 electoral votes. The conduct of the Civil War was in the hands of a Republican administration, though the acts of the administration received strong support from the Democrats of the North. The election of Lincoln was followed by a long series of successes at the polls, the government remaining in the hands of the Republican party from 1861 to 1885, a period of 24 years. Since then the governmental control has alternated, the Democrats electing Cleveland in 1884, the Republicans Harrison in 1888, the Democrats Cleveland again in 1892, and the Republicans McKinley in 1896. With the end of the Civil War, the slavery question, to which the Republican party owed its origin, passed out of politics, and with it largely the question of State rights, which formerly had been so prominent. For the succeeding twelve years the problems of reconstruction divided the two parties, not passing out of politics until after the election of Hayes, and leaving a permanent result in the enfranchisement of the Southern negroes. The high tariff policy was first adopted by the Republican party as a necessary war measure, and met with little opposition at that time, the need of a large income overtopping all other considerations. After the war it was maintained as an aid to the development of American manufactures, and gradually, as other questions were settled and passed out of politics, the tariff issue became the great point of distinction between the Republican and Democratic parties. In the campaign of 1896 the Republicans maintained that gold should be the sole standard of value, in opposition to the bimetallic standard then advocated by their opponents. The R. P. was successful in electing its candidates in 1896 and 1900, and in 1904 nominated for the Presidency Theodore Roosevelt, who, as Vice-President, had succeeded McKinley in 1901.

Res'onator, n. (Music.) A device for analyzing compound sounds, and for detecting a particular note by sympathetic vibrations. It was invented by Helmholtz, and in its simplest form consists of a hollow bulb or coned tube, with one aperture to be applied to the ear, and an opposite aperture of a certain size which serves to admit the vibrations of one musical note, to which it is adapted, and to exclude all others. By making a series of these, with alteration of the form of the bulb or tube and the size of the holes, a set may be formed, each one of which corresponds to a note of the musical scale. These may be arranged on a staff like a flute, and by closing them in succession the notes peculiar to certain sounds can be discovered with accuracy. This instrument has demonstrated that the sounds of many musical instruments and of the human voice are not simple, but compound tones of different intensity and pitch, so blended that they strike the ear as being a simple note.

(Elec.) A conductor having an open circuit, and designed for detecting the electro-magnetic radiation from a nearby circuit, which is manifested by a spark, as the result of sympathetic electric vibration.

Resz'ke, EDOUARD DE, bass singer, was born at Warsaw in 1856; a brother of Jean de Reszke, with whom he has been constantly associated in professional life. He appeared first in Paris; his principal parts are *Ruy Gomez* in *Hernani*; *Don Basile* in *The Barber of Seville*; *Lepporello* in *Don Juan*; *Mephistopheles* in *Faust*, and *Frère Laurent* in *Romeo and Juliet*.

Reszke, JEAN DE, tenor singer, was born in Warsaw, in 1853; made his debut in London (1875) as a baritone singer; sang in Paris at the Theatre Français in 1876 and 1883. In 1883 his voice changed to the tenor timbre; in 1884 he engaged at the *Théâtre des Nations*, and has since sung there, with various absences. In 1892 and 1893-94, he was the leading tenor of grand opera in the U.S.; his principal parts were *Faust*, *Radames*, and *l'asco* in *L'Africaine*.

Ret'icle, or Ret'icule, n. Originally, a network of fine spider threads placed in the focal plane of a telescope, but now usually a glass plate, bearing very finely ruled lines of reference. These reticle lines assist in the determination of the position of an object observed, as a star.

Reu'ter, BARON PAUL JULIUS, telegraph promoter, was born in Cassel, Germany, July 21, 1821; was connected with the electric telegraph from its earliest beginnings, and was a promoter of the continental system in Europe. He started the first news-agency in Aix-la-Chapelle; in 1851 the headquarters of the

agency were removed to London, and since then it has grown to include all parts of the civilized world.

Revere, in *Massachusetts*, a post-town of Suffolk co., 4 m. N. E. of Boston. Pop. (1895) 7,723.

Reynolds, JOHN FULTON, U. S. A., was born in Lancaster, Pa., in 1820; graduated at West Point (1841); served in the Mexican War, and in 1859 became commandant at West Point. In 1861 he was appointed lieutenant-colonel of volunteers; was soon promoted to brigadier-general, and major-general in 1862, succeeding Hooker in command of the 1st Army Corps. He was killed at Gettysburg on July 1, 1863.

Reynoldsville, in *Pennsylvania*, a post-borough of Jefferson co., 120 m. N.E. of Pittsburgh. Pop. (1897) 2,940.

Reynoldton, in *Pennsylvania*, a post-borough of Allegheny co. Pop. (1897) 1,550.

Rhea, HORTENSE, actress, was born in Brussels, Belgium, in 1848; studied the dramatic art under Janson, the famous instructor of Rachel, and later, at the Paris Conservatory, under Beauvoilet. She attained success in France, and in 1881 visited the U. S.; her conspicuous success was in the tragedy, *Adrienne Lecouvreur*.

Rheoscope, *n.* An instrument for detecting the existence of an electric current; replaced by the galvanoscope.

Rheostat, *n.* (*Elec.*) A resistance-box or resistance-cell, to be placed in the path of an electric current for the purpose of increasing the resistance in the circuit. When an electric current is first turned on to a motor, as that of a street car, it is essential that it should be done gradually, in order that the motor may not start off instantly at full force. This is accomplished by directing the current through a resistance-box or *R.* This box contains a series of coils of wire, made of metal that is a poor conductor of electricity. When the electricity is made to flow through these coils it encounters a resistance which causes it to expend the greater part of its energy in heating the coils instead of transmitting the current beyond to the motor. If the *R.* have 12 coils, and a handle on top that may be placed at any one of 13 points, so as to direct the current at starting through all 12 of the coils, and then by turning the handle a point through 11 of them, or 10, or 9, and so on to zero, then the current will be received by the motor very slightly at first, having to pass through the whole 12 coils; then the current reaching the motor is increased as the coils are cut out one by one, until when all are out of the circuit the full current reaches the motor and it revolves at full speed. Rheostats are also made to arrange the resistance in more complicated ways, for special purposes. The same principle of passing the current into wires that are poor conductors, and thus heating them, is used in the electric heater. See **ELECTRIC RESISTANCE**; **ELECTRIC MOTOR**, &c.

Rheotome, *n.* An old electrical instrument, known in its more modern form as an *interrupter*.

Rhesus (*rê-sûs*) **Monkey**. (*Zool.*) The *Macacus Rhesus*, an Indian monkey, and one of the most intelligent and mischievous of the tribe. They live in troops in the forests, chiefly in hilly districts, and visit the cultivated grounds to carry away grain and other produce,

Fig. 305I.—RHEBUS MONKEY.

which they store up for themselves among the rocks. The native farmers leave a share for the monkeys, believing this to be necessary for the averting of their anger, as otherwise, next year, they would destroy the whole crop whilst green. The *R. M.* has a stout form, stout limbs, short ears, a short tail, large callosities, the skin hanging loose about the throat and belly, the hair rather long, the back brownish, the lower part of the back and the haunches bright chestnut, or almost orange, the shoulders and arms lighter. It is held in so great veneration by the natives of India that the killing of one of these animals is apt to arouse the popular indignation.

Rhett, ROBERT BARNWELL, editor and politician, was born at Beaufort, S. C., Dec. 24, 1800; studied law, and was senator from South Carolina in 1851-52. He was editor of the *Charleston Mercury*, and through its columns, as well as by his speeches in Congress, he voiced the sentiments of the nullifiers and ultra-Secessionists, then designated "fire-eaters." He was prominent in the organization of the Confederate government, and a member of its Congress. After the war he retired from public life. Died Sept. 14, 1876.

Rhine/lander, in *Wisconsin*, a post-village, cap. of Oneida co., 65 m. N.E. of Wausau; has a number of saw and planing mills, turning and wagon works, foundry and machine shops. Pop. (1895) 4,330.

Rhodes, CECIL JOHN, statesman, was born at Bishop's Stortford, Hertfordshire, Eng., July 5, 1853; his early education was received at the local grammar school; and he spent a short time at Oriel College, Oxford; but not being physically strong, he relinquished study, and his physicians ordered him to the Cape. Here he became interested in diamond mining, and eventually consolidated the mining interests, and controlled the diamond supply of Africa, in this enterprise amassing an immense fortune. At the same time he entered with zest into Cape politics, and with health built up by the favoring climate, became a vital force in affairs. He entered the Colonial Parliament, and later took office in the ministry of Sir Thomas Scanlon. On the fall of Sir Gordon Spriggs' ministry (July 17, 1890), he became premier of the colony. In 1891 he visited England; in 1893 he took the field against Lobengula, the warlike king of Matabeleland, with a flying squadron of 600 troopers. This campaign, directed northward, with the purpose of establishing a telegraph line, and possibly a railroad, to Cairo, was mercilessly pursued against the savage Matabeles, and was unprecedentedly successful, adding more to the territory of the British Empire in one month than had been acquired by the armies in a century, and winning for *R.* the title of "Napoleon of Africa." He was called home to be sworn of the Privy Council, returning soon after to Africa. Then came the Uitlander outbreak in Johannesburg, led by his brother, Col. Francis W. Rhodes. That the Cape premier was cognizant of the proceedings is generally believed; but the impetuous action in the case was led by his lieutenant, Dr. L. S. Jameson, who, encouraged by a message sent to him by Colonel Rhodes and others, and with no halt for second thought, led his forces across the Transvaal border, met disaster, surrendered to the Boers, and was put on trial for irregularity of military action, and disobedience of orders. In the subsequent proceedings in the Jameson raid case, particularly in the special court of inquiry in England, led by Sir William Vernon Harcourt, Cecil *R.*, who was summoned for examination, displayed his unique qualities on the witness stand, his replies and explanations being characteristically shrewd and fearless, and embodying, incidentally, some pointed criticisms and suggestions for the home government. He resigned from the Cape government, but soon was occupied in quelling an extensive Matabele revolt. His intense Home Rule sympathy was shown on the occasion of his visit to England in 1891, when he donated \$50,000 to the Irish Home Rule Fund. He took no part in the South African war, but was in Kimberly during its siege by the Boers, his capture being one of their objects. Of the later purposes entertained by him, the most ambitious was a railroad to traverse the whole length of Africa, from Cairo to Capetown. He did not live to put this into effect, dying March 26, 1902. His will was a peculiar one. The bulk of his estate, estimated by his executors at \$30,000,000, was left for the establishment of scholarships in Oxford University for students from the British colonies and the United States, with a few from Germany. This was in furtherance of his cherished desire for the consolidation of the Anglo-Saxon race, which he hoped to aid by this project.

Rhodesia. (*Geog.*) The country subject to the sway of the British South Africa Company, and especially the portion of the territory watered by the river Zambesi, which is now under British protection, is frequently called Rhodesia, from Cecil J. Rhodes, until quite recently the chairman of the company, and formerly prime minister of Cape Colony. It is also sometimes called Zambesia. This part of South Africa has attracted much attention during several years on account of the large quantities of gold found there. A royal charter was granted to the British South Africa Company in 1889, and the company was formed with the dukes of Abercorn and Fife as president and vice-president, and Mr. Rhodes as managing director. Its territory was till recently a sealed book to all but the most adventurous of sportsmen, who hunted the big game of South Central Africa. It was the land in which Moffat and Livingstone carried on their missionary labors. At a meeting of the British Association for the Advancement of Science at Toronto, in August, 1897, a paper on Rhodesia was read by Mr. F. C. Selous, who has lived in the country north and south of the Zambesi for 25 years, and has been a great hunter and explorer there. He describes Rhodesia as a country of great value quite apart from the gold it produces. Anywhere at an elevation of 4,000 feet and upwards—and there are about 26,000 sq. m. at that altitude—the climate is one of the finest in the world. Fever is quite unknown. Europeans are able to work at any time of year all day long, in the full heat of the sun. The white man can live and thrive there, and rear strong, healthy children. The Dutch Boers and the British colonists of English, Irish, and Scotch descent, who were established in Cape Colony, in 1820, are fine, tall, robust men, and it is believed that Rhodesia can produce an equally admirable race. It is a fertile land, with great agricultural possibilities and pasturage for enormous numbers of cattle. The principal settlement is Bulawayo.

Rhys, JOHN, philologist, was born in Cardiganshire, Wales, June 21, 1840; educated at Oxford, the Sorbonne, Heidelberg, Leipzig, and Göttingen, returning to England in 1871 to become inspector of schools for Flint and Denbigh. In 1877 he was appointed professor of Celtic in Oxford. He is distinguished as a lecturer on Welsh philology and history.

Ribbeck, JOHANN KARL OTTO, philologist, was born in Erfurt, Germany, in 1827; professor of ancient lan-

guages at Berne (1859), at Kiel (1862), Heidelberg (1872), and Leipzig (1877).

Ribot (*rê-bô'*), ALEXANDRE FELIX JOSEPH, lawyer and statesman, was born at St. Omer, France, Feb. 7, 1842; studied law in Paris, and was first secretary of the bar society in 1870. In 1875 he was appointed director of criminal affairs and pardons; from that time onward he was an active politician, holding various offices, and in Jan., 1893, becoming president of the Cabinet and minister of the interior. In March, 1893, his government was overthrown. In Jan., 1895, upon the election of Faure to the presidency, *R.* was again made premier, and remained in office until the following October, when he was superseded by M. Bourgeois. *R.* was always a Moderate Republican. He was a conspicuous opponent of General Boulanger.

Rice, in *Kansas*, a central co.; area, 720 sq. m.; intersected by Arkansas river, and also drained by the Little Arkansas river and Cow creek. Surface, chiefly rolling prairie; soil, fertile; timber along streams. Cap. Lyons. Pop. (1895) 13,367.

Rice Lake, in *Wisconsin*, a city of Barron co., 12 m. N.E. of Barron. Pop. (1895) 3,162.

Rich, CLAUDIUS JAMES, Orientalist, was born near Dijon, France, March 28, 1787; travelled in Syria, Babylonia, Kurdistan, &c.; was British resident in Bagdad. Died October 5, 1821.

Rich, in *Utah*, a N. co.; area, 980 sq. m.; drained by Bear river, and several smaller streams. Surface, mountainous in the east; west, timbered. Stock raising and lumbering are prominent industries. Cap. Randolph. Pop. (1895) 1,781.

Rich Hill, in *Missouri*, a city of Bates co., 85 m. S. of Kansas City; has coal mines, zinc, lead and iron deposits; extensive smelting works, &c. Pop. (1897) 4,650.

Rich Square, in *North Carolina*, a post-village of Northampton co., 25 m. from Scotland Neck. Pop. (1897) 770.

Richards, THOMAS ADDISON, landscape-painter, was born in London, December 3, 1820; arrived in the U. S. in 1831; resided ten years in Georgia; then studied art in New York city; director of the Cooper School of Design (1858); became professor of Art in the New York University (1867). Besides several paintings of acknowledged merit, *R.*'s work includes many superior illustrations for books and magazines.

Richards, WILLIAM TROST, artist, was born in Philadelphia, Pa., November 14, 1833; studied with Paul Weber, and extensively in Europe. He had a studio in London (1878-80), and then resided for many years in Philadelphia. Among his paintings in oil are *Midsummer* (1862); *Woods in June* (1864); *Land's End* (1880); *Old Ocean's Gray and Melancholy Waste* (1885); and *The Wissahickon*, which was exhibited at the Centennial in 1876. His water-colors are equally well known. His *On the Coast of New Jersey* is in the Corcoran Art Gallery at Washington. In his youth he was a pronounced pre-Raphaelite; and all his paintings show a careful regard for detail. His later works are chiefly marine pictures. Died Nov. 8, 1905.

Rich'ardson, HENRY HORSON, architect, was born in Priestley's Point, Louisiana, September 29, 1838; graduated at Harvard (1859); and studied architecture in Paris until 1865. He planned the Brattle Street Church, and also Trinity Church, Boston, Mass.; Sever and Austin Halls at Harvard; was employed on the New York State Capitol at Albany. Died April 28, 1886.

Richardson, in *Nebraska*, extreme S. E. co.; area, 545 sq. m.; bounded E. by Missouri river, and is also drained by the Big Nemaha river and its North Fork. Surface, undulating; prairie and woodland; soil, fertile. Cap. Falls City. Pop. (1897) 20,200.

Rich'field, in *Utah*, a city, capital of Sevier co., about 165 m. S. of Salt Lake City. Pop. (1895) 1,817.

Rich'land, in *Louisiana*, a N. E. parish; area, 575 sq. m.; intersected by Boeuf Bayou, and is also drained by Big creek. Surface, low and level; soil, very fertile. Cap. Rayville. Pop. (1897) 12,100.

Richland, in *North Dakota*, extreme S. E. co.; area, 1,440 sq. m.; bounded E. by the Red River of the North, and intersected by the Wild Rice river. Surface, level; soil, very fertile and well watered. Cap. Wahpeton. Pop. (1897) 13,400.

Richmond, LEIGH, clergyman and religious writer, was born at Liverpool, England, in 1772; he wrote several popular tracts: *The Dairyman's Daughter*; *Annals of the Poor*; *The Young Cottager*, &c.; edited *Fathers of the English Church* (1807-12). Died May 8, 1827.

Richter (*rik'ter*), ERGEN, politician, was born at Düsseldorf, Prussia, July 30, 1838; entered the Reichstag in 1867, and the Prussian Landtag in 1869; has been leader of the Progressive party, and of the German Liberal party, and latterly of the radical People's party.

Richter, HANS, musical conductor, was born in Raab, Hungary, April 4, 1843. In 1859 he entered the Conservatorium in Vienna, and studied the horn under Kleinschke, and theory under Lechter; played the horn in the orchestra of the Kärnthnerthor; in 1868 was made conductor of the Hof- and National Theater, Munich; in 1871 chief conductor of the National Theater at Pesth; in 1875 at the Court Opera Theater in Vienna; in 1876 conducted the Bayreuth Festival; in 1879, 1880, and 1881, conducted concerts in London, and attracted great attention by using no scores. His prominence as an orchestra leader is doubtless due to his practical knowledge of the technique of orchestral instruments.

Rico, in *Colorado*, a post-town, cap. of Dolores co., about 35 m. N. W. of Durango; has abundant deposits of gold, silver, iron ore, coal, and other minerals. Pop. (1897) 1,280.

Ridge'dale, in *Tennessee*, a post-village of Hamilton co. Pop. (1897) 1,315.

Ridge'wood, in *New Jersey*, a post-town of Bergen co. Pop. (1895) 1,841.

Ridg'way, in *Illinois*, a post-village of Gallatin co., 11 m. N. W. of Shawneetown. Pop. (1897) 628.

Rid'ley Park, in *Pennsylvania*, a post-borough of Delaware co.; a suburb of Philadelphia, on the P., W. & B. R. R.

Rid'path, JOHN CLARK, educator and writer, was born in Putnam co., Indiana, April 26, 1840; graduated at Asbury (now De Pauw) University, and entered upon the profession of teaching; in 1869 became professor of English Literature in Asbury University, and in 1879 was elected vice-president of the institution. Through his influence Mr. De Pauw was led to endow the University with \$1,500,000 to \$2,000,000, whereupon the school was rechartered under the name of the De Pauw University. This accomplished, Professor Ridpath resigned his position, and gave his time to literature. His earlier published works are mainly historical and biographical. Among his later books are: *A Cyclopaedia of Universal History* (3 vols., 1880-84); and *Great Races of Mankind* (1894). Died July 31, 1900.

Riel, LOUIS, a Canadian insurgent, was born at Boniface, Manitoba, Oct. 23, 1844; son of the leader of the Metis (half-breed) Indians, who resisted the Canadian authority in the Northwestern Territory. He became secretary of their national organization, and afterward president of their provisional government at Fort Garry; fled before the approach of the English force under General Wolseley; returned, and in 1873 was elected to the Dominion Parliament, but not permitted to take his seat. Twice after this he attempted to raise a rebellion; the second attempt, in March, 1885, was suppressed by force of arms; R. was convicted of treason, sentenced to death, and executed Nov. 16, 1885. Among the French Canadians it was commonly believed that he was insane.

Rif, Rif, or Er Rif. (*Geog.*) That portion of the coast of Morocco which extends from Tangiers on the west to near the western frontier of Algiers, having a length of about 210 miles, with a breadth of 58. The name, in the Berber language, which is that of the inhabitants, signifies a mountainous and rugged coast. The inhabitants of Rif are almost wholly Berbers, who are employed in feeding and breeding cattle, fishing, and occasional piracy. In 1893 their depredations caused complications and a short war between Morocco and Spain.

Rifle-bird, or **Rifleman-bird**, *n.* (*Ornith.*) One of the long-billed or epimachine birds-of-paradise (*Ptilorhis paradisiensis*) of S. E. Australia. It has a long curved bill, and is equal to a large pigeon. The male is regarded as more splendid in plumage than any other Australian bird. The upper parts are velvety-black, tinged with purple, while the under parts are diversified with olive-green. The crown of the head and the throat are covered with innumerable little specks of emerald-green, of most brilliant luster. The tail is black, the two central feathers rich metallic green. The suggestion in this plumage of the former uniform of the British Rifle Brigade accounts for the name.

Fig. 3052.—RIFLE-BIRD.

"Little is known," says Newton, in his *Dictionary of Birds*, "of the habits of any of them [i. e., species of this Australasian genus], but the rifleman-bird proper is said to get its food by thrusting its somewhat long bill under the loose bark on the boles or boughs of trees, along the latter of which it runs swiftly, or by searching for it on the ground beneath. During the pairing season the males mount to the higher branches, and there display and trim their brilliant plumage in the morning sun, or fly from tree to tree, uttering a note which is syllabled 'yass' greatly prolonged, but at the same time making, apparently with their wings, an extraordinary noise like that caused by the shaking of a piece of stiff silk stuff."

Riis, JACOB A., journalist and writer on sociology, was born at Ribe, Denmark, May 3, 1849; removed to America in 1870; was a reporter on the *New York Tribune*, and later police reporter in New York for the *Associated Press*, in which capacity he became acquainted with tenement life in the most squalid parts of the city. As a result of these observations he published *How the Other Half Lives* (1890), which attracted immediate attention; in 1892 a second book appeared, *Children of the Poor*; and in 1893 a collection of three stories, one of which, *Nisby's Christmas*, was made the title of the volume.

Riley, CHARLES VALENTINE, entomologist, was born in London, England, Sept. 18, 1843; educated at Dieppe,

France, and Bonn, Germany; in 1860, removed to the U. S.; became a farmer and agricultural editor in Illinois; was a soldier of the Union army (1864-65); afterward devoted special attention to entomology in relation to agriculture; was State entomologist in Missouri (1868); in 1878, was appointed chief of the U. S. Entomological Commission to investigate the Rocky Mountain locust; in 1878, appointed U. S. entomologist under the Department of Agriculture; in 1881, organized the entomological division of that department, and thereafter continued in charge of that division, also holding the office of curator of insects in the U. S. National Museum, to which he presented his collection of over 150,000 mounted specimens. He lectured on entomology at Cornell University, Kansas State Agricultural College, Washington University, and Missouri State University, receiving from the last-mentioned institution the honorary degree of Ph.D. He made valuable researches in the species of insects which are most destructive to crops, as the locust, army-worm, chinch-bug, canker-worm, cotton-worm, &c. Died Sept. 15, 1895, as the result of a fall from his bicycle.

Riley, JAMES WHITCOMB, poet, was born in Greenfield, Ind., in 1853. About the year 1875 he made his first appearance as a contributor of verse to current newspapers and magazines; afterward he devoted all his time to writing and giving readings of his poems, the most popular of which are in the Hoosier dialect, and deal with homely subjects that appeal to popular sympathy.

Rinderpest, *n.* (*Vet.*) A malignant contagious fever attacking cattle and other ruminants; it is an Asiatic disease, but it occurs very often and with great malignancy in Russia, where it has become established; at various times it has been imported into Europe, where it has broken out as a widespread plague, and it is probably the same disease as that which has been known since the 4th century, prevailing in 809-10, during the wars of Charlemagne, and in 1348-49, just after the human plague called the black death. In 1480 a cattle plague, probably rinderpest, occurred again, and other outbreaks identified as rinderpest occurred in 1715 and 1745, the latter not being suppressed until 1757. In 1865 it occurred again, and, in England, where it was introduced by cattle imported from Russia, it spread so rapidly that in less than a year more than 150,000 cattle had been affected. The disease continued to spread until the government made it compulsory to kill and bury all cattle which had contracted or been exposed to it. In 1870 it still prevailed on the continent of Europe, 130,000 cattle dying from it in France alone. Although every effort has been made to find a cure for it, no treatment has yet proved to have any effect. The infection may be communicated either directly or indirectly, the disease beginning from three to six days after exposure, and running its course in from four to seven days. It begins with fever; soon the mucous membranes become congested and covered with small ulcers, the muscles stiffen and twitch, and the animal shows every symptom of pain and decreasing vitality. The few animals which recover are not subject to a second attack. As yet the disease has not occurred on the American continent, nor in Australia or New Zealand; but in 1896 a serious epidemic broke out in Africa, supposed to have been introduced into that country by the Italian army during the war in Abyssinia, it being in part supplied with diseased cattle, from which the disease was communicated to the African herds. It spread with great rapidity through the continent, reaching South Africa by the end of the year, and destroying thousands of the domesticated herds, and also extending to wild animals, great numbers of which died, particularly of antelopes. The stringent measures adopted by the British to stamp out the disease by slaughter of the infected herds caused a rebellious dissatisfaction among the South African natives.

Rinehart, WILLIAM HENRY, sculptor, was born in Carroll co., Md., Sept. 13, 1825; in 1846 went to Baltimore, and while pursuing his trade as a stone-cutter studied also in the night art schools of the Maryland Institute; went to Italy in 1855, and there executed the two bas-reliefs, *Night* and *Morning*; returned to Baltimore and opened a studio, but in 1858 settled in Rome, and continued in the practice of his art. Died Oct. 28, 1874.

Rinehart, in *South Dakota*, a N.W. central co.; area, 835 sq. m.; intersected by the Moreau or Owl river. Grazing and mining are the leading industries. Unorganized. Pop. (1895) 111.

Ringbone, *n.* A bony enlargement either above or below the pastern joint of a horse, sometimes resulting in a complete stiffening of the joint. "False ringbone" is a bony growth near the middle of the long pastern bone, where it does little or no harm, but true ringbone, either high or low, affects the articular ends of the bones, either in the pastern or the coffin joints, causing serious and sometimes incurable lameness. Ringbones are hereditary, but are also caused by overwork, by an injury to one leg which throws too much weight upon another, and by allowing young colts to run too much with their mothers upon hard roads. Ringbones should be treated by complete rest, bathing and poulticing, and finally blistering. Where these remedies are useless, a veterinary surgeon may perform what is called the "nerve operation."

Rio Blanco, in *Colorado*, a N.W. co.; area, 3,600 sq. m.; intersected by White river; a fine stock and agricultural country. Cattle raising is a leading industry. Cap. Meeker. Pop. (1897) 1,600.

Rio Grande, in *Colorado*, a S. co.; area, 1,260 sq. m.; drained by the Rio Grande del Norte and its tributaries. Surface, mountainous; soil, fertile in the valleys. Gold and silver mining. Cap. Del Norte. Pop. (1897) 3,650.

Rip'on (GEORGE FREDERICK SAMUEL ROBINSON), MARQUIS OF, statesman, was born in London, England, Oct. 24, 1827; became Earl de Grey and Ripon by succession in 1859; the same year became under-secretary of war; and in 1861, under-secretary for India; was secretary for war, in 1863; secretary of state for India, in 1866; in 1871, was chairman of the High Joint Commission which negotiated the treaty of Washington; for which service he was rewarded with the title of marquis; was Viceroy of India (1880-84); first lord of the admiralty (1885-86); colonial secretary (1892-95).

Rising City, in *Nebraska*, a post-village of Butler co., 10 m. W. of David City. Pop. (1897) 775.

Riverside, in *California*, a city, cap. of Riverside co., 12 m. S. of San Bernardino. Pop. (1897) 5,500.

Riverside, in *Iowa*, a post-town of Washington co., 32 m. W. of Muscatine. Pop. (1895) 685.

Riverside, in *Ohio*, a post-village of Hamilton co., a suburb of Cincinnati.

Riverside, in *Pennsylvania*, a post-borough of Northumberland co. Pop. (1897) 500.

Riverton, in *Illinois*, a post-village of Sangamon co. Pop. (1897) 1,264.

Riverton, in *Iowa*, a post-village of Fremont co., 9 m. S.W. of Sidney. Pop. (1895) 656.

Rives, AMÉLIE, novelist, was born in Richmond, Va., Aug. 23, 1863; her first book was a series of stories entitled, *A Brother to Dragons*; she came prominently into notice through her second venture, *The Quick or the Dead*, a unique specimen of sensational fiction. Her later works include *Virginia of Virginia* (1890); *According to St. John* (1891); and *Athelwold* (1893). In 1888, she married John A. Chanler, but they were divorced for incompatibility; in 1896, she married Pierre Troubetskoi, the son of a Russian prince.

Riviera. (*Geog.*) This term ("seashore") is applied to the narrow strip of coast-land bordering the Mediterranean, and including the whole coast of the Alpes Maritimes, the southeastern department of France, and the Italian coast as far as Genoa, though, strictly speaking, the Riviera extends only from Nice to Spezia. Sheltered on the north by high mountains, the district has an exceptional climate, no other region north of Palermo and Valencia being so mild in winter. The part west of Genoa is mildest and most frequented. There the scenery is striking and beautiful, and there are numerous health and fashion resorts—Nice, Monaco, Mentone, San Remo, and others. There are places on the coast of the department of Var, next west of Alpes Maritimes, as, for instance, Frejus and Hyères, which have an equally fine climate, though none of the places in the Riviera are entirely exempt from occasional cold winds. The famous *Corniche* (Ital. *cornice*, road), widened by Napoleon I., leads along the coast from Nice to Genoa, and commands magnificent views.

Rix'ford, in *Pennsylvania*, a post-village of McKean co. Pop. (1897) 615.

Roads and Road-making. Within a dozen years there has been a wide increase of interest in the United States in the matter of good roads. Being a comparatively new country, the roads have seldom been as well built as in the longer-settled countries of the Eastern Hemisphere. The advent of the bicycle has called the attention of so many persons to this deficiency that strong movements have been inaugurated in various sections to influence favorable legislation for better roads. More than twenty States have within a few years taken action in the matter, prominent among them being Massachusetts, which has established a permanent highway commission and made an annual appropriation of \$300,000 for building new roads and reconstructing old ones. The roads so improved are known as State highways, and the officials of towns are empowered to obtain releases of thoroughfares which it is desired to turn over to the State for care. New York has also made large appropriations for State roads. As the result of numerous petitions, the Agricultural Bureau appointed a special agent in 1895 to inquire into and report on the condition of the country roads in the United States. The report showed that the average distance which farmers in the Eastern States were obliged to haul their products in wagons to market was 5.9 miles, at a cost of 32 cents per ton per mile; Northern States, 6.9 miles, at 27 cents per ton-mile; Middle States, 8.8 miles, at 31 cents; Cotton States, 12.6 miles, at 25 cents; Prairie States, 8.8 miles, at 22 cents; Pacific and Mountain States, 23.3 miles, at 22 cents; average haul for the whole United States, 12.1 miles, at 25 cents a ton per mile; average load, 2,000 pounds; average cost for whole length of haul, \$3 per ton. The League of American Wheelmen has been prominent in agitating for good roads, and several periodicals are published wholly devoted to advocating the movement. J. S. Coxey, a labor agitator, has also attracted national attention by his endeavors to have the government at Washington construct national highways for the double purpose of keeping busy the unemployed and the improvement of the roads, the expense to be met by the issue of bonds. The construction of roads may be divided into the use of broken stone by the Telford or Macadam systems and the use of pavements, or cobblestones, Belgian blocks, and asphalt, or some combination of these. Telford and Macadam were the pioneers of good roads in Europe, and the first to construct them on really scientific principles. Telford used a foundation of comparatively large stones,

on which he built up a top structure of smaller stones, 9 inches thick in the center and 3 inches thick at the edge. Macadam's plan was to use stone broken angularly and passed through screens having circular holes of $2\frac{1}{2}$ inch diameter. These stones he laid directly on the surface soil, the thickness varying with conditions and the amount of traffic. About 10 inches of properly compacted broken stone is commonly considered enough to support the wear of a moderately heavy traffic. Cobblestones make a road that will stand a great deal of surface wear, but they are being generally discarded in cities in favor of Belgian blocks, which are simply stones broken or chipped into rectangular form, giving a more regular surface than the cobbles. Asphalt makes the smoothest and most slightly pavement, and is excellent for bicycle travel. Its only drawback is that it becomes dangerously slippery for horses in icy weather. (See ASPHALT.)

Much difference of opinion exists among engineers as to how much curve it is best to give to the surface of a road. Some curve is necessary in order to carry the water to the gutters, and if the curve is very slight, puddles are likely to result; but if the curve is steep, the teams naturally keep as much as possible in the center, cutting up that portion of the road quickly, instead of distributing the wear over the whole surface. A slight curve of 1 to 36 is perhaps the preferred average. As to grade, 1 in 30 is not objectionable on a macadamized road, being just enough inclination to carry a wagon down grade without pushing the horse, and not steep enough to more than double the animal's effort in ascending. In country districts, where the travel is not great, a macadam road of ten feet in width answers a very good purpose, and is easily kept in order. Roads in cities and suburbs, which are subjected to very heavy traffic, are best built of considerable thickness, and if possible, it is best to go below the frost line. Frost will injure any roadway, no matter how it is made, and if the material does not go down to the frost line, upheavals and settling must be expected. To build a durable road for heavy traffic the basis of the road is best made with large stones, and it does not matter whether the stones in the lower strata are broken or not. The big stones are laid first, and the smaller ones on top, being rammed and pounded, or rolled, until within eight or ten inches of the top level. Then more rolling should be done with heavy road-rollers to secure an even bearing surface all over. Next Belgian blocks are laid, not in the ordinary slipshod fashion, but well-squared blocks, crowded together, set in a good cement, and rammed level on top. Hot gravel and hot tar are used to fill in the interstices, and this is a portion of the work that requires especial care. The gravel must be heated on the spot, and it must be poured in, and the tar after it, without loss of time, as a partial cooling of the gravel or tar prevents the tar from working all the way to the base of the blocks. If the work is properly done, the result is a water-tight and stone-strong road-bed, eight or ten inches thick, lying on a stone foundation which no water should enter, and which, if any moisture does get in, will drain it away between the broken stone to the never-frozen soil below, where it can run off without damage to the roadway. Nothing short of an earthquake will injure such a road, which is cheap in that it will wear for hundreds of years and never requires mending. It is open to the single objection that it is hard to tear up, and where used in cities a large conduit is best run underneath, through which all water-pipes and gas-mains may be laid. If the blocks of the roadway are well squared, and the tar and fine gravel are allowed to fill up well between the stones, the surface is fairly smooth—just rough enough to allow a good grip for the horses' feet, and far smoother than the ordinary Belgian blocks, which become rounding on top, leaving big gaps between, the contractors preferring to set them well apart so that it may be easier to remove them when tearing up is called for. If the road is designed to be altogether a bicycle road, it may be topped off with asphalt, which can be renewed or patched up as it wears; but if for heavy traffic, as in a city, where great truck wagons are numerous, it is best without the asphalt, as it is rough-faced rather than jolty.

Wood pavements have been used for roads more as a makeshift than with serious thought of permanence. Wooden blocks sawed in lengths of 7 or 8 inches, and laid end up, will stand a great deal of wear, but exposure to alternate moisture and drying heat rots them in the course of a decade or two. Compressed salt-marsh grass is a comparatively new paving substance seeking a market. The grass is subjected to enormous hydraulic pressure, and in this condition is bound with iron bands in blocks about 15 x 30 inches, and 8 inches thick. It is chemically treated to resist rotting, resembles wood in appearance, is easy to lay and easy to take up, and several years of wear in a busy thoroughfare have failed to reduce its thickness materially. The makers claim that its resiliency protects it from wear. It has not been on the market long enough to make any positive statements as to its durability.

Roanoke, in *Indiana*, a post-town of Wabash co., 27 m. E. N. E. of Logansport. Pop. (1897) 660.

Roanoke, in *Alabama*, a post-village of Randolph co., about 85 m. N. E. of Montgomery. Pop. (1897) 715.

Roanoke, in *Virginia*, a city, 53 m. W. by S. of Lynchburg; has extensive machinery, iron and steel works, locomotive and car shops, tobacco factory, &c. Pop. (1897) 16,750.

Roaring Spring, in *Pennsylvania*, a post-borough of Blair co., on the Pennsylvania R.R., about 9 m. S. of Hollidaysburg. Pop. (1897) 1,080.

Ro'bard, in *Kentucky*, a post-village of Henderson co. Pop. (1897) 725.

Ro'beline, in *Louisiana*, a post-town of Natchitoches parish. Pop. (1897) 770.

Robert College. (Educ.) James H. and William B. Dwight, sons of the Rev. Harrison G. O. Dwight, a veteran missionary in Turkey, became convinced that it would be a great aid to Christian missions in the Sultan's dominion to have at Constantinople a college patterned after the fashion of a New England college. Christopher R. Robert, of New York, furnished the necessary funds, stipulating only that the institution should be under the care of the Rev. Cyrus Hamlin, D.D., of Constantinople. Mr. Robert supported the college until his death in 1878, when he bequeathed to it one-fifth of his estate, his total benefactions to the institution amounting to about \$450,000. The college was opened in 1863 in a rented building. In 1864 it was incorporated in the State of New York as one of the colleges of the University of the State. By permission of the Sultan two buildings have been erected on a line site on the Bosphorus. Dr. Hamlin resigned in 1877, after fourteen years of service, and was succeeded by the Rev. Geo. Washburn, D.D. The college offers a regular academical course of five years, leading to the degree of the bachelor, and a two years' preparatory course. Special attention is paid to languages, no fewer than thirteen being taught, though the chief language of instruction is English. From 1863 to 1893, 1,715 students attended the college, of whom 274 graduated.

Roberts, GEORGE BRINTON, was born in Lower Merion township, Montgomery co., Pa., Jan. 15, 1833, where his Welsh ancestors had resided since 1682. His early education was acquired in the public schools; he then took a course in engineering at Rensselaer Polytechnic Institute, and in 1851 entered the employ of the Penna. Railroad Company as rodman. In this service he continued for a year, and then became assistant engineer of the Phila. & Erie R.R. During the succeeding ten years R. was employed as engineer on several new lines of road, but in 1862 returned to the Penna. R.R. Co. as chief assistant to the president, J. Edgar Thomson. Step by step he was promoted, becoming 4th vice-president in 1869, 1st vice-president in 1874, and president in 1880. Died Jan. 30, 1897.

Roberts, in *South Dakota*, an extreme N. E. co., adjoining North Dakota and Minnesota; area, 1,100 sq. m.; bounded E. by Lake Traverse and Big Stone Lake. Cap. Wilmot. Pop. (1895) 7,509.

Roberts, in *Texas*, a N. W. co.; area, 900 sq. m.; drained by Canadian river. Surface, nearly all level prairie; soil, dark, sandy, very fertile. Cap. Parnell. Pop. (1897) 440.

Roberts of Candahar (FREDERICK SLEIGH), LORD, soldier, son of Sir Abraham Roberts, was born in England in 1832; was appointed lieutenant in the Bengal artillery in 1851; captain in 1860. Since then he has had a brilliant military career in India, especially in the Afghan war of 1878; rose to the command of the Indian army in 1885. In 1892 he was raised to the peerage, and later was promoted to the rank of field-marshal.

Rob'ertsdale, in *Pennsylvania*, a post-village of Huntingdon co. Pop. (1897) 690.

Robertson, AGNES, actress, was born in Edinburgh, Scotland, Dec. 25, 1833; began her career at the age of 16, at Hull; appeared in London as *Nerissa* in 1851. In 1853 married Dion Bonicault, and came to the U. S.

Robertson, FREDERICK WILLIAM, clergyman and pulpit orator, was born in London, England, Feb. 3, 1816; educated at Edinburgh University; ordained in 1840; settled at Cheltenham. In August, 1847, he began his famous ministry at Trinity Chapel, Brighton. His sermons and addresses were published at intervals, and issued complete in 1870. Died Aug. 15, 1853.

Robertson, in *Kentucky*, a N. E. co.; area, 210 sq. m.; bounded S. and W. by Licking river, and also drained by the North Fork of that river. Surface, undulating and hilly; soil, fertile. Cap. Mount Olivet. Pop. (1897) 4,990.

Robeson, GEORGE MAXWELL, lawyer and politician, was born in Oxford, Warren county, New Jersey, in 1827; he was secretary of the navy under President Grant (1869-77); Republican member of Congress from New Jersey (1879-83). Died Sept. 27, 1897.

Robinson, SIR HERCULES GEORGE, diplomatist, was born in England in 1824; educated at the Royal Military School at Sandhurst; held a commission in the army until 1846; thereafter was in the diplomatic service, chiefly as colonial governor at various successive points, finally being sent in that capacity to Cape Colony in 1880. He retired in 1889, and was made a baronet in 1890. In 1895 he was reappointed governor of the Cape and high commissioner for South Africa. In 1896 he was raised to the peerage.

Rob'son, STUART, actor, was born in Annapolis, Md., March 4, 1836; became an actor in 1852; was a member of Laura Keane's company in New York, in 1862. He was a partner of William H. Crane from 1877 to 1889; after that period played leading parts in several comedies, notably *The Henrietta*. Died April 29, 1903.

Rochefort (*rosh-fôr'*), VICTOR HENRI, COMTE DE, journalist and politician, was born in Paris, France, Jan. 30, 1830; began his journalistic career at the age of 22, as dramatic and art critic on the *Figaro*. He soon turned his caustic criticism on the Imperial administration, and his radical opinions led to his dismissal from the *Figaro*. He then founded *La Lanterne*, which was soon suppressed, and Rochefort was arrested, and condemned to one year's imprisonment and a fine of \$2,000. He escaped to Belgium, and there resumed the

publication of *La Lanterne*, which was surreptitiously circulated in France. In 1869 he was elected to the Corps Législatif; returned to France, and founded *La Marseillaise*, in Paris. He had a stormy career for many years, with three arrests, imprisonment twice, and enforced flight in 1889, when convicted of treason by the Senate. He remained in London until 1895, when the French government permitted his return to Paris. He published several novels, farces, satires, &c.; and in 1896 issued *The Adventures of My Life*, an autobiography.

Rock, in *Minnesota*, an extreme S. W. co., adjoining South Dakota and Iowa; area, 470 sq. m.; intersected by Rock river. Surface, rolling prairie; soil, fertile. Cap. Laverne. Pop. (1895) 8,597.

Rock, in *Nebraska*, a N. co.; area, 856 sq. m.; bounded N. by the Niobrara river. Surface, generally level; soil, mainly black sandy loam; timbered along streams. Cap. Bassett. Pop. (1897) 3,440.

Rock Creek, in *Ohio*, a post-village of Ashtabula co., 7 m. S. W. of Jefferson. Pop. (1897) 530.

Rock Drills. (Mach.) Steam, compressed air, electricity, and hydraulic pressure are all used to operate rock drills, as in tunnelling and blasting operations, and the classifications of these machines may be further divided into those operating by percussion, commonly called tappet-drills, and those operating by the pressure and rotation of a hollow bit, known as a diamond drill. The steam and compressed-air rock drills are practically similar, consisting essentially of a cylinder, having a reciprocating piston, on which a percussion drill is fixed, the whole being supported on a tripod, whose legs are weighted to assist in steadying the machine, and give it weight enough to render the blows of the drill effective. The steam or compressed air is introduced through a tube, from a convenient source, and

Fig. 3053.—COMPRESSED-AIR ROCK DRILL.

admitted to the cylinder by valves, affording a regular reciprocating action like that of a steam-engine. They are necessarily provided with a variable piston-stroke, as the depth of the hole is constantly changing. The Ingersoll Eclipse drill is of this sort, and by feeding down the cylinder the piston will work entirely in the upper part, cutting off the steam as soon as the blow is delivered to save waste, and increasing its stroke automatically as the hole is driven deeper. The Rand Economizer rock drill delivers an uncushioned blow, has a cut-off for saving steam, and devices to accommodate the stroke to irregularities. The Rand Slinger is made with the cut-off on the up-stroke only. The Stevens Climax rock drill uses a reversible tappet-valve, and a rotating device on a rifled spindle in the back end of the cylinder. McCulloch's Rio Tinto rock drill has two pistons, arranged to act as valves for themselves, or to operate slide-valves. Githens' rock drill has only two moving parts, the piston and valve. Marvin's electric rock drill has a superficial resemblance to the steam drills, the piston operating from a closed cylinder hung from a tripod, and delivering its blow with a percussion drill. The piston is driven, however, by electro-magnetic coils, placed at each end of the cylinder, so that the piston is drawn up and down between them, as they are alternately magnetized by the armature. The Van Depoele electric rock drill operates on a similar principle. The electric diamond drill is an ordinary diamond drill, with a hollow stem, operating by rotation and pressure, the power being furnished by an electric motor mounted on the same framework. The Brandt hydraulic rock drill is of the diamond type, a hydraulic ram forcing the piston down to its work. It is suited to very hard rock.

Rock Falls, in *Illinois*, a city of Whiteside co., on Rock river, opposite Sterling; has great water power,

and numerous manufacturing establishments. Pop. (1897) 2,250.

Rock Rapids, in Iowa, a post-town, cap. of Lyon co., 32 m. E. of Sioux Falls. Pop. (1895) 1,740.

Rock Valley, in Iowa, a post-town of Sioux co., 25 m. N.W. of Orange City. Pop. (1895) 959.

Rockdale, in Georgia, a N. central co.; area, 126 sq. m.; drained by Ocmulgee river. Surface, hilly; soil, good. Cap. Conyers. Pop. (1897) 7,220.

Rockdale, in Texas, a city of Milam co., 61 m. N.E. of Austin. Pop. (1897) 1,775.

Rockefeller, JOHN DAVIDSON, capitalist, was born in Richford, Tioga co., N. Y., July 8, 1839; went into business at the age of 19 with marked success. In 1860, when the discoveries of petroleum caused exciting speculation, he owned a refinery in Cleveland, Ohio; his business developed until he became president of the Standard Oil Company, a monopolistic corporation founded in 1870, through which he acquired an immense fortune. He is noted for large donations to religious and charitable purposes, notably his endowment of the Chicago University (*q. v.*).

Rockford, in Washington, a post-town of Spokane co., 25 m. S.E. of Spokane Falls. Pop. (1897) 780.

Rockland, in Massachusetts, a post-town of Plymouth co.; has extensive manufactures of boots, shoes, and tacks. Pop. (1895) 5,523.

Rocklin, in California, a post-town of Placer co., 22 m. N.E. of Sacramento. Pop. (1897) 1,210.

Rockville, in Missouri, a post-village of Bates co., 25 m. S.E. of Butler. Pop. (1897) 610.

Rockwall, in Texas, a N.E. co.; area, 150 sq. m.; drained by small affluents of the Trinity and Sabine rivers. Surface, undulating prairie. Cap. Rockwall. Pop. (1897) 6,640.

—A post-village, cap. of above co., 25 m. N.E. of Dallas. Pop. (1897) 1,010.

Rockwell, in Iowa, a post-town of Cerro Gordo co., 12 m. S. of Mason City. Pop. (1895) 702.

Rockwell City, in Iowa, a post-village, cap. of Calhoun co., 98 m. N.W. of Des Moines. Pop. (1895) 742.

Rockwood, in Pennsylvania, a post-borough of Somerset co. Pop. (1897) 660.

Rockwood, in Tennessee, a post-town of Roane co., 45 m. W. S. W. of Knoxville. Pop. (1897) 2,550.

Rocky Mountain Goat-antelope. (*Zoöl.*) This interesting animal, the white goat, or mazama, (*Haploceros montanus*), is one of the distinctive game-quadrupeds of North America. It is really nearer an antelope than a goat in structure, and is closely related to the goral and screw of the Himalayas (genus *Nemorhaedus*). It dwells near the snow-line of the mountains along the coast of British Columbia and Alaska, only rarely wandering southward along the crests of a few lofty ranges into the U. S. It is only within a very few years that it has become known either to naturalists or hunters, and 20 years ago all Europe contained only two or three mutilated skins, while American museums had very few presentable specimens. Usually of the bulk of a large sheep, some of the patriarchs grow to a great size and formidable weight, and their curiously grotesque proportions and great hump give them the appearance of a mountain buffalo with a goat's head, and with a silky pure-white coat. The females are smaller, but their horns are very much the same in size as those of the ram—short, jet-black, smooth, and sharply pointed. The chase of this animal partakes of all the enthralling experiences that make chamois-stalking the king of sports. Two ways of hunting are practiced—by stalking and by following with dogs. The former is more sportsmanlike, but the latter sufficiently arduous work to please the most ardent climbers. In order to even begin the chase, the enormous precipices that skirt all the peaks must be scaled, for the game should be approached from "above," goats having a singular fancy for the very top of sharp ridges, where the breathless sportsman can see them silhouetted against the sky as they pick their steps with grave steadiness along the knife-back-like ridge, either unconscious of the yet distant foe, or calmly watching him. The white hide is utilized by the Indians of that region in many ways; the hair is also woven by them, and the horns are carved into spoons and various utensils. See illustration under MOUNTAIN GOAT, in SECTION I.

Rocky Ridge, in Ohio, a post-village of Ottawa co. Pop. (1897) 522.

Roe, EDWARD PAXSON, author, was born in New Windsor, N. Y., March 7, 1833; wrote a number of novels in which love and religion are melodramatically mingled, and which have had large sales. Among them are: *Barriers Burned Away* (1872); *The Opening of a Chestnut Burr* (1874); *Near to Nature's Heart* (1876); *Miss Lou* (1888). Died July 19, 1888.

Roebling, WASHINGTON AUGUSTUS, engineer, was b. in Saxenburg, Pa., May 26, 1837; son of John A. Roebling. He served in the Federal army from 1861 to 1865, on the staff of General Pope, acting as military engineer, bridge-builder, &c., rising to the rank of major. In 1865 he resigned and joined his father, who was then building the railroad suspension bridge at Cincinnati. On the death of his father, in 1869, he finished the plans of the Brooklyn Bridge and superintended its construction. In 1883 the work was completed. After that date Major R. devoted his time to managing the wire factory at Trenton, N. J.

Roentgen, (*rent'gen*) WILLIAM C., physicist, born in Holland, in 1845; studied at the University of Zurich until his 25th year, graduating M. D.; accompanied his teacher, Prof. Kundt, to Würzburg, and later (1873) to Strasburg, as assistant professor; was prominent for 20 years as a professor of Mathematics and Physics, and a

writer on scientific topics. In Dec., 1895, he announced his discovery, made on Nov. 8, 1895, of "a new kind of rays." (See ROENTGEN RAYS.) This new method of "photographing the unseen" appealed to the popular fancy as nothing else has for years. The German emperor allowed a shadowgraph of his arm to be taken, and the imperial approval was expressed by bestowing the Order of the Royal Crown on R.; and Prince Ludwig, of Bavaria, created him a baron.

Roentgen Rays. (*Physics*.) On Dec. 4, 1895, Prof. Roentgen astonished the world by a description of his discovery of what he termed the "X-rays." His announcement came in the form of a paper read before the Physico-Medical Society of Würzburg. The discovery was heralded all over the globe by telegraph in the shape of an announcement that a new photography had been developed, which by means of unknown rays from Crookes tubes penetrated substances heretofore considered opaque to light, so that objects like the bones of the living hand or the coins enclosed in a purse were apparent in the photographs. A great number of investigators at once set themselves to studying the matter, and Crookes tubes came into great demand. It was shortly demonstrated that, although the rays were invisible, yet they could be used with the aid of a fluorescent screen to view with the naked eye the bones of the body of a living person standing in front of the Crookes tube while the observer held the screen between him and the person under inspection. The fluorescent screen has the property of changing the Roentgen rays into light. A number of fluorescent materials have been used in the experiments with the rays. Roentgen used barium platino-cyanide, and Edison calcium tungstate. English experimenters have been addicted to potassium platino-cyanide, and others have succeeded with tungstate of zinc. The fluorescent screen has been developed by Edison into the fluoroscope (*q. v.*), and by others into the skiascope (*q. v.*). The photographic side of the discovery has attracted the most attention, however, and a vast number of pictures have

Fig. 3054.—WILLIAM CONRAD ROENTGEN.

been taken, being termed radiographs, shadowgraphs, skiagraphs, skotographs, cathodographs, and X-ray pictures. The methods of taking the pictures have improved rapidly, so that exposures of a few seconds now give better results than were at first obtained from exposures of many minutes' duration. The gain in time is the result partly of improvements in the tubes, but more from using photographic plates prepared with a thick film impregnated with some fluorescent substance, or by placing the photographic film in contact with a fluorescent screen at the time of exposure.

There appears to be a tendency to prefer the name of Roentgen in naming the rays, as a proper tribute to the discoverer, rather than to continue the name of X-rays, which was applied to them provisionally by Roentgen, in the algebraic sense of unknown, as he evidently thought that it would not be long before physicists were able to explain the phenomena. Nearly two years have passed since the discovery, and the rays remain as much a mystery as before. Several theories have been advanced as to their origin, but none have been wholly satisfactory. The most popular theory, perhaps, is that they are ultra-violet ether-waves of light—that is, light-waves which, if they were visible, would appear beyond the violet end of the spectrum. In support of this theory it is shown that they resemble light in travelling in a straight line, in affecting photographic films, in exciting fluorescence, in being non-deflectable by a magnet, in discharging electrified bodies, and in temporarily increasing the conductivity of some substances. Attempts to measure the wave-length have not been wholly satisfactory, so that no proof is as yet obtainable from that quarter. As against the light theory, it has been demonstrated that the rays cannot be refracted or polarized, that they fail to affect the retina of the eye, and that they pass through most substances impermeable to light. Another theory is that the X-rays are vortices of the intermolecular ether, forced from the cathode when the gas pressure is sufficiently low. The

impossibility of refracting the rays is cited in proof of this theory, it being one of the properties of vortices. Other theories, which have received less support, are that the rays are streams of material matter, or that they are variations of stress in the dielectric surroundings of the vacuum tubes.

In order that the reader may clearly understand how the Roentgen rays are produced, it should be remembered that the Crookes tube is a glass bulb from which the air has been exhausted, and into which is introduced the negative terminal of an electric current, this terminal, through which the electricity passes out, being called the cathode. It is commonly made in the form of a concave button. There are cathode rays, as well as Roentgen rays, and they must not be confounded. The cathode rays are produced within the tube (although Lenard has succeeded in also producing them exteriorly), and were known years before the discovery of the Roentgen rays, which become manifest outside of the Crookes tube, when the conditions are favorable. The cathode rays are considered to be streams of electrified molecules, which impinge against the glass walls of the tube, or upon a platinum plate, producing a soft light (which is intensified in the fluorescent lamp by coating the interior of the tube with a fluorescent substance). The cathode rays can be shut off from a portion of the tube by introducing an interior screen, and they also can be turned aside by a magnet. The Roentgen rays only become manifest when they strike some opaque substance. It is commonly necessary to produce the cathode rays in order to obtain the Roentgen ray phenomena, and this has led many to confound the two.

Many forms of Crookes tubes have been made for illustrating the Roentgen rays, the focus-tube shown in the illustration being one of the preferred forms. Though these tubes are called focus-tubes, it must not be inferred that the Roentgen rays can be focussed, for such is generally believed impossible; although A. C. Swinton has claimed, in a paper read before the Royal Society, that the Roentgen rays cross, but without rotation; also, that they can be produced by cathode rays only when these strike solid matter which is positively electrified. Another popular type of Crookes tube is made with a side tube communicating with the main bulb, and containing caustic potash, or some similar substance that volatilizes with heat, so that its vapor will reduce the vacuum in the tube as the heat increases, for only a partial vacuum is desired. In all the forms of tube that have been devised there is a critical degree of vacuum, and also of electrical potential, peculiar to that form of tube with which the best results can be obtained. The Roentgen rays emanate from the surface of the tube, or from a platinum plate, where the cathode rays first impinge. Their intensity varies inversely as the square of the distance of their source; hence experiments with them must be made close to the tube. Their penetrating power depends on the time they act, as well as the distance and the nature of the substance acted upon. The degree of transparency of different substances under the Roentgen rays is of interest. The fluids generally are quite transparent, and so is paper; but cork is much more transparent than either. The human flesh is more transparent than the bones, for which reason the bones of the hand are conspicuous in a skiagraph. Leather is more transparent than iron, or the metals generally, as may be seen in a skiagraph of a boot, in which the nails show up darkly and sharply. Roentgen found aluminum the most transparent and platinum the most opaque of the metals examined by him, the difference being about as 200 to 1. Lead is three and zinc six times as permeable as platinum. Glass is not as permeable as might be supposed from its transparency in light, ranking about the same as aluminum. Wood has been permeated to a depth of eight inches or more.

The principal utility of the Roentgen rays thus far has been found in locating foreign substances in the human body, or in examining fractures. More than one-third of the hospitals are supplied with appliances for making examinations with the rays, and the number is constantly increasing. Apparatus have been widely exhibited as a means of entertainment or exhibition, but as popular interest and the newness of the discovery wanes they are being reduced to the laboratories of colleges and physicists. A complete outfit, as now generally used, consists of a set of Crookes tubes, connection with a current, as that of the incandescent lights—say, at 110 volts—a rheostat, rotary interrupter, ammeter, pole-changer, induction-coil, fluoroscope, and a screen. In the focus-tube shown in the illustration the cathode rays are concentrated upon a platinum plate, which becomes incandescent with the heat, and shows in the picture as a white central streak. Here the cathode rays are centered or focussed, and changed, or partly changed, so that they emerge from the tube as Roentgen rays, radiating in all directions from the face of the platinum plate. By using the platinum plate a smaller source is acquired for the Roentgen rays, and sharper pictures can be taken.

Dr. Seneca Egbert and others have taken Roentgen ray pictures without using Crookes tubes, substituting sunlight, and artificial light, through aluminum plates 1 millimeter in thickness, as well as through vulcanite and other opaque substances. Since the discovery of the rays, a considerable number of photographs have been resurrected which were at the time supposed to be the result of some peculiar accident, but which now appear to have been produced by Roentgen rays without the knowledge of the makers. It is therefore prob-

Theodore Roosevelt.

1858-

able that other means exist for developing the rays, some of which may eventually prove more convenient for use than the Crookes tubes. The ordinary method of taking the skiagraphs consists in mounting the Crookes tube on an upright stand, at the base of which is a photographic plate-holder. The object or objects to be pictured are laid on top of the plate, and directly under the tube. The induction-coil is connected with the tube by wires, and other wires are led to the source of the electric current. The other instruments previously named are placed within the circuit. The current being turned on, and the interrupter made to operate rapidly, a discharge takes place through the tube at each interruption. A pale, fluorescent light accompanies the discharge, and the length of time this is kept up constitutes the exposure. Applications of the Roentgen rays have been made on patients suffering from tubercular consumption and similar diseases, with the idea that the rays would reach and destroy the bacilli; but the effects have proved to be almost as deleterious to the patients as to the bacilli, producing injury to the cuticle and the hair, and promoting various other physical disturbances. Such experiments, therefore, have been practically abandoned. For further information bearing on this subject, see FLUORESCENCE, CROOKES TUBE, GEISSLER'S TUBE, RADIOGRAPH, SKIAGRAPH, &c.

Rog'er Mills. in Oklahoma, a W. co. It is bounded S. by the North Fork of Red river, and intersected by Washita river. Surface, rolling prairie; soil, fertile; timbered along streams. Products. Forage plants, corn, and vegetables; stock raising. Cap. Cheyenne. Pop. (1897) 2,000.

Rog'ers. JOHN, sculptor, was born in Salem, Mass., Oct. 30, 1829. In early life he engaged in business pursuits; became interested in clay-modelling, and went to Europe in 1858 to study art, returning to America the following year. His first group, *The Checker Players*, attracted favorable attention; since then he has modelled and cast in composition many statuette groups on subjects relating to the Civil War, and to everyday life, familiarly named "Rogers' Groups." He also executed the equestrian statue of General Reynolds which stands before the City Hall in Philadelphia. Died July 27, 1904.

Rogers. RANDOLPH, sculptor, was born at Waterloo, N. Y., July 6, 1825; studied in Rome (1848-50); for 5 years had a studio in New York, then, in 1855, returned to Italy, and resided many years in Rome; executed many ideal busts: *Ruth, Isaac, Nydia*, &c.; is best known in America by his massive works: the bronze doors of the Capitol at Washington, and portrait statues and memorial monuments in Richmond, Detroit, Providence, &c. Died January 15, 1892.

Rogers. WILLIAM AUGUSTUS, astronomer and physicist, was born at Waterford, Conn., Nov. 13, 1832; graduated at Brown University (1857); professor of Mathematics and Astronomy in Alfred University, at Alfred Center, N. Y. (1858), which position he occupied until appointed assistant in the Harvard Observatory (1870); became assistant professor there (1877); took the chair of Astronomy and Physics at Colby University (1886). Died 1898.

Rogers. in Arkansas, a post-town of Benton co., 80 m. N. of Fort Smith. Pop. (1897) 1,375.

Rogers. in Michigan, a post-village, cap. of Presque Isle co., 45 m. N. W. of Alpena. Pop. (1894) 586.

Rogers Park. in Illinois, a post-village of Cook co., 9 m. N. from, and a suburb of, Chicago.

Rolette. in North Dakota, a N. co.; area, 936 sq. m.; watered by small streams and lakes; an Indian reservation. Grazing and farming are the chief industries. Cap. Rolla. Pop. (1897) 2,800.

Rolfe. WILLIAM JAMES, editor and author, was born in Newburyport, Mass., Dec. 10, 1827; studied at Amherst College (1854-58); was an instructor in Maryland; master in the High School, Cambridge, Mass. (1862); and editor of *Popular Science News* (1869). His editorial labors for thirty years or more embrace the plays, poems, and sonnets of Shakespeare, in 40 handy volumes, with critical notes; and selected works of Milton, Gray, Goldsmith, Scott, Byron, Wordsworth, Macaulay, Tennyson, Browning, and several other English classics.

Roosevelt. (roos'e-velt), THEODORE, 26th President of the United States, was born in New York City, October 27, 1858 the descendant of one of the old Dutch families of that city, in which his father was a wealthy merchant. He was educated at Harvard University, graduating in 1880. He then began the study of law, but quickly became engrossed in politics, and in the fall of 1881 was elected to the Assembly from the 21st district. He was twice re-elected, serving in 1882, 1883, and 1884. He quickly became prominent as a reformer, and in his second year was made the Republican candidate for Speaker. He succeeded in carrying through a reform charter for New York City, and as Chairman of the Committee on Cities introduced and aided in the passage of various other reform bills. In 1886 he was the Republican candidate for Mayor of New York against Abram S. Hewitt, Democrat, and Henry George, Labor candidate. In 1889 he was appointed by President Harrison a member of the U. S. Civil Service Commission. In this position he showed the same energy and activity he had done in the Assembly, resigning May 1, 1895, to accept the position of Police Commissioner of New York. His ability and integrity in this office were especially notable. The administration of police affairs was found by him in a demoralized condition, he went to work on its reform

with his accustomed spirit, and brought it to a degree of efficiency rarely attained in that city. His intervals of leisure were spent by Mr. Roosevelt largely in hunting and in the pursuit of literature, he producing a naval history of the War of 1812 and other works. Several years were spent by him in Dakota, where he engaged in cattle-raising and made himself very popular among cowboys and hunters. Although very short-sighted and obliged always to wear glasses, he earned a reputation as a hunter of large game second to few in America. In April, 1897, he was appointed by President McKinley Assistant Secretary of the Navy, and at once set himself to increase the efficiency of the naval service, perhaps foreseeing the coming conflict with Spain. He especially devoted his attention to exercising the gunners in marksmanship, and to his efforts they owed the marked skill shown by them in the subsequent war. On April 16, 1898, two days before the Cuban War began, he resigned his office and quickly developed the idea of organizing a cavalry regiment of cowboys and other trained horsemen. This regiment, when formed, became popularly known as "Roosevelt's Rough Riders," though, at his request, Colonel Wood, of the regular army, took the command, he serving as lieutenant-colonel. With this regiment, as dismounted troops, he took part in the fight at Las Guasimas and the charge up San Juan Hill, showing in both an impetuous daring that made him the popular hero of the war. As a result, in 1899 he was nominated for Governor of New York and elected by a plurality of 18,079. His record as governor added to his growing popularity, and in 1900, at the Republican National Convention in Philadelphia, his was the most prominent name offered for the Vice-Presidency. He was disinclined to accept this nomination, preferring the more active post of governor, but his objections were overcome and the nomination given him. It was followed in November by his election, with McKinley as President. This nomination was largely due to his opponents in the party, who wished to get rid of his impetuous honesty at Albany and "shelve" him in the chair of President of the Senate. But destiny worked in his favor, the assassination of McKinley landing him in the presidential office on the 14th of September, 1901. As President of the United States the native qualities of Theodore Roosevelt had the highest opportunity for display—his rugged and inflexible integrity of purpose, his earnestness in the cause of reform, and his impetuous spirit, which at times led him to hasty, but rarely to unwise action. The youngest man ever inducted into the office, he quickly made himself one of the most respected and admired. His messages to Congress showed unwonted pith and comprehensiveness and his readiness to take hold of difficult situations, such as that of the great coal strike of 1902, with his plain and non-partisan Americanism, won him friends in all parties, and in the election of 1904 he was chosen President by the great plurality of 2,541,635 and the notable electoral majority of 196. In his second term as President he was especially active in instituting legislation, and instigated and carried through several acts aimed to restrict and control the great monopolies, particularly the famous railroad rate bill. In international politics his efficient services in connection with the peace treaty between Russia and Japan won him the world's admiration, and in 1906 were recognized by the award to him of the Nobel prize of approximately \$40,000 for the greatest work in the interest of peace. This prize he devoted to the creation of a commission for the fostering of industrial peace. In his active work for reform he declined to be bound by party lines and assumed the position of a national rather than a partisan executive. He thus won supporters in all parties and became the most widely popular of all our Presidents. His literary include a valuable historical work, *The Winning of the West*, *American Political Ideas*, works on hunting, on biography, &c., and an essay entitled *The Strenuous Life*, in which his own character seems typified.

Root. ELIHU, cabinet official, was born in Clinton, N. Y., Feb. 15, 1845. He graduated at Hamilton College in 1864, studied law and was admitted to the bar of New York City, where he won a very successful practice. He was counsel for William M. Tweed, in the "Tweed Frauds" prosecution, for Judge Hilton, in the Stewart Will cases, for Mayor Weaver of Philadelphia in the reform revolt of 1905, and was engaged in other important litigation. He served as U. S. Attorney for the southern district of New York 1883-85, and was a member of the Constitutional Convention of 1894. He entered President McKinley's Cabinet as Secretary of War Aug. 1, 1899, reorganizing the department and creating the General Staff system of army government. He served also under President Roosevelt, withdrew in June 1904, and on the death of John Hay, July 1, 1905, succeeded him as Secretary of State.

Rope-mak'ing. n. (Mannf.) The manufacture of rope has been largely revolutionized within a few years by the operation of automatic machinery, and only the larger sizes of ropes are now laid on the ropewalks, partly because the machines are less economical for large rope, and partly because the makers possess the ropewalks and do not care to discard them and buy new machines. The manufacture of hemp rope is begun by a series of preparation machines, whose office is to lay the fibers straight, in which condition they are called slivers. The hemp is received in bales, containing bundles of tangled fibers, which are first passed through a softening machine, and manipulated be-

tween several pairs of fluted iron rolls, while slightly sprinkled with oil. Most hemp is then ready to be heckled and combed, but manila hemp requires scutching at this stage, having more tendency to remain in a tow mass than other kinds. The scutcher used resembles a coarse form of carding-machine, having a rotating cylinder with pinlike blades, about 4 inches long, which straighten the fibers so that they are fit to go to the chain-machines. The chains of these are not like a common chain, but are rather a series of parallel bars, linked side by side into endless chain form, each chain bearing an upright perpendicular pin. The single-chain machine is called a drawing-machine, and has at one end fluted rolls, speeded to run several times faster than the chain, so that the sliver is drawn out lengthwise. The double-chain machines, designed by John Good, are called heckling machines, as they smooth and lengthen out the slivers by means of two endless chains, bearing pins, and speeded so that one runs from 6 to 10 times faster than the other. The slivers are run through these preparation machines half a dozen times or more until the fibers all lie smooth and parallel, and are drawn out suitably for spinning into a yarn or thread. They then go to the spinning-room. The spinning-jenny has a slow-moving chain, in front of which is a flier, bearing a pair of capstan-wheels. With each rotation of the flier, the capstan-wheels draw in a fixed amount of sliver, and the flier gives it such a turn as to form a yarn or thread, and at the same time winds the yarn so made on a bobbin. The bobbins are usually made to carry about 15 pounds of yarn, and are removed as filled, to be conveyed to the rope-machines. The first of these is called a former or strand-forming machine, and the second a layer or rope-laying machine. In the forming-machine the yarn is led from the bobbins through a gauge-plate, leading to the capstan, on which the first strand is twisted, or formed, after which it is wound on a reel, by the aid of a right and left shifting mechanism, which insures even winding. The reels so formed go to the laying-machine, which is of similar construction, but larger. The reels containing the strands are mounted like the yarn-bobbins on the former, and the rope is laid, and wound upon reels, the length of the rope being determined by the size of the reels. Wire rope is treated in a manner similar to hemp, except that the lay is commonly different.

Small cord and twine are twisted on special machines resembling the drawing-frames used in textile manufacture. A set of ten or twenty may be twisted at one time on a single frame, instead of being formed singly, as is the case with rope. Twines usually require finishing by sizing and polishing to render them smooth and of good appearance.

Ro'sa. EUPHROSINE PAREPA, singer, was born in Edinburgh, Scotland, May 7, 1836; made her debut at Malta in 1855; appeared, with success, in London in 1857. In 1863 she married Captain Carvell, of the British army, who died two years later. She visited the U. S. with the Bateman troupe; made a second tour in 1866-67; in 1867 married Carl Rosa, a violinist and member of the same troupe; with him she organized, in 1869, an English opera, and for three years toured successfully through the U. S.; was prima donna of the great Boston Jubilee. In 1872-73 she was at the Khedive's court at Cairo; afterward made another tour in England, where she died, Jan. 21, 1874. Her husband founded to her memory a \$5,000 scholarship in the London Academy of Music.

Roscom'mon. in Michigan, a N. central co.; area, 580 sq. m.; drained by Muskegon river and the S. Branch of the Au Sable river, and contains Houghton Lake and Higgins Lake. Surface, partly hilly, generally covered with forests; soil, mostly fertile. Cap. Roscom'mon. Pop. (1894) 1,657.

—A post-village, cap. of above co., 87 m. N.N.W. of Bay City. Pop. (1897) 480.

Rose. MARIE, soprano singer, was born in Paris, March 2, 1846; sang in opera in Paris, until the outbreak of the Franco-German war, when she joined the ambulance department. From 1872 to 1877 was a favorite member of the Mapleson Opera Company, singing in England and America, her best rôles being *Marguerite, Mignon, Leonora*, and *Carmen*. She was married, first to Julius Perkins, and after his death (1875) to James Henry Mapleson.

Rose'bery (ARCHIBALD PHILIP PRINROSE), EARL OF, statesman, was born in London in 1847; succeeded his grandfather in 1868, held several offices under the government, and, in 1886, attained the post of secretary for foreign affairs, retaining the portfolio only six months, until the fall of Mr. Gladstone's government in June. He was fully in sympathy with the policy of Mr. Gladstone; a strong advocate of imperial federation; interested in movements to improve the social conditions of the masses; presented a magnificent swimming-bath to the People's Palace, in the East End of London; was member and chairman of the city division of the London County Council, in 1889. In 1892, he became secretary of state for foreign affairs, under Gladstone, succeeding him as Premier in March, 1894, which office he filled until the Liberals went out of power, in 1895. In 1896 he retired from the leadership of the Liberal party.

Ro'senthal. MORITZ, pianist, was born in Lemberg, Austria, Dec. 18, 1862; gave his first concert at Vienna (1876); was pianist to the Roumanian court (1878); played successfully in the principal cities of the Continent, from 1878 to 1895, at which latter date he made his first London appearance, being received with enthusiasm.

Roseville, in Ohio, a post-village of Muskingum co., 10 m. S. by W. of Zanesville. Pop. (1897) 820.

Roslyn, in Washington, a post-town of Kittitas co., 28 m. N.W. of Ellensburg. A coal-mining town. Pop. (1897) 1,750.

Ross, SIR JAMES CLARK, navigator, nephew of Sir John Ross, was born in London, Eng., April 15, 1800; entered the navy in 1812; accompanied his uncle on several arctic expeditions; discovered the location of the north magnetic pole; in April, 1839, was given command of the *Erebus*, and in September following sailed, in company with the *Terror*, for the antarctic seas, and reached the farthest south yet attained, 78° 18'; discovered a volcano in Lat. 77° 32' S., which he named Mount Erebus. He was knighted in 1844; was an F. R. S., and member of many continental scientific bodies. Published *A Narrative of a Voyage in Antarctic Regions*. Died April 3, 1862.

Rossetti, CHRISTINA GEORGINA, poet, sister of Dante Gabriel Rossetti, was born in London, in 1830. She shared the family gift of spiritual insight and poetical imagination; her literary work was varied in themes, but all permeated with religious sentiment and human affection. Died Dec. 29, 1894.

Rossetti, DANTE GABRIEL, poet-artist, was born in London, England, May 12, 1828; was noted as a leading pre-Raphaelite; as a writer was one of the most romantic and sensuous of modern English poets. He was educated at King's College; entered the Royal Academy in 1846, and entered Madox Brown's studio in 1847. Some of his typical works are (paintings): *Girlhood of the Virgin* (1849); *Dante's Dream* (1870); (poems) *The Blessed Damozel*, and 100 sonnets called *The House of Life* (1881). Died April 9, 1882.

Rossetti, WILLIAM MICHAEL, poet and art-critic, brother of Dante Gabriel Rossetti, was born in London, Sept. 25, 1829; educated at King's College School, London; held a post in the English civil service; came to notice as an art-critic in 1850; like his brother, he was an earnest pre-Raphaelite, and edited and wrote for *The Germ*. His work as literary and art-critic is both voluminous and artistic, and embraces the whole field of the English classics as viewed through the medium of the Rossetti spirit.

Rossi, ERNESTO, actor, was born at Leghorn, Italy, in 1829; studied law in the University of Pisa; subsequently entered the dramatic school of Gustavo Modena; acted in various Italian cities until 1853, when he went with Mme. Ristori to Paris and Vienna. Thereafter he played in Italy, France, and England, and in South America with success; visited the U. S. in 1881, with moderate success. Died June 4, 1896.

Rossville, in Kansas, a post-village of Shawnee co., 16 m. N.W. of Topeka. Pop. (1895) 559.

Rossville, in Texas, a post-town of Atascosa co. Pop. (1897) 810.

Rothmel, PETER FREDERICK, historical painter, was born in Luzerne county, Pa., July 18, 1817; visited Europe (1856-59, 1873-75), but resided mainly in Philadelphia, where he was an associate of the Pennsylvania Academy. His subjects are largely chosen from events in American history; among his paintings are: *De Soto Discovering the Mississippi*; *Patrick Henry Before the Virginia House of Burgesses*; *Battle of Gettysburg*. Many of his pictures have been engraved. Died Aug. 15, 1895.

Routh, MARTIN JOSEPH, clergyman and educator, was born in Suffolk, England, Sept. 18, 1755; held various college positions until 1891, when he became president of Magdalen College, a post that he held for nearly 64 years. His most valuable work is *Reliquiae Sacrae* (4 vols., 1846-48). Died Dec. 22, 1854.

Routt, in Colorado, an extreme N.W. co., adjoining Utah and Wyoming; area, 6,000 sq. m.; intersected by Yampa and Green rivers. Surface, mountains; soil, a very fertile dark loam. Min. Gold, silver, lead, iron, coal. Cap. Hahn's Peak. Pop. (1897) 2,560.

Rowbotham, JOHN FREDERICK, musical historian, was born in Edinburgh in 1852; graduated at Balliol College. His *History of Music* was published in 1885, and embodies profound research.

Rowland, HENRY AUGUSTUS, physicist, was born in Honesdale, Pa., Nov. 27, 1848; a civil engineer and professor of physics; he has made many important discoveries in optics and electricity, invented superior methods of photographing the solar spectrum, and has written many valuable papers on these subjects. In 1876 he accepted the chair of Physics in Johns Hopkins University, which institution in 1880 conferred on him the honorary degree of Ph. D.

Rowland, in Kentucky, a post-village of Lincoln co. Pop. (1897) 585.

Rubinstein, ANTON GRIGORIEVICH, composer and pianist, was born in Wechotynetz, Roumania, Nov. 30, 1830; was thoroughly trained in music by several superior masters, including Liszt. He made his first concert tour in 1857, creating a sensation. In 1858 he became imperial concert conductor (in Russia), with a life-pension; and in 1862 founded, in St. Petersburg, a conservatory, of which he was principal until 1867. In 1872-73 he visited the U. S. and European countries in concert tours. He resigned the directorship of the conservatory in 1890; the same year, published his *Autobiography*. He wrote fifteen operas, six symphonies, besides numerous overtures, sonatas, concertos, vocal pieces, &c. Died Nov. 20, 1894.

Rudini, ANTONIO DI MARQUIS, statesman, was born in Palermo, Sicily, in 1839. He has been active in politics since 1866. His present office (premier of Italy)

he has held in curious alternation with Crispi—R. succeeding Crispi in 1891, Crispi succeeding R. in 1892, and R. succeeding Crispi in 1896—the cause of this alternation being the fluctuating public sentiment on the question of an increase in military expenses, R. favoring this, and Crispi opposing it. The disasters to the Italian army in Abyssinia in 1896 caused the pendulum to swing to the side of R.; Crispi was forced to resign, March 5, 1896, and a new ministry was promptly formed under R., as president of the council and minister of the interior.

Ru'ger, THOMAS HOWARD, U. S. A., was born at Lima, N. Y., April 2, 1833; graduated at West Point (1854); resigned (1855) to study law; reentered the service in 1861, and commanded a division at Gettysburg; aided in suppressing the draft riots in New York, in 1863; was made colonel of the regular army at the close of the war; superintendent of West Point (1871-76); promoted brigadier-general (1880); placed in command of the department of California (1891), and later in command of the department of the Missouri.

Ruling-machine, *n.* (*Mach.*) The ruling of very fine accurately spaced lines, as required in various scientific and other instruments, is accomplished on machines of extreme delicacy and precision. The machines used for ruling graduations on circles and arcs are called circular dividing-engines, and are commonly made with a large horizontal wheel, on which is placed the work to be ruled. The circumference of this wheel bears an accurately divided circle, with ratchet-teeth corresponding to the graduations. A worm-and-screw movement, or similar device, is provided for very slow rotation of the wheel, and a diamond tracing point is arranged to descend at the desired intervals, and make a scratch or graduation, whose length can be altered at every fifth, tenth or twelfth stroke, or the like, as may be essential to the work. The large graduated circle on the machine is called a master circle, and as the work reproduced from it is of smaller diameter, it is possible to make it much finer. Still greater fineness can be obtained by a second ruling, for which the work is shifted half a point, so that the lines come midway between those of the first ruling. The machines which make graduation lines on a straight line are denominated line-dividing engines. These operate by the movement of a carriage driven by a mathematically accurate screw. The formation of such a screw is a difficult piece of work, involving great care and experience, allowances for temperature, expansion and contraction, and the like. For correct working every thread or turn of the screw must be exactly equal to every other turn, and the same degree of advancement must be secured by every half revolution and every quarter revolution of the screw, and so on. In operation, the carriage of the machine, bearing the work to be ruled, travels on ways of extremely accurate proportions, and is forced along by the screw. If the screw have 100 threads to the inch, and the carriage be stopped for the ruling of a line every tenth of a turn of a screw, 1,000 lines will be ruled within the inch, and this number can be increased as much as the accuracy of the machine will permit, or until the lines are practically closed because their own width is greater than the space afforded them. It is claimed that ruling as fine as 20,000 lines in the inch has been made for diffraction-gratings. Among other work requiring fine and accurate ruling may be mentioned the reticles of telescopes, engraver's half-tone screens, slide-rules, and scales and verniers for scientific instruments.

The ruling-machines used by bookbinders for making faint colored lines on writing and commercial paper are of an entirely different class. They comprise mechanism for drawing sheets through a frame and under a row of pens, and delivering them in a pile. The pens may be set at any desired distance for forming the lines, usually of red and blue, as the paper is drawn under. The Hickok machine is universally used. Some printing presses are made, however, with ruling attachments to do the work as the paper comes from the roll.

Rumford, or **Rumford Falls**, in Maine, a post-town of Oxford co. Pop. (1897) 920.

Rumfels, in Texas, a W. central co.; area, 910 sq. m.; intersected by Colorado river. Surface, rolling; soil, fertile in the valleys. Wool and cattle growing are the principal industries. Cap. Ballinger. Pop. (1897) 4,050.

Rumyou, THEODORE, diplomat, was born in Somerville, N. J., Oct. 25, 1822; graduated at Yale (1842), and was admitted to the bar (1846); held various offices, including that of mayor of Newark (1864). He was chancellor of New Jersey from 1873 to 1887, and in 1893 was appointed United States minister to Germany, soon after becoming ambassador. Died Jan. 27, 1896.

Rush, in Kansas, a W. central co.; area, 720 sq. m.; intersected by Walnut creek. Surface, chiefly rolling prairie; timber only along streams; soil, fertile. Cap. La Crosse. Pop. (1895) 4,863.

Rushford, in Minnesota, a post-village of Fillmore co., 35 miles W. of La Crosse. Pop. (1895) 1,122.

Rushville, in Nebraska, a post-village, cap. of Sheridan co., 32 m. E. of Chadron. Pop. (1897) 680.

Rusk, JEREMIAH McLAIN, soldier and statesman, was born in Morgan county, Ohio, June 17, 1830; removed to Wisconsin (1853), and engaged in farming; served throughout the Civil War; brevetted brigadier-general in 1865; bank-comptroller of Wisconsin (1866-70); member of Congress (1871-77); governor of Wisconsin

(1882-89); secretary of the Department of Agriculture (1889-93). Died Nov. 21, 1893.

Rusk, in Texas, a post-town, cap. of Cherokee co., 15 m. S. E. of Jacksonville. Iron is found here abundantly. Seat of the Eastern Texas Penitentiary, whose inmates are employed in the manufacture of articles made of iron. Pop. (1897) 1,590.

Russell, WILLIAM CLARK, novelist, was born in New York, Feb. 24, 1844; educated at Winchester, and in France; went to sea at the age of 13, as a midshipman, and made several voyages to Australia, India, and Japan. He has won distinction as a writer of stories of seafaring life; was on the staff of the *London Daily Telegraph* until 1887, and many of his contributions to that paper have been since published in book form. His first successful book was *John Holdsworth, Chief Mate*; others are: *An Ocean Free-Lance*; *A Sea-Queen*; *What Cheer*, &c.

Russell, WILLIAM EUSTIS, lawyer and politician, was born in Cambridge, Mass., Jan. 6, 1857; graduated at Harvard (1877), and at the Boston University Law School; engaged in politics; was elected governor of Massachusetts, in 1889; was again elected in 1891 and 1892; was a delegate to the Democratic National Convention, in 1896, where he opposed the silver-standard platform. Died July 16, 1896.

Russell, WILLIAM HOWARD, journalist, was born in Lilyvale, co. Dublin, Ireland, March 28, 1821; studied at Trinity College, and at the Middle Temple, and was called to the bar in 1850; went to the Crimea as war correspondent for the *London Times*; from that date officiated as war correspondent for the *Times*, during the Indian mutiny (1857); the Civil War in the U. S. (1861); the Prussian-Austrian War (1866); the Franco-Prussian War (1870), and with Lord Wolseley's army in Zululand, and in Egypt. In 1876 he accompanied the Prince of Wales to India. He published numerous works, mainly a condensation of his voluminous newspaper letters. He is a Knight of the Iron Cross, and has Indian, Turkish, and other war medals. He was knighted in 1895.

Russell, in Kansas, a post-village, cap. of Russell co., 77 m. W. of Salina. Pop. (1895) 952.

Russell Guleh, in Colorado, a post-village of Gilpin co. Pop. (1897) 715.

Russell of Killowen (CHARLES RUSSELL), LORD, jurist, was born in Newry, county Down, Ireland, in 1833; was called to the bar in 1859, and speedily became prominent. In 1860 entered Parliament and became, in turn, solicitor-general and attorney-general; was a follower of Gladstone, and an advocate of Home Rule. In 1886 he was knighted. On the decease of Lord Bowen (1894) he was appointed a lord of appeal in ordinary, with a life-peerage, and in July of the same year, Lord Chief Justice of England, in succession to Lord Coleridge. In 1896 he visited America, with other English jurists, and delivered an address on "International Arbitration" before the annual meeting of the Bar Association of America, held at Saratoga Springs, N. Y. He presided over the trial of Dr. L. S. Jaimeson and his fellow-raiders, for invading the Transvaal.

Russellville, in Arkansas, a post-town, cap. of Pope co., 74 m. W. N. W. of Little Rock. Pop. (1900) 1,832.

Russo-Japanese War. See JAPANO-RUSSIAN WAR.

Rutgers College. (*Educ.*) In 1766 Governor William Franklin, of New Jersey, granted a charter for a college to be called Queen's College, which was to be primarily an institution for the education of young men for the ministry of the Dutch Reformed Church, and secondarily a seminary for giving a collegiate education to all who might resort to it. An amended charter was granted in 1770, and it was not until then that the college went into active operation at New Brunswick, N. J. The charter requires the president to be a communicant of the (Dutch) Reformed Church in America, but no sectarian religious instruction is given and its students have always been of all denominations. It had a long struggle with poverty, and was finally obliged to close its doors. In 1825, however, Col. Henry Rutgers, of New York, gave the college \$5,000. Thereupon the institution was revived, and its name changed to that of its benefactor. Since then its course has been upward. In 1863 was organized a scientific department under the name of Rutgers Scientific School. In 1896 it had 27 instructors and 165 students, with more than 33,000 volumes in its library.

Rutherford, in Tennessee, a post-town of Gibson co., 11 m. N. of Trenton. Pop. (1897) 622.

Ruthven, in Iowa, a post-town of Palo Alto co., 13 m. E. of Spencer. Pop. (1895) 761.

Rutland, in Illinois, a post-village of La Salle co., 40 m. S. of Mendota. Coal mines in vicinity. Pop. (1897) 580.

Rutledge, in Georgia, a post-village of Morgan co. Pop. (1897) 685.

Ryan, PATRICK JOHN, ecclesiastic, was born in Cloneyharp, Ireland, Feb. 20, 1831; educated at Thurles and Dublin; prepared for the American mission at Carlow College; removed to America, continuing his studies in Missouri; became vicar-general and coadjutor archbishop of the Roman Catholic diocese of St. Louis, with the title of bishop of Tricomia. Owing to the great age of Archbishop Kendrick, the government of the diocese largely fell upon Bishop R.; his administration was energetic and successful; and in 1884 he was nominated archbishop of Philadelphia. He went to Rome in 1887 in the interests of the Catholic University at Washington.

PAST OFFICERS' JEWELS.

- 1 PAST MASTER, of a Lodge of Master Masons, or Blue Lodge.
- 2 PAST HIGH PRIEST, of a Royal Arch Chapter, or a Chapter of Royal Arch Masons.
- 3 PAST EMINENT COMMANDER, of a Commandery of Knights Templar.
- 4 PAST ILLUSTRIOUS COMMANDER-IN-CHIEF, of a Consistory, Thirty-second Degree of Freemasonry.
- 5 PAST POTENTATE, of Ancient Arabic Order of the Nobles of the Mystic Shrine.
- 6 PAST EXALTED RULER, of a Lodge of the Benevolent Protective Order of Elks.
- 7 PAST CHANCELLOR, of a Lodge of Knights of Pythias.
- 8 PAST COMMANDER, of a Council American Legion of Honor.
- 9 PAST GRAND, of a Lodge of Independent Order of Odd Fellows.
- 10 PAST SACHEM, of a Tribe of Improved Order of Red Men.
- 11 PAST PRESIDENT, of a Camp, Patriotic Order Sons of America.
- 12 PAST REGENT, of a Council of Royal Arcanum.
- 13 PAST COUNCILLOR, of a Council of Junior Order of United American Mechanics.
- 14 PAST WORKMAN, of a Lodge of Ancient Order United Workmen.
- 15 PAST CHIEF PATRIARCH, of an Odd Fellows Encampment.
- 16 PAST REGENT, of a Senate, Order of Sparta.

S.

SABA

S is the nineteenth letter of the English and other western alphabets (eighteenth in the Latin), and a consonant of the sibilant series, being articulated by breathing through a narrow channel formed by the tongue with the palate, with, at the same time, a concurrent motion of the jaw and lips; producing, from such a conjoint position of the larynx and mouth, a sort of hissing sound. *S* is a letter so universally used in the English language, that to the foreigner it produces on the ear a constant and unpleasant sibilant sound. The letter *S* has two uses—one to express a mere hissing sound, as in the words *sabbath*, *such*, *sin*, *this*, *thus*, &c.; the other is a vocal hissing precisely analogous to the sound of *Z*, as in *muse* and *wise*, pronounced *múze* and *wíze*. At the beginning of all proper English words, the *S* has its first and most legitimate hissing sound; but in the middle, or end, of a word, it has a sound only regulated by custom and usage. In some few words of the language, the letter *S* is entirely silent, as in *isle*, *viscount*, etc. In abbreviations, *S* stands for *Socius*, a companion; *Societatis*, of a society, as *R. S. S.*, *Regia Societatis Socius*, a Fellow or Companion of the Royal Society. *S. S. S.*, *Stratum super Stratum*, layer upon layer. *S* or *Sl* is a contraction for saint; *S* or *Sc* for seconds; *Sec* for secretary; *S* or *Sh* for shilling. *S* is sometimes used by physicians in their prescriptions and otherwise, as a direction how to make up a mixture or compound a prescription, as *S. A.*, or *Secundum Artem*, according to art or rule, or effect it in a professional or workmanlike style. *S* is also used as a sign for weight, and stands for *semi*, or half; and was formerly used by physicians abbreviated to *S. N.*, *Secundum Naturam*, according to nature. As a numeral, *S* signifies seven. In navigation and geographical works, *S* stands for south, or joined to other letters, as *S.E.*, *S.W.*, *S.S.E.*, and *S.S.W.* implies south-east, south-west, south-south-east, and south-south-west. In music, *S* stands for *solo*, alone; and among the old fathers stood as *S. N.*, for *Savior Noster*, our Saviour.

Saa'di, *SHEIK MOSLIIH EDDIN*, a distinguished Persian poet, whose entire works were published in the original Persian and Arabic at Calcutta, in 1791. His *Gulistan* (Garden of Roses) was translated into English by Gladwin and Ross, and into French by Duryer, D'Aligre, and Gandin. He flourished in the 13th century, and lived 102 or 116 years.

Saadh, *Saud*, *n.* [Hind.] A member of a Hindoo sect of religionists, who somewhat resemble the Friends in their tenets and ceremonies.

Saale, (*saal*), a river of Germany, rising in the frontiers of Bavaria, and after a N. course of 200 m., falling into the Elbe, 25 m. S. of Magdeburg.

Saalfeld, (*saal-feld*), a town of Germany, duchy of Saxe-Meiningen, 50 m. S.W. of Altenburg; pop. 4,500.

Saar, or **Sarre**, a river of France and W. Germany, rising in the Vosges Mountains, and after a N. course of 120 m., joining the Moselle, 5 m. S.W. of Treves. It is navigable for 50 m.

Saarbrück, a town of Rhenish-Prussia, on the Saar, 40 m. S.S.E. of Treves. *Manuf.* Woollen and linen fabrics, pottery, and tobacco. Pop. 11,288.

Saar'dam, a town of Holland. See ZAANDAM.

Saarlouis, (*sa'ar-loo-is*), a fortified town of Rhenish-Prussia, 30 m. S.E. of Luxembourg. *Manuf.* Fire-arms. Pop. 7,000.

Saar-union (*sa'ar-oo-ne-awng*), a town of Germany, in Alsace, 35 m. E. of Nancy.

Saatz, a town of Bohemia, on the Eger, 39 m. W.N.W. of Prague; pop. 6,000.

Sa'badell, a town of Spain, prov. of Barcelona, 14 m. N.W. of Barcelona. *Manuf.* Woollen and cotton fabrics, and paper. Pop. 16,000.

Sabadilla, *n.* [Sp. *cebadilla*.] (*Bot.*) See VERATRUM.

Sabae'an, *Sabe'an*, *n.* See SABIAN, the more usual orthography.

Saba'ism, *Sa'beism*, *n.* Same as SABAISM, *q. v.*

Sabaism, (*sai'bai-izm*), *n.* [Heb. *saba*, lord.] That religion which worships the heavenly bodies, especially the sun and moon. The connection of these with the constant changes in nature, and their influence on the physical world, doubtless led to their being regarded in the character of deities. This religion prevailed in the East, particularly in Arabia, before the time of Mohammed.

Saba'oth, *n. pl.* [Heb. *tsēbāoth*, pl. of *tzaba*, a host, an army.] Hosts; armies;—"the Lord of Saba'oth," an expression used only as a designation of the Almighty.

Saba'ra, a city of Brazil, on an affluent of the São Francisco, abt. 40 m. N.N.W. of Ouro-Preto. It is situated 2,300 feet above sea-level. Pop. 6,000.

Sabat'tus, or **SABATUS**, in *Maine*, a post-village of Androscoggin co., abt. 6 m. E. by N. of Auburn.

Sab'bat, *n.* The nightly assembly wherein demons and sorcerers were of old believed to have held their orgies.

Sabbatar'ianism, *n.* Belonging, or relating, to the Sabbath, or to the doctrines held by Sabbatarians.

Sabbatar'ians, *n. pl.* (*Theol.*) A term applied to such Christians as observe the seventh day of the week as others do the first. They maintain that the seventh day of the week is of divine institution, and that Christians had no authority for changing it to the first.

Sab'bath, *n.* [Lat. *sabbatum*; Heb. *shabbāth*, rest, from *shābath*, to keep holiday.] The day of rest, or of cessation from labor; the day which God appointed to be observed as a day of repose from all secular labor and employments, and to be kept holy and consecrated to his service and worship;—among the Jews, the seventh day of the week, but among the Christians, the first day, or Sunday; the Lord's Day.

—The sabbatical year among the Israelites.

—Figuratively, a season of rest and repose; intermission of pain, labor, sorrow, &c.

Sabbath-day's journey, a distance of nearly one mile, permitted to the Hebrews to travel on the Sabbath.

Sab'bath-break'er, *n.* One who breaks or desecrates the Sabbath.

Sab'bath-break'ing, *n.* Profanation or desecration of the Sabbath.

Sabbatia, (*sab'bai-she-ā*), or **CHIRONIA**, *n.* [After *Sabbatia*, an Italian botanist.] (*Bot.*) A genus of plants, ord. *Gentianaceae*. The herb and root of the species *S. angularis* are employed medicinally, for their tonic and febrifugal properties. The plant is commonly known as *American centaury*.

Sabbat'ic, **Sabbat'ical**, *a.* [Fr. *sabbatique*; Lat. *sabbaticus*.] Pertaining or relating to, or resembling, the Sabbath; enjoying or bringing an intermission of labor.

Sabbatical year, (*Jewish Chron.*) The Jews received the command for its observance every seventh year, in which they were therein to sow their fields nor prune their vineyards. (*Exod.* xxiii. 10 and 11), B.C. 1491. The injunction, repeated *Lev.* xxv. 2-7, is referred to *Deut.* xv. 1-11, and xxxi. 10-13. The Jews observed it after their return from the Babylonish captivity.

Sab'batism, *n.* Rest or intermission of labor, as upon the Sabbath.

Sabbinet'ta, a town of N. Italy, prov. of Cremona, 19 m. S.W. of Mantua; pop. 7,000.

Sab'bi're, *n.* A beam or bulk of timber.

Sabella'na, *n.* [From Lat. *sabulum*, gravel.] (*Geol.*) Coarse sand or gravel.

Sabellianism, *n.* (*Ecc.*) The heretical tenets held by the Sabellians.

Sabell'ians, *n. pl.* (*Ecc.*) The followers of Sabellius, according to some authorities a bishop, and according to others a presbyter of Upper Egypt, who flourished 256-270, and taught that the Father suffered on the cross, and that there is but one person in the Godhead. Pope Dionysius pronounced condemnation of the doctrines of Sabellius in a council held at Rome in 260. Marcellus, bishop of Ancyra, maintained the doctrine in 325. The *Historia Sabelliana* was published by Wormius in 1696. Hallam says that Servetus held what were nearly Sabellian opinions.

Sab'ians, **Sa'beans**, *n. pl.* [Heb. *sābā*, the heavenly host.] A Christian sect that started up in the 7th or 8th century, whose tenets seemed to be a mixture of Judaism, Mohammedanism, and Christianity. They accepted baptism in commemoration of the Baptist's mission, but did not practice it in the name of the Trinity. They only acknowledged four sacraments, those of *baptism*, the *eucharist*, *holy orders*, and *matrimony*. In the latter respect both the priesthood and laity were permitted to have two wives.

Sabi'na, in *Ohio*, a post-village of Clinton co., abt. 62 m. S.W. of Columbus.

Sabine (*sa-been'*), in *Louisiana*, a W. parish, adjoining Texas; area, about 1,010 sq. m. *Rivers*, Sabine river, Bayou Lenan, Bayou Couco, and Paul's creek. *Surface*, nearly level; *soil*, fertile. *Cap.* Many. *Pop.* (1897) 10,100.

Sabine, in *Michigan*, a former township of Washtenaw county.

Sabine, in *Texas*, an E. co., adjoining Louisiana; area, about 580 sq. m. *Rivers*, Sabine river, and Patröon Palo and Gucho bayoux. *Surface*, level; *soil*, generally very fertile, producing large crops of cotton and corn. *Cap.* Hemphill. *Pop.* (1897) 5,240.

Sabine Cross-Roads, in *Louisiana*, a place 3 or 4 m. below Mansfield, where, April 8, 1864, the Confeder-

ates under Gens. Kirby Smith, Taylor, Mouton, and Green, defeated a body of National troops under Gens. Lee, Franklin, Banks, and Ransom. The Nationals lost ten guns, and about 7,000 men were captured.

Sa'bine Lake, an expansion of the Sabine River, between Louisiana and Texas, and abt. 5 m. N. of the Gulf of Mex., maximum breadth, 9 m., a. abt. 150 sq. m.

Sabine Pass, in *Texas*, a p. v. of Jefferson co., abt. 65 m. E.N.E. of Galveston. It was almost obliterated by a storm, Oct. 12, 1886, with loss of over 90 lives.

Sabine River, rises in Hunt co., Texas, and flowing S.E. to the E. border of the State, at Shelby co., turns to the S., and forming the boundary between Louisiana and Texas, enters the Gulf of Mexico at Sabine City; length, abt. 500 m.

Sabines', *n. pl.* An ancient people of Italy, supposed to have been named from *Sabus*, one of their deities. Little is known of their history. They were at war with the Romans at a very early period. A contest broke out between them B. C. 504, and a body of the Sabines migrated to Rome, where they were welcomed, and founded the powerful family and tribe of Clandii. The Sabines carried their ravages to the very gates of Rome, B. C. 469. On their defeat by Marcus Horatius, B. C. 449, their camp was found full of plunder obtained in the Roman territories. They were again at war with the Romans B. C. 290, and having been vanquished, many of them were sold as slaves. The remaining citizens were admitted to the Roman franchise.

Sabine'town, in *Texas*, a post-village of Sabine co., abt. 10 m. E. of Milam.

Sable, (*sabl*), a town of France, dept. of Sarthe, at the junction of the rivers Sarthe and Erve, 26 m. S.W. of Le Mans. *Manuf.* Gloves. *Pop.* 5,500.

Sa'ble, *n.* [Ger. *zobel*; Swed. *sabel*; Fr. *zibeline*.] (*Zoöl.*) See MUSTELA.—The fur of the sable, which is very black and glossy; as, a cloak of *sable*.—A mourning garment; a funeral robe.

(*Her.*) The tincture black;—denoted by vertical and horizontal lines running criss-cross.

—a. [Fr.] Of the color of fur called *sable*; black; dark;—used chiefly in poetry or in heraldry; as, "Night's *sable* throne."—*Dryden*.

—v. a. To gloom; to darken; to make black, sad, or dismal. *Sable iron*, (*Metal.*) An excellent make of Prussian iron;—so styled because originally branded with the figure of a sable.

Sablé (or **Au Sablé**) **River**, in *Michigan*, is formed by the union of several branches in Crawford co., and flowing E.S.E. enters Lake Huron from Iosco co.

Sables D'Olonne, (*Les*), (*sabl do'lon*), a seaport-town of France, dept. of Vendée, on the Bay of Biscay, 45 m. S. of Nantes. It has an active pilchard fishery. *Pop.* 6,000.

Sablière, (*sab-le-air'*), *n.* [Fr.] (*Corp.*) A piece of timber of the same length as a beam, but not of equal thickness.

Sabot, (*sa-hō'*), *n.* [Fr., from Lat. *sabbatum*, a shoe.] In France, and some countries of the European continent, a kind of wooden shoe worn by the peasantry.

Sabre, (*sā'br*), *n.* [Fr., from Ar. *saif*, a sword.] (*Mil.*) A sword of scimitar-like form, with a broad and heavy blade, thick at the back, and a little curved backward at the point; a cavalry-sword.

—v. a. To strike, cut, or kill with a sabre; as, the Light Brigade *sabred* the Russian gunners at Balaklava.

Sabretasche, (*sā'br-tash*), *n.* (*Mil.*) A leathern case, or reticule, worn by cavalry officers at the left side, suspended from the sword-belt, and used as a depository for despatches, &c.

Sabu'la, in *Iowa*, a post-town of Jackson co., about 30 m. S. by E. of Galena, Illinois.

Sabules'ity, *n.* [From *sabulous*.] Grittiness; sandiness; state or quality of being sabulous.

Sabulous, (*sāb'u-lūs*), *a.* [Lat. *sabulosus*, from *sabulum*, sand.] Gritty; sandy.

Sac, *n.* [A. S. *sac*, *sac*. See SACK.] (*Nat. Hist.*) A little sack;—specifically, a bag or receptacle for a liquid.

Sac, (*sawk*), [from a tribe of Indians formerly occupying this region.] in *Iowa*, a W.N.W. co.; area, abt. 576 sq. m. *Rivers*, Racoon and Boyer rivers. *Surface*, mostly level; *soil*, fertile. *Pop.* (1895) 15,868. *Cap.* Sac (ity, a thriving city, 45 m. W. by S. of Fort Dodge. *Pop.* (1895) 1,601.—A township of the above co.

Saccade', *n.* [Fr., from Lat. *saccus*, sack.] (*Manege*.) A sudden or forcible check of a horse by twitching the reins abruptly, and with one pull.

Sac'cate, *a.* [From Lat. *saccatus*, a sack, a bag.] (*Bot.*) Bag-shaped; having the form of a pouch or sack; as, a *saccate* petal.

Saccarap'pa, in *Maine*, a village of Cumberland co., about 50 m. S. W. by W. of Augusta.

Saccatoo', or **Sok'oto**, a town of Central Africa, in Soudan, on the Zirmie, an affluent of the Sokoto, which flows into the Quorra; *pop.* 20,000.

Saccharic Acid, *n.* (*Chem.*) An uncrystallizable acid product, formed in combination with oxalic acid during the action of nitric acid on sugar.

Sacchariferous, (*sāk-kar'if-e-rus*), *a.* [*Lat. saccharum*, sugar, and *ferre*, to bear.] Yielding or producing sugar; sugar-bearing; as, *sacchariferous* canes.

Saccharify, *v. a.* [*Fr. saccharifier*.] To convert or transform into sugar; as, *saccharified* juice.

Saccharilla, *n.* A certain kind of muslin.

Saccharin'efry, *n.* [*Lat. saccharum*, and *Gr. metron*, measure.] The process or operation of estimating the quantity of sugar in any substance that may contain it.

Saccharine, (*sāk'ka-rin*), *a.* Pertaining, or relating, to sugar; having the qualities, properties, or taste of sugar;—hence, sweet; as, *saccharine* matter, a *saccharine* flavor, &c.

Saccharize, (*sāk'ka-riz*), *v. a.* To convert or transform into sugar.

Saccharoid, **Saccharoid'al**, *a.* [*Lat. saccharum*, sugar, and *Gr. eidos*, form.] Having a texture resembling that of loaf-sugar; as, *saccharoid* carbonate of lime.

Saccharometer, *n.* [*Lat. saccharum*, sugar; *Gr. metron*, a measure.] A variety of hydrometer used in the process of brewing, in order to ascertain the density of the liquid extracted from malt. The same instrument is used to indicate the degree to which the juice expressed from the sugar-cane is concentrated, previously to undergoing the process of crystallization. (For a description of the instrument, see *HYDROMETER*.)

Saccharum, *n.* (*Bot.*) See *SUGAR-CANE*.

Sacchola'tate, **Sac'cholate**, *n.* (*Chem.*) A salt formed by the combination of saccholactic acid with a base.

Sacchola'ctic, *a.* [*Lat. saccharum*, sugar, and *lac*, milk.] (*Chem.*) Pertaining or relating to, or obtained from, a combination of sugar and milk; as, *saccholactic*, or *mucic*, acid.

Sac'ciform, (*-si-*), *a.* [*Lat. saccus*, sack, and *forma*, form.] Sac-shaped.

Saccomy'idæ, *n. pl.* (*Zoöl.*) The Pouched Gopher family, comprising Rodents which have large and distinct external cheek-pouches, pelage composed of stiff hairs with no under fur, and the upper lips not cleft. The Pouched Gopher, Pocket Gopher, or Pouched Reat (*Geomys bursarius*), of the North-western States, is 8 to 10 inches long to the tail, which is 1 to 2 inches; the color reddish-brown above, paler beneath, with a plumbeous tinge along the vertebral region. Its cheek-pouches are very large, extending as far back as the shoulders, and lined with short hair; and, as in other members of this family, are used mainly or wholly to convey food into the burrows, to be stored up or eaten at leisure.

Saccule, (*sāk'ūle*), *n.* [*Fr.*, from *Lat. sacculus*, dimin. of *saccus*, a sack.] A small sack.

Sacellum, (*sa-sell'um*), *n.* [*Lat.*, dim. of *sacrum*, a holy place.] (*Arch.*) A small unroofed enclosure containing an altar sacred to a deity. The term is also used to indicate a small mortuary chapel within a church, generally taking the form of a square canopied enclosure, with open sides formed by stone screens, the tomb in the centre being used as an altar, and having an altar-screen at its head.

Sacerdotal, (*sās-er-dō'tal*), *a.* [*Lat. sacerdotalis*, from *sacerdos*, a priest, from *sacer*.] Pertaining, or relating, to priests, or the priesthood; priestly; as, *sacerdotal* functions, *sacerdotal* robes, the *sacerdotal* office.

Sacerdo'talism, *n.* The style, office, dignity, or characteristic qualities of the priesthood; maintenance of the interests of the sacerdotal order.

Sacerdo'tally, *adv.* In a sacerdotal manner; after the style assumed by the priesthood.

Sac'hem, *n.* Among the North American Indians, a sagamore, or chief of a tribe.

Sachet, (*sak-shā'*), *n.* [*Fr.*] A scent-bag, or cushion containing perfume.

Sacheverel, (*sa-shēv'er-el*), *n.* A blower for the mouth of a stove.

Sack, *n.* [*A. S. sacc*, *sac*.] A bag, usually of large size, used for holding and carrying grain, wool, &c.; a pouch of considerable volume; as, a *sack* made of gunny-cloth. — That which a sack holds; as, a *sack* of coals, a *sack* of potatoes, &c.

— *v. a.* To put in a sack or pouch; to bag; as, to *sack* corn.

— [*Fr. sacque*, from *Gr. sagos*, a tunic.] A loose outer garment, worn like a cloak about the shoulders, whether by males or females.

Sack, *n.* [*Fr. sec*; *It. secco*, from *Lat. siccus*, dry, harsh.] A Spanish wine formerly in vogue, and is supposed to have corresponded with what is known to the moderns as *drysherry*; Shakspeare (*I. Henry IV.*) calls it *sherry sack*, *i. e.*, sherry sack. At a later period, *sack* seems to have been used as a general term for all kinds of sweet wines.

Sack, *v. a.* [*A. S. secan*, to seek.] To plunder or pillage, as a town or city; to ravage; to devastate, after taking by storm. — To dismiss from a situation or employment; to discharge;—generally implying some degree of demerit; as, to *sack* a dishonest servant.

— *n.* The pillage or plunder of a town or city, or the storm or plunder of an enemy's town; devastation; loot; ravage; as, the *sack* of Magdeburg by the Imperialists. — Dismissal; discharge from employment or office; as, to give an employé, or suitor, the *sack*.

Sack'age, *a.* Act of taking by storm, and pillaging; as, the *sackage* of a conquered city.

Sack'but, *n.* [*Fr. saquebute*; *Gr. sambūkē*; *Lat. sambuca*; etymol. unknown.] (*Mus.*) A former wind instrument of the trumpet species, but different from the common trumpet in form and size;—it may, in fact, be said to be the modern *Trombone*, *q. v.*

Sack'cloth, *n.* [*sack* and *cloth*.] Coarse cloth, or sacking, of which sacks are made; anciently, a cloth or garment worn in grief, distress, or mortification.

“And next her wrinkled skin rough *sackcloth* wore.” — *Spenser*.

Sack'clothed, (*-klōthd*), *a.* Draped in sackcloth.

Sack'er, *n.* One who sacks; one who storms and pillages a town or city;—also, one who discharges an employé, or menial.

Sack'ett's Harbor, in *New York*, a post-village and port of entry of Jefferson co., on Black River Bay, abt. 8 m. E. of Lake Ontario; *Lat.* 43° 55' N., *Lon.* 75° 57' W. In the War of 1812 it was the headquarters of the northern division of the American fleet, and was twice unsuccessfully attacked by the English. Several war vessels were built there. The frigate *Superior* of 66 guns, was built in 66 days, and the *Madison* in 45 days, from timber standing in the forests.

Sack'ful, *n.*; *pl.* *SACKFULS*. The quantity which a sack will hold; as, a *sackful* of soot.

Sack'ing, *n.* [*A. S. saccian*.] Coarse cloth of which sacks or bags are made. — The coarse canvas fastened to a bed-frame for supporting the bed, mattress, &c.; also, the act of taking by storm, and pillaging; act of discharging an employé or servant.

Sack'less, *a.* [*A. S. sacleas*.] Quiet; peaceable; harmless. (*R.*)

Sack'posset, *n.* A posset, made of sack, milk, sugar, and spices, and formerly considered a delectable beverage;—it corresponds to the modern *MILK-PUNCH*, *q. v.*

Sac'o, a river rising in Coos co., New Hampshire, and flowing E. into Maine; thence pursuing a general S.S.E. course enters the Atlantic Ocean from York co.

Saco, in *Maine*, a city and township, port of entry of York co., on the Saco River, abt. 13 m. S.W. of Portland. The river, which has here a fall of 42 feet, furnishes immense water power, and the industry of the inhabitants is chiefly directed to the manufacture of cotton and woollen goods, machinery, lumber, hardware, &c. The manufacture of cotton alone is represented by an aggregate capital of over \$5,000,000. *S.* has also a considerable commerce.

Sacoman'go River, in *New York*, rises in Warren co., and enters the Hudson River from Saratoga co.

Sac'ral, *a.* (*Anat.*) Relating, or belonging, to the sacrum.

Sacrament, (*sāk'-*), *n.* [*Fr. sacrement*, from *Lat. sacramentum* — *sacra*, to devote, from *sacer*, holy, sacred.] (*Theol.*) The name given to certain religious rites, the number as well as effects of which are the subject of much controversy between various bodies of Christians. In the Roman Catholic Church, it is held that there are 7 sacraments, viz.: Baptism, Confirmation, the Eucharist, Penance, Extreme Unction, Holy Orders, and Matrimony. The special teaching of Catholics on each of these rites will be found under the several heads; but there are several general principles regarding them all, on which the Roman Catholic doctrine differs widely from that of the Reformed communities. Catholics define a sacrament to be a visible or sensible sign permanently instituted by God, and conveying real interior grace to the recipient, and they teach that all sacraments contain within themselves, as instruments, and, when they are received with proper dispositions, produce such grace by the virtue imparted to them by God, and not merely through the faith of the recipient; although they hold that proper dispositions on the part of the recipient, as sorrow for sin, love of God, pious resolves, &c., are conditions indispensable for the efficacy of the sacramental rite. — By the majority of the Reformed Churches, the sacraments are held to be merely ceremonial observances, partly designed as a solemn act, by which each individual is admitted to membership, or desires to make solemn profession thereof; partly intended to stimulate the faith and excite the fervor and the pious dispositions of the recipient, to which dispositions alone all the interior effects are to be ascribed. As to the number of rites called by the name, almost all Protestants agree in restricting it to two — viz., *Baptism* and the *Lord's Supper*; although some of the rites which Catholics regard as sacramental are retained by some of the Protestant communities as religious observances.

Sacrament'al, *a.* [*Fr.*, from *L. Lat. sacramentalis*.] Pertaining or relating to, or constituting, a sacrament; sacredly or solemnly obligatory or binding; as, a *sacramental* rite. — Bound by a sacrament; as, “the *sacramental* host of God's elect.” — *Cowper*.

Sacramentalism, *n.* Sacerdotal government, rule, or authority. (*R.*)

Sacrament'ally, *adv.* After the manner of a sacrament.

Sacramenta'rian, *a.* Pertaining, or having reference, to the sacraments. — Relating to, or concerning, the Sacramentarians.

Sacramenta'rians, *n. pl.* (*Eccl.*) The name given in the 16th century to the party among the Reformers who separated from Luther on the doctrine of the Eucharist.

Sacrament'ary, *n.* [*Fr. sacramentaire*.] A sacramentarian; — a term of reproach formerly applied by Roman Catholics to Protestants.

— *a.* Relating to the sacraments, or to the Sacramentarians. **Sacramen'to**, in *California*, a large and important river, which, with the San Joachin, drains the most fertile valley of the State. It has its source in Goose Lake,

in the northeastern part of California, flows in a tortuous manner S. and S. W., till, in *Lat.* 38° 10', it unites with the San Joachin, and, after a course of about 480 m., finally falls into the Bay of San Francisco, being, for a distance of about 50 m., navigable for vessels of large tonnage, and for boats and rafts open for traffic for quite 100 miles further.

— *A. N. W.* central co.; *area*, about 1,010 sq. m. *Rivers*. Sacramento, San Joachin, American, Cosumne, and Mokelumne rivers. *Surface*, diversified; *soil*, very fertile, producing wheat, barley, and potatoes in abundance. It is also well adapted to grazing. *Min.* Granite is quarried in considerable quantities, and some gold is found. *Pop.* (1897) 30,000.

— *A city*, port of entry, and cap. of the State, also the seat of justice of the above co., on the Sacramento River, abt. 75 m. N.E. of San Francisco; *Lat.* 38° 34' N., *Lon.* 121° 26' W. It is regularly laid out, and contains many handsome public and private edifices. The river affords communication with the mining regions of the N., and trade is active. Sacramento was founded in 1849 (the former settlement having been known as *NEVA HELVETIA*), and in 1861–62 suffered severely from inundation. In 1863, it was selected as the site of the State capital, and has since continued to increase rapidly in wealth, population and importance. The state capitol is an imposing building, cost \$3,000,000. The State Agriculture Society has extensive grounds, State Library some 60,000 vols., the Crocker Art Gallery contain some fine paintings and statuary. *Pop.* (1897) 31,140.

Sacramen'to, in *Illinois*, a p.-v. of White co.; in *Minnesota*, a v. of Dodge co.; in *Nevada*, a v. of Nye co.

Sacramento, in *Wisconsin*, a village of Waushara co., abt. 80 m. N. by E. of Madison.

Sa'cred, *a.* [*pp.* of *O. Eng. verb sacre*, from *Lat. sacer*, *sacra*, *sacrum*, holy.] Set apart for a holy or religious purpose; hallowed; dedicated; devoted;—hence, holy; not profane or common; as, a *sacred* day, a *sacred* place, a *sacred* ceremony, &c. — Pertaining to God or to his worship; separated from common secular things; religious; theological; as, *sacred* songs, *sacred* history. — Set apart to some one for worship; veneration, or honor, in the highest degree;—preceding to; as, “A temple *sacred* to the queen of love.” (*Dryden*). — Venerable; entitled to extreme reverence, respect, or veneration. — Hence, inviolable; not to be profaned or appropriated. “Secrets of marriage still are *sacred* held.” — *Dryden*.

— Accursed; baleful; solemnly devoted, in a bad sense, as to evil, vengeance, destruction, &c.; as, “*sacred* to ridicule his whole life long.” — *Pope*.

Sacred bean. (*Bot.*) The *Nelumbium speciosum*. See *NELUMBIACEÆ*, and *Fig. 1628*.

Sacred Heart of Jesus. (*Eccl.*) A festival in the Roman Catholic Church, whose origin is traced to a vision which is recorded of a French nun, of the order of the Visitation, named Mary Margaret Alacoque, who lived at Paray la Moniale, in Burgundy, in the latter half of the 17th century, and whose enthusiasm led her to practice a special devotion to the Heart of the Saviour. This devotion was gradually propagated in France, and at length was approved by Pope Clement XII. in 1732 and 1736, and by Clement XIII. in 1765. The festival is held on the Friday after the octave of Corpus Christi. Confraternities of the Sacred Heart are disseminated through all parts of the Church.

Sa'credly, *adv.* In a sacred manner; religiously; not secularly or profanely; as, to keep the Lord's day *sacredly*. — Inviolably; faithfully; with scrupulous adherence; as, he kept his word *sacredly*.

Sa'credness, *n.* State of being sacred or consecrated to God, to his worship, or to religious uses; sanctity; holiness; religiousness; as, the *sacredness* of the Sabbath. — Inviolability; strict fidelity; as, the *sacredness* of a trust imposed and received.

Sacrifice, (*sāk'rī-fiz*), *v. a.* [*Lat. sacrifico* — *sacer*, holy, and *facere*, to make.] To make an offering, as of something consecrated, or of a holy or religious thing; to immolate or consume, partially or wholly, on the altar of God, either as an atonement for sin, or to beseech favor, or express thankfulness; as, to *sacrifice* an ox. — Hence, by analogy, to destroy, surrender, or suffer to be lost for the sake of obtaining something; to devote with loss; to destroy; as, to *sacrifice* one's love to one's duty.

— *v. n.* To make offerings to God, or to a deity, of things consumed on the altar;—hence, to make sacrifice or abandonment; as, “*Sacrifice* to the Graces.” (*Chesterfield*).

— *n.* [*Fr.*; *Lat. sacrificium*.] An offering made to an object of religious worship. Coextensive with the feeling of religion, with the belief in the existence of a Supreme Being, who superintends the affairs of mortals, is the desire to secure his favor and avert his displeasure. Hence we find the idea of sacrifices existing in all times, and among, probably, every people. It is generally supposed that sacrifices were instituted immediately after the fall of Adam, when God made with him the “covenant of grace.” This supposition is founded on the fact that God clad Adam and Eve with the skins of beasts. In the next generation we find Cain and Abel offering sacrifices unto God. Hence, some account for the universal prevalence of sacrificial worship in some form or other. Sacrifices formed a prominent part of patriarchal worship, and the sacrificial code was at length consolidated by Moses. In the Jewish religion we have a complete system of sacrificial rites, and strict rules laid down regarding them. Animal sacrifices were of four general kinds; viz., *burnt-offerings*, *sin-offerings*, *trespass-offerings*, and *peace-offerings*. The first three had an expiatory virtue, that is, they made atonement for those that offered them; the last were more particularly expressive of gratitude for mercies received, or supplication for mercies desired. As a sacrifice was not

only intended to represent the offerer, but also to convey his deepest feelings on the occasion of the offering, the selection of the object was upon the ground of its nearness of relation and preciousness to the offerer. It must be his own, the first and best of its kind; it must be what he values and loves. Another peculiarity of a sacrifice consisted in destroying, in whole or in part, the offering presented. In the heathen world, human sacrifices have been very generally prevalent, apparently from a notion that human life is the most precious thing that can be offered to a Divine Being. Christians regard the sacrifices of the Jewish economy as typical of the death of Christ (whom they regard as the one great sacrificer), which has forever made atonement for the sins of men.

—Destruction, surrender, loss, or suffering made or incurred for gaining some object, or for obliging another; also, the thing so devoted, relinquished, or given up; as, he makes a *sacrifice* in selling those goods so cheap, she made a *sacrifice* of her love to her ambition.

Sacrificer, (*sák'ri-fiz-er*), *n.* One who sacrifices or immolates.

Sacrificial, (*sák-ri-fish'al*), *a.* Performing sacrifice; included in sacrifice; pertaining or relating to, or consisting in, sacrifice; as, *sacrificial* rites.

Sacrificios, an island in the Pacific Ocean, off the coast of Mexico; Lat. 15° 40' N., Lon. 98° 6' W.

Sacrilege, (*sák'ri-líj*), *n.* [Fr.; Lat. *sacrilegium* — *sacer*, and *lego*, to steal or carry off.] The crime of violating or profaning sacred things, or the alienating to laymen, or to secular purposes, what has been appropriated or consecrated to religious purposes or uses.

Sacrilegious, (*-léj-us*), *a.* Relating to, or implying, sacrilege; violating or profaning sacred things; polluted with the crime of sacrilege; impious.

"An altar, above the reach of sacrilegious hands." — Pope.

Sacrilegiously, *adv.* With sacrilege; profanely; in violation of sacred things.

Sacrilegiousness, *n.* Quality of being sacrilegious; disposition to commit sacrilege.

Sacrilegist, *n.* A person guilty of the crime of sacrilege.

Sacring, *a.* [Fr. *sacrer*.] Consecrating; dedicating.

Sacring-bell, *n.* (*Ecl.*) In the Roman Catholic Church, a small bell rung before the elevation of the host; — also called *saint's bell*.

Sacrist, **Sacristan**, *n.* [Fr. *sacristain*, from Lat. *sacer*.] (*Ecl.*) A sexton; an officer belonging to a church who has the care of the sacred vessels, movables, &c.

Sacristy, *n.* (*Ecl.*) That apartment in an ecclesiastical edifice in which the vestments and sacerdotal vessels are kept; a vestry.

Sac River, (*sawk*), in Missouri, is formed by the East and West Forks, which unite in Cedar co., and flowing N. enters the Osage River in St. Clair co.

Sacrum, (*Os*), (*os sak'rum*), *n.* [Lat., sacred bone, so called probably from being offered in sacrifices by the ancients.] (*Anat.*) The bone (Fig. 2067) which forms the bases of the vertebral column, being articulated above by the last lumbar vertebra, while laterally it is firmly united by a broad irregular surface to the ossa innominata, or hip-bones, and united below to the os coccygis. In young subjects, it is composed of five or six pieces, united by cartilage, but in more advanced age it becomes one bone, in which, however, we may still easily distinguish the marks of the former separation. It is pyramidal in form, flattened before and behind, with its basis towards the lumbar vertebrae and its point terminating in the coccyx. Like the vertebrae, it presents various processes, and holes affording passage for the nerves.

Sacs and Foxes, two kindred and associated tribes of N. American Indians (Fig. 1007), formerly dwelling in the S. part of Iowa, now occupying lands in the Indian Territory.

Sacy, (*sa'se*), ANTOINE ISAAC SYLVESTRE DE, one of the most universal scholars of this century, and particularly renowned for his Oriental learning, was born at Paris, 1758, and occupied the first rank as professor under every form of government in France from 1795 to the reign of Louis Philippe. He is author of several original works, and of many highly valued translations from the Oriental languages. D. 1838. — His son, SAMUEL USTAZA SYLVESTRE DE, b. 1801, followed in the steps of his father, and is one of the profoundest scholars of the age. He was elected to the Academy in 1854. D. 1861.

Sad, *n.* (*comp.* SADDER; *superl.* SADDEST.) [*Ecl. sad*, *sedia*, to fill.] Affected with grief; gloomy; dejected; desponding; mournful; sorrowful; cast down with affliction; full of sorrow or anxiety; as, a *sad* countenance. — Habitually affected with melancholy; grave; serious; gloomy; not gay, vivacious, light, volatile, or cheerful. — Dull; grave; dark; sombre; heavy; — said of colors. — Heavy; close; not light or porous in substance; as, *sad* bread. — Causing sorrow or affliction; calamitous; grievous; as, a *sad* affair, a *sad* accident, a *sad* misfortune. — Hence, by implication, naughty; wicked; vicious; troublesome; as, he's a *sad* fellow among the women.

(NOTE. *Sad* is occasionally employed in the construction of certain self-explanatory compounds; as, *sad-eyed*, *sad-looking*, *sad-minded*, &c.)

Sadaqua'da, or **Sauquoit**, in New York, a creek flowing into the Mohawk River from Oneida co.

Sad'da, **Sad'der**, *n.* [Pers.] (*Lit.*) A Persian summary of the Zendavesta, or Sacred Books.

Sadden, (*sád'da*), *v. a.* [A. S. *sadian*.] To make sad or sorrowful; to make melancholy or gloomy.

"Her gloomy presence saddens all the scene." — Pope.

—*v. n.* To become, or to be made, sad; as, a *saddened* face.

Saddle, (*sad'dl*), *n.* [A. S. *sadel*, *sadl*; Ger. *sattal*,

allied to Lat. *sedeo*, to sit.] A leathern seat to be placed on a horse's back for the rider to sit on; — hence, something resembling a saddle in shape or in use, as a piece of meat comprising the back-bone of an animal's carcass, with the ribs on either side; as, a *saddle* of mutton.

(*Naut.*) A chunk of wood acting as a seat or rest to the heel of a boom, and shaped accordingly. It is principally used in steadying the studding-sail booms and the jib-boom.

—*v. a.* To put a saddle upon, as a horse; — hence, to load, to encumber, to fix, as a charge or burden upon; as, he is *saddled* with the keep of his wife's mother and sister.

Sad'dle, an island of S. America, off the coast of Terra del Fuego; Lat. 55° 23' 50" S., Lon. 68° 4' 30" W.

Sad'dleback, in Maine, a mountain of Franklin co.; height, abt. 4,000 ft.

Sad'dle-backed, (*-bákt*), *a.* Shaped like a saddle; having a low back and a raised head and shoulders, as a horse.

Sad'dle-bags, *n. pl.* Leathern bags slung across the pommel of a saddle by straps, for transportation on horseback, one bag thus lying on each side of the rider.

Sad'dle-bow, *n.* [A. S. *sadl-boga*.] The bow or arch forming the pommel of a saddle.

Sad'dle-cloth, *n.* The housing placed under a horse's saddle.

Sad'dle-gall, (*-gawl*), *n.* (*Far.*) A chafed place made on a horse's back by friction of the saddle.

Sad'dle-girth, *n.* The girth which, passing round a horse's body, holds the saddle securely in its place.

Sad'dle-horse, *n.* A horse trained and used for bearing a rider in the saddle.

Sad'dler, *n.* A maker of saddles for horses.

Sad'dle River, in New Jersey, enters the Passaic River from Hudson co. — A post-township of Bergen co.

Sad'dle-roof, *n.* (*Arch.*) A two-gabled roof.

Sad'dlery, *n.* The trade or occupation of a saddler. — The materials for making saddles, harnesses, &c.; the articles commonly offered for sale in a saddler's shop, taken collectively.

Sad'dle-shaped, *a.* Having the form of a saddle.

(*Bot.*) Bent down at the ends so as to give the upper part a curvilinear form.

(*Geol.*) Bent on each side of a ridge, while preserving an unbroken top; — said of certain strata.

Sad'dle-tree, *n.* The frame, or skeleton, of a saddle.

Sad'dleworth, a town of England, co. of York, 12 m. from Huddersfield. *Manuf.* Principally woollen goods. *Pop.* 18,000.

Sadduce'ic, *a.* Pertaining to, or after the manner of, the Sadducees; as, *Sadduce'ic* objections.

Sadducean, (*sád-du-sé'an*), *a.* Belonging, or relating, to the Sadducees.

Sadduceeism, (*-sé'izm*), **Saddu'eism**, (*-sizm*), *n.* [Fr. *Saducéisme*.] The tenets held by the Sadducees.

Sad'ducees, (*-sés*), *n. pl.* (*Ecl. Hist.*) The name applied in the time of Jesus to a portion or sect of the Jews, who were usually at variance with the other leading sect, namely, the Pharisees, but united with them in opposing Jesus and accomplishing his death. The name would seem to be derived from a Hebrew word signifying *the just*; but the Talmudists affirm that it comes from a certain Sadoc, or Sadduceus, who was the founder of the sect, and lived about three centuries before the Christian era. The S. disregarded all the traditions and unwritten laws which the Pharisees prized so highly, and professed to consider the Scriptures as the only source and rule of the Jewish religion. They rejected the demonology of the Pharisees, denied the existence of angels and spirits, considered the soul as dying with the body, and of course admitted no future state of rewards and punishments. While, moreover, the Pharisees believed that all events and actions were directed by an overruling providence or fate, the S. considered them all as depending on the will and agency of man. The tenets of these free-thinking philosophers were not, in general, so acceptable to the people as those of the Pharisees; yet many of the highest rank adopted them, and practised great severity of manners and of life. Many members of the Sanhedrim were Sadducees.

Sad'duceize, (*-síz*), *v. n.* To follow the doctrines of the Sadducees.

Sad'iron, (*-í'árn*), *n.* Same as FLAT-IRON, *q. v.*

Sad'ly, *adv.* Mournfully; sorrowfully; in a distressing, calamitous, or miserable manner; darkly; gloomily; in a sad manner; as, she suffers *sadly*.

Sad'ness, *n.* State of being sad; sorrowfulness; mournfulness; dejection of mind; despondency; gloom of countenance; sombreness, as of colors; sedate gravity; seriousness; heaviness, as of bread.

Sado', an island in the Sea of Japan, W. of Nippon; area, 700 sq. m. It is fertile and populous.

Sadow'a, a village of Bohemia, near Königsgrätz. Here, July 3, 1866, the Prussians, commanded by King William I. in person, defeated the Austrians under Field-marshal Benedek. The attack was commenced by the Austrian artillery about 7.30 A. M. At 10 o'clock the Prussians, under Gen. Stuhnapf, advanced upon the villages of Sadowa, Dohelnitz, and Mokrowena, whence, after hard fighting, in which the needle-gun did good service, they expelled the enemy; and by 2.30 P. M. they had seized the village of Chlum, or Klum, the centre of the Austrian position. The advantage, however, remained with the Austrians till about 3.30, when the Prussian Crown-Prince drove their left flank from the village of Lipa. By 4.30 the retreat had become general; but the firing continued till 9. Three Austrian archdukes were wounded. Prince Lichtenstein and Prince

Windischgrätz, with about 15,000 men, were made prisoners; and 160 guns, 11 sets of colors, and 3 cavalry standards were captured. The Austrian army consisted of about 190,000, and the Prussians of 220,000 men.

Sadsbury, in Pennsylvania, a post-township of Chester county. It contains Sadsburyville, a post-village, about 39 miles west of Philadelphia. — A township of Crawford county. — A township of Lancaster county.

Sad'gerstown, in Pennsylvania, a post-borough of Crawford co., abt. 6 m. N.N.E. of Meadville.

Sad'gersville, in Pennsylvania, a post-village of Lehigh co., abt. 69 m. N.N.W. of Philadelphia.

Safe, *a.* (*comp.* SAFER; *superl.* SAFEST.) [Fr. *sauf*, *saure*, from Lat. *salvus*; probably allied to Gr. *saos*, *sôs*, *safe* and *sound*.] Secure; free from danger or harm of any kind; sound; exempt from hurt, injury, or damage; whole; as, he arrived home *safe*. — Conferring security; securing from harm, or risk of harm; confining within secure bounds; trustworthy; to be relied upon; as, a *safe* harbor, a *safe* means of conveyance, a *safe* road, a *safe* plank, a *safe* man, a *safe* guide, &c. — Made incapable of imparting or receiving harm; placed out of reach of being longer dangerous; in secure care or custody; as, he is *safe* in prison.

—*n.* A place of safety or security; — specifically, a fire- or burglar-proof chest or closet for depositing and containing money, valuable papers, books, &c.; as, an iron *safe*; — also, a hermetically sealed box or closet for securing or preserving provisions; a refrigerator; as, a meat-*safe*.

Safe-conduct, *n.* [*Safe* and *conduct*; Fr. *sauf-conduit*.] That which insures a safe passage; — specifically, a pass-warrant; a pass or passport; a convoy or guard through an enemy's country, &c.

Safed', a town of Palestine, pashalic of Acre, 12 m. N. of Tiberias. *Manuf.* Principally weaving and dyeing. *Pop.* 5,000.

Safe-guard, (*-gard*), *n.* One who, or that which, guards, defends, or protects; defence; protection.

"Thy sword, the safeguard of thy brother's throne." — Granville.

— A passport; a warrant of security given by a sovereign or ruler of a state to protect a stranger within his territories, or a convoy or guard granted for the like purpose; — also, a riding-skirt, or outer garment, worn to protect women's underclothing on horseback.

—*v. a.* To guard; to protect. (*R.*)

Safe Harbor, in Pennsylvania, a post-village of Lancaster co., abt. 10 m. S.W. of Lancaster.

Safe-keeping, *n.* [From *safe* and *keep*.] Act of keeping or holding in safety from injury or from escape; as, his body is in *safe-keeping*.

Safely, *adv.* In a safe manner; without incurring risk or danger; as, we may *safely* conclude all is right. — Without harm, obstacle, or injury; as, we arrived *safely* on the other side of the Atlantic. — Without means of escape; in close duration or custody; as, he is *safely* locked up in a cell.

Safeness, *n.* Quality or condition of being safe; security; freedom or exemption from risk of harm or danger; as, the *safeness* of an undertaking, the *safeness* of one's credit. — State of being safe, or of assuring safety; trustworthy as regards security; as, the *safeness* of a ship, the *safeness* of a road.

Safe-pledge, (*-pléj*), *n.* (*Law*.) A surety given for the appearance of a person at a specified time.

Safety, *n.* State of being safe or out of danger; freedom from risk or hazard of harm or evil; exemption from hurt, injury, or loss; as, the *safety* of the passengers is assured. — Quality of making safe or secure, or of imbuing with confidence; insuring against detriment or loss, &c.; as, there is no *safety* in his promises. — Close custody; preservation or security from escape; as, to place a prisoner or refugee in *safety*.

Safety-arch, *n.* (*Arch.*) An arch formed in the body of a wall, as over a door, window, &c., to equalize the pressure.

Safety-beam, *n.* (*Railway Eng.*) A strapped beam of a truck-frame, passing around an axle, to prevent accidents.

Safety-belt, **Safety-buoy**, (*-boi*), *n.* A life-belt; a life-preserver. See LIFE-BUOY, *q. v.*

Safety-lamp, *n.* (*Mining*.) See DAVY SAFETY-LAMP.

Safety-plug, *n.* (*Engineering*.) In locomotive engines, a bolt having the centre filled with a fusible metal. It is screwed into the top of the fire-box, that the metal may melt out by the increased temperature when the water becomes too low, and thus admit the water to put the fire out, and save the tubes and fire-box. When the water is allowed to fall below a proper height, there is great risk of spoiling both the fire-box and tubes by the intense action of the fire. This is called "burning them;" and tubes subjected to such a trial are unfit for use again, as the tenacity of the metal has been destroyed.

Safety-tube, *n.* A tube of various forms used in distillations, the preparation of gases, &c., to prevent the bursting of vessels from the sudden disengagement of gases, and their collapse from the sudden condensation of vapors or gases; to prevent the mingling of fluids contained in different vessels connected together by tubes; and to prevent explosion in that form of the oxyhydrogen blowpipe in which the oxygen and hydrogen are contained in the same vessel.

Safety-valve, *n.* (*Mach.*) In steam-engines, a valve fitted to the boiler, in order to open and let out the steam when the inner pressure threatens to become dangerous; — also, a valve in a steam-boiler, opening on the interior, to admit the air and prevent the boiler being injured by atmospheric pressure upon the cooling of the steam.

Saffi, Azaffi, or Asfi, a seaport-town of Morocco, prov. of Abda, on the Atlantic, near Cape Canfin, 95 m. N.W. of Morocco; pop. 12,000.

Safflower, *n.* (*Bot.*) See **CARTHAMUS**.

—The dried flowers of the *Carthamus tinctorius* (Bastard Saffron), which are used as a dye-stuff, and in the preparation of the pigment called *rouge*.

Saffron, *n.* [*Fr. safran.*] (*Bot.*) See **CROCUS**.

—Deep yellow; of the color of saffron-flowers; as, a saffron face, a saffron flame.

—*v. a.* To make yellow; to tinge, as with saffron. (*R.*)

Saffron-Walden, a town of England, co. of Essex, 23 m. N.N.W. of Chelmsford, and 37 m. N.N.E. of London; pop. 5,500.

Saffrony, *a.* Presenting the color of saffron.

Sag, *v. n.* [*A. S. sagan*, to sink down.] To lean or incline from an upright position, or to bend from a horizontal position; to sink in the middle; to arch downwards, as the middle part of the keel and bottom of a ship, in consequence of undue weight; as, a building sags outward. —Hence, to be unsettled or unbalanced, as under the pressure of care, trouble, &c.; as, the mind sags with doubt.

To sag to leeward. (*Naut.*) See **SAGGING**.

—*v. a.* To load or burden so as to occasion a heaving or giving way.

—*n.* State or act of sagging, or of sinking in the middle.

Saga, *n.*; *pl.* **SAGAS**. [*Scand. sagen*, to say.] The general name of those ancient compositions which comprise at once the history and mythology of the northern European races. Their language is different from the modern Danish, Swedish, and Norwegian, and is more powerful and expressive than either of these latter dialects.

Sagacious, (*sa-gā'shūs*), *a.* [*Lat. sagax, sagacio*, from *sagio*, to perceive quickly by the intellect.] Quick of perception; having the senses acute; quick of scent; —hence, skilled in following a trail; as, a sagacious hound. —Hence, perceiving, as it were, by intuition; informed by keen or acute perceptions. (*R.*) —Hence, also, acute in discernment or penetration; shrewd; sage; wise; keen-witted; as, a sagacious head, a sagacious man.

Sagaciously, *adv.* In a sagacious manner; with quick scent; with keen, acute, or shrewd discernment or penetration.

Sagaciousness, *n.* Quality of being sagacious; quickness of scent; readiness or acuteness of penetration or discernment; sagacity.

Sagacity, (*-gās'itē*), *n.* [*Fr. sagacité*; *Lat. sagacitas*, from *sagax*.] Quality of being sagacious; quick of scent; sharpness or acuteness of discernment or penetration; readiness of apprehension; sagaciousness.

Sagadahoc, in *Maine*, a S. co., bordering on the Atlantic Ocean; area, abt. 270 sq. m. *Rivers*, Androscoggin and Kennebec rivers. *Surface*, much diversified; soil, generally fertile. *Cap.* Bath.

Sagamore, *n.* The head of a North American tribe; —generally held to be synonymous with **SACHEM**, *q. v.*

Sagan, a town of Prussian Silesia, on the Bober, 48 m. N.W. of Liegnitz. *Manuf.* Cotton and woollen goods, glass, and paper. *Pop.* 9,100.

Sagapen, Sagapenum, *n.* [*Lat. sagapenum*; *Gr. sagapemon*.] (*Med.*) A fetid gum-resin, imported into Europe from the Levant, and also from Alexandria, in amygdaloidal masses of a brownish-yellow or olive color, sometimes in tiers. It is probably a Persian product, and has been supposed to be obtained from the root of the umbelliferous plant *Ferula persica*. It is employed medicinally as an antispasmodic, but is considered to be less powerful than asafoetida.

Sagathy, *n.* [*Fr. sagatis*.] Same as **SAYETTE**, *q. v.*

Sage, (*sāj*), *n.* [*Fr. sauge*.] (*Bot.*) See **SALVIA**.

Sage, (*sāj*), *a.* (*comp. SAGER*; *superl. SAGEST*.) [*Fr.*; *Lat. saga, sagus*, prophetic.] Perceiving quickly or keenly by the senses, or by the intellect; presaging; acute; discerning; grave; having nice penetration of mind and powers of judgment; prudent; as, a sage adviser. —Proceeding from wisdom; well judged; well adapted to the purpose; as, sage policy; sage counsels. —Grave; serious; pregnant with weight or solemnity; as, a sage dilemma. (*R.*)

—*n.* A man of quick and accurate discernment; a wise individual; a man of gravity and penetration; —especially, a man venerable for years, and known as a man of sound judgment and prudence; a grave philosopher.

Sage-cheese, *n.* Cheese flavored with sage, and colored green by the juice of leaves of spinach and other plants which are added to the milk.

Sage-ly, *adv.* In a sage manner; wisely; with just and true discernment and prudence.

Sagene, Sajene, *n.* [*Russ. sázheny*.] A Russian measure of length, equivalent to about 7 English feet.

Sagerness, *n.* Quality of being sage; wisdom; sagacity; prudence; gravity.

Sageville, in *Iowa*, a village of Dubuque co., abt. 6 m. N.N.W. of Dubuque.

Sageville, in *New York*, a village, former cap. of Hamilton co., about 70 m. N.N.W. of Albany.

Sage-willow, *n.* (*Bot.*) The *Salix tristis*. See **SALIX**.

Saggar, Sagger, Seggur, *n.* A cylindrical case of fine clay, in which fine stone-ware is baked in the oven. —Also, the clay of which such cases are formed.

Sagging, *n.* A bending or sinking in consequence of over-weight.

Sagging to leeward. (*Naut.*) A term denoting the movement by which a ship makes considerable lee-way; —it is the converse to holding a good wind, i. e., bearing up well to windward.

Sagg Village, in *New York*, a village of Suffolk co., abt. 100 m. E. by N. of New York city.

Saghalien (*sa-hā'li-en*), or **Sakhalin**. [*Native name, Saika.*] A long, narrow island, belonging to Russia since 1875, when Japan ceded its southern part, lying off the shores of Siberia, S.W. of the Sea of Okhotsk, and immediately N. of the Japanese island of Yezo; Lat. between 46° and 54° 30' N., Lon. 141° 50' and 144° E.; area, 47,000 sq. m. The surface is mountainous and generally unfruitful. The climate is very severe. *Rivers*, Ty and Tymy rivers. The inhabitants are very largely devoted to fishing and hunting. *Pop.* (1897) 10,850.

Sag Harbor, in *New York*, a post-village and port of entry of Suffolk co., abt. 100 m. E. by N. of New York city.

Sagina, *n.* (*Bot.*) The Pearl-wort, a genus of plants, order *Caryophyllaceae*. The Creeping Pearl-wort, *S. procumbens*, found in damp places in almost all the States, is a small weed, with slender, creeping stems 3 or 4 inches long; leaves very small, flowers white and green, axillary or peduncles longer than the leaves.

Saginate, (*sāj'-*), *v. a.* [*From Lat. sagino*, a stuffing.] To pamper; to feed to the full. (*R.*)

Saginaw, in *Michigan*, an E. central co. of the lower peninsula; area, abt. 860 sq. m. *Rivers*, Saginaw, Flint, Shiawassee, Cass, Tittabawassee, and Mishtegayoc rivers. *Surface*, level or slightly undulating; soil, very fertile. *Cap.* Saginaw.

—A city, cap. of above co., on Saginaw river and several R. Rs., 100 m. N.W. of Detroit; consolidated with E. Saginaw in 1890; the third city in the State in size and importance. *Pop.* (1897) 91,450.

Saginaw Bay, in *Michigan*, an arm of Lake Huron, bordered by Iosco, Bay, Tuscola, and Huron cos. It is 60 m. in length, with a maximum breadth of 30 m., and affords good navigation and safe harbors for large vessels.

Saginaw River, in *Michigan*, is formed in Saginaw co. by the confluence of the Flint and Shiawassee rivers, and flowing N. enters Saginaw Bay from Bay co. The main stream is abt. 20 m. long. It receives several considerable streams, and is navigable to Saginaw City, a distance of 22 m.

Sagitta, (*-jī'tū*), *n.* [*Lat.*] (*Arch.*) The keystone of an arch. (*R.*)

(*Astron.*) A small constellation between the Fox and the Goose on the North, and the Eagle on the South.

(*Geom.*) The abscissa of a curve; also, among old writers on trigonometry, the versed sine of an arc; —so styled from its resemblance to an arrow standing on the chord of a double arc.

Sagittal, (*sāj'-*), *n.* [*Lat. sagittalis*, from *sagitta*, an arrow.] Pertaining or relating to, or resembling an arrow.

Sagittal suture. (*Anat.*) The median suture which unites the parietal bones of the skull.

Sagittaria, *n.* (*Bot.*) A genus of plants, order *Alismaceae*. The root of *Sagittaria sagittifolia* is tuberous, nearly globular, with many long fibres. In China it is much cultivated for its esculent properties, its mealy nature making it easily convertible into starch or flour. The floating leaves are very variable in size, and in form resemble the head of an arrow, from which circumstance the plant derives its name. The leaves also are very cooling when applied to the skin; they have consequently been used, and may be serviceable, as a dressing to inflamed sores. Arrow-head, as a food, is much relished by most cattle.

Sagittarius, *n.* [*Lat.*, an archer; *Fr. sagittaire*.] (*Astron.*) One of the twelve signs of the zodiac, which

Fig. 2290. — SAGITTARIUS.

the sun enters about Nov. 22. It is represented on celestial globes and charts by the figure of a centaur in the act of shooting an arrow from his bow. In printing it is represented thus, ♐.

Sagittary, (*sāj'-*), *n.* (*Myth.*) Same as **CENTAUR**, *q. v.*

—*a.* Pertaining to, or resembling, an arrow.

Sagittate, *a.* (*Bot.*) Having the shape of an arrow-head; as, a sagittate leaf.

Sago, *n.* [*Hind. sagoo-danu*.] A well-known form of starch, obtained from the stems of various plants, particularly those of the botanical genera *Sagrus* and *Saguerus* (see these words). Sago is produced chiefly in the Moluccas and in Sumatra; but it is first imported into Singapore, in very large quantities, for granulation and reexportation. It is obtained by cutting and splitting the palm-stem, and washing it with water. The fecula subsides from the washings, and forms a powder like arrow-root, but of a dirty-white color. This constitutes meal sago, of which 500 or 600 lbs. may be yielded by a single tree. This, when imported into Singapore, is well washed, partially dried, granulated, sifted, and roasted. The sago of commerce was formerly in grains

about the size of coriander-seeds, of a roddish or brownish-white color, and mixed with some of the meal. The Chinese settled at Singapore some time since introduced their methods of refining and granulating, which gave a sago in small grains, about the size of a pin's head, hard, of a whitish or a pearly lustre, sometimes even transparent, without odor, and with very little taste. This kind is now called *pearl-sago*. Sago is nutritive and demulcent, and well suited for invalids. It may be boiled with water, with milk, or in soups, and made into puddings with eggs and milk.

Fig. 2291. — SAGO PALM.

Sagoins, *n. pl.* (*Zool.*) A group of *Cebidae*, comprises non-prehensile tailed monkeys, known as Fox-tailed Monkeys (*Pithecia*), Squirrel Monkeys (*Callithrix*), Night Monkeys (*Nyctipithecus*), and Marmosets (*Leopold and Midas*).

Sagres, (*sa-grais*), a fortified seaport-town of Portugal, prov. of Algarve, on the peninsula of the S. coast, 4 m. S.E. of Cape St. Vincent.

Sagua La Grande, (*sa'gwa*), a town of Cuba, on a river of same name, 20 m. above its mouth, and abt. 145 m. E. of Havana.

Saguenay, a large river of Canada. See **CANADA**, and Fig. 493.

Saguenay, a co. of prov. of Quebec; area, about 12,815 sq. m. *Rivers*, St. Lawrence, Saguenay, and Port Neuf rivers. *Cap.* Tadoussac.

Sague'srus, *n.* (*Bot.*) A genus of Palms. *Sagussacharifer* is the Gommuti-palm, which supplies the greater part of the sugar produced in the Moluccas and Philippines. Palm sugar, called *jaggery* in India, is generally obtained from the juice which flows out from the different palms upon wounding their spathes and surrounding parts. The saccharine juice of the Gommuti-palm is transformed into an intoxicating liquor, or *toddy*, by fermentation. This is termed *nera* in Sumatra, and a kind of arrack is distilled from it in Batavia. From the trunk of this palm, when exhausted of its saccharine juice, a great deal of our commercial sago is obtained, a single tree yielding from 150 to 200 lbs. The juice of the fruit is very acrid. Besides sugar, toddy, and sago, this palm yields the stiff, strong fibre known in commerce as *Gommuti*, or *Ejow fibre*.

Sagus, *n.* (*Bot.*) A genus of Palms. From the trunks of *S. laevis*, *S. genuina*, and other species, the principal part of the sago in the trade is obtained. See **SAGO**.

Sagy, (*sāj'y*), *a.* Full of sage; seasoned with sage; partaking of the qualities of sage; as, a *sagy* flavor.

Saha'ma, (*Neva'do de*), a summit of the Peruvian Andes; Lat. 15° 7' S., Lon. 68° 52' W. *Height*, 22,350 m.

Saha'ra, or the GREAT DESERT, an immense tract in Northern and Central Africa, extending from the Nile to the Atlantic coast, and from the Atlas Mountains to within 10° of the equator. Throughout this vast tract, which is an undulating, and for the most part barren, district, there are intervals of cultivated land, called *oases*. It was long supposed that the S. was the bed of an ancient inland sea, and consisted of a vast, nearly level expanse of sand, here and there swept into ridges by the wind. Recent research has disproved this idea, the surface, instead of being uniform and depressed below sea-level, being found to be greatly diversified, rising at one point to an altitude of 8,000 feet. Yet, though much has been done in the way of exploration, there are extensive tracts which are yet practically unknown. There is no reason to doubt that much, though not all, of the S. was at one time under water, probably in the Cretaceous and earlier periods. Since its elevation the lakes remaining have disappeared, and a process of desiccation set in which has been in action for thousands of years, and still continues, the surface being probably much drier now than during the period of Roman occupation. Water exists abundantly at depths of from 10 to 300 feet, and the boring of artesian wells has given rise to many new and fertile oases. The population is estimated at between 1,500,000 and 2,500,000.

Sah'ite, *n.* (*Min.*) A greenish gray variety of angite.

Sa'ic, *n.* [*Fr. saïque*; *Turk. saika*.] (*Naut.*) A kind of vessel frequently met with in the waters of the Levant, being a kind of ketch without top-gallant sail or mizzen-topsail.

Said, (*sēd*), *a.* (*imp. and pp. of SAY*; so written for *sayed*.) Declared; uttered; reported; aforesaid; before-mentioned; —of common usage in legal phraseology; as, the *said* lessor, &c.

Said, (*Port.*) See **SUEZ** (CANAL OF).

Saida, or **SEIDA**, (*si'da*), a seaport-town of Syria, 18 m. from Beyrout, and built on the site of the ancient *Sidon*; Lat. 33° 25' N., Lon. 35° 24' S. It is celebrated as the most ancient of the Phœnician cities, preceding even Tyre; but now, like all other Turkish towns, is ill-built, dirty, and full of modern ruins, though the orchards and gardens with which the neighborhood is surrounded make it at a distance appear very beautiful. The once magnificent harbor, composed of vast moles, and stretching out into the sea, is now entirely destroyed. The trade is considerable, being the emporium of Damascus and all the surrounding country. The exports consist of corn, silk, raw and unspun cotton, particularly the

last. Sidon is mentioned in Scripture, and also by Homer. It was a place of consequence even long after the Christian era. *Pop.* 7,000.

Fig. 2292.—SAIDA (ANC. SIDON).

Sai'gon, a city, river-port, and the cap. of the French possessions in Cochiu-China, on a branch of the Mekong, about 60 m. from the Chinese Sea by the river channel. This city, with the territory of which it was the capital, was taken by the French in 1861, since when it has grown from its former condition as a collection of Siamese huts into one of the handsomest cities of the East, marked by fine streets, boulevards, and squares, a magnificent governor's palace, a cathedral, two colleges, a floating and a dry dock, botanical and zoological gardens, &c. The population is made up of Annamese, Chinese, and French, amounting to 16,213, to which must be added that of the business suburb of Cholon, 4 m. S.W., which in 1890 had 39,925 people, of whom more than half were Chinese. Saigon (*Gia-dinh* in the native tongue) is the most important port between Singapore and Hong Kong, its exports of rice to China, Japan, the Philippine Islands, and the Straits settlements reaching a value annually of \$8,000,000, while it has a considerable export trade in fish, salt, cotton, wool, hides, &c. On an average, at least 500 vessels, aggregating over 500,000 tons, enter and depart from the port yearly, principally under the British, French, and German flags.

Sail, *n.* [A. S. *segel*; Icel. *segl*; Dan. *sejl*; all of which signify a sail.] (*Naut.*) A surface obtained by canvas, lateen, or other material, by the action of which, when extended, a ship or other vessel is moved. A sail extended by a yard hung (*slung*) by the middle, and balanced, is called a *square-sail*; a sail set upon a gaff or stay, is called a *fore-and-aft sail*; which terms refer to the position of the yard, gaff, or stay, when the sail is not set. The upper part of every sail is the *head*, the lower part the *foot*; the sides, in general, are called *leeches*; but the weather- or side-edge of any but a square sail is called the *luff*, and the other edge the *after leech*. The two upper corners are ear-riings, but that of a jib is the *head*; the two lower corners are, in general, *clews*; the weather clew of a fore-and-aft sail, or of a course while set, is the *tack*. The edges of a sail are strengthened by a rope called the *bolt-rope*. The ropes at the upper and lower edges are the *head- and foot-ropes* of the sail. The canvas, or sail-cloth, is made in *bolls*; and the qualities are numbered from No. 1, which is the strongest, and is used for storm sails, to No. 8, which is used for the smallest and lightest sails, as small studding sails, &c., which seamen ordinarily call *flying-kites*. The cloths in a square sail are seamed *vertically*; while in a fore-and-aft sail they are *parallel to the after leech*. In this way the strain of the sheet diffuses itself over the canvas, both along and across the cloths. Sails take their names from the mast, yard, or stay upon which they are stretched. The principal sails belonging to a square-rigged ship are pre-

Fig. 2293.—SQUARE-RIGGED SHIP UNDER FULL SAIL.

sented in Fig. 2293, and are as follows — 1. Course; 1a, studding-sails; 2, fore-top-sail; 2a, studding-sails; 3,

main-top-sail; 3a, studding-sails; 4, mizzen-top-sail; 5, fore-topgallant-sail; 5a, studding-sails; 6, main-topgallant-sail; 6a, studding-sails; 7, mizzen-topgallant-sail; 8, fore-royal; 8a, studding-sails; 9, main-royal; 9a, studding-sails; 10, mizzen-royal; 11, fore-skysail; 12, main-skysail; 13, mizzen-skysail; 14, fore-topmast-staysail; 15, jib; 16, flying-jib; 17, spanker; 18, main-trysail, a similar sail on foremast is called fore-try-sail; 19, main-royal-staysail; 20, main-topmast-staysail; 21, mizzen-topgallant-staysail.

—Hence, a wing; used poetically, in the plural; as, "an eagle's sails." — *Spenser*.

—*sing.* and *pl.* A ship or other vessel; a craft; — used as a collective word to denote the number of ships; as, a fleet of twenty sail.

—An excursion made in some vessel upon the water; as, to take a sail across a river.

Shoulder-of-mutton sail. (*Naut.*) A triangular sail, set on a boat's mast; — so called from its resemblance to a shoulder of mutton. — To loose sails, to spread or hang out the sails heretofore furled, either to air them, or for the purpose of setting afterwinds. — To make sail, to spread out an additional extent of sail. — To set sail, to spread the sail to the wind in order to give impulsion to the ship; — hence, to proceed on a voyage. — To shorten sail, to take in some sail by furling or reefing. — To strike sail, to lower the yard or gaff of a sail when set, as in saluting, &c. — Under sail, with all necessary sails set.

—*v. n.* To be impelled or urged forward by the action of the wind upon sails, as a ship on water; to move through the water; — expressed also of a swimming-bird or of a fish. — To pass by water; to be conveyed in a vessel on water. — To set sail; to commence a voyage. — To be carried in the air, as a balloon; to pass smoothly along, as through the air; to fly without beating with the wings; as, a heron sails overhead.

—*v. a.* To navigate; to pass or move upon in a ship, by means of sails. — To fly or soar through.

"Sublime she sails th' aerial space." — *Pope*.

—To direct or manage the motion of, as a vessel; as, the chief mate sailed the ship after the death of the captain.

Sail'able, *a.* Navigable; that may be passed or sailed over by ships; as, sailable channels.

Sail'-broad, *a.* Spreading out after the manner of a sail.

Sail'-cloth, *n.* Duck or canvas used in making sails. See *SAIL*, *n.*, and *CANVAS*.

Sail'er, *n.* One who sails; a sailor. (*r.*) — A ship or other vessel; — used, referentially, as to her speed and manner of sailing; as, a fast sailer, a prime sailer, a crank sailer, a heavy sailer, &c.

Sail'-hook, *n.* A small hook used by sail-makers, to hold the seams square.

Sail'ing, *n.* (*Naut.*) Act of moving on water, or the movement of a ship or vessel impelled by the action of wind on her sails; act of setting sail or beginning a voyage; — also, smooth impulsion through the air, as in a balloon; or, the aerial passage of a bird.

(*Navig.*) The art of directing a ship on a given line laid down in a chart. It is called *plane sailing* when the chart is constructed on the supposition that the surface of the ocean is an extended plane; and *globular sailing*, when the chart is a globular chart, or constructed on the hypothesis that the earth is a sphere, the ship being then supposed to be sailing on the arc of a great circle. See *OBELIQUE-SAILING*, *PARALLEL-SAILING*, *TRAVERSE-SAILING*, *NAVIGATION*, &c.

Sailing order, or **order of sailing**, any determinate order preserved by a squadron of ships. It usually implied, in the days of sailing fleets, one, two, or three parallel columns; but it is at the disposition of the admiral or commodore.

Sail'ing-master, *n.* (*Nav.*) A warrant-officer, ranking next below a lieutenant, whose duties are to navigate the vessel, and, under the direction of the executive officer, to attend to the stowage of the hold, to the cables, rigging, &c.

Sail'less, *a.* Without sails.

Sail'-loft, *n.* A loft, or room, where sails are cut out and made ready for sending up.

Sail'or, *n.* [From *sail*.] One who follows the business of navigating or working ships, &c.; — specifically, on shipboard, a mariner who is making a long sea-voyage other than his first, and who is qualified to go aloft and tend the sails. A sailor is not necessarily an *able seaman*.

Sail'-room, *n.* (*Naut.*) A room on shipboard where all sails which are not bent are stowed away.

Sail'-yard, *n.* (*Naut.*) The yard or spar on which a sail is bent or extended.

Saim, Seim, *n.* [A. S. *seim*.] An English provincialism for lard.

Sai'ma, a lake in European Russia, govt. of Finland, 30 m. N.W. of Viborg. *Ext.* 145 m. long, and 50 wide.

Sain'foin, Saint'foin, *n.* [Fr., from *sain*, sound, and *foin*, hay.] (*Bot.*) See *ONOBRYCHIS*.

Saint, *n.* [Fr., from Lat. *sanctus* — *sacer*, sacred, holy.] A person sanctified; a holy or godly person; one eminent for piety and virtue. — One of the blessed in heaven. (*Eccl.*)

In the Roman Catholic Church, one of those who, whether under the old or under the new dispensation, have been specially remarkable for their personal virtues and their eminent services to the cause of religion. Of the old dispensation, the "patriarchs and prophets" are commonly designated as saints. But the word is used much more of the Christian Church. The procedure of the Church of Rome, as to the public recognition of saints, consists of two stages, that are called respectively *BEATIFICATION* and *CANONIZATION*, *q. v.* On the doctrine of saint-worship, see *INVOCATION OF SAINTS*.

—*v. a.* To canonize; to beatify; to number or enroll among saints by an official act of the Pope. (*r.*)

—*v. n.* To act the saint; to pretend to, or simulate, piety. (*r.*)

(NOTE. All names having the prefix *Saint*, not included in this part of the work, will be found under their proper heads.)

Saint An'drew's, a village of prov. of Quebec, co. of Argenteuil, about 45 m. W. of Montreal.

Saint Al'bans, a town of England, co. of Herts, 10 m. N.W. of London, famous for its magnificent abbey-church. *Pop.* about 8,000.

Saint Albans, in *Illinois*, a village of Hancock co., about 100 m. N.W. by W. of Springfield.

Saint Alban's, in *Maine*, a post-township of Somerset co.

Saint Alban's, in *Minnesota*, a village of Hennepin co., abt. 24 m. W. by S. of St. Paul.

Saint Alban's, in *Ohio*, a township of Licking county.

Saint Alban's, in *Vermont*, a post-village and township, cap. of Franklin co., abt. 24 m. N. by E. of Burlington.

Saint Alban's Bay, in *Vermont*, a post-village of Franklin co., abt. 24 m. N. of Burlington.

Saint An'drew, a seaport-town of King's co., Prince Edward Island, on Cardigan Bay; Lat. 46° 10' N., Lon. 62° 35' W.

Saint Aimé, a village of Richelieu co., prov. of Quebec, abt. 50 m. N.E. of Montreal.

Saint Andrew's, a seaport-town of New Brunswick, cap. of Charlotte co., on the N.E. extremity of Passamaquoddy Bay, abt. 60 m. W. by S. of St. John; Lat. 45° 4' 3" N., Lon. 67° 3' W. The town is well located and regularly built.

Saint Andrew's, in *Florida*, a post-village of Washington co., on the bay of the same name, abt. 80 m. S. of Tallahassee.

Saint Andrew's Bay, in *Florida*, an irregularly shaped inlet of the Gulf of Mexico, in Washington co. It is 25 miles in length, has 12 feet of water on the bar, and is completely land-locked.

Saint Andrew's Cross, *n.* See *CROSS*.

(*Bot.*) Same as *ST. PETER'S WORT*. See *ASCYRUM*.

Saint Anne, a lake of British N. America, abt. 50 m. N. of Lake Superior, with which it is connected by a small river. It covers an area of abt. 400 sq. m.

Saint Anne, a river of prov. of Quebec, flowing into the St. Lawrence abt. 50 m. W.S.W. of Quebec; length, abt. 120 m.

Saint Anne, a town of prov. of Quebec, on the St. Lawrence River; Lat. 49° N., Lon. 66° 25' W.

Saint Anne, in *Illinois*, a post-township of Kankakee co.

Saint Ans'gar, in *Iowa*, a post-village and township of Mitchell co., abt. 95 m. W. of Lansing.

Saint Anthony, (*an'to-ne*), in *Minnesota*, a town of Ramsey co., on the Mississippi River, at the Falls of St. Anthony, abt. 8 m. W. of St. Paul; Lat. 44° 48' 40" N., Lon. 93° 10' W. The river here has a perpendicular fall of 18 feet, which affords immense hydraulic power. The town is well located on an elevated plain, and is generally well built. It is the site of the State University. Incorporated with Minneapolis (*q. v.*) in 1872.

Saint An'thony's Fire, *n.* (*Med.*) The *ERYSIP-ELAS*, *q. v.*

Saint Ar'mand, in *New York*, a township of Essex co.

Saint An'bert, in *Missouri*, a post-village and township of Osage co.

Saint Augus'ta, in *Minnesota*, a post-township of Stearns co., abt. 6 m. S.E. of St. Cloud.

Saint August'in, a river of Labrador, British North America, flowing into a bay of the same name, near the S. entrance of the Straits of Belleisle; Lat. 51° 15' N., Lon. 59° W.

Saint August'ine, in *Florida*, a city, port of entry, and the cap. of St. John's co., about 200 m. E. by S. of Tallahassee; Lat. 29° 48' 30" N., Lon. 81° 35' W. It is the oldest, and one of the most important places in the State. It is situated on Matanzas Sound, about 2 m. from the sea, and is defended by Fort Marion, built more than 100 years ago by the Spaniards, and called by them the *Castle of St. Mark*. Settled 1565. *Pop.* (1897) 4,340.

Saint August'ine, in *Illinois*, a post-village of Knox co., about 49 m. W. of Peoria.

Saint Barthol'omew, an island of the W. Indies, abt. 30 m. W. of St. Kitt's; Lat. (E. point) 17° 53' N., Lon. 62° 52' W. *Area*, abt. 35 sq. m. *Soil*, fertile, producing sugar, tobacco, cotton, and cocoa. The island is nearly surrounded with shoals and sunken rocks, and, except at the Carenage, on the W. side, is difficult of access; here, however, is a good harbor, and near it Gustavia, the capital. It was the only possession of Sweden in America, and was ceded to that country by France in 1784, and retroceded to France in 1877. *Pop.* abt. 3,000.

Saint Bernard', in *Louisiana*, a S.E. parish, bordering on the Gulf of Mexico; *area*, abt. 620 sq. m. *Lake Borgue* washes the N.W. border. *Surface*, level; *soil*, in some parts, very fertile. *Cap.* St. Bernard, a post-village, abt. 15 m. E. of New Orleans.

Saint Cath'arine, in *Missouri*, a post-village of Linn co., abt. 9 m. E. of La Clede.

Saint Cath'arine's, a cap. of Lincoln co., prov. of Ontario, abt. 12 m. N.W. of Niagara. It contains numerous manufs., and has an extensive trade. *Pop.* 7,864.

Saint Cath'arine's, in *Georgia*, an island off the coast of Liberty co., from which it is separated by Saint Catharine's Sound. *Area*, abt. 40 sq. m.

Saint Charles, in *Arkansas*, a post-village of Arkansas co., about 12 m. E. of Arkansas Post.

Saint Charles, in *Illinois*, a city and township of Kane co., about 42 m. W. of Chicago. It contains several large manufactories, and is thriving rapidly. *Pop.* (1897) 7,150.

Saint Charles, in *Iowa*, a township of Floyd co.—A post-town of Madison co., about 25 m. S.S.W. of Des Moines.

Saint Charles, in *Louisiana*, a S.E. parish; *area*, about 238 sq. m. *Rivers*. Mississippi river, and lakes Pontchartrain, Des Allemands, and Washia. *Surface*, low and level; *soil*, in some parts very fertile. *Products*. Corn, cotton, sugar cane, fruits, vegetables, &c. *Cap*. Hahnville. *Pop.* (1897) 8,180.

Saint Charles, in *Michigan*, a post-village and township of Saginaw co., about 11 m. S.W. of Saginaw city.

Saint Charles, in *Minnesota*, a city and township of Winona co., about 25 m. W. by S. of Winona. *Pop.* (1895) 1,416.

Saint Charles, in *Missouri*, an E. co., adjoining Illinois; *area*, abt. 480 sq. m. *Rivers*. Mississippi, Missouri, and Cuivre rivers, and Dardenne and Femme Osage creeks. *Surface*, much diversified; *soil*, fertile. *Min.* Limestone. *Cap.* St. Charles.

—A city, cap. of the above co., on the Missouri River, abt. 140 m. E. of Jefferson City. It contains some extensive manufactories, and also is a place of much business activity.

Saint Chris'topher, an island of the W. Indies. See KITT'S, (SAINT).

Saint Clair, (*sin-kler*), ARTHUR, a gallant, but unsuccessful American general, born at Edinburgh, Scotland, 1735. In June, 1777, he was besieged in Ticonderoga by Burgoyne's troops, and was compelled to evacuate that fort with great loss. In 1791, he was made major-general, became general-in-chief of the army, and was entrusted with the command of the expedition against the Miami Indians; but he was surprised near the Miami village, and his force of 1,400 men cut to pieces. He was compelled to resign his commission, and d. 1818.

Saint Clair, a lake between prov. of Ontario and Michigan, and between Lakes Huron and Erie. It covers an area of abt. 360 sq. m., and averages 20 feet in depth. Its surface is 571 feet above sea-level, or 6 feet higher than that of Lake Erie, into which its surplus waters are carried by the Detroit River, while it receives the waters of Lakes Superior, Michigan, and Huron, through St. Clair River.

Saint Clair, in *Alabama*, a N. by E. co.; *area*, abt. 725 sq. m. *Rivers*. Coosa River, and Canoe Creek. *Surface*, mountainous; *soil*, in some parts fertile, and well adapted to grain and grazing. *Min.* Bituminous coal in large deposits. *Cap.* Ashville.

Saint Clair, in *Illinois*, a S.S.W. co., adjoining Missouri; *area*, abt. 630 sq. m. *Rivers*. Mississippi and Kaskaskia rivers, and Cahokia, Silver, and Richland creeks. *Surface*, undulating; *soil*, very fertile. *Min.* Coal in abundance. *Cap.* Belleville.

Saint Clair, in *Iowa*, a township of Benton co.—A post-village of Monona co., abt. 20 m. E. of Onawa.

Saint Clair, in *Michigan*, an extreme E. co. of the lower peninsula, bordering on Canada, Lake Huron, and Lake St. Clair; *area*, abt. 700 sq. m. *Rivers*. St. Clair, Black, and Belle rivers. *Surface*, level, or gently undulating; *soil*, in some parts fertile. *Cap.* Port Huron. *Pop.* (1894) 54,315.—A post-village and township, former cap. of the above co., about 50 m. N.E. of Detroit. It was formerly called Palmer.

Saint Clair, in *Minnesota*, a village of Carver co., about 44 m. W. by S. of St. Paul.

Saint Clair, in *Missouri*, a S.W. co.; *area*, about 670 sq. m. *Rivers*. Osage and Sac rivers, and Warblow, Peshaw, and Monaghan creeks. *Surface*, diversified; *soil*, fertile. *Cap.* Osceola. *Pop.* (1897) 17,220.—A post-village of Franklin co., about 55 m. S.W. of St. Louis.

Saint Clair, in *Ohio*, a township of Butler co.—A post-township of Columbiana co.

Saint Clair, in *Pennsylvania*, a post-borough of Schuylkill co., about 62 m. N.E. of Harrisburg.

—A township of Westmoreland co.

Saint Clair, or **Saint Clair City**, in *Pennsylvania*, a village of Westmoreland co.

Saint Clair River, an outlet of Lake Huron, forming a partial boundary between prov. of Ontario and Michigan. It averages $\frac{1}{2}$ m. in width, is 40 m. long, and empties into Lake St. Clair.

Saint Clairsville, in *Ohio*, a post-village, cap. of Belmont co., about 116 m. E. of Columbus.

Saint Cloud, in *Kansas*, a village of Saline co., about 33 m. W.S.W. of Junction City.

Saint Cloud, in *Minnesota*, a city, cap. of Stearns co., on the Mississippi, abt. 80 m. N.W. of St. Paul. It has extensive factories, and an active trade. Ap. 14, 1886, it was almost destroyed by a cyclone, 15 persons were killed.

Saint Croix, or **SANTA CRUZ**, (*san'ta kroos*), an island of the W. Indies, abt. 80 m. E.S.E. of Porto Rico. It is the most S. and the largest of the Virgin group, and has an area of abt. 100 sq. m. *Cap.* Christianstad. It has been possessed successively by the Dutch, English, Spanish, and French, the last of whom sold it to Denmark in 1733. *Pop.* 27,000.

Saint Croix, (*krwaw*), PASSAMAQUODDY, or SCHOODIC, a river rising in Grand Lake, and flowing a tortuous S.S.E. course between Maine and New Brunswick, enters Passamaquoddy Bay. *Length*, abt. 75 m.

Saint Croix, in *Wisconsin*, a N.W. co., adjoining Minnesota; *area*, abt. 750 sq. m. *Rivers*. St. Croix, Willow, and Apple rivers. *Surface*, somewhat diversified; *soil*, fertile. *Cap.* Hudson.

Saint Croix Lake, an expansion of the St. Croix River between Wisconsin and Minnesota. It is abt. 36 m. long, with an average breadth of 3 m.

Saint Croix River, rises in Douglas co., Wisconsin, and flowing S.W., then S. by W., between that State and Minnesota, enters the Mississippi River abt. 38 m. below St. Paul. *Length*, abt. 200 m.

Saint Cuthbert, an English bishop, b. near Melrose, early in the 7th century. He was successively prior of the monasteries of Melrose and Lindisfarne, retired afterwards to the lone and desolate isle of Farne, where he might enjoy a life of solitude. He finally yielded to the persuasion of the Northumbrian king, Oswy, and took the bishopric of the prov. of Lindisfarne. He held this office for two years, when, worn out by labors and ansterities, he died in the island of Farne, March 20, 687, which day is observed for his festival.

Saint Cuthbert's Beads, *n. pl.* (*Pol.*) See ENCRINITE.

Saint Cyril OF ALEXANDRIA, b. abt. 376, succeeded his uncle Theophilus as bishop of Alexandria, in 412. He compelled the Novatians to silence, banished the Jews, and caused Nestorius to be condemned and deposed by the Council of Ephesus. A subsequent *ex parte* council of 42 bishops, headed by John, patriarch of Antioch, and favoring Nestorius, excommunicated and deposed his opponent. The Emperor, appealed to in this strait, condemned both sides, and ordered the rival champions to be imprisoned. The powerful intercession of Rome, however, caused this sentence against C. to be abrogated. His works, mostly controversial, have been published, Paris, 1638, in 7 vols. folio.

Saint Cyril OF JERUSALEM, an eminent church father, b. at Constantinople abt. 315, was elected bishop of his native city in 351. He was soon engaged in hot conflict with his metropolitans, the Arian bishop Acacius of Caesarea, who caused him to be twice deposed. He was for the second time restored to his episcopate in 383. Soon after, his old enemy Acacius died, but Cyril was immediately involved in new difficulties. After considerable strife, Cyril was banished, by order of the Emperor Valens, in 367; nor did he return till the Emperor's death in 378. D. 386. His writings, mostly doctrinal, are extremely valuable, not on account of their vigor, profundity, or beauty, but on account of their theology. They present to us, in a more complete and systematic manner than the writings of any other father, the creed of the church. Their style is simple and unattractive.

Saint David, a seaport-town of Queen's co., Prince Edward Island, on the Halifax Bay; Lat. 46° 23' N., Lon. 63° 42' W.

Saint David, an island of the Bermuda group, West Indies; Lat. 32° 10' N., 64° 20' W.

Saint Den's Bayou, in *Louisiana*, enters Barataria Bay from Jefferson parish.

Saint Domingo. See HAITI.

Saint Donatus, in *Iowa*, a p.-vill. in Jackson co.

Sainte-Anne, a town of the island of Gaudeloupe, W. Indies, on the S. coast of Grande Terre, abt. 12 m. E.S. E. of Point-à-Pitre.

Sainte-Benve, (*bu'r've*), CHARLES AUGUSTIN DE, a French author, b. at Boulogne-sur-Mer, 1804, who at first studied medicine, but subsequently turned his attention towards literature, for which he had a strong predilection from his earliest years. He commenced by writing articles on history, philosophy, and criticism for a French newspaper, and, in 1828, produced his *Historical and Critical Picture of the Poetry and Drama to the 16th Century*, a work which was accepted as a choice specimen of criticism. Some poems followed, but were less favorably received. He next supplied papers to the *Revue des Deux Mondes*, to the *Nationale*, and other important French organs; but his great work on the *History of Port Royal*, which appeared between the years 1840-48, gave him the high position among French *littérateurs* which he from that period maintained. His *Literary Portraits* have placed him at the head of the critics of the age. D. 1869.

Saint'ed, *a.* Holy; pious; sacred; canonized; as, "sainted hills." (*Milton*).—Gone to heavenly happiness;—often employed as an euphemism for *dead*.

"I hold you as a thing enskied and sainted."—*Shaks.*

Saint Elena, a cape of Ecuador, on the Pacific coast; Lat. 2° 12' S., Lon. 81° W. About 30 m. to the S.E., on a bay of the same name, is the village of Saint Elena.

Saint Elizabeth, a vill. and parish of Berthier co., prov. of Quebec, abt. 45 m. N.E. of Montreal.

Sainte-Lucie, a town on the S. coast of the island of Martinique, W. Indies, abt. 13 m. S.E. of Port Royal; *pop.* 1,500.

Sainte Rose, a town on the N. coast of the island of Guadeloupe, W. Indies, abt. 10 m. S.W. of Port Louis; *pop.* 4,500.

Saintes, (*sants*), a town of France, dept. of Charente-Inférieure, on the Charente, 33 m. S.E. of Rochelle; *pop.* 8,405.

Saintes, (*Les*), (*la sante*), a cluster of small islands in the W. Indies, off the S. extremity of Guadalupe. Aggregate *area*, abt. 5 sq. m. Discovered by Columbus, Nov. 4, 1495.

Saint-Esprit, (*-es-pree'*), a village and parish of Montcalm co., prov. of Quebec, abt. 42 m. N.W. of Montreal;—Also a village of Richmond co.; P. Quebec.

Saint'ess, *n.* A female saint. (*n.*)

Saint Eustatius, (*yūs-tā'shus*), or EUSTATIA, an island of the Leeward group, W. Indies, abt. 12 m. N.W. of St. Kitt's; *area*, abt. 190 sq. m. *Surface*, mountainous. It has two extinct volcanoes. *Pop.* 2,000.

Saint-Félix-de-Valois, (*-vā'l'wah*), a village and parish of Berthier co., prov. of Quebec, abt. 51 m. N.N.E. of Montreal; *pop.* 3,800.

Saint Francis, in *Arkansas*, an E. co.; *area*, abt. 612 sq. m. *Rivers*. White, St. Francis, and Cache rivers. *Surface*, nearly level; *soil*, generally fertile. *Cap.* Forest City. *Pop.* (1897) 14,150.—A township of Green co.—A township of Phillips co.

Saint Francis, in *Minnesota*, a post-township of Anoka co.

Saint Francis River, rises in St. François co., Missouri, and flowing S. into Arkansas, it enters the Mississippi River from Phillips co. *Length*, abt. 450 m.

Saint Francisville, in *Illinois*, a post-village of Lawrence co., abt. 170 m. S.E. of Springfield.

Saint Francisville, in *Louisiana*, a post-village, cap. of West Feliciana parish, abt. 30 m. N. of Baton Rouge.

Saint Francisville, in *Missouri*, a post-village of Clarke co., abt. 10 m. W.N.W. of Keokuk, Iowa.

Saint François, (*frāng's'wah*), or SAINT FRANCIS, in *Missouri*, a S.E. co.; *area*, abt. 350 sq. m. *Rivers*. St. Francis and Big rivers. *Surface*, hilly and broken; *soil*, in some parts fertile. The celebrated Iron Mountain is at the S.E. angle of this co. *Cap.* Farmington.

Saint François (or FRANCIS) **River**, rises in Lake Pohenaganook, and flowing a general E. and S.E. course, enters the St. John abt. 10 m. below the confluence of the Walloostook River. During its entire length, it forms a portion of the N. boundary between Maine and New Brunswick.

Sainte Genevieve (*zhēn-a-vē'*), in *Missouri*, an E.S. E. co., adjoining Illinois; *area*, about 450 sq. m. *Rivers*. Mississippi river, and Riviere aux Vases, and Isle au Bois, Saline, and Establishment creeks. *Surface*, uneven and broken; *soil*, in some parts very fertile. *Min.* Lead and copper, besides some fine marble. *Cap.* Sainte Genevieve, a thriving city on the Mississippi river, about 60 m. below the city of St. Louis. *Pop.* (1890) 9,883.

Saint George, the patron saint of England, said to have been a soldier in the army of Diocletian, and to have suffered death for the Christian faith. His character and very existence are surrounded with much obscurity. He is commonly represented on horseback, with a dragon vanquished at his feet.

Saint George, an island of the Bermuda group, lying N.E. of Bermuda. It is strongly fortified, and on the E. side has the town of Saint George, an important British military depot. *Pop.* 4,000.

Saint George, a town on the S.S.W. coast of the island of Grenada, W. Indies. It has an excellent harbor, and is defended by a fort; Lat. 12° 2' 54' N., Lon. 61° 48' W.

Saint George, an island in the bay of Honduras, opposite the mouth of the river Balize.

Saint George, a bay and harbor on the W. coast of Newfoundland, extending inland (E.N.E.) abt. 54 m. It receives a river of the same name.

Saint George, a bay on the N.W. coast of Nova Scotia, E. of Cape St. George. It extends abt. 18 m. inland, and is 20 m. wide at its mouth.

Saint George, in *Florida*, an island in the Gulf of Mexico, opposite the mouth of the Appalachicola River; *area*, abt. 100 sq. m.

Saint George, in *Kansas*, a post-village of Pottawatomie co., abt. 12 m. E. of Manhattan.

Saint George, in *Maine*, a post-township of Knox co.

Saint George, in *Nebraska*, a village of Nemaha co., abt. 10 m. W. of Brownsville.

Saint George, in *Oregon*, a post-village, former cap. of Columbia co., about 30 m. N. of Portland.

Saint George, in *Utah*, a post-village, cap. of Washington co., about 345 m. S. by W. of Salt Lake City.

Saint George, in *Vermont*, a post-township of Chittenden co.

Saint George, in *West Virginia*, a post-village, former cap. of Tucker co., about 100 m. S.E. of Wheeling.

Saint George's, in *Delaware*, a post-village of New Castle co., about 16 m. S.S.W. of Wilmington.

Saint Gregoire-le-Grand, a village and parish of Nicolet co., prov. of Quebec, about 90 m. S.W. of Quebec.

Saint Helen, in *Missouri*, a village of Cedar co., about 17 m. S.W. of Jefferson City.

Saint Helena, in *California*, a post-village of Napa co., about 18 m. N. of Napa.

Saint Helena, in *Louisiana*, an E. parish, adjoining Mississippi; *area*, 540 sq. m. *Rivers*. Tickfah and Amite rivers. *Surface*, level, or slightly undulating; *soil*, generally very fertile. *Cap.* Greensburg. *Pop.* (1897) 8,450.

—A village of the above parish, about 35 m. N.E. by N. of Baton Rouge.

Saint Helena, in *Nebraska*, a post-village of Cedar co.

Saint Helena (Island of). See HELENA (St.).

Saint Helen's Mountain, in *Washington*, volcanic peak of the Cascade Range, at the N.W. angle of Skamania co.; *height*, about 13,400 feet. It is very seldom in a state of eruption.

Saint Helier. See HELIER'S ST.

Saint-Henri-de-Quebec, a village of Dorchester co., prov. of Quebec, abt. 12 m. S.S.E. of Quebec.

Saint Hilaire. See GEOFFROY SAINT HILAIRE.

Saint'hood, *n.* State or condition of being a saint.—The order or collective body of saints.

Saint Hyacinthe, a S. county of prov. of Quebec; *area*, about 477 sq. miles. *Cap.* St. Hyacinthe. Its cap., St. Hyacinthe, is about 30 m. E.N.E. of the city of Montreal.

Saint Ig'nace, in *Michigan*, a thriving city of Mackinaw co. *Pop.* (1897) 2,750.

Saint Ignatius's Beaus. See IGNATIA.

Saint In'igo's, in *Maryland*, a post-village of St. Mary co., abt. 60 m. S. by E. of Annapolis.

Saint'ism, *n.* Characteristic quality of saints. (*n.*)

Saint-Jacques-de-l'Achigan, a village and parish of Montcalm co., prov. of Quebec, about 30 m. N.W. of Montreal; *pop.* 9,000.

Saint Ja'go. See SANTIAGO.

Saint James, in *Louisiana*, a S.E. parish; *area*, abt.

300 sq. m. *Rivers.* Mississippi and Acadien rivers. Lake Maurepas washes the N.E. border. *Surface,* generally level; *soil,* extremely fertile, producing large crops of sugar and Indian corn. *Cap. Convent.* Pop. 16,000.

Saint James, in *Michigan*, a post-village of Charlevoix co., 70 m. N. of Traverse City.

Saint James, in *Missouri*, a post-village of Phelps co., about 10 m. E. of Rolla.

Saint James, in *Nebraska*, a post-village, former cap. of Cedar co., about 48 m. W.N.W. of Sioux City.

Saint Jan, or **SAINT JOHN**, one of the Danish W. Indir islands, lying E. of St. Thomas; *area*, abt. 42 sq. m. *Cap. Christiansburg.* Pop. 3,000.

Saint Joachim, (*yô'a-keem*), a village of Montmorency county, prov. of Quebec, abt. 10 m. N.E. of the city of Quebec.

Saint John, a town on the W. coast of the island of Antigua, W. Indies.

Saint John, or **SAINT JOHN'S**, [Indian *Looshtook*, long river], a river of Maine and New Brunswick, which takes its rise in the highlands which separate Maine from Canada. Flowing N.E. a distance of 100 m., under the name of *Looshtook*, it joins the St. Francis 50 m. below. It then flows E.S.E. to the Great Falls, where it has a perpendicular descent of from 70 to 80 feet. In Lat. 46° N., it turns suddenly, and flows E. to St. John's Harbor. Its whole course is about 450 m., and it is navigable for vessels of 120 tons to Fredericton, 80 m. from its mouth. 75 m. from the Great Falls to the St. Francis forms the boundary between Maine and New Brunswick.

Saint John, a seaport of N. Brunswick, cap. of St. John co., at the mouth of St. John River, 135 m. N.W. of Halifax; Lat. 45° 14' 6" N., Lon. 66° 3' 30" W. The harbor is one of the finest in America. Almost totally destroyed by fire, June 21, 1877; 200 acres were burnt, many lives lost, and property valued at several millions destroyed.

Saint John, in prov. of Quebec, a river flowing into the Assumption River from Montcalm co.—A river flowing into the Gulf of St. Lawrence from Gaspé co.—A considerable lake, abt. 120 m. N. by W. of Quebec. It is nearly circular in outline, and covers an area of abt. 900 sq. m. It receives the Peribona, Mistissiany, and several other rivers, and has its outlet in the Saguenay River.—A town of Chamby co., also called *Dorchester*, abt. 27 m. S.E. of Montreal.

Saint John, in *Illinois*, a village of Lake co., abt. 26 m. N. by W. of Chicago.—A post-village of Perry co., abt. 80 m. N. of Cairo.

Saint John, in *Iowa*, a post-village and township of Harrison co., abt. 22 m. N. of Council Bluffs.

Saint John, in *Michigan*, a post-village, cap. of Clinton co., abt. 98 m. W.N.W. of Detroit.

Saint John, in *Minnesota*, a village of Pine co., abt. 90 m. N.N.E. of St. Paul.

Saint John, in *Nebraska*, a village of Dakota co., abt. 9 m. W.S.W. of Sioux City.

Saint John Baptiste, in *Louisiana*, a S.E. parish; *area*, abt. 200 sq. m. *River.* Mississippi River. It is washed on the N. and S.E. by lakes Maurepas and Pontchartrain respectively. *Surface*, low and level; *soil*, along the rivers, very fertile. *Cap. Edgard.* Pop. (1897) 11,950.

Saint John's, a city, cap. of Newfoundland, and the most E. seaport of N. America, 1,665 m. W. by S. of Galway, Ireland; Lat. 47° 33' 6" N., Lon. 52° 43' W. It is situated on an acclivity, consists chiefly of one street of abt. 1 mile in length, is lighted with gas, and well supplied with water. Its trade consists chiefly in supplying the fishermen with clothing, provisions, and fishing and hunting-gear. Pop. 25,000.

Saint John's, or **SAINT JOHNSTOWN**, in *Delaware*, a village of Sussex co., abt. 28 m. S. of Dover.

Saint John's, in *Florida*, a river rising in Lake Poinsett, near the S. border of Orange co., and flowing in a general N. direction, enters the Atlantic Ocean from Duval co. During its somewhat tortuous course of 200 m. through a low marshy region, it receives numerous smaller streams, and expands into several considerable lakes.—A N.E. co., bordering on the Atlantic Ocean; *area*, abt. 990 sq. m. *River.* St. John's River. *Surface*, level and low; *soil*, sandy, and not very fertile. *Cap. St. Augustine.*

Saint John's, or **SAINT JOHN**, in *Indiana*, a post-village and township of Lake co., abt. 145 m. N.W. by N. of Indianapolis.

Saint John's, in *Ohio*, a post-village of Auglaize co., abt. 90 m. W.N.W. of Columbus.

Saint John's Bread, n. (*Bot.*) See CERATONIA.

Saint Johnsbury, in *Vermont*, a city, cap. of Caledonia co., on the Passumpsic River, abt. 35 m. N.E. of Montpelier. The river affords excellent water-power, and the city contains numerous manufactories, among which is one of patent weighing-scales, said to be the most extensive in the U. States.

Saint Johnsbury Centre, in *Vermont*, a post-village of Caledonia co., abt. 2 m. N. of St. Johnsbury.

Saint Johnsbury East, in *Vermont*, a post-village of Caledonia co., abt. 5 m. N.E. of St. Johnsbury.

Saint John's Creek, in *Missouri*, enters the Missouri River from Franklin co.

Saint Johnsville, in *New York*, a post-village and township of Montgomery co., about 63 m. W. by N. of Albany.

Saint John's Wort, n. (*Bot.*) See HYPERICACEÆ.

Saint Joseph, a lake of British N. America; Lat. 51° 10' N., Lon. 91° W. It covers an area of about 350 sq. m., receives the Catlake River, and empties into St. James' Bay on Hudson's Bay through the Albany River.

Saint Joseph, an island of prov. of Ontario, at the W. end of North Channel, and between lakes Huron and

Superior; Lat. 46° 15' N., Lon. 84° 10' W.; *area*, about 200 sq. m.

Saint Joseph, in *Florida*, a village, former cap. of Calhoun co., on a bay of the same name, about 70 m. S.W. of Tallahassee.

Saint Joseph, in *Indiana*, a N. co., adjoining Michigan; *area*, about 470 sq. m. *Rivers.* St. Joseph and Kankakee rivers. *Surface*, nearly level; *soil*, very fertile. *Min. Iron.* *Cap. South Bend.* Pop. (1897) 54,575.

—A township of Allen co.

Saint Joseph, in *Louisiana*, a post-town, cap. of Tensas parish, about 100 m. N. of Baton Rouge.

Saint Joseph, in *Michigan*, a S.S.W. co., adjoining Indiana; *area*, about 504 sq. m. *Rivers.* St. Joseph (of Lake Michigan), Portage, Prairie, Pigeon, and Fawn rivers. *Surface*, undulating; *soil*, remarkably fertile. *Cap. Centerville.* Pop. (1897) 25,800.

—A post-village and township of Berrien co., about 194 m. W. of Detroit.

Saint Joseph, in *Minnesota*, a village of Stearns co., about 10 m. W. of St. Cloud.

Saint Joseph, in *Missouri*, a city, cap. of Buchanan co., on the Missouri river, about 340 m. above Jefferson City. It is well located, has numerous manufactories, and carries on an extensive trade. The city is regularly and handsomely built, and is thriving rapidly. Pop. (1897) 61,200.

Saint Joseph, in *Ohio*, a township of Williams county.

Saint Joseph, in *Wisconsin*, a township of St. Croix co.

Saint Joseph Bay, in *Florida*, an arm of the Gulf of Mexico, extending S. into Calhoun co. It is 25 m. in length, and has a maximum breadth of 10 m.

Saint Joseph de Maskinongé, or **MASKINONGÉ**, a village and parish of St. Maurice co., prov. of Quebec, abt. 60 m. N.E. of Montreal.

Saint Joseph's Grove, in *Iowa*, a village of Dubuque co., abt. 10 m. S.W. of Dubuque.

Saint Joseph's River, (of Lake Michigan,) rises in Hillsdale co., Michigan, and flowing first N.W. into Calhoun co., then S.W. through Branch, St. Joseph, and Cass cos. into Indiana, where, after a W. course of abt. 30 m., it turns N.W. into Michigan again, and enters Lake Michigan from Berrien co. Length, abt. 250 m. Navigable abt. 120.

Saint Joseph's River, (of the Maumee,) rises in Hillsdale co., Michigan, and flowing S.W. through the N.W. angle of Ohio, into Indiana, it joins the St. Mary's River at Fort Wayne, in Allen co., to form the Maumee River.

St. Just, (*-zhoozt*), ANTOINE, one of the associates of Robespierre, was b. in 1768, and was educated for the legal profession. He voted for the death of Louis XVI. materially assisted in the destruction of the Girondists, acted as a commissioner of the National Convention to the army in Alsace, where he was distinguished for his severity; and, on his return to Paris, becoming involved in the ruin of Robespierre, was guillotined in July, 1794. This demagogue, who was the author of several works, among which were some licentious poems, has often been confounded with LOUIS LEON ST. JUST, the writer of *Esprit de la Révolution, et de la Constitution de France*.

Saint Landry, in *Louisiana*, a central parish; *area*, about 1,700 sq. m. *Rivers.* Atchafalaya and Mermontau rivers. *Surface*, somewhat elevated and undulating; *soil*, very fertile. *Cap. Opelousas.* Pop. (1897) 42,240.

Saint Lawrence, a river of N. America. See LAWRENCE (SAINT).

Saint Leger, (*lêj'r*), in *Missouri*, a post-village of Ozark co., abt. 13 m. S.E. of Gainesville.

Saint Leonard's, (*len'ardz*), in *Maryland*, a post-village of Calvert co., abt. 45 m. S. of Annapolis.

Saint-like, a. *Saintly*; resembling or befitting a saint; as, a *saint-like* show.

Saintliness, n. Quality of being saintly.

Saint Lô, a town of France, cap. of the dept. of Manche, on the Vire, 55 m. S.E. of Cherbourg. Pop. 8,539.

Saint Louis, (*loo'ee*) a seaport, cap. of the island of Mauritius. It is a place of active trade, and exports great quantities of coffee and sugar. Pop. 15,000.

Saint Louis (*loo'is* or *loo'ee*) in *California*, a village of Sierra co., abt. 21 m. N. by W. of Downieville.

Saint Louis, in *Indiana*, a village of Bartholomew co., abt. 11 m. N.E. of Columbus.

Saint Louis, in *Michigan*, a post-village of Gratiot co., abt. 35 m. W. of Saginaw City.

Saint Louis, in *Minnesota*, a N.E. co., adjoining the British possessions; *area*, abt. 6,000 sq. m. *Rivers.* St. Louis, Big White Face, and Cloquet rivers. Lake Superior washes the S.E. border. Vermilion Lake occupies the N. central part, and Rainy Lake forms a part of the N. border of this co. *Surface*, elevated and broken; *soil*, in general, not fertile. *Min. Copper and iron.* *Cap. Duluth.* Pop. (1897) 87,850.

Saint Louis, in *Missouri*, an E. co., adjoining Illinois; *area*, about 492 sq. m. *Rivers.* Mississippi, Missouri, and Maramec rivers. *Surface*, somewhat diversified; *soil*, very fertile, producing fruit and the cereals in abundance. *Min. Stone-coal, iron, and marble.* *Cap. Clayton.* Pop. (1897) 38,480.

—A fine and flourishing city, port of entry, former cap. of above, and the principal place in the State, admirably situated on the Mississippi, 18 m. below the mouth of the Ohio, at the terminus of many important railroads. The city extends along the margin of the river, from which the ground rises by a gentle ascent to a second plateau, about forty feet above the level of the first. Fortifications were erected on this terrace at an early

period in the history of St. Louis; but these have been removed to make way for buildings, and their site is now occupied by streets and houses. In the older part of the city, by the brink of the river, which is the chief seat of trade, the streets are narrow and inconvenient, but of late they have been much improved. The more modern sections, on the high grounds, are laid out in broad avenues and streets, in which are most of the residences of the business and professional men. The old town of St. Louis was chiefly of wood, but since the great fire of 1849 substantially rebuilt, and has many handsome edifices, as, for example, the Court-house (cost \$1,200,000), the Four Courts (cost \$1,000,000), the new U. S. Custom-house and Post-office (cost about \$5,000,000), Merchants' Exchange (costing \$1,000,000), and the Cathedral (R. C.) is an elegant Doric building with a lofty spire and chime of bells. Among the other imposing church buildings, are Christ church (Epis.), Pilgrim church (Cong.), Church of the Messiah (Unitarian), First Presbyterian, and the Jewish synagogue.

Fig. 2294.—SAINT LOUIS.

Among the literary and scientific institutions may be named the St. Louis University, founded by the Jesuits in 1829, which has a valuable museum and library of 25,000 volumes, and the Academy of Sciences, founded in 1856, has a large museum and library, and the St. Louis School and Museum of Fine Arts. The Mercantile Library has over 70,000 volumes and some fine works of art, and the Public School Library has also upwards of 75,000 volumes. St. L. has many spacious parks—Tower Grove has 277 acres, Forrest Park 1,350 acres, the beautiful, but smaller, Lafayette Park of 30 acres, together with Shaw's Garden and several other parks, form in all over 2,000 acres. St. L. has several orphan asylums, homes for the friendless, a house of refuge, a girls' industrial home, industrial school for boys, several free evening schools, an insane hospital, a maternity, an infant hospital, a large marine hospital, 3 general hospitals, 7 convents, and many other benevolent institutions, upon both individual and State foundations, which attest the intelligent philanthropy of its citizens; while the literary and professional organizations are of a corresponding high order. The periodical press, embracing some 60 publications, exercises commanding influence upon public opinion; and educational zeal is manifested by a complement of schools fully equal to the average of our largest cities of the east. Steamboats of the largest class come close up to the levee; and St. Louis, whose commercial importance is incessantly increasing, has become the grand emporium of the regions on the Missouri and the Upper Mississippi. The bridge, made of iron and steel, over the Mississippi at this city is one of the grandest in the world, built by Captain Eads and completed in 1874, at a total cost of \$10,000,000; it is nearly 5,000 feet in length, built in two stories, and of sufficient elevation to permit the passage of steamboats. The new Union R.R. dépôt is an immense building. The great tunnel (7,000 ft.) under the city runs from it to the bridge. St. L. is largely engaged in manufactures. Her flouring-mills are numerous, and enjoy a high reputation; and her large sugar-refineries manufacture most of the sugar consumed in the Mississippi Valley. Oils and chemicals are largely manufactured. The manufacture of hemp into bale-rope and bagging, the distillation of whiskey, and the manufacture of tobacco, occupy many hands. The packing of pork, beef, lard, and hams employs a very large capital. In its tobacco product it has no equal. An important event in the history of the city was the Louisiana Purchase Exposition, a World's Fair held in 1904, in commemoration of the acquisition from France in 1803 of the territory of Louisiana. The site selected was nearly 1200 acres in extent, about twice the area occupied by any preceding Exposition. On this were erected numerous handsome buildings, covering about 126 acres, which were dedicated with appropriate ceremonies April 30, 1903. These were filled with striking exhibits from all quarters of the world, while the ample grounds were decorated in the highest style of landscape art. The Exposition was largely attended, and was held to be unsurpassed in beauty and grandeur. Pop. (1900) 575,238.

Saint Louis River, rises in St. Louis co., Minnesota, and flowing first S.S.W., then S.E. to the borders of Wisconsin, turns to the N.E. and enters Lake Superior.

Saint Louisville, in *Ohio*, a post-vill. of Licking co.

Saint Lucia (*lu'she-a*), one of the smaller Cape de Verde Islands, bet. St. Nicholas and St. Antonio; Lat. 16° 49' N., Lon. 24° 47' W. Ext. 10 m. long and 3 broad

Saint Lu'eia. (*Geog.*) See LUCIA, St.

Saint Lu'eie, in *Florida*, the former name of Brevard co., a S.E. district, bordering on the Atlantic Ocean; *area*, 2,446 sq. m. The Indian river extends along the E. border. *Surface*, low and largely swampy; *soil*, in some parts fertile. *Cap.* Titusville. *Pop.* (1897) 4,752.

Saintly. *a.* (*comp.* SAINTLIER, *superl.* SAINTLIEST.) Like a saint; becoming a holy, devout person; as, *saintly* patience.

Saint Mar'a, in *Wisconsin*, a township of Green Lake co.

Saint Marie', in *Illinois*, a post-village and township of Jasper co., about 60 m. E. by S. of Vandalia.

Saint Mark's, in *Florida*, a small river flowing S. into the Gulf of Mexico from Wakulla co.

—A post-village, port of entry, the former cap. of Wakulla co., on St. Mark's River, abt. 26 m. S. by E. of Tallahassee. It has a safe harbor for vessels drawing 8 feet of water, and being the port of Tallahassee, it commands an extensive trade. At the E. side of the entrance to the harbor is a light-house, exhibiting a fixed light 73 feet high; *Lat.* 30° 4' N., *Lon.* 84° 20' W.

Saint Martin, an island of the W. Indies, between Anguilla and St. Bartholomew; *Lat.* 18° 4' N., *Lon.* 53° 10' W. *Area*, about 30 sq. m. In 1638, this island was settled by the French and Dutch, the former occupying still the N., and the latter the S., part. *Pop.* (Freuch) 4,000; (Dutch) 4,500.

Saint Martin, an island in the Pacific Ocean, off the W. coast of Patagonia, S. of Madre de Dios; *Lat.* 50° 40' S., *Lon.* 75° 26' W.

Saint Martin, a village and parish of Terrebonne co., prov. of Quebec, abt. 12 m. N.W. of Montreal; *pop.* 4,500.

Saint Martin's, in *Louisiana*, a S.S.E. parish; *area*, about 620 sq. m. *Rivers*, Grand river, and Atchafakaya and Teche bayoux. *Surface*, level; *soil*, in the vicinity of the streams extremely fertile, producing large crops of Indian corn and sugar. *Cap.* St. Martinsville. *Pop.* (1897) 16,020.

Saint Martin's, in *Maryland*, a small river flowing through Worcester co. into Sinepuxent Sound.—A post-village of Worcester co., about 120 m. S.E. of Annapolis.

Saint Martin's Keys, in *Florida*, a small cluster of islets in the Gulf of Mexico; *Lat.* 28° 42' N., *Lon.* 83° 30' W.

Saint Martinville, in *Louisiana*, a post-village, cap. of St. Martin's parish, about 125 m. W.S.W. of Baton Rouge.

Saint Mary's, a group of islands in the Gulf of St. Lawrence, off the S. coast of Labrador; *Lat.* 50° 20' N., *Lon.* 60° W.—A S.E. district of Newfoundland.

Saint Mary, in *Iowa*, a village of Mills co., about 230 m. W. of Iowa City.

Saint Mary's, in *Georgia*, a post-village, port of entry, and cap. of Camden co., on St. Mary's river, about 9 m. above its mouth.

Saint Mary's, in *Indiana*, a township of Adams co.

Saint Mary's, in *Iowa*, a village of Linn co., about 20 m. N. by E. of Iowa City.—A township of Mills co.

Saint Mary's, in *Louisiana*, a S. by E. parish, bordering on the Gulf of Mexico; *area*, about 640 sq. m. *Rivers*, Atchafakaya and Teche bayoux. *Surface*, level; *soil*, extremely fertile. *Cap.* Franklin. *Pop.* (1897) 23,640.

Saint Mary's, in *Maryland*, a S. co., bordering on the Chesapeake Bay; *area*, about 360 sq. m. *Rivers*, Potomac and Patuxent rivers. *Surface*, nearly level; *soil*, fertile. *Cap.* Leonardtown. *Pop.* (1897) 15,960.

Saint Mary's, in *Minnesota*, a village of Waseca co., about 22 m. S.E. of Mankato.

Saint Mary's, in *Nevada*, a village of Humboldt co., abt. 40 m. N. of Unionville.

Saint Mary's, in *Ohio*, a post-village and township of Auglaize county, about 105 miles west north-west of Columbus.

Saint Mary's, in *W. Virginia*, a post-village, cap. of Pleasants co., abt. 64 m. S.S.W. of Wheeling.

Saint Mary's Landing, in *Missouri*, a village of St. Genevieve co., abt. 70 m. S. by E. of St. Louis.

Saint Mary's River, rises in the Okefinokee Swamp, in Ware co., *Georgia*, and flowing S. to the border of *Florida*, continues to form the boundary of these two States until it enters the Atlantic Ocean; *length*, abt. 100 m.

Saint Mary's River, rises in Auglaize co., *Ohio*, and flowing N.W. into *Indiana*, joins the St. Joseph River in Allen co. to form the Maumee River.

Saint Mary's Strait, a channel connecting Lake Superior with Lake Huron, and separating the upper peninsula of Michigan from Canada. It is abt. 63 m. in length, and is navigable to within 1 m. of Lake Superior. Here it has a fall of 22 ft. in $\frac{3}{4}$ of a m. A canal, (one of the finest works of the kind in the Union,) has been constructed around this obstacle, and communication between all the great lakes is now complete.

Saint Maurice, (*mô'ris*), a co. of prov. of Quebec; *area*, abt. 7,300 sq. m. *Cap.* Three Rivers.

—A village of the above co., abt. 84 m. S.W. of Quebec.

Saint Michael's, (*mik'ls*), in *Maryland*, a river flowing into Chesapeake Bay from Talbot co.

—A post-village of Talbot co., abt. 57 m. S.E. of Annapolis.

Saint Michael's Bay, an inlet of the Atlantic Ocean, on the E. coast of Labrador; *Lat.* 52° 56' N., *Lon.* 55° 30' W.

Saint Mo'ran, in *Michigan*, a township of Mackinaw co.

Saint Nazian, (*nā'zhan*), in *Wisconsin*, a village of Manitowoc co., abt. 33 m. E.N.E. of Fond du Lac.

Saintologist. (*-jist*), *n.* (*Theol.*) One who is learned in the knowledge of saints;—also, a biographer of saints.

Saint Omer, (*ô'mair*), in *Indiana*, a post-village and

township of Decatur county, about 36 miles S.E. of Indianapolis.

Saintonge, (*sant'awng*), an old W. prov. of France, bordering on the Atlantic, now forming the depts. of Charente-Inférieure, Deux-Sèvres, and Charente.

Saint Par'is, in *Ohio*, a post-village of Champaign co., abt. 58 m. W. of Columbus.

Saint Paul, an island of British N. America, in the Gulf of St. Lawrence, abt. 8 m. N.E. of North Point, Cape Breton Island. It exhibits 2 fixed lights. *Lat.* (of N. Point) 47° 14' N., *Lon.* 60° 9' W.

Saint Paul, in *Indiana*, a post-village of Decatur co., abt. 35 m. S.E. of Indianapolis.

Saint Paul, in *Iowa*, a post-village of Lee co., abt. 22 m. W. by S. of Burlington.

Saint Paul, in *Minnesota*, a city, port of entry, cap. of Ramsey co., and seat of the State government, on the Mississippi River, 2,070 m. above its mouth, and 9 m. below the Falls of St. Anthony; *Lat.* 44° 52' 46" N., *Lon.* 93° 5' W. The city is finely located on a bluff, 70 or 80 feet above the river. It was first settled in 1840, and is now the most populous city in the State, as well as one of the most important commercial places of the N.W.

It contains a fine State House, and other buildings devoted to literature, science, benevolence, &c., while its churches and schools are on a scale commensurate with its rapid progress as a city, indicating a worthy aspiration for moral and intellectual improvement. Situated almost at the head of navigation on the Mississippi River, S. P. commands an extensive and rapidly increasing commerce. *Pop.* (1900) 163,632.

Saint Paul, in *Missouri*, a village of Webster co., about 25 m. E. of Springfield.

Saint Paul's, in *North Carolina*, a post-village of Robeson co., about 20 m. S.S.W. of Fayetteville.

Saint Paul's Bay, a village and parish of Saguenay co., pr. of Quebec, about 60 m. N.E. of Quebec. *Pop.* 3,000.

Saint Peter, in *Minnesota*, a city, cap. of Nicollet co., about 75 m. S.W. of St. Paul. *Pop.* (1895) 4,251.

Saint Peter's Lake, an expansion of the St. Lawrence River, between *Lat.* 46° and 46° 8', and *Lon.* 73° W.; *length*, abt. 35 m.; greatest breadth 10 m.

Saint Peter's (or MINNESOTA) River, in *Minnesota*, rises in Big Stone Lake, on the W. border of the State, and flows S.E. to Blue Earth co.; thence turning N.E., it enters the Mississippi River between Hennepin and Dakota cos. *Length*, abt. 450 m.

Saint Peter's Wort. *n.* (*Bot.*) See ASCRYUM.

Saint Pierre, JACQUES HENRI BERNARDIN DE, a French miscellaneous writer, was b. at Havre, in 1737, was educated in the engineer school at Paris; for a time he followed the military profession in the service of Russia; afterwards obtained a commission in the engineer corps of France; spent three years in the Isle of France, about 1770-73; and, retiring from military life, he devoted the remainder of his days to literature. In 1784 appeared his *Etudes de la Nature*, and in 1788, his *Paul et Virginie*, which, after passing through 50 editions in one year, has been translated into almost all the languages of Europe. "For many years," says Humboldt, "it was the constant companion of myself, and my valued friend and fellow-traveller Bonpland; and often, in the calm brilliancy of a southern sky, or, when in the rainy season the thunder reechoed and the lightning gleamed through the forests that skirt the shores of the Orinoco, we felt ourselves penetrated by the marvellous truth with which tropical nature is described in this little work." Carlyle has called it "the swan-song of old dying France." Napoleon conferred on St. Pierre the order of the Legion of Honor, and Joseph Bonaparte granted him a pension of 2,000 francs. St. Pierre was also the author of *La Chaumière Indienne*, *Harmonies de la Nature*, and several other works, all marked by elegant taste and philosophical feeling. D. 1814.

Saint Pierre, a small island on the S. coast of Newfoundland, and which, with the two islands of *Miquelon*, belong to France, and compose the all of her possessions in N. America. *Pop.* 1,700.

Saint Pierre, a city of the island of Martinique, and its commercial port. It was utterly destroyed, with its 30,000 inhabitants, on May 8, 1902, by an eruption of Mount Pelee, a volcano in its vicinity, the citizens being killed by heated and poisonous gases. See MARTINIQUE.

Saint Regis River, in *New York*, rises in Franklin co., and, flowing N. by W., enters the St. Lawrence River between St. Lawrence and Franklin cos.

Saint's Bell. *n.* (*Ecol.*) See SACRING-BELL.

Saint-seeming. *a.* Assuming the characteristics of a saint; as, *saint-seeming* piety.

Saintship. *n.* The character or qualities of a saint.

"Whose eyes might shake the saintship of an anchorite."—*Byron*.

Saint Simon, (*se-mawng*), CLAUDE HENRI, COUNT DE, a celebrated French social philosopher, grandson of the following, b. at Paris, 1760. After completing his education he entered the army, and in 1777 was included in an expedition sent by Louis XVI. to assist this country in her war with England. After seeing some service under Washington, and travelling through Mexico, he returned to France, and was appointed colonel in the French army. He, however, took no interest in his military duties, as he intended to devote his life to the advancement of human civilization. On the breaking out of the Revolution, though he warmly sympathized with the movement, he took no part in the subsequent events, but retired entirely from the army, and bought a considerable quantity of confiscated land, with the view of establishing a large scientific and industrial school; but the scheme was a failure, and St. Simon retired from it after losing a vast sum of money. From this time he devoted himself to what he termed a "physico-political" reformation, for which purpose he

entered into the study of all the physical sciences—mathematics, astronomy, general physics, and chemistry,—and all the general science attainable with respect to organized beings. He next proceeded to make his *experimental education*, he married, and continued to pursue his prescribed career, in which good and evil were confounded, and every kind of dissipation followed each other in rapid succession. This, however, in 1807, came to an end; his fortune was gone, and he was compelled to become a clerk in a government office at a small yearly salary. In 1812, he being then in his fifty-second year, he considered it time to "establish his theory," and published a number of remarkable works, which, however impracticable and visionary in their character, attracted round him a large number of disciples. His last efforts were directed towards the foundation of a new religion, which he called the *New Christianity*, in which society was to be reorganized upon this formula:—"To each man a vocation according to his capacity, and to each capacity a recompense according to its worth." Before breathing his last he gave his final instructions to his chief disciples, among whom were Augustine Thierry, the great historian, and Comte, the future author of the *Positive Philosophy*. His most important works, *Introduction to the Scientific Labors of the Nineteenth Century*; *The Reorganization of European Society*; and *New Christianity*. D. 1825. After the death of its founder, St. Simonianism experienced some curious mishaps. Several of its most enthusiastic followers established a little church, where a mystical theology was propounded. In 1830 a weekly journal was started in furtherance of the movement, which had now attracted numbers of the educated classes to embrace its dogmas; but a split occurred between the leaders of the sect; one party formed a kind of monastic community, which, after a short time, was suppressed by the government. M. Enfantin, the abbot, being sentenced to a term of imprisonment.

Saint Simon, LOUIS DE ROUVROI, DUKE DE, was b. in 1675. He entered the army early, and served in the campaigns in Flanders, was a member of the Council of Regency under the Duke d'Orleans, and in 1721 was appointed ambassador-extraordinary to the court of Spain, to negotiate a marriage between the Infanta and Louis XV.; and d. in 1755. His *Memoirs of the Reign of Louis XIV. and the Regency* contain a vast mass of information, and possess great historical value as a vivid, and, on the whole, truthful representation of the times.

Saint-Simonian. *n.* (*Pol. Econ.*) A disciple of St. SIMON (COUNT DE), *q. v.*

Saint-Simonianism. *n.* The theories, principles, or practice inculcated by the Saint-Simonians.

Saint Stefano, Stefano. See BERLIN, TREATY OF.

Saint Stephen, in *Neb.*, a village of Richardson co.

Saint Stephen's, a seaport town of New Brunswick, about 60 m. W. of St. John.

Saint Tammany, in *Louisiana*, a S.E. parish, bordering on Mississippi and Lake Pontchartrain; *area*, about 915 sq. m. *Rivers*, Pearl and Cadeaux rivers. *Surface*, uneven; *soil*, not generally fertile. *Cap.* Covington. *Pop.* (1897) 10,950.

Saint Thomas, an island of the Virgin group, W. Indies, belonging to Denmark, abt. 38 m. E. of Porto Rico; *Lat.* 18° 20' 24" N., *Lon.* 64° 55' 45" W. *Area*, abt. 45 sq. m., only 2,500 acres of which are under cultivation. *Prod.* Sugar, rum, &c. S. T. having a free harbor, is visited annually by a large number of vessels, and is a place of much business activity. *Cap.* Charlotte Amalie. *Pop.* abt. 14,000.

Saint Thomas, a town of prov. of Ontario, co. of Middlesex, abt. 17 m. S. of London.

Saint Thomas, a village of Lower California, abt. 30 m. S.S.E. of San Diego.

Saint Thomas, in *Missouri*, a post-village of Cole co., abt. 15 m. S. of Jefferson City.

Saint Thomas, in *Pennsylvania*, a post-village and township of Franklin co., abt. 10 m. W. of Chambersburg.

Saint Vincent, an island of the W. Indies, belonging to Great Britain, abt. 100 m. W. of Barbadoes; *Lat.* 13° 13' N., *Lon.* 61° 15' W.; *area*, abt. 132 sq. m. *Surface*, pleasantly diversified, a volcanic ridge intersecting the island from N. to S., the culminating peak of which, called the *Souffriere*, was in a state of terrific eruption in 1812, and again in 1902, when great destruction was caused. *Prod.* Sugar, rum, molasses, arrow-root, and cotton. *Cap.* Kingstown. *Pop.* 32,000.

Saint Vitus' Dance. *n.* (*Med.*) See CHOREA.

Saint Vrain, in *Colorado*, a thriving post-village, cap. of Weld co., abt. 50 m. N. by E. of Denver.

Sajou. *n.* (*Zool.*) A lively and active monkey, of the *Cebidae*, genus *Cebus*; docile, but somewhat capricious. It has a prehensile tail, though it is not so delicate an organ of touch as in some other species. In their native forests they live in troops, feeding on fruits, grain, eggs, &c.

Sake. *n.* [A. S. *sacu*, a suit in law.] Final cause; end; aim; purpose; or rather, the purpose of obtaining; account; regard to any purpose or thing;—principally used in the phrases, *for my sake*, *for the sake of*, *for his* (or *her*) *sake*, *for mercy's sake*, &c.

Saker. *n.* [*Fr.*] (*Mil.*) A kind of ordnance used in the 16th century, throwing a $5\frac{1}{2}$ lb. ball, and of $3\frac{1}{2}$ inches calibre.

Saki. *n.* (*Zool.*) A monkey, called also Fox-tailed Monkey, belonging to the *Cebidae*, genus *Pithecia*. These animals usually reside in the outskirts of forests, in small societies of ten or twelve individuals. Upon the slightest provocation they display a morose and savage temper; and, like the Howlers, they utter loud cries before sunrise and after sunset.

Sakina'ra, a river of Asiatic Russia, rising in the Ural Mountains, and after a S. course of 350 m., joining the Ural River, 20 m. S.E. of Orenburg.

Sal, *n.* (*Chem.*) This word was formerly used as a prefix to signify a crystallizable compound; as, for example, *sal-ammoniac*, or chloride of ammonium; *sal-enixum*, acid sulphate of potash; *sal-prunella*, fused nitrate of potash; *sal-acetosella*, oxalate of potash; *sal-volatile*, carbonate of ammonia, or liquid ammonia; *sal-gem*, or rock-salt.

Salaam, *Salam*, *n.* [*Ar. salām*, peace.] A salutation practised by the Orientals, as a mark of deference or respect;—hence, a bow; an obeisance; as, to make a *salaam*.

Salable, *a.* [*From sale*.] That may be sold; marketable; merchantable; in good demand; as, *salable commodities*.

Salableness, *n.* Quality, or state, of being salable.

Salably, *adv.* In a salable manner.

Salacious, (*-lū'shūs*), *a.* [*Lat. salax*, *salacio*, fond of leaping, from *salire*, to leap.] Lustful; lecherous; lascivious.

Salaciously, *adv.* Lustfully; with hot, carnal appetite.

Salaciousness, **Salacity**, (*-lū's-i-ty*), *n.* [*Lat. salacitas*.] Hot lust; strong propensity to indulge the sexual passions; lasciviousness.

Salad, *n.* [*Fr. salade*; *It. insalata*, from *Lat. sal*, salt.] A preparation of raw herbs, as lettuce, radish, onion, &c., generally dressed with salt, oil, vinegar, &c., or other condiments, and used as a relish to other food; as, to dress a *salad*.

(*Cookery*) A dish, as of chicken or lobster, minced fine, and intermixed with green herbs, as lettuce, onion, &c., seasoned with mustard, oil, and other condiments; as, we supped off lobster-*salad* and champagne.

Salad-bowl, (*-bōl*), *n.* A large bowl or basin wherein salad is mixed and served.

Salade, **Sallet**, *n.* A light kind of helmet (Fig. 2295) introduced during the 15th century, chiefly for the use of foot-soldiers.

Saladin, or **Salaheddin**, a celebrated sultan of Egypt and Syria, b. 1137, who, in the time of the Crusades, distinguished himself by his valor. He made great conquests in Syria, Arabia, Persia, and Mesopotamia; after which he defeated the Christians with great slaughter, near Tiberias, and took Gny de Lusignan, King of Jerusalem, prisoner. This was followed by the surrender of Jerusalem, where he behaved with great generosity to the Christians. In 1189 Richard Cœur-de-Lion, with his ally Philippe Auguste, King of France, laid siege to Acre, which, after a two years' struggle, was taken by them. The crusaders subsequently took Caesarea and Jaffa, and Richard Cœur-de-Lion advanced to within a short distance of Jerusalem; but a truce was afterwards concluded between Saladin and the Christians; soon after which the Sultan died, broken down by his constant toil. D. at Damascus, 1192.

Salading, *n.* Herbs or vegetables for salads.

Salado Bay, an inlet of the Pacific Ocean, in the dept. of Coquimbo, Chili, S. of Copiapo.

Salado Creek, in Texas, enters the San Antonio River from Bexar co.

Salahieh, (*sal-la-he-a*), a town on the E. frontier of Egypt, 36 m. from Belbeis: pop. 6,000.

Salal-berry, *n.* (*Bot.*) The fruit of *Gaultheria shallon*, growing in the valley of the Oregon, abt. the size of a common grape, of a dark-purple color, and of sweet, pleasant flavor.

Sal-alem'broth, *n.* (*Chem.*) See ALEMBROTH.

Salam, *n.* Same as SALAAM, *q. v.*

Salamanca, a city of Spain, cap. of a prov. of the same name, on the Tormes, a tributary of the Douro, 92 m. S.W. of Leon, and 119 W.N.W. of Madrid. The city stands on 3 small hills, and is surrounded by walls. It has numerous squares and public buildings. The Cathedral is a majestic Gothic edifice. The University,

posite the mouth of the Magdalena River, abt. 30 m. S.W. of Santa Marta.

Salamanca, in N. Y., a twp. of Cattaraugus co.

Salamander, *n.* [*Ar. samander*, from *samad*, perpetual, eternal.] Originally, a fabulous animal supposed by the ancients to live in the fire, and to be very poisonous. (*Zoöl.*) See SALAMANDRIDÆ.

—In England, a circular iron plate employed for culinary purposes;—also, a large poker, placed in the fire till red-hot, and then used in heating ale, &c.

Salamander safe, in the U. States, a particular kind of fire-proof iron safe.

Salamandridæ, *n. pl.* (*Zoöl.*) The Salamander fam., order Urodela, comprising tailed batrachia, divided into *Salamander proper* and *Tritons*. More

than twenty species are found in the U. S., from two and a half to twelve inches long. They have no sternum, ribs rudimentary, legs four, fingers four, and toes five in most genera; and, contrary to what is seen in frogs and toads, the fore feet are developed before the hind ones. In their adult state, most *Salamanders proper* live upon the land, approaching the water only at the season in which they lay their eggs. Some are terrestrial throughout life, laying their eggs under stones and old logs in damp places. The *Tritons* have the tail compressed, and are entirely aquatic; yet, as they respire by means of lungs, they come to the surface of the water from time to time for atmospheric air. They have the most wonderful power to reproduce mutilated or lost parts. The limbs may be removed, and in less than a year they will grow again; and the new-formed limbs may in turn be amputated, and will in turn be replaced by others. Even the eye, when destroyed, is said in time to be reproduced.

Salamandrine, *a.* Having the property of resisting fire; pertaining or relating to, or resembling a salamander.

Salamandroid, *a.* [*Gr. salamandra*, and *eidos*, form.] Resembling the salamanders.

Salamauque, (*-kēz'*), *n., sing. and pl.* (*Geog.*) A native or inhabitant of Salamanca, Spain; plurally, the people of Salamanca.

a. (*Geog.*) Pertaining, or relating, to Salamanca, or its inhabitants.

Salamis, (*anc. Geog.*) a mountainous island of Greece, off the coast of Attica, and forming with it the Bay of Eleusis; area, 30 sq. m. Its modern name is *Koluri*. Pop. 5,000. The Persian fleet, under Xerxes, was defeated in the Bay of Salamis by the Greek fleet, commanded by Themistocles, in Dec., B.C. 480. The Persian fleet consisted of 1,207, and the Greek of 366 ships.

Sal-ammo'nia, *n.* (*Chem.*) See AMMONIA (CHLORIDE OF).

Salamo'nie, in Indiana, a river rising in Jay co., and flowing N.W. enters the Wabash River in Wabash co.—A township of Huntington co.

Salam-stone, *n.* (*Min.*) The SAPPHIRE, *q. v.*

Salan'ga, an island of Ecuador, in the Pacific Ocean, abt. 80 m. N.W. of Guayaquil.

Salariéd, (*sal'ō-rīd*), *a.* Having or enjoying a salary; as, a *salariéd official*.

Salary, *n.* [*Fr. salaire*; *Lat. salarium*, said to be from *sal*, salt, because salt was part of the pay of the Roman soldiers.] The recompense, or consideration, stipulated to be paid to a person for services, usually a fixed sum to be paid annually or periodically; stipend; pay; wages; hire; allowance.

—*v. a.* To allow or pay a salary to a person; as, a *salariéd judge*, a *salariéd clerk*.

Salawatty, (*sal-a-wat'te*), an island of the Eastern Archipelago, off the W. coast of Papua, Lat. 1° S., Lon. 130° E. Ext. 35 m. long, and 25 broad.

Sal, *n.* [*Ice. sal*, *sal*; *Dan. sely*, a selling. See SELL.] Act of selling; the exchange of a commodity for money of equivalent value, paid, or to be paid; as, a *sale* of cotton on 14 days' credit. — Power of selling; market; demand; as, there is always a ready *sale* for such goods. — Auction; public disposal of goods to the highest bidder; as, I bought that table at a *sale*. — State of being venal, or of being open to bribery; state of being to be sold; as, the *sale* of a vote to a buyer. — *Of sale, on sale, for sale*, offered to purchasers; to be bought or sold; as, he has books for *sale*.

To *sell to sale*, to offer for sale; to make merchandise of. (*Law*) That transaction by which the ownership of property is transferred from one person to another, in consideration of a money payment made by the buyer to the seller. If it be a commutation of goods for goods, it is more properly an *exchange*. In order to the validity of a *sale*, it is necessary that the parties act in good faith; for it is a maxim in law, that fraud vitiates all contracts. Neither is a *sale* valid if the subject matter of it is illegal or prohibited, or if an essential part of it involves an illegal act. In order to constitute a *sale*, the consent of each of the parties is required; and hence each must be legally qualified to consent. See BARGAIN AND SALE.

Sal'lem, a town of British India, presidency of Madras; Lat. 11° 38' N., Lon. 78° 12' E.

Sal'lem, in Arkansas, a post-village, cap. of Fulton co., abt. 140 m. N. of Little Rock.

Sal'lem, in Connecticut, a post-township of New London co.

Sal'lem, in Illinois, a township of Carroll county.—A township of Knox county.—A city, cap. of Marion county, about 14 miles northeast of Centralia. Pop. (1897) 1,625.

Salem, in Indiana, a township of Delaware county.—A township of Pulaski county.—A village of Randolph county, about 83 miles northeast of Indianapolis.—A township of Steuben county.—A post-town, cap. of Washington county, about 36 miles northwest of New Albany. It is finely located, has some extensive manufacturing, and is a place of considerable activity. Pop. (1897) 2,250.

Sal'lem, in Iowa, a post-village and township of Henry co., abt. 25 m. W. of Burlington.

Salem, in Kentucky, a post-village of Livingston co., abt. 200 m. W.S.W. of Frankfort.

Salem, in Maine, a post-township of Franklin county.

Salem, in Massachusetts, a city, port of entry, and one of the caps. of Essex co., on a point of land in Massachusetts Bay, formed by two inlets called N. and S. rivers, 14 m. N.E. of Boston; Lat. 42° 31' 18" N., Lon. 70° 53' 53" W. It is an important commercial and manufacturing city of New England, and though irregularly laid out, is well built, and contains many handsome residences. The harbor is commodious and well protected. The East India Marine Society, composed of men who had doubled the Cape of Good Hope, has a large museum of oriental curiosities; the Essex Institute, with a large library and scientific collections, each now forming a part of the Peabody Acad. of Science, founded in 1863, with a gift of \$150,000; the Salem Athenæum has also a fine library. There are also a normal and several grammar schools, cotton-mills, manufactures of chemicals, varnishes, leather, jute, shoes, machinery, &c. Salem, after Plymouth, is the oldest town of New England having been settled in 1628, 8 years after the arrival of the Pilgrim Fathers. In 1692, nineteen persons were burned at S. for practising witchcraft. S. was noted for its patriotic zeal in the Revolutionary War, taking an important part in the fitting out of privateers—it is said to the number of 60. It was incorporated as a city in 1836. It had formerly a large foreign commerce, and still has a good coasting trade.

Salem, in Mich., a twp. of Allegan co.—A post-vill. and twp. of Washtenaw co., abt. 30 m. W. by N. of Detroit.

Salem, in Mississippi, a former post-vill. of Tippah co.

Salem, in Missouri, a city, cap. of Dent co., about 25 m. S.S.E. of Rolla. Pop. (1897) 1,410.

Salem, in New Hampshire, a post-village and township of Rockingham county, about 35 miles S.E. by S. of Concord.

Salem, in New Jersey, a S.W. co., on Delaware Bay; area, about 340 sq. m. Rivers, Delaware and Maurice; rivets, and Oldman's, Stow, Salem, and Alloway's creeks. Surface, mostly level; soil, in some parts very fertile. Min. Some iron is found. Marl is abundant. Cap. Salem. Pop. (1895) 26,084.

—A city, cap. of the above co., about 65 m. S.W. of Trenton. *Manuf.* Glass. Pop. (1895) 6,327.

Salem, in New York, a village of Chautauque co., about 50 m. W.S.W. of Buffalo.

—A post-village and township, semi-cap. of Washington co., about 48 m. N.N.E. of Albany.

Salem, in North Carolina, a city of Forsyth co., about 120 m. W. by N. of Raleigh. *Manuf.* Cotton and woolen goods, paper, &c. Pop. (1897) 3,450.

Salem, in Ohio, a township of Auglaize county.—A township of Champaign county.—A city of Perry township, Columbiana county, about 167 m. N.E. of Columbus. *Manuf.* Locomotives, agricultural machines and implements, pottery, &c. Pop. 6,500.—A post-township of Columbiana county.—A vill. of Gnerhsey county, about 30 miles north-east of Zanesville.—A township of Highland county.—A township of Jefferson county.—A township of Meigs county.—A township of Monroe county.—A village of Montgomery county, about 12 miles north-west of Dayton.—A township of Muskingum county.—A township of Ottawa county.—A township of Shelby county.—A township of Tuscarawas county.—A township of Warren county.—A village and township of Washington county, about 14 miles north by east of Marietta.—A township of Wyandot county.

Salem, in Oregon, a city, capital of the State, and seat of justice of Marion county, on the Willamette River, about 110 miles north of San Francisco. Latitude, 44° 56' north; longitude, 123° 1' west. It is generally well built, contains some fine public and private edifices, several extensive manufacturing, and is thriving rapidly.

Salem, in Pennsylvania, a township of Clarion county.—A township of Luzerne county.—A township of Mercer county.—A township of Wayne county.—A township of Westmoreland county.

Salem, in Vermont, a township of Orleans co.

Salem, in Virginia, a village of Fauquier county, about 114 miles N.N.W. of Richmond.—A post-village, cap. of Roanoke county, about 180 miles west of Richmond.

Salem, in Wisconsin, a post-township of Kenosha county.—A post-village of La Crosse county, abt. 12 miles N.E. of La Crosse.

Salem Centre, in New York, a post-village of Westchester co., abt. 112 m. S. by E. of Albany.

Salem Church, in N. Carolina, a post-village of Randolph co., abt. 121 m. W. of Raleigh.

Salem Church, in Virginia, a place some miles W. of Fredericksburg, where, May 3, 1863, the National under Gen. Sedgwick attacked the Confederates under Gen. Wilcox, and were repulsed with great slaughter.

Sal'lem, in Illinois, a township of Carroll county.—A township of Knox county.—A city, cap. of Marion county, about 14 miles northeast of Centralia. Pop. (1897) 1,625.

Salem, in Indiana, a township of Delaware county.—A township of Pulaski county.—A village of Randolph county, about 83 miles northeast of Indianapolis.—A township of Steuben county.—A post-town, cap. of Washington county, about 36 miles northwest of New Albany. It is finely located, has some extensive manufacturing, and is a place of considerable activity. Pop. (1897) 2,250.

Sal'lem, in Iowa, a post-village and township of Henry co., abt. 25 m. W. of Burlington.

Salem, in Kentucky, a post-village of Livingston co., abt. 200 m. W.S.W. of Frankfort.

Salem, in Maine, a post-township of Franklin county.

Salem, in Massachusetts, a city, port of entry, and one of the caps. of Essex co., on a point of land in Massachusetts Bay, formed by two inlets called N. and S. rivers, 14 m. N.E. of Boston; Lat. 42° 31' 18" N., Lon. 70° 53' 53" W. It is an important commercial and manufacturing city of New England, and though irregularly laid out, is well built, and contains many handsome residences. The harbor is commodious and well protected. The East India Marine Society, composed of men who had doubled the Cape of Good Hope, has a large museum of oriental curiosities; the Essex Institute, with a large library and scientific collections, each now forming a part of the Peabody Acad. of Science, founded in 1863, with a gift of \$150,000; the Salem Athenæum has also a fine library. founded in 1239, was formerly celebrated and the principal seat of learning in Spain. *Manuf.* Hats, woollens, shoes, leather, earthenware, glue, starch, &c. The French under Marmont were here defeated by the Anglo-Spanish army under Wellington, in 1812. Pop. 15,500.

Salaman'ca, an island of the Republic of Colombia, op-

Salem Creek, in New Jersey, enters Delaware Bay from Salem co.

Salem Cross-Roads, in Pennsylvania, a post-village of Westmoreland co., abt. 180 m. W. of Harrisburg.

Sal'emi, a town of Italy, in Sicily, prov. of Trapani, 20 m. E. of Marsala; pop. 13,860.

Sal'ep, *n.* See EULOPHIA, and ORCHIE.

Salera'tus, *n.* [Lat. *sal*, salt, and *aër*, air.] A salt intermediate in composition between a carbonate and a bicarbonate of potash, prepared from pearl-ash by exposing it to carbonic acid gas;—much used in making bread, to neutralize acetic acid, or tartaric acid, and thus render the bread light by the escape of the carbonic acid gas.

Salerno, a city of S. Italy, capital of the province of Salerno (formerly Principato-Citeriore), on the Gulf of Salerno, 28 miles S.E. of Naples. It is irregularly built, and of a gloomy appearance. There are in front of the cathedral 28 ancient granite columns, with Corinthian capitals of good workmanship. Pop. 24,241. The Gulf is separated from the Bay of Naples by Cape Campanella. It is 36 m. broad, and receives the river Sall.

Sales'man, *n.*; *pl.* SALESMEN. [From *sale* and *man*.] One who is employed in selling goods or merchandise.

Saley, or SALAYER ISLANDS, (*sa-lai'yer*), in the E. Archipelago, off the S. coast of the island of Celebes; Lat. 6° S., Lon. 120° E. The largest is 30 m. long, and 8 broad.

Sale'work, *n.* Work manufactured for sale;—hence, inferentially, work clumsily or carelessly performed.

Sal'ford, a borough of England, co. Lancaster, divided from Manchester by the Irwell.

Salga'do, a town of Brazil, on the Sao Francisco River, abt. Lat. 15° 20' S.; pop. 5,090.

Sal'iant, *a.* (*Her.*) SAINE as SALIENT, *q. v.*

Saliba'bo, an island in the Eastern Archipelago, separated from Tulour by a narrow strait 1 m. wide. It is 10 m. in circumference, and is well cultivated.

Sal'ic (or **Salique**) **Law**, *n.* [Lat. *Lex Salica*.] (*French Hist.*) An ancient fundamental law of France, supposed to have been made by Pharamond or Clovis, in virtue of which daughters were excluded from the inheritance, and sons alone considered capable of succeeding to it. The term most probably is taken from the name of the ancient Franks,—*Sali*, or *Salici*, so called from *Sala*, a river of ancient Germany. The Salic law is said to have been made for the Salic lands, which were given to the Salic Franks who settled in Gaul, and held their lands upon condition of their personal service in war. It was, however, extended even to the throne; and from the earliest period of the French monarchy, no princess succeeded to the throne, except by force of some law different from the ordinary usage.

Salica'ceæ, *n. pl.* [Lat. *salix*, the willow.] (*Bot.*) The Willow family, an order of plants, alliance *Amentales*. *Diag.* One-celled ovary, and numerous cottony seeds. They are trees or shrubs, chiefly natives of cold and temperate climates. Leaves simple, alternate, stipulate. Flowers unisexual, amentaceous, naked, or with a membranous or cup-like calyx. Male flowers with 1-30 distinct or monadelphous stamens; female flowers with a superior 1-celled ovary; ovules numerous, erect. Fruit 1-celled, 2-valved. Seeds numerous, covered with long silky hairs, exalbuminous; embryo erect, with an inferior radicle. Many of the species are valuable for their timber, and some for their tonic and febrifugal bark. The hair investing their seeds has been employed for stuffing cushions. There are but two genera, *SALIX* and *POPULUS*, *q. v.*

Sal'icin, *n.* (*Chem.*) A neutral bitter principle found in the bark of willows. It is procured by adding to an aqueous infusion of the bark hydrated oxide of lead, by which the tannin and coloring matters are precipitated. Salicin has been made the subject of a series of interesting and valuable researches by Piria of Turin, which have thrown considerable light on the compounds known as *glucosides*. Mixed with synaptase (a peculiar ferment), it splits up into glucose and saleginin. Heated with bichromate of potash and sulphuric acid distilled, a fragrant oily liquid comes over, which has exactly the same physical and chemical characteristics as the essential oil of Meadow-sweet.

Salicor'nia, *n.* (*Bot.*) A gen. of plants, ord. *Chenopodiaceæ*. They were formerly used in making *Carilla*, *q. v.*

Salicylic Acid, *n.* (*Chem.*) An acid obtained by the action of fused potassa on calicin. It is recommended as an anti-ferment, an antiseptic, and a remedy for rheumatism.

Sal'ience, *n.* Condition of being salient; a leaping forward; an onsetting;—hence, quality of standing out prominently; projection; protrusion.

Sal'ient, *a.* [Lat. *saliens*, from *salio*, to leap.] Moving by leaps or bounds; beating; throbbing, as the heart; as, a *salient* animal.—Springing; darting; projecting; shooting out or up; as, a *salient* jet of water.—Hence, in a figurative sense, standing out prominently; conspicuous; obtrusive; as, a *salient* trait of character.

(*Her.*) Representing a beast in a leaping or springing attitude; as, a lion *salient*.

(*Math.* and *Fortif.*) Projecting outwardly; as, a *salient* angle;—the opposite of *reëntering*.

Salient angle, (*Fortif.*) An angle (Fig. 745) of which the vertex projects outward from the work;—it is the reverse of a *reëntering* angle.

Salient angle of a polygon, (*Geom.*) An angle which projects outward.

Salient places of arms, (*Portif.*) Enlarged spaces left by the rounding of the counterscarp opposite the salients. They are intended for the assembly of troops for sorties or defence.

(*Fortif.*) A salient angle; a projecting part.

Sal'iently, *adv.* In a salient manner.

Salif'erous, *a.* [Lat. *sal*, salt, and *ferre*, to bear; Fr. *salifère*.] Salt-bearing; as, *saliferous* rock.

Sal'ifiable, *a.* [Fr.] (*Chem.*) Susceptible of combination with an acid to form a salt.

Salification, *n.* [Fr.] Act of salifying.

Sal'ify, *v. a.* (*imp.* and *pp.* SALIFIED.) [Fr. *salifér*, from Lat. *sal*, salt, and *facio*, to make.] To form into a salt by combining an acid with a base, as with a metallic oxide, &c.

Sal'ii, (*Rom. Hist.*) See ANCILE.

Sal'ina, *n.* [Lat., from *sal*, salt.] A salt marsh.—Also, a salt-works.

Sal'ina, in New York, a post-village and township of Onondaga county, about 2 miles N. by W. of Syracuse.

Salinas (or **SAN BUENAVENTURA**) **River**, in California, rises in San Luis Obispo co., and flowing a general N.W. course, enters Monterey Bay from Monterey co.

Salina'tion, *n.* Act of washing with salt-water.

Sal'ine, *a.* [Fr. *salin*.] Consisting of, constituting, or containing salt; as, *saline* particles.—Partaking of the characteristic qualities of salt; as, a *saline* flavor.

—*n.* [Fr.] A salt-spring, or a place where salt-water is deposited in the earth.

Sal'ine, or **Sal'ini**, (*Anc. Didyme*.) One of the Lipari islands in the Mediterranean Sea. Ext. 5 m. long, and 5 broad.

Sal'ine, in Arkansas, a river formed by the union of several small branches in Saline co., and flowing a general S.E. and S. course, joins the Washita River between Ashley and Bradley cos. Length, abt. 200 m.

Saline, in Arkansas, a central co.; area, about 622 sq. m.; River, Saline river. Surface, diversified; soil, fertile and well adapted to cotton, corn, and grass. Min. Marble, soapstone, and quartz. Cap. Benton. Pop. (1897) 12,300.

—A township of Hempstead co.

—A township of Sevier co.

Saline, in Illinois, a creek flowing S.E. into the Ohio river, between Gallatin and Hardin cos.

—A S.E. co.; area, about 380 sq. m. River, Saline creek. Surface, somewhat diversified; soil, fertile. Min. Salt. Cap. Harrisburg. Pop. (1897) 20,100.

Saline, in Michigan, a post-village and township of Washtenaw co., about 40 m. W. by S. of Detroit.

Saline, in Missouri, a N.W. central co.; area, about 760 sq. m. Rivers, Missouri river, and Black and Salt Forks of La Mine river. Surface, mostly undulating; soil, fertile. Min. Stone-coal in abundance, besides salt, lead, limestone, and sandstone. Cap. Marshall. Pop. (1897) 34,560.

—A post-village of Mercer co., about 90 miles N.E. of St. Joseph. A village and township of Ralls co., abt. 17 miles W. S. W. of Hannibal.—A township of St. Genevieve co.

Saline, in Ohio, a township of Jefferson county.

Saline Bayou, in Louisiana, rises in Catahoula Lake, and flowing S.E., enters Red River from Catahoula parish.—Another rises in Claiborne parish, and flowing S., enters Red River from Winn parish.

Saline'ness, *n.* State or quality of being saline.

Saline'ville, in Ohio, a post-village of Columbiana co., abt. 140 m. N.E. of Columbus.

Saliniferous, *a.* Producing, or yielding, salt; as, *saliniferous* earth.

Salin'iform, *a.* Possessing the form of salt.

Sal'ino, a river of Italy, which, after an E. course of 32 m., falls into the Adriatic Sea, 5 m. N. of Pescara.

Salinom'eter, *n.* [Lat. *salinus*, and Gr. *metron*, measure.] A salt-gauge, or instrument for measuring the quantity of salt that may be in solution in the water of a steam boiler, which is indicated by the specific gravity of the water. Common sea-water contains 1-33 of salt, and the water in the boiler should never be suffered to attain a degree of saturation above that represented by 2-33 of salt, or *two salt waters*, as it is called.

Sal'no-terrene', *a.* [Lat. *salinus*, saltish, *terrenus*, earthy.] Pertaining or having reference to, or consisting of, salt and earth.

Salin'ous, *a.* Saline. (*R.*)

Salins, (*sah'lan*), a fortified town of France, dept. of Jura, 26 m. N. E. of Lons-le-Saulnier. P. abt. 7,500.

Salisbury adiantifolia. See GINKGO.

Salisbury, or **New Sarum**, (*sahz'bère*), a city of England, cap. of the co. of Wilts, on the Avon, 21 m. W. of Winchester, and 80 m. W.S.W. of London.

Salisbury, an island of British N. America, in Hudson Strait; Lat. 63° 27' N., Lon. 76° 40' W.

Salisbury, in Connecticut, a post-village and township of Litchfield co., abt. 54 m. N.W. of Hartford. Iron ore of a superior quality is found in this township, and several extensive manufactories have been established, chiefly of machinery, cannon, edge-tools, fine cutlery, &c.

Salisbury, in Illinois, a post-village of Sangamon co., abt. 9 m. N.W. of Springfield.—A township of Coles co.

Salisbury, in Indiana, a village of Harrison co., abt. 8 m. N. by E. of Corydon.

Salisbury, in Maryland, a post-village, cap. of Wicomico co., abt. 95 m. S.E. of Annapolis.

Salisbury, in Massachusetts, a post-village and twp. of Essex co., abt. 38 m. N. by E. of Boston.

Salisbury, in New Hampshire, a post-township of Merrimack co.

Salisbury, in New York, a post-village and township of Herkimer co., abt. 70 m. N.W. of Albany. The township also contains Salisbury Centre, a post-village abt. 25 m. E. by N. of Utica.

Salisbury, in North Carolina, a city, cap. of Rowan co., about 118 m. W. of Raleigh. Pop. (1897) 4,750.

Salis'bury, in Ohio, a twp. of Meigs co.; pop. abt. 11,000.

Salisbury, in Pennsylvania, a post-village and township of Lancaster county, about 51 m. E. S. E. of Harrisburg.—A township of Lehigh co.—A village of Somerset county, abt. 20 m. W. N. W. of Cumberland, Maryland.

Salisbury, in Vermont, a post-village and twp. of Addison co., abt. 37 m. S.W. of Montpelier.

Salisbury Mills, in New York, a post-village of Orange co., abt. 9 m. S.W. of Newburgh.

Sal'iva, *n.* [Lat., from *sal*, salt.] (*Physiol.*) That fluid by which the mouth and tongue are constantly moistened in their natural state, and which is supplied by glands which form it, called the *salivary glands*. There are three pairs of salivary glands—the *parotid*, the *sub-maxillary*, and the *sub-lingual*. The saliva itself has neither color nor smell, and is tasteless; for although it contains a little salt, the nerves of the tongue

Fig. 2298. — THE SALIVARY GLANDS.

1, The parotid gland; 2, the sub-maxillary gland; 3, the sub-lingual gland; 4, Steno's duct; 5, Wharton's duct; 6, Bartholin's duct; 7, masseter muscle; 8, mastoid process; 9, digastric muscle; 10, internal jugular vein; 11, external carotid artery; 12, the tongue.

are so accustomed to it, that it is imperceptible. Its specific gravity is somewhat greater than that of water, and it is supposed that about twelve pounds are secreted in twelve hours. From the mechanical pressure of the muscles upon the salivary glands, the secretion is much augmented during speaking and mastication. In hungry persons, too, it is largely secreted at the sight of agreeable food. Its uses are to augment the taste of food by the evolution of sapid matter; to mix with, dissolve, and resolve into its principles the food during mastication, so as to change it into a pulaceous mass fit to be swallowed; to moderate thirst, by moistening the cavity of the mouth and fauces. In the healthy state, it consists of at least four-fifths of water, comprising, besides, mucilage, albumen, muriates of soda, phosphate of soda, phosphate of lime, and phosphate of ammonia.

Sal'ival, *a.* Relating to saliva; salivary.

Sal'ivant, *a.* Causing salivation.

—*n.* That which produces salivation.

Sal'ivary, *a.* Pertaining, or having reference, to saliva; secreting or excreting saliva; salival; as, the *salivary* glands. See SALIVA.

Sal'ivate, *v. a.* [From Lat. *salivo*, *salivatum* — *saliva*.] (*Med.*) To produce an unusual secretion and discharge of saliva in a person, generally by means of mercury.

Salivation, (*sal'ishun*), *n.* [Fr.; Lat. *salivatio*.] (*Med.*) Act or process of producing an increased secretion of saliva; excessive flow or secretion of saliva, as that produced by mercury; ptyalism.

Sal'ivous, *a.* [Fr. *saliveux*.] Belonging to saliva; partaking of the nature of saliva.

Sal'ix, *n.* [Lat.] (*Bot.*) The Willow, a gen. of plants, order *Salicaceæ*. The species found in the United States are numerous, and commonly known as *willows*, *osiers*, and *sallows*. Their timber, though wanting in strength and durability, is applied to many useful purposes; and the wood of the flexible branches and twigs is largely employed for basket-work, hoops, &c. The Sage Willow, *S. tristis*, a small, downy shrub, with a profusion of aments in spring, appearing before the leaves, is the most common species in the Northern and Middle States.—A peculiar crystalline alkaloid, resembling quinine in its properties, called *salicine*, has been obtained from the bark, leaves, or flowers of about twenty species of this genus.

Sallee, or **Sla**, (*sah'la'*), a seaport-town on the W. coast of Morocco, at the mouth of the Bu-Regreb, 105 m. from Fez; Lat. 34° 3' N., Lon. 6° 40' W. It was formerly a stronghold of the Mediterranean pirates. It has now fallen to decay. *Manuf.* Carpets. Pop. 12,000.

Sal'lenders, **Sel'lenders**, **Sell'lenders**, *n. pl.* (*Far.*) An eruption on the hind leg of a horse.

Sal'low, *n.* (*Bot.*) The popular name of a number of British species of Willow, the most common of which is the Gray Sallow, *Salix cinerea*.

—*a.* (*comp.* SALLOWER; *superl.* SALLOWEST.) [A. S. *sallow*, *saluwi*, from *seal*, a willow; Lat. *salix*.] Having a saffron or yellowish color; of a pale, sickly hue, tinged with a dark-yellow; as, a *sallow* complexion.

Sal'towness, *n.* State of being *sallow*; pallor, tinged with a darkish yellow; as, *sallowness* of the skin.

salloy-thorn, n. (Bot.) The common name of the genus *Hippophaë*, order *Elæagnaceæ*, consisting of large Asiatic shrubs or trees, with gray, silky foliage, and active leaves. The only European species is *H. rhamnoides*, the Sea Buck-thorn, a low tree, native of the sandy sea-coasts of W. Europe.

Salust, CAIUS CRISPUS, a Roman historian, distinguished equally for his talents and profligacy, was b. at Amiternum, B. C. 86. He was expunged from the list of senators, in consequence of his extravagance and shameless debaucheries; but being restored by Julius Cæsar, and made governor of Numidia, he there amassed an enormous fortune by acts of rapine. He died B. C. 35. His *Histories of the Jugurthine War*, and the *Conspiracy of Catilina*, bear ample testimony to his genius; but the rigid morality displayed in his writings forms a strange contrast to the vices of his life.

Sally, n. [Fr. *saillie*, from Lat. *salio*.] A leaping or springing forth.—Specifically, a sudden issue or rushing out of troops from a beleaguered place to attack the besiegers; a sortie; as, the garrison made a successful *sally*.—Excursion from the ordinary track; range; deviation; digression; as, to make *sallies* into a country district.—A spring or darting of intellect, fancy, or imagination; flight of liveliness or humor; sprightly exertion of the faculties; as, *sallies* of wit.—Act of levity or extravagance; unseemly display of vivacity; an act of wild frolic or obstreperous gaiety; an escapade; an overleaping of the bounds of propriety; as, *sallies* of hot-blooded youth.

—v. n. (imp. and pp. *SALLIED*.) [Fr. *saillir*.] To leap, spring, bound, or rush out or forth; to issue suddenly, as a body of troops from a fortified place to attack besiegers; to make a sudden irruption or sortie.

Sally-lump, n. [Called after the inventor.] In England, a sort of sweet tea-cake, toasted and well-hutted before eaten.

Sally-port, n. (Fortif.) An opening cut in the glacis of a fortified work, through which a passage leads by a ramp from the terreplein of the covered way to the exterior.

(Naval.) A landing-place in a harbor at which the boats of men-of-war (but no other boats) are allowed to land. It is also the name for an opening in the quarter of a fire-ship by which the crew escape after setting her on fire.

Salmagundi, n. [Fr. *salmigondis*, from Lat. *salmaga*, pickles.] (Cookery.) A mixture of chopped meat and pickled herrings, seasoned with oil, vinegar, pepper, and onions. (Johnson.)—Hence, a hodge-podge of various ingredients; an olio; a medley; an olla podrida; a miscellany; a pot-pourri;—used in a literary sense; as, Washington Irving's *Salmagundi*.

Salmi, (sāl'mē), n. [Fr.] (Cookery.) A ragout of roasted game stewed with wine, forcemeat, and spices, as a provocative of the appetite; as, a *salmi* of pheasants.

Salmo, n. [Lat., from *salio*, to leap or spring, the species being remarkable for its power of leaping.] (Zool.) The principal genus of the *Salmonidæ*.

The Salmon, *S. salar* of the Arctic seas, whence it visits the rivers of both continents, is one of the largest of the genus, and is celebrated for its delicious flesh. It is from 24 to 36 inches long, and attains a weight of 30 pounds or more. In N. America it frequents the rivers of Labrador, Canada, Nova Scotia, New England, and those of N. York communicating with the St. Lawrence, ascending even to Lake Ontario. The S.-fishing in the Gulf of St. Lawrence is estimated as worth \$500,000 a year, and by steamers the fish are delivered in Boston, N. York, and Philadelphia in the best condition. The Great Trout of the lakes, *S. amethystus*, of the Northern lakes of North America, is from 24 to 60 inches long, dark-gray, with numerous lighter spots on the back and sides; under parts light ashy-gray or cream-color. It sometimes attains the weight of 120 pounds, and is often called Mackinaw Trout. It is also known as the Longe. The Speckled Trout, or Brook Trout, *S. fontinalis* (Mitch.), of the clear streams of Northern North America, is from 6 to 20 inches long, horn-color above with irregular darker marking, sides bluish mixed with silvery white, and ornamented with yellow spots and vermillion dots. There are many varieties of trout, and probably some of the so-called varieties are distinct species. All are highly prized on account of the delicacy of their flesh.

Fig. 2299. — SALMON, (*Salmo salar*.)

Salmon, (sām'un), n. (Zool.) See SALMO.

Salmonidae, n. pl. (Zool.) The Salmon family comprising abdominal mualacopterygious fishes, which have the body more or less scaly, a first dorsal with soft rays, followed by a second small one, which is fatty, and unsupported by rays. They inhabit both salt and fresh water, are very voracious, and highly prized for food. See SALMO.

Salmon Creek, in New York, enters Cayuga Lake at Ludlowville, Cayuga co.—Another, enters Braddock's Bay of Lake Ontario, from Monroe co.—A village of Wayne co., abt. 30 m. E. by N. of Rochester.

Salmon Falls River, rises in Carroll co., New Hampshire, and flowing a general S.E. course along the boundary between that State and Maine, joins the Cochecho River to form the Piscataqua River.

Salmon-peel, n. A young salmon; a samlet.

Salmon-pipe, n. A contrivance for catching salmon.

Salmon River, in Connecticut, enters the Connecticut River in Middlesex co.

Salmon River, in New York, rises in Franklin co.,

and enters the St. Lawrence River abt. 10 m. N.E. of St. Regis.

Sal'lo, a town of Italy, prov. of Brescia, 14 m. from Brescia. *Manuf.* Linnen, yarn, and thread. *Pop.* 6,000.

Sal'ogen, n. (Chem.) The electro-negative component of haloid salts; salt-radical.

Salome, (Script.) the mother of James the Elder and John the Evangelist, one of those holy women of Galilee who attended our Saviour in his journeys and ministered to him; *Matt.* xxvii. 56. Some infer, from comparing *Matt.* and *John* xix. 25, that she was a sister of Mary the mother of Jesus.

Salon, (sah-lōng'), n. [Fr., saloon.] A state apartment; a room for the reception of visitors;—hence, plurally, assemblies of the fashionable world; circles of select society, the élite, &c.; as, her *salons* were crowded with notabilities.

Salon, (sa'lawng), a town of France, dept. of Bouches-du-Rhône, 29 m. N.N.W. of Marseilles. *Manuf.* Silk plush, hats, and soap. *Pop.* 6,600.

Salona, a town of European Turkey, at the foot of Mount Parnassus. It contains many interesting ruins. *Pop.* 6,000.

Salona, in Pennsylvania, a post-village of Clinton co., abt. 104 m. N.W. of Harrisburg.

Salonica, (sa-lon-ek'a), a city and seaport of European Turkey, in Roumania, on the Bay of Salonica, 185 m. N.W. of Athens; Lat. 40° 30' 47" N., Lon. 22° 57' 13" E. It is built on the acclivity of a steep hill, and is 5 m. in circumference. It is commanded by a large citadel called the "Seven Towers," and contains numerous public buildings and anc. remains. *Manuf.* Silk; besides, a large trade in maize, wheat, barley, tobacco, wool, sponges, timber, wine, &c. *Pop.* 70,000.

—The GULF of SALONICA, is 70 m. long, and 30 m. broad at its entrance.

Saloon, n. [Fr. *salon*; It. *salone*, augmentative of *sala*, a hall.] (Arch.) A large state apartment; a spacious and lofty hall;—specifically, a spacious and elegant apartment for the reception of company, or the exhibition of works of art; also, a large public room or parlor; also, again, a refreshment room in a theatre.

—A concert or dancing room where liquors are sold;—hence, in American parlance, a public house; a tavern.

(Naut.) The main cabin of a steamer or passenger-ship.

Sal'op, or Shropshire, an inland co. of England, having N. the co. of Denbigh, and a portion of Flint and Cheshire, E. Stafford, S. Worcester, Hereford, and Radnor, and W. Montgomery; *area*, 1,300 sq. m. The surface is generally diversified, but mountainous in the S., and the soil fertile. *Rivers.* Severn, Teme, Shelbrook, Elf Brook, Weaver, Clun, Orme, and Cowe. *Prod.* The usual cerealia, with hemp, flax, hops, &c. Numerous cattle and sheep are also raised. *Min.* Iron, coal, lead, salt, limestone, sandstone, &c. *Manuf.* Flannels, woolen, cotton, and linen goods, gloves, buttons, hardware, paper, porcelain, china, tobacco-pipes, iron-ware, tar, &c. *Cap.* Shrewsbury.

Sal'safy, Sal'sify, n. (Bot.) See TRAGOPOGON.

Salsamenta'rons, a. [From Lat. *salsamentum*, brine.] Salted; pertaining to, consisting of, or partaking of the quality of, salt.

Sals'es, n. pl. Mud-eruptions, being vents of vapor and heat, where there is no true volcano.

Sal'sette, an island on the W. coast of Hindostan, prov. of Aurungabad, N. of Bombay Island, with which it is connected by a narrow causeway. *Ext.* 18 m. long, with an average breadth of 13 m. *Pop.* 60,000.

Salsify, n. (Bot.) See TRAGOPOGON.

Salsilla, n. (Bot.) A twining, tuberculous-rooted plant, also called Oyster-plant, *Alstræmeria salsilla*, ord. *Amaryllidaceæ*, cultivated in the W. Indies for its roots, which are used as the tubers of the potato.

Sal-so-acid, (-s'id), a. Possessing a combined taste or flavor of salt and acid.

Sal-so'da, n. The commercial term for impure carbonate of soda.

Sal'sola, n. [Lat. *sal*, salt, and *salus*, alone, from its saline qualities.] (Bot.) A genus of plants, order *Chenopodiaceæ*. The species inhabit salt-marshes and contain much soda. See BARILLA.

Salsolaceæ, (-lā'shus), a. (Bot.) Pertaining, or having reference, to the family *Salsola*.

Salsuginous, (-sū'jī-nus), a. [Fr. *salsugineux*, from Lat. *salsugo*, saltiness.] Salty; somewhat salt; salty (R.)

Salt, n. [A. S. *salt*, *sealt*; Ger. *salz*; Fr. *sel*.] A substance used for seasoning, being the chloride of sodium, and generally known as common salt. It is obtained by evaporation from the waters of the sea, or saline lakes or springs, and from the earth in a crystallized state, or in the form of rock-salt, q. v.

—Hence, savor; taste; relish; vapor; smack; seasoning; as, "we have some salt of our youth in us."—*Shaks.*

—Hence, also, pungency; piquancy; wit; epigrammatic point; poignancy; as, Attic salt.—A vessel to hold salt at table; a salt-cellar; as, a set of silver salts.—A veteran sailor; a weather-beaten tar; as, an old salt.

(Chem.) A salt may be defined as a compound containing either a metallic oxide or alkaloid in combination with an acid or a metal, or pseudo-metallic grouping in combination with a halogen. The advocates of Gerhardt's theory reverse his well-known definition of an acid,—"a salt whose basis is hydrogen,"—and describe a salt as any metallic compound that is obtainable from an acid by the substitution of a metal or pseudo-metallic grouping for hydrogen. When first Lavoisier proposed his admirable scheme of chemistry, it was supposed that an acid could not exist without containing oxygen. As the science advanced, Sir Humphry Davy discovered the true composition of hydrochloric acid, and found that there were acids whose

acidifying principle was hydrogen, which, when entering into combination with metallic oxides, gave up their hydrogen to the oxygen to form water. Taking the union of hydrochloric acid and soda as an example, it was found that the chlorine united directly with the sodium, the water formed at the time being readily driven off by heat. To meet this difficulty, salts were divided into two classes,—*oxy-salts*, formed by the union of a base and an acid, and *haloid salts*, formed by the union of a metallic and a halogen. Sir Humphry Davy advanced a theory, however, which is now almost universally received as the correct one. He assumed that when acids were rendered anhydrous they lost their acid properties, an assumption provable by direct experiment. Sulphuric acid he looked on not as SO_4 , the anhydrous acid, but as H_2OSO_3 , or rather H_2SO_4 . This at once brought the two classes of salts into harmony, the grouping SO_4 being equivalent to the halogen in HCl , HI , HBr , &c. A few examples of salts and acids will render this more intelligible:

Hydrochloric acid,	HCl	Potash salt, KCl
Hydrochloric acid,	HBr	" KBr
Sulphuric acid,	H_2SO_4	" K_2SO_4
Nitric acid,	HNO_3	" KNO_3
Sulphurous acid,	H_2SO_3	" K_2SO_3

This theory is accepted in its entirety by the advocates of the new school. Salts being looked on as the union of an acid radicle with a metal, the name in a few cases has been necessarily altered. Thus we now constantly meet with carbonate of *potassium*, nitrate of *sodium*, sulphate of *ammonium*, &c., in chemical publications. Salts are generally divided into three classes:—*Basic salts*, in which the amount of base predominates over the acid; *neutral salts*, when these are united equivalent for equivalent in protosalts, or one of base to three of acid in sesquisalts; and *acid salts*, where the acid is in excess. These terms must be taken in their chemical sense, and not as meaning the effect that certain salts have on litmus or turmeric paper. Thus, carbonate of potash, which is chemically a neutral salt, reddens turmeric paper, and sulphate of alumina, also neutral, reddens litmus. Numerous examples of each of these classes will be found throughout this work. *Double salts* are those whose acid apparently combines with two bases to form a crystalline compound, but the real union appears to take place between the two salts; thus, we have the double chloride of platinum and potassium, KClPtCl_2 ; the double sulphate of potash and alumina, or ordinary alum, $\text{K}_2\text{SO}_4\text{Al}_2\text{SO}_4$; the double sulphate of potash and magnesia, $\text{K}_2\text{SO}_4\text{MgSO}_4$.

—*pl.* An Eng. provincialism for marshes flooded by the tide.

Above the salt, on the dais, or at the upper end of the table; hence, in a position of honor;—derived from the ancient custom in the banqueting-halls of people of rank, of placing a large salt-cellar in the centre of a long table, the places above which were assigned to guests of distinction; while the places below were reserved for retainers, inferior guests, &c.

Below the salt, at the lower end of the table;—hence, in an inferior or mean position.

—*a.* (comp. *SALTER*; superl. *SALTEST*.) Having the taste of salt; impregnated with salt; abounding with salt, or yielding it; prepared with, or tasting of, salt; as, salt water, salt provisions.—Overflowed with salt water; as, a salt marsh.—Growing on salt marshes or meadows, and hence, having the flavor of salt; as, salt grass.—Poignant; bitter; sharp; acrid; as, "a salt rheum." (*Shaks.*)—Salacious; lecherous; libidinous; as, a salt jest a salt story, a salt imagination.

—*v. a.* To sprinkle, impregnate, or season with salt; as, to salt meat or fish.—To stuff with salt between the timber and planks, for the preservation of the wood; as, to salt a ship.

—*v. n.* To throw off salt, as a saline solution; as, the brine salts but slowly.

Sal'ta, a city of the Argentine Republic, cap. of prov. of same name, abt. 180 m. N. of Tucuman; Lat. 24° 15' S, Lon. 64° 50' W. It is well built, and contains some handsome religious and other edifices. *Pop.* 10,000.

Sal'tant, a. [Lat. *saltans*, from *salire*, to leap.] Leaping; dancing; skipping; jumping.

(Her.) In a leaping attitude; bounding forward; as, a squirrel saltant.

Saltarel'lo, n. [It.] (*Mus.*) A dance among the Neapolitans.

Salt'ate, v. a. To leap; to dance; to bound. (R.)

Saltation, (-tā'shun), n. [Fr., from Lat. *saltatio*, from *saltare*, to dance.] Act of dancing, leaping, or jumping; as, to practise saltations.—Beating; throbbing; palpitant; as, the saltation of the great artery.

Saltato'rial, a. Belonging, or having reference, to leaping; as, saltatorial exercises or exploits.—Possessing the power of leaping; as, saltatorial animals.

Salt'atory, a. Leaping or dancing, or having the power of leaping or dancing; employed in leaping or dancing; as, saltatory motions, saltatory performances.

Salt'-cake, n. Sulphate of soda, in its prepared form, for the use of glass-blowers and soap-manufacturers.

Salt'-cat, n. A lump of salt used as a lure for pigeons

Salt'-cellar, n. A small vessel used at table for holding salt; a salt.

Saltcoats, (solt'kotes), a seaport-town of Scotland, co. of Ayr, 24 m. S.W. of Glasgow. It is a great resort for sea-bathing. *Pop.* 4,800.

Salt Creek, in Illinois, enters the Sangamon River, between Menard and Mason cos.

Salt Creek, in Indiana, enters the East Fork of White River from Lawrence county.—A township of Decatur county.—A township of Franklin county.—A township of Jackson county.—A township of Monroe county.

Salt Creek, in Iowa, enters the Iowa River from Tama co. — A village and township of Davis co., abt. 75 m. S.W. by S. of Iowa City.

Salt Creek, in Michigan, enters Maple River from Gratiot co.

Salt Creek, in Ohio, enters the Sciota River from Ross co. — Another enters the Muskingum River from Muskingum co. — A township of Hocking co. — A post-township of Holmes co. — A township of Muskingum co. — A township of Pickaway co. — A township of Wayne co.

Salt Creek, in Texas, a p. o. of Montague county. — In Virginia, a p. o. of Amherst county.

Salt'er, *n.* One who salts, or applies salt; as, a *salt'er* of provisions. — One who sells salt; a dealer in salt; a dry-salter; also, a maker of salt.

Salt'ern, *n.* A place where salt is manufactured; a salt-work.

Salt-fish, *n.* A fish preserved or cured with salt. — A fish taken in salt water; — in contradistinction from *fresh-water fish*.

Salt-foot, *n.* A large salt-cellar, formerly used at the tables of persons of rank to mark the line of demarcation between the superior and inferior guests. See **SALT**.

Salt Fork, in Missouri, an affluent of the Black River, which it joins in Saline co.

Salt-guage, (*-gāj*), *n.* An instrument used to guage or test the strength of brine or salt-water.

Salt-green, *n.* Sea-green.

Saltier, *Saltire*, (*sāl'teer*), *n.* (*Her.*) A bearing in form of a St. Andrew's cross, formed by two bends — dexter and sinister — crossing each other.

Salt'ier-wise, **Salt'ire-wise**, *a.* (*Her.*) In the form of a saltier; — thus, charges having length (as swords, bâtons, &c.) placed in the direction of the saltire, are said to be borne *salt'ier-wise*.

Salt'igrade, *a.* [*Fr.*; from *Lat. saltus*, a leap, and *gradī*, to go.] (*Zool.*) Having feet or legs adapted to leaping, as certain animals.

— *n.* (*Zool.*) One of a tribe of spiders which seize their prey by leaping upon it from a distance.

Salt'illo, a town of Mexico, on the Tigre River, abt. 110 m. S. of Coahuila; pop. 7,000. See **BUENA VISTA**.

Salt'illo, in Indiana, a village of Jasper co., abt. 10 m. N.E. of Rensselaer.

Salt'illo, in Tennessee, a post-village of Hardin co., abt. 12 m. N. of Savannah.

Salt'illoville, or **SALTILLO**, in Indiana, a post-village of Washington co., abt. 47 m. N.W. of New Albany.

Salt'ing, *n.* Act of sprinkling, impregnating, or seasoning with salt.

— A salt-marsh.

Salt'ish, *a.* Somewhat salt; seasoned or impregnated with a moderate quantity of salt.

Salt'ishly, *adv.* With a moderate degree of saltiness.

Salt'ishness, *n.* A moderate degree of saltiness.

Salt-junk, *n.* Hard salt beef for use at sea.

Salt Key, a sandy and rocky bank, abt. 90 m. S. by E. of Florida, between Cuba and the Grand Bahama Bank. Length, abt. 62 m.; greatest breadth 36 m. Its W. border consists of a chain of barren rocks called *Double-Headed Shot Key*, of which the extreme N.W. one has a lighthouse, exhibiting a fixed light 100 feet above the sea; Lat. 23° 26' 24" N., Lon. 80° 27' 35" W.

Salt Lake, in Utah. See **GREAT SALT LAKE**. — A N. co.; area, about 784 sq. m. *River*, Jordan river. Surface, diversified, and in some parts mountainous; soil, generally very fertile, producing wheat, corn, oats, potatoes, and hay in abundance. Cap. Salt Lake City. Pop. (1895) 68,182. — A city, cap. of Salt Lake co., and seat of the State government, on the Jordan river, about 22 m. S. E. of Great Salt Lake. The city is regularly laid out, and contains some handsome edifices, among which is a magnificent temple which was 40 years in building. S. L. City was founded July 24, 1847, by Brigham Young and his company of Mormons, numbering 143.

Salt'less, *a.* Lacking salt; — hence, pointless; insipid; as, a *saltless* joke.

Salt-lick, *n.* A saline spring, resorted to by buffaloes, deer, &c. See **LICK**.

Salt Lick, in Pennsylvania, a township of Fayette co.

Salt Lick, in Ohio, a township c^d Perry county. — *n.* See **LICK**.

Salt'ly, *adv.* With a smack of salt; in a salt manner.

Salt-marsh, *n.* Meadow or grass-land subject to the overflow of the tides.

Salt-mine, *n.* A mine where rock-salt is obtained.

Salt'ness, *n.* Quality of being salt or impregnated with salt; as, the *salt'ness* of brine. — Taste or flavor of salt; hence, raciness; as, the *salt'ness* of dried cod, the *salt'ness* of an anecdote, &c.

Salt-pan, **Salt-pit**, *n.* A pan, basin, or pit where salt is obtained or made.

Saltpetre, (*-pē'tr*), *n.* [From *salt*, and *Gr. petra*, a rock, a stone.] (*Chem.*) See **POTASH** (NITRATE OF).

Saltpe'trous, *a.* Pertaining, or relating, to saltpetre; impregnated with, or partaking of the qualities of, saltpetre.

Salt-raker, *n.* A collector of salt in natural salt ponds, or inclosures near the sea.

Salt-rheum, (*-rōm*), *n.* (*Med.*) A name somewhat indefinitely applied in the U. S. to various cutaneous affections of the eruptive and herpetic forms.

Salt River, *n.* An imaginary river up which defeated politicians, &c., are supposed to be sent to oblivion. The phrase *To run up Salt River* has its origin in the fact that there is a small stream of that name in Kentucky, the passage of which is made difficult and laborious as well by its tortuous course as by the abundance of shallows and bars. The real application of the phrase is to

the unhappy wight who has the task of propelling the boat up the stream; but in political or slang usage it is to those who are rowed up.

Salt River, in Kentucky, rises in Shelby co., and flowing S.W., W., and N.W., enters the Ohio River between Hardin and Jefferson cos.

Salt River, in Missouri, is formed in Monroe co., by the union of several branches, and flowing an irregular E.S.E. course, enters into the Mississippi River from Pike co. — A village of Audrain co., abt. 40 m. N. of Jefferson City. — A township of Knox co. — A township of Randolph co.

Salt Rock, in Ohio, a township of Marion county.

Salt Spring, in Missouri, a township of Randolph co.

Salt Sulphur Springs, in W. Virginia, a post-village of Monroe co., abt. 230 m. W. of Richmond, Va.

Salt'ville, in Virginia, a post-village of Smyth co., about 20 m. N. E. of Abingdon.

Salt'-water, *n.* Sea-water; water impregnated with salt in solution.

Salt'y, *a.* Saltish; moderately salt.

Salt'burg, or **Salts'burg**, in Pennsylvania, a post-borough of Indiana co., 32 m. E. of Pittsburg.

Salu'bria, in New York, a village of Chemung co., abt. 20 m. N. of Elmira.

Salubrious, *a.* [Lat. *saluber*, *salubris*, from *salus*, a sound condition.] Favorable to health; promoting health; wholesome; salutary; healthful; as, a *salubrious* climate.

Salu'briously, *adv.* In a salubrious manner; so as to promote health.

Salu'briousness, **Salu'brity**, *n.* [Fr. *salubrité*; Lat. *salubritas*.] Quality of being salubrious; wholesomeness; healthfulness; favorableness to the preservation of health; as, the *salubrity* of country air.

Salu'da, in Indiana, a post-township of Jefferson county.

Saluda, in S. Carolina, a river rising among the Blue Ridge Mountains, between Pickens and Greenville dists., and flowing a general S.S.E. course, joins Broad River at Columbia; length, abt. 200 m. — A village of Newberry dist., abt. 55 m. W. by N. of Columbia.

Salu'ria, in Texas, a village and port of entry of Calhoun co., on Matagorda Island, abt. 125 m. S.W. of Galveston.

Salutarily, *adv.* In a salutary manner.

Salutariness, *n.* Wholesomeness; quality of being salutary. — Quality of conducing to good or prosperity; as, *salutariness* of counsel.

Salu'tary, *a.* [Fr. *salutaire*; Lat. *salutaris*, from *salus*, a whole condition.] Healthful; wholesome; salubrious; promoting health; as, to take a *salutary* walk. — Promotive of public good or safety; contributing to some beneficial purpose; useful; advantageous; profitable; as, to adopt *salutary* measures, to set a *salutary* example.

Saluta'tion, *n.* [Lat. *salutatio*, from *salus*, safety.] The act or ceremony of saluting or paying respect or reverence to any one. Among the Romans, *salutatio* was the daily homage paid by clients and dependents to their superiors. The women, too, had their crowds of saluters attending them every morning. In the reception of those who came to pay their respects, the better sort were honored with a kiss, while the poorer had a small

Fig. 2300. — ORIENTAL SALUTATIONS.

entertainment set before them, and were even feasted by those who wished to be thought very liberal. It is not a little interesting to observe the different modes of salutation that prevail in different countries. In most civilized countries, bowing, uncovering the head, pressing the hand, embracing, and kissing, are the usual modes in which good-will, esteem, and love, are expressed; but, not infrequently what is regarded as an act of civility in one country, would be out of place, or even considered as rude, in another. In some parts of Germany, it is considered an act of politeness to kiss the hands of ladies; in Italy, this is a familiarity only permitted to nearest relatives. In the East, the salutations are generally of a very slavish character; as the throwing oneself on the ground before persons of distinction, and repeatedly kissing their feet. In Sumatra, the saluting person bows, hegs the left foot of him whom he addresses, kneels on the ground, and applies this foot to the crown of his head, forehead, breast, and knee; finally, he touches the ground with his head, and remains for some moments stretched out on his belly. In the Pellew Islands, a person seizes the hand or foot of

him whom he wishes to salute, and rubs his face with it. In the Philippines, they bend their body very low, place their hands upon their cheeks, raise one leg, and bend the knee. In Siam, the inferior throws himself on the ground before his superior. In Japan, the inferior takes off his sandals, puts his hands into the opposite sleeves, bends slowly till they reach his knees, and thus with short and measured steps, and with a rocking motion, passes his superior, crying, "Do not hurt me." In China, the forms of salutation are various. The Turk crosses his hands, places them upon his breast, and bows; the Laplanders rub noses; the Franks are said to have pulled out a hair, and presented it to the person saluted; an Ethiopian takes the robes of another and ties it about his own waist, leaving his friend half naked. In some parts, they show their humility by presenting themselves naked before the person whom they salute; in others, they scratch the hand slightly, and reciprocally suck a drop of blood from the wound, or, as a peculiar mark of esteem, they open a vein and present a goblet of blood as a beverage for their friend.

Salutato'rian, *n.* In the U. States, the student of a college who pronounces the salutatory oration at the annual Commencement, or like exercises.

Saluta'torily, *adv.* After the manner of salutation.

Saluta'tory, *a.* Containing, implying, or expressing salutation; speaking a welcome; conveying a greeting; — applied particularly to the oration introductory of the exercises of the Commencements, &c., in American colleges.

— *n.* In American colleges, the salutatory oration.

Salute, *v. a.* [It. *salutare*; Lat. *saluto*, from *salus*.] To greet; to hail; to address or accost with friendly gratulations or expressions of kind wishes. — To greet with a kiss; to greet with a wave of the hand or nod of the head; as, to *salute* a lady's lips, to *salute* a stranger.

(*Mil.* and *Nav.*) To greet or show honor to by a discharge of cannon or small arms, by striking colors, rolling drums, presenting arms, &c.; as, the President was *saluted* by the troops.

— *n.* Act of saluting, or of expressing respect, gratulation, or kind wishes; greeting; salutation; as, friendly *salutes* were exchanged between them. — A kiss; a lip-greeting expressing more than mere courtesy.

"No cold salute is in you lovers' kiss." — *Earl of Roscommon*.

— In the military and naval services, a mark of respect performed in different ways, according to circumstances. Naval salutes are fired from ships, the number of guns engaged in which denotes the rank of the personage saluted. A foreigner's salute is returned gun for gun. Troops under arms salute with their rifles or swords; staff-officers not drawing their swords salute with the hand, as, also, do soldiers when unarmed. Another form of salute at sea is *dipping the ensign*, that is, lowering the colors for a few moments, and then rehoisting them up to the masthead or gaff-peak. See also **COLORS** and **FEU-DE-JOIE**.

Salu'ter, *n.* One who, or that which, salutes.

Salutiferous, *a.* [From *Lat. salus*, *salutis*, health, and *ferre*, to bring.] Bringing health; salubrious; healthy; as, *salutiferous* weather. (*R.*)

Salutiferously, *adv.* In a salutiferous manner.

Salut Public, (*Comité de*), [*Fr.*, Committee of Public Safety.] (*Fr. Hist.*) The term applied to a number of members of the National Convention during the Reign of Terror, 1793-94, who acted as the dictators of France. The committee arose out of that section of the convention called the "Mountain," which had gained the victory over the Girondist party; and at length its power came to be concentrated in three of its members — Robespierre, the real chief, though half concealed from view, Couthon, and St. Just. Among these men there was perfect equanimity down to the moment of their fall; and there is reason to believe that they had resolved to perpetuate their power by establishing a supreme council of three consuls, in which Robespierre would have had the perpetual presidency, with the departments of Justice, Exterior, and Finance; Couthon that of the Interior, and St. Just the War Department. The career of this sanguinary tribunal was brought to a termination by some of their former associates impeaching its members before the convention; and a reaction having taken place in the public mind, Robespierre, Couthon, and St. Just were executed on the 9th Thermidor (July 28, 1794).

Saluzzo, (*sa-lu'zō*), a town of Italy, prov. of Coni, near the Po, 30 m. S.S.W. of Turin. It consists of an Upper and Lower town, the former situated on a height crowned by a magnificent castle, now used as a prison; the latter contains a handsome cathedral and other public buildings. It was the cap. of a dept. under the French domination. *Manuf.* Silk, leather, and hats. Pop. 17,548.

Salvabil'ity, *n.* The possibility of being saved, or admitted to everlasting life.

Salv'able, *a.* [From *Lat. salvus*, safe.] That may be saved or received to eternal happiness; admitting of salvation; as, *salvable* souls.

Salvador, *San*. See **SALVADOR**.

Salvador, *St.* See **SALVADOR**.

Salvadora'cea, *n.* (*Bot.*) The *Salvadora* family, a small order of plants, alliance *Echiales*, consisting of shrubs and small trees, with leathery leaves and minute paniced flowers. The species are natives of India, Syria, and North Africa. The only one of any importance is *Salvadora Persica*, which Dr. Royle has shown to be the mustard-tree of Scripture. Its fruit is edible, and resembles in taste the garden-cress. The bark of its root is acrid, and is employed in India as a blistering agent. Its leaves are said to possess purgative properties.

Salvage, (*sāl'vaj*), *n.* [Fr., from *L. Lat. salvagium*,

from Lat. *salvus*, safe.] (*Mar. Law*) A reward or recompense allowed by law for the saving of a ship or cargo (or any part or parts thereof) from loss at sea; also, the goods or property so saved.

Salvages, a group of uninhabited islands off the W. coast of Africa, N. of the Canaries; Lat. 30° N., Lon. 16° W.

Salvatella, *n.* [Lat., from *salvare*, to save.] (*Anat.*) A vein of the arm terminating in the fingers. It was formerly regarded as having peculiar influence on the health when opened.

Salvation, (*vā'shun*), *n.* Act of saving; rescue or preservation from danger, great calamity, or total destruction; as, marrying money was his *salvation*.

(*Theol.*) The deliverance wrought out by Christ for mankind, saving them from the consequences of their sins. This last is the sense in which it is commonly used in the New Testament, as by the apostle Paul, when he says, "How shall we escape if we neglect so great *salvation*?"

—Deliverance from enemies; victory; saving power; as, "see the *salvation* of the Lord." — *Exod.* xiv. 13.

Salvator Rosa. See ROSA, SALVATOR.

Salvatory, *n.* A repository; a place where things are kept safe and secure. (*R.*)

Salve, (*sawv*), *n.* [*A.S. scalfre*; kindred with Lat. *salvus*.] That which saves, mitigates, relieves, or preserves; a help; a remedy; an aid; an antidote; as, heavy damages proved a *salve* to his dishonor. — An adhesive composition; a substance applied to heal, mollify, or relieve wounds or sores; an unguent; an ointment; a plaster.

—*v. a.* (*imp.* and *pp.* SALVED, (*sawvd*.) To cure by remedial or emollient treatment; to heal by external applications; to apply *salve* to; as, to *salve* a wound.

Salver, (*sawv'er*), *n.* A piece of plate with a foot; or, a waiter on which articles are carried round and presented; as, the groom of the chambers brought me their cards on a *salver*.

Salver-shaped, (*-shāpt*), *a.* (*Bot.*) Tubular, with a flat border rectangular to the tube; — said of the corolla of a plant.

Salvia, *n.* [Lat. *salvus*, well, in good health, because it was esteemed capable of curing many diseases.] (*Bot.*) A genus of plants, order *Subiaceae*, consisting of herbs and under-shrubs, with aromatic leaves, which have generally a rugose appearance, and flowers commonly in spikes. The species best known is *S. officinalis*, the Common or Garden Sage, so much used by the cook as a flavoring agent, particularly in the stuffing for pork, goose, and duck. *S. lyrata*, the Wild or Meadow Sage, is found in shady woods from Canada to Georgia. An infusion of sage was formerly used, under the name of *sage-tea*, as a substitute for that of China tea; it is still largely employed in North America as a gargle in common sore throat, and when the uvula is relaxed. Many of the *salvias* are very ornamental plants, and are favorite objects of culture with the florist.

Salvisa, in Kentucky, a post-village of Mercer co., abt. 20 m. S. of Frankfort.

Salvo, *n.*; *pl.* SALVOS. [Lat. *salvo jure*.] An exception; an excuse; a reservation; as, "private *salvos* or evasions." — *Locke*.

(*Mil.*) A discharge of heavy guns, or volley of musketry; as, to fire a *salvo*.

Sal-volat-ile, *n.* (*Chem.*) Carbonate of ammonia. The term is often applied to a spirituous solution of carbonate of ammonia flavored with aromatics, as in the compound spirit of ammonia.

Salvor, *n.* (*Mar. Law*.) One who saves a ship or goods at sea.

Salzburg, (*saltz-boorg*), a city of Upper Austria, on the Salzach, 67 m. S.W. of Linz, and 70 m. E.S.E. of Munich. It is situated amidst lofty mountains, and surrounded by walls. The Salzach flows through the city, dividing it into two parts. It contains numerous public buildings and monuments. *Manuf.* Leather, tobacco, starch, and iron-wire. It is the birth-place of Mozart and Haydn. *Pop.* 18,000.

Salzburg, a town of Hungary, S.W. of Eperies; *pop.* 4,000.

Samakov, a town of European Turkey, in Bulgaria, 30 m. S.S.E. of St. Sophia. It has extensive iron-works. *Pop.* 7,000.

Samana, a peninsula on the N.E. of the island of Hayti, republic of San Domingo, extending 32 m. from W. to E., with a breadth of 11 m.; Lat. 19° 18' N., Lon. 69° 8' W. The surroundings indicate that it was formerly an island. *Soil*, fertile, producing timber for ship-building and cabinet-ware. *Min.* Copper, gold, and coal. *Pop.* 1,721.

Samana Bay, in San Domingo, S. of ab. peninsula, 30 m. long and several broad, one of the most important harbors of the W. Indies. On the shores are the harbors of Santa Barbara and San Lorenzo. The bay was surveyed by a U. S. vessel in 1882. See HAYTI.

Samar'co, a bay on the coast of Peru, Lat. 9° 15' 30" S., Lon. 78° 32' 45" W.

Samar', one of the Philippine Islands, situated to the S.E. of Luzon, from which it is separated by a strait 20 m. wide; Lat. between 11° 15' and 12° 45' N., Lon. 124° 15' and 125° 52' E. *Ext.* 140 m. long, with an average breadth of 60 m. It is fertile and easily cultivated. *Prod.* Sugar, cotton, coffee, and various kinds of fruits and vegetables. *Pop.* 100,000.

Sam'ara, *n.* [Lat., from *sambucus*, a musical instrument formed of this tree.] (*Bot.*) The Elder, a gen. of the ord. *Caprifoliaceae*. *S. nigra* is the Common Elder,

Samara', a city of European Russia, cap. of govt. of

same name, on the Volga, at the junction of the Samara, 100 m. S.E. of Simbirsk. *Pop.* 25,343.

Samarang', a seaport-town of Java, on the N. coast, near the mouth of the river Samarang, 240 m. E.S.E. of Batavia; Lat. 6° 56' S., Lon. 110° 27' E. It is strongly fortified, and has a considerable trade in coffee, pepper, and rice.

Sam'arcand, a fortified city of Independent Tartary, in Bokhara, on the Sogd, or Zer-Afshan, 120 m. E. of Bokhara; Lat. 39° 30' N., Lat. 65° 50' 15" E. It was formerly the cap. of Timour's empire, and was a place of great importance. *Pop.* 25,000. Captured and annexed by the Russians in 1868. See also BOKHARA.

Sam'are, *n.* Same as SIMAR, *q. v.*

Sama'ria, (*Jewish Hist.*) a city and country of Palestine, situated towards the north of Judea. Samaria was the country in which the ten revolted tribes raised their independent state, and formed the kingdom properly denominated Israel, in contradistinction to that of Judah, embracing the two tribes of Judah and Benjamin, from which the other ten had seceded when, refusing the authority of Rehoboam, they established a dynasty of their own, at the head of which they placed Jeroboam, the first king of the nation of Israel. So deadly was the animosity, and so implacable the hatred that existed between these two nations of Jews, that, from the time of their severance to the destruction of their capital and the captivity of Israel, an almost perpetual state of warfare existed between Judah and Israel; indeed, so intensely did the former hate the latter, that the term of *Samaritan* was one of the bitterest contempt and reproach that could be applied to any one. It was the consciousness of this fact, though it had long outlived the existence of the nation, that made the woman at the well marvel when Jesus asked her to draw him some water. The antipathy borne by the people of Judah for those of Israel or Samaria was not only political, but religious, and they hated them not alone for the difference of their institutions, but more for the difference that existed in the form of worship adopted by the Samaritans. These theological dissensions were, however, in time greatly modified by the return of the Samaritans to the ancient form of worship, and by the erection of a temple in the capital that professed to be a model of the great fabric completed by Solomon in Jerusalem, an event that was celebrated soon after the passage of Alexander the Great through the land of Syria. The city of Samaria, and capital of the kingdom, was situated on a hill, Mount Sameron, was founded by Omri, and from that time till its overthrow by the Assyrians was the residence of all the kings of Israel. It was subsequently rebuilt by Herod, who called it *Sebaste* (a Greek word signifying *Augustus*), in honor of Augustus Caesar.

Samar'itan, *a.* (*Geog.*) Pertaining, or relating, to Samaria, the chief city of the ten tribes of Israel.

(*Philol.*) Denoting the ancient characters and alphabet used by the Hebrews before the Babylonish captivity, and retained by the people of Samaria.

—*n.* (*Geog.*) An inhabitant of Samaria; one who belonged to the sect which derived their appellation from that city. (*Philol.*) The language of Samaria; — a dialect of the Chaldee.

Sam'aroid, *n.* (*Bot.*) Bearing resemblance to a samara.

Samar'rah, a town of Asiatic Turkey, pashalic of Bagdad, 65 m. N.N.W. of Bagdad. It is frequented as a place of pilgrimage.

Sambas', a river on the W. coast of Borneo; Lat. 1° 12' N., Lon. 109° 5' E. — A town on the above river, 40 m. from its mouth. The British were repulsed in an attack upon it in 1812, but captured it in the following year. *Pop.* 10,000, mostly Malays.

Sam'bo, *n.* [*Sp. zambo*.] The offspring of a black person and a mulatto; — hence, sportively or derisively, a negro.

Sambre, (*sambr*), a river of France and Belgium, rising in the dept. of Aisne, and after a N.E. course of 100 m., joins the Meuse, at Namur.

Sambu'cus, *n.* [Lat., from *sambuca*, a musical instrument formed of this tree.] (*Bot.*) The Elder, a gen. of the ord. *Caprifoliaceae*. *S. nigra* is the Common Elder,

Fig. 2301. — ELDER, (*Sambucus canadensis*.)

a low tree, native of Europe, from which the elder-wine of old-fashioned folk is manufactured, a liquor which is now chiefly used for adulterating port-wine. Several parts of this plant are used in medicine. Its

flowers contain a volatile oil, which renders them mildly stimulant and sudorific; they are employed in the preparation of a cooling ointment, and to make elder-flower water. The inner bark and leaves have more or less purgative and emetic properties. The fruit is mildly aperient and diuretic. The American species, *S. canadensis* (Fig. 2301), much resembles *S. nigra*, but never assumes anything of a tree character.

Sam'buke, *n.* [Lat. *sambuca*; Gr. *sambukē*.] (*Mus.*) An ancient stringed musical instrument, resembling a harp, the invention of which has been attributed to the Syrians and Phœnicians. — The name was also applied to a military engine for scaling the walls of besieged cities.

Same, *a.* [*A. S.*] Having the property of oneness; identical; not different from other; as, he is the *same* individual I spoke of. — Of the identical kind or species, though not the specific thing; being of the like class, kind, like, or degree; corresponding; equal; exactly similar; as, it is all the *same* to me whether he accepts or rejects. — That was mentioned before, or that was just about to be mentioned; as, he spoke too of the *same*.

Sameness, *n.* State of being the same, or of being identical; state of not being different or other; state of being perfectly alike; near resemblance; correspondence; similarity; identity; oneness; as, *sameness* of individuality, of appearance, of sound, &c. — Hence, tedious monotony; absence of variety; tiresome repetition; as, there's too much *sameness* in his style.

Sam'ian, *a.* [Lat. *Samius*.] (*Geog.*) Pertaining or relating to the island of Samos, or to its inhabitants; as, *Samian* wine.

Samian earth, a sort of marl brought from Samos, and formerly used, medicinally, as an astringent.

Sam'ian, *n.* (*Geog.*) A native or inhabitant of Samos; a Samiot.

Sam'iel, *n.* The simoom. See SIMOOM.

Sam'iot, *Sam'iot*, *a.* (*Geog.*) Pertaining or relating to Samos, or its inhabitants; Samian.

—*n.* (*Geog.*) A native or inhabitant of Samos.

Sam'let, *n.* A young salmon; a salmonet.

Samo'lus, *n.* (*Bot.*) A genus of plants, order *Primulaceae*. They are herbs with alternate leaves, and flowers corymbose or racemose. *S. valerandi*, the Water Pimpernel, found in wet, gravelly places throughout the world, is 1 foot high, and has small, white flowers, the corolla of which is twice the length of the calyx.

Sam'nites, *n. pl.* (*Anc. Hist.*) A people of ancient Italy, who inhabited the country between Apulia on the east and Latium and Campania on the west; a brave and warlike nation, who distinguished themselves by their implacable hatred of the Romans, with whom, from their earliest existence as a people, they waged a perpetual hostility. They were, however, ultimately compelled to succumb before the growing power of Rome, and after a succession of disasters were finally exterminated about 272 B.C. Their capital city was called Samnium, or Samnis. — The term *Samnites* was subsequently applied to an order of Roman gladiators, so named because accoutred and armed in the fashion of the ancient nation of Samnites.

Samoan Islands. See NAVIGATORS' ISLANDS.

Samo'ens, a town of France, in Savoy; *pop.* 4,000.

Samo'edes, *Samo'yeds*, *n. pl.* (*Geog.*) Three tribes inhabiting a region skirting the Arctic Ocean.

Samos. [Turk. *Susam-adassi*.] An island of the Grecian Archipelago, belonging to Turkey, off the W. coast of Asia Minor, from which it is separated by the Little Bosphorus, a strait 2 m. wide, 42 m. S.W. of Smyrna; Mount Kerki, on its W. extremity, being in Lat. 37° 43' 48" N., Lon. 26° 38' 21" E.; area, 165 sq. m. The surface is mountainous, varied in scenery, the highest peak (Mount Kerki) being 4,725 feet. It is well wooded and fertile. *Prod.* Grain, wine, and the vegetables and fruits of the temperate zone. *Min.* Silver, lead, and marble. *Cup.* Kborra. *S.* was anciently one of the most famous isles of Greece, and early turned its attention to naval affairs, establishing numerous colonies along the shores of the Mediterranean. It took part in the numerous wars of Greece, and finally became a Roman province B.C. 84. It took part in the war against the Turks for Grecian independence, but at its conclusion was retained by the Turks.

Samothrace, (*sa'mo-thraice*). [Mod. Gr. *Samothraki*; Turk. *Semendrek*.] An island belonging to European Turkey, in the Egean Sea, 15 m. S.E. of Nubros; area, 30 sq. m. The surface is rugged and mountainous. *Pop.* 1,500.

Samp, *n.* An article of food consisting of maize, broken or bruised, which is cooked by boiling, and often eaten with milk; — a dish borrowed from the aborigines of America.

Samphire, (*sām'fur*), *n.* (*Bot.*) See CRITHMUM.

Sample, (*sām'pl*), *n.* [*Fr. exemple*, from Lat. *exemplum*.] A specimen; that which is taken out of a larger quantity; as a specimen; a part of anything presented for inspection, or intended to be shown, as evidence of the quality of the whole; as, cotton is purchased by *sample*, give me a *sample* of the goods. — A pattern; an example; an instance; as, is this a *sample* for me to follow?

Sam'pler, *n.* [*Lat. exemplar*.] A pattern or model of work; a specimen; — particularly, a piece of needle-work sewed by learners, containing specimens of various kinds of stitches. — One who apportions things into *samples* for inspection; as, a tea *sampler*.

Sampson, WILLIAM T., Rear-Admiral U. S. Navy; born in Palmyra, N. Y., February 9, 1840; graduated Naval Academy 1861; served in civil war; was on board the *Palapasco* when blown up in Charleston harbor, 1865. Advanced from captain to acting rear-admiral, 1898, and put in command of North Atlantic squadron at

Key West. Commanded the fleet during the blockade of Cuba and the destruction of the Spanish squadron at Santiago. Promoted rear-admiral after the war. Served as chairman of the Maine Inquiry and the Cuba Evacuation Commissions. Died May 6, 1902.

Samsoe, (*sam'se(r)*), an island of Denmark, in the Great Belt, between Zealand and Jutland; *area*, 40 sq. m.

Sam'son. (*Script.*) The son of Manoah, of the tribe of Dan. He was endowed with extraordinary strength, and obtained several advantages over the Philistines. At length his mistress betrayed him into the hands of his enemies, who put out his eyes, and made him work at a mill. On a public festival, when the Philistine lords were assembled in the temple of Dagon, Samson was sent for to show them sport. Laying hold of two pillars of the temple as if to support himself, he pulled down the building, and was buried in the ruins, with more than 3,000 Philistines.

Sam'son's-post, *n.* (*Naut.*) A strong pillar resting on a ship's keelson, and supporting a beam of the deck over the hold, thus helping to keep the cargo in its place. — Also, a temporary or movable pillar carrying a leading block for various purposes.

Samuel, (*sām'u-el*). (*Script.*) A prophet and judge of Israel, of the tribe of Levi, was called in his youth, while attending Eli, the high priest. He consecrated Saul king of Israel, and was afterwards commanded to anoint David. After governing Israel either alone or in conjunction with Saul during 50 years, he died in the 90th year of his age, B. C. 1072.

Books of Samuel. Two of the ceremonial books of the Old Testament, called after the prophet Samuel, their reputed author. They were anciently reckoned as one book by the Jews, the present division into two being derived from the Septuagint and Vulgate. Various attempts have been made to determine the age and authorship of these books, with more or less of probability. The common opinion, founded on 1 *Chron.* xxix. 29, is that the first twenty-four chapters were written by Samuel himself, and the remainder by Nathan and Gad. There is no reason to believe, however, that these documents were identical with the present Books of Samuel. From Samuel and Kings being sometimes called the four Books of Kings, John is of opinion that they were all written by the same person, and at a date so recent as the thirtieth year of the Babylonish captivity. This hypothesis, however, will not stand the test of criticism. The language and style of the books are very different, denoting different periods and different authors. The Books of Samuel bear the impress of a hoary age in their language, allusions, and mode of composition. The insertion of odes and snatches of poetry, to enliven and verify the narrative, is common to them with the Pentateuch. They appear to have been made up from documents contemporary, or nearly so, with the events to which they refer, and wrought into their present form by some later hand. Some portions are more fully detailed and warmly colored than others, and the minute and vivid sketches with which they abound prove that their author speaks what he knows, and testifies what he has seen. With respect to the person who compiled and brought them together in their present form, all that can be affirmed with probability is that he lived not long after the time of David. Though much has been made of discrepancies and contradictory statements that are said to occur in these Books, their historical character is abundantly supported both by external and internal evidence. Portions of them are quoted or referred to in the New Testament, and allusions to them also occur in the Book of Psalms, to which they often furnish historical illustration.

Samyda'ceæ, *n.* (*Bot.*) A small order of plants, alliance *Violales*, consisting of trees and shrubs, exclusively tropical, and principally S. American. Leaves alternate simple, evergreen, stipulate, usually with round or linear transparent markings. Flowers perfect, calyx inferior, 4-5-partite. Stamens perigynous, two, three, or four times as many as the segments of the calyx. Fruit superior, capsular, leathery, 1-celled. Seeds numerous, arillate, with oily or fleshy albumen and large embryo. The plants are of little economic value.

San, a river of Austrian Poland, rising in the Carpathian Mountains, and after a N. course of 250 m., falling into the Vistula, near Sandomir.

Sa'na, a city of Arabia, cap. of Yemen, and residence of the Imam, near the head of the Shab River, 150 m. N.N.E. of Mocha; Lat. 15° 21' N., Lon. 44° 9' E. It has a considerable trade in coffee. *Pop.* 40,000.

Sanability, *n.* State of being sanable or curable.

San'able, *a.* [*Lat. sanabilis* — *sano*, to cure.] That may be healed or cured; curable; healable; susceptible of remedial treatment.

San And'reas, in *California*, a post-vill., cap. of Calaveras co., abt. 42 m. E. by N. of Stockton;

San Angel, (*anzh'l*), a town of Mexico, abt. 6 m. S. of the city of Mexico; *pop.* 2,500.

San Antonio, (*an-to'ne-o*), a bay of Patagonia; Lat. 40° 49' S., Lon. 65° 54' W.

San Antonio, a cape of Brazil, at the entrance to the Bay of Bahia. It has a light 140 feet high; Lat. 13° 0' 7" S., Lon. 38° 31' 7" W.

San Antonio, a cape of Buenos Ayres, Argentine Republic, at the mouth of the Rio de la Plata; Lat. 36° 19' S., Lon. 56° 45' W.

San Antonio, a town of Venezuela, abt. 110 m. E. of Varinas.

San Antonio, in *New Mexico*, a village abt. 45 m. S.S.W. of Santa Fé. — A village abt. 150 m. S.S.W. of Santa Fé.

San Antonio, in *Texas*, a river rising in Bexar co.,

and flowing a S.E. course enters Guadalupe River from Refugio co., a few m. above Espiritu Santo Bay. The upper portion is called Medina River. — A city, cap. of Bexar co., on the San Antonio River, abt. 110 m. S.W. of Austin. It is well built, and contains many fine public and private edifices. A U. S. arsenal is here located. Fort Alamo, near here, is memorable as having been the scene of one of the most affecting episodes of the Texan war of independence. On March 6, 1836, a small body of patriots, under the command of Col. Travis, resisted a Mexican army ten times their number, and, rather than surrender, perished to a man; — hence it has been called the *Thermopylæ of Texas*, and "Remember the Alamo" afterwards became the war-cry of the Texan army.

San Antonio, one of the Cape Verd Islands; Lat. 16° 26' N., Lon. 25° 21' W.

San Antonio Creek, in *California*, flows into the Pacific Ocean from Marin co.

San Antonio de Gibraltar, a town of Venezuela, abt. 50 m. N.W. of Trujillo; *pop.* 3,500.

San Antonio de los Cues, a town of Mexico, abt. 70 m. N. of Oajaca.

San'ative, *a.* Having the power to heal or cure; tending to cure or heal; healing; curative; remedial; sanatory; as, *sanative treatment*.

San'ativeness, *n.* Quality of being sanative; power of healing; curativeness.

San'atory, *a.* [*From Lat. sanare*, to heal.] Sanative; curative; healing; tending to promote health; as, *sanatory regulations*; — this term is often confounded with *sanitary*, as being synonymous in definition; this is, however, not properly so, the word *sanitary* having the passive sense of *belonging to health*, rather than *tending to, or conducive of health*.

San August'in, a town of Mexico, abt. 12 m. S. of the city of Mexico.

San August'ine, in *Texas*, an E. co.; *area*, abt. 620 sq. m. *Rivers.* Angelina and Attoyac rivers. *Surface*, mostly level; *soil*, very fertile, and noted for its cotton-growing qualities. *Cap.* San Augustine, a thriving post-village, abt. 310 m. E.N.E. of Austin. *Pop.* of co., abt. 5,000.

San-benito, (*-bā-nē'to*), *n.* [*It.*; *Lat. saccus benedictus*.] (*Eccl.*) A robe painted with bizarre images of hideous aspect, formerly worn by those condemned by the Spanish Inquisition. — Also, a garment of sack-cloth worn by a penitent restored to the bosom of the Roman Catholic Church.

San Bernard', in *Texas*, a small river flowing S.E. into the Gulf of Mexico from Brazoria co.

San Bernardino, (*ber-nar-dee'no*), in *California*, a lofty peak of the Coast Range, in San Bernardino co., abt. 30 m. E. of San Bernardino. *Height*, abt. 8,500 ft. — A southeast co., adjoining Nevada and Arizona; *area*, about 21,000 square miles. *Rivers.* Colorado, Mohave, Amargosa, and Santa Anna rivers. There are also several brackish lakes, or *sinks*. *Surface*, much diversified, the Coast Range traversing the S.W. part of the co.; *soil*, in some parts fertile. *Min.* Gold, silver, and tin. *Cap.* San Bernardino. — A thriving city, cap. of the above county, about 30 miles east of Los Angeles. *Pop.* (1897) 4,900.

San Bernard'o, a group of islets belonging to the U. S. of Colombia, in the Caribbean Sea, at the mouth of the Gulf of Morrosquillo, abt. 50 m. S. by W. of Cartagena.

San Blas, or MANDINGO, a bay or gulf of the U. S. of Colombia, formed by an arm of the Caribbean Sea on the N. coast of the Isthmus of Panama; Lat. 9° 30' N., Lon. 79° W. See CAPE SAN BLAS.

San Blas, or SAINT BLAS, a seaport-town of Mexico, on an island in the Pacific Ocean, at the mouth of the Santiago River, abt. 37 m. W.S.W. of Tepic; Lat. 21° 32' 34" N., Lon. 105° 15' 24" W. It has an excellent harbor, but the climate is very unhealthy. *Pop.* abt. 2,500.

San Boron'bon, (*ENSENADA DE*), a bay of the Argentine Republic, in the Rio de la Plata, abt. 30 m. S.E. of Buenos Ayres.

San'bornton, in *Iowa*, a village of Clinton co., abt. 45 m. N.E. by E. of Iowa City.

Sanbornton, in *New Hampshire*, a post-township of Belknap co.

San'bornton Bridge, in *New Hampshire*, a village of Belknap co., about 18 m. N. of Concord.

San Buenaventura (*bua-na-ven-too'ra*), in *California*, a small river flowing W. into the Pacific Ocean from Santa Barbara co.

— A town of Ventura co.; its post-office is VENTURA.

San Cascia'no, a town of Central Italy, prov. of Florence, 10 m. S.W. of Florence; *pop.* 11,258.

San Carlos, (*kar'loce*), a town of Chili, on the N.E. coast of the island of Chiloe. It has a fine harbor, well fortified, and commands an extensive trade.

San Carlos, a town of Venezuela, abt. 130 m. S.W. of Caracas. In the vicinity, rich plantations of indigo, coffee, and cotton, and immense numbers of sheep and cattle are raised on the neighboring savannas. *Pop.* 10,000.

Sancerre, (*san-sair*), a town of France, dept. of Cher, on the Loire, 27 m. N.E. of Bourges; *pop.* 4,000.

San Clemente, in *California*, one of the Santa Barbara Islands, abt. 15 m. S. of Santa Catalina.

San'coty Head, in *Massachusetts*, a promontory and light-house at the S.E. extremity of Nantucket Island. It exhibits a fixed light 150 ft. above sea level; Lat. 41° 17' N., Lon. 69° 59' W.

San Cristo'val, a lake of Mexico, abt. 12 m. N.N.E. of the city of Mexico. On its S. side is a village of same name.

San Cristoval, a town of Venezuela, abt. 96 m. S.S.W. of Merida.

San Croce, (*-kro'chai*), a town of Italy, on the Arno, 4 m. N.W. of San Miniato; *pop.* 5,200.

Sanctification, (*sank-tif-e-kai'shun*), *n.* [*Lat. sanctus*, holy, and *facio*, to make.] (*Theol.*) The work of the Holy Spirit on the soul of the regenerate man, by which it is made "meet for the inheritance of the saints in light." It is to be carefully distinguished from *justification*, which is the divine pardon and acceptance of the sinner. It is the progressive conformity of the heart and life of the Christian man to the will of God from his justification to his final salvation.

Sanctified, (*-fid*), *p. a.* Sanctimonious; made to present an appearance of affected holiness; puritanical; — used in a reproachful or contemptuous sense; as, a *sanctified sinner*.

Sanctifier, *n.* One who sanctifies or makes holy; specifically, the Holy Spirit; as, God the *sanctifier*.

Sanctify, (*sangk'ti-fi*), *v. a.* (*imp.* and *pp.* SANCTIFIED.) [*Fr. sanctifier*, from *Lat. sanctus*, holy, and *facio*, to make.] To make holy or sacred; to hallow; to separate, set apart, or appoint to a holy, sacred, or religious use; to consecrate by appropriate ceremonies. — To make holy or pure; to free from sin; to cleanse from moral corruption or pollution; to render fit for the service of God and the enjoyment of heaven. — To make productive of holiness or piety; to provide, as the active means of holiness. — To secure from violation; to give sanction, or authoritative title, reverence, and respect to; to impart venerableness or inviolability to; as, a doctrine *sanctified by truth*.

Sanctifyingly, *adv.* In a manner tending to sanctify; in a degree adapted to make or increase holiness.

Sanctil'oquent, (*-kwent*), *a.* [*Lat. sanctus*, holy, and *loquens* — *loqui*, to speak.] Speaking of holy things, or discoursing in a devout manner.

Sanctimo'nious, *a.* [*From Lat. sanctimonia* — *sanctus*, holy.] Sacred; saintly; possessing sanctimony or devoutness. — Having the external appearance of sanctity; pretending to religiousness; mock-pious; hypocritically devout; puritanical; as, a *sanctimonious Sabatarian*.

Sanctimoniously, *adv.* In a sanctimonious manner; puritanically.

Sanctimo'niousness, *n.* State or quality of being sanctimonious; sanctity, or the appearance of it; devoutness; mock piety; hypocritical devoutness; pretended holiness; artificial saintliness; puritanical manners or practices.

Sanctimony, *n.* [*Lat. sanctimonia* — *sanctus*, holy.] Holiness; sanctity; devoutness; religiousness; — particularly, assumed saintliness; mock piety; pretended holiness; sham or hypocritical devoutness.

Sanction, (*sangk'shun*), *n.* [*Fr.*; *Lat. sanctio*, from *sancio*, to make sacred or inviolable.] Solemn or magisterial authorization, confirmation, or ratification; official countenance or support; an authoritative act of a superior, by which he ratifies and gives validity to the act of some other person or body of persons; confirmation or acceptance derived from testimony, character, influence, or custom. — That which is acted or uttered to carry out the will, law, or authority of another or others; as, "the public *sanctions* of the peace." *Dryden*.

— *v. a.* To give a sanction to; to make authoritative or valid; to ratify; to confirm; to countenance; to support; as, he refused to *sanction* so risky an enterprise.

Sanctionary, *a.* Serving to, or giving, sanction.

Sanctitude, *n.* [*Lat. sanctitudo*.] Sanctity. (*R.*)

Sanct'ity, *n.* [*It. santita*; *Fr. sainteté*; *Lat. sanctitas*, from *sanctus*.] State or quality of being sacred, holy, or devout; state of being pure or godly; holiness; saintliness; godliness; piety; purity; goodness; as, he makes no pretensions to *sanctity* of life. — State of being religiously or solemnly binding or incumbent; sacredness; inviolability; as, the *sanctity* of an oath or moral obligation. — A saint; a holy personage. (*R.*)

Sanctuary, *n.* [*Lat. sanctuarium*.] Among the ancient Jews, a sanctuary was the innermost chamber of the tabernacle, — afterwards of the temple, in which was kept the ark of the Covenant, and was never entered, except by the high-priest once a year. It was also called the Holy of Holies, *Sanctum Sanctorum*. In the Christian church, the bema, or inner portion of the church, immediately round the altar, was called the *sanctuary*. From the sacred character of the churches, and from the rising power of the clergy, they came to be resorted to as asylums by fugitives from the hands of justice, and afterwards certain churches were set apart specially for that purpose, and were termed *sanctuaries*. This seems to have been originally intended only to prevent sudden violence, and to give time for the regular administration of the law, and perhaps, in the case of certain delinquencies, for the intercession of the church. The abuses to which this system gave rise, as tending entirely to defeat the ends of justice, led to its abolition in all the Christian countries.

Sanctus, *n.* [*Lat.*] (*Mus.*) In sacred music, an anthem commencing with the word *sanctus*, holy.

Sand, *n.* [*A. S.* and *Ger.*] Any mass or collection of fine particles of stone, particularly of fine, granular particles of silicious stone, which constitutes common river- and sea-sand. Particles of other substances are often blended with it, and sometimes it becomes calcareous from the prevalence of carbonate of lime. Silicious sand selected for the mixing of mortar and other cements, should be freed from all saline matters, not too fine-grained, and somewhat sharp or angular. In the manufacture of glass and of porcelain, sand should be from oxide of iron and other tinging oxides. The fine, white sand resulting from the disintegration of soft and pure sandstone, is much used, under the name of *silver-sand*.

George Sand

[BARONESS DUDEVANT]

1804-1876

Hence, chiefly in the plural, a moment; a measured interval; — from the use of sand in the hour-glass.

"The sands are number'd that make up my life." — *Shaks.*

—*pl.* Tracts of land consisting of sand, like the deserts of Arabia, Africa, Asia, &c.; as, "the Libyan sands." — *Milton.*

—*v. a.* To sprinkle or cover with sand; as, to sand a floor.

Sand, GEORGES, the *nom de plume* of MADAME AMANTINE LUCILE AURORE, BARONESS DUDEVANT, a French authoress of great celebrity, b. in Paris, 1804, and descended from the famous Marshal de Saxe by her father the Marquis Maurice Dupin de Franceuil. After having received a conventual education, from 1817 to 1820, she married in 1822 M. Dudevaut. A separation took place in 1831. She went to Paris, where her first literary efforts appeared in the *Figaro*. In conjunction with a young student, Jules Sandeau, from whose name she composed her *nom de plume*, she wrote the romance *Rose et Blanche*, in 1832, but which, though clever in parts, gave no hint of the splendid ability first fully developed in *Indiana*, published in the same year. Much interest was excited by this, which increased on the appearance of the romances *Valentine*; *Lélia*; *Jacques*; *André*; *Leone Leon*; *Simon*; and *Mauprat*. Besides imaginative productions, she contributed miscellaneous papers, articles, and political essays to *La Monde*, edited by Lamennais. She started the *Revue Indépendante*, in connection with P. Leroux and Viardot. She wrote for this paper *Horace*; *Consuelo*; and *La Comtesse de Rudolstadt*. Madame Dudevaut obtained possession of her private property and her children, and afterward chiefly resided at the Château de Nohant. She published an autobiography and several popular dramas, and attained the highest distinction for versatility, brilliancy of imagination, intrepidity of mind, and mastery of the great problems of modern social progress. Died in 1876.

Sand'al, *n.* [*Fr. sandale.*] A protection for the foot, worn in ancient times, and which, in the Authorized Version of the Old Testament, is usually denoted by the word translated *shoe*. It was usually a sole of hide, leather, or wood, bound on the foot by thongs; but it may sometimes denote such shoes and buskins as eventually came into use. Jewish ladies appear to have paid great attention to the beauty of their sandals (*Cant.* vii. 1), which, probably, did not differ much from those used in Egypt, excepting, perhaps, that from the greater roughness of their country, they were usually of more substantial make and materials. The Egyptian sandals varied slightly in form; those worn by the upper classes, and by women, were usually pointed and turned up at the end, like our skates and many of the Eastern slippers at the present day. In transferring a possession or

Fig. 2302. — EGYPTIAN AND TURKISH SANDALS.

domain, it was customary among the Jews to deliver a sandal (*Ruth* iv. 7), as in our Middle Ages, a glove. Hence, the action of throwing down a shoe upon a region or territory, was a symbol of occupancy (*Ps.* lx. 10). It was undoubtedly the custom to take off the sandals on holy ground, in the act of worship, and in the presence of a superior. Hence the command to take the sandals from the feet under such circumstances (*Exod.* iii. 5; *Josh.* v. 15). This is still the well-known custom of the East — an Oriental taking off his shoe in cases in which a European would remove his hat. The shoes of the modern Orientals are, however, made to slip off easily, which was not the case with sandals, which required to be unbound with some trouble. This operation was usually performed by servants; and hence the act of unloosing the sandals of another became a familiar symbol of servitude (*Mark* i. 7; *Luke* iii. 16; *John* i. 27; *Acts* xiii. 25).

—*pl.* A kind of ladies' slippers, having ribbons tied criss-cross over the instep of the foot.

Sand'al, **Sand'al-wood**, *n.* See SANTALUM.

Sandaliform, *a.* Shaped like a sandal or slipper.

Sand'al-wood Isle, an island of the Eastern Archipelago, in Lat. 10° S., Lon. 119° E. Ext. 120 m. long, and 60 m. broad in its widest part. The surface is generally mountainous, but fertile. *Prod.* Cotton, rice, coffee, sugar, maize, pepper, indigo, ebony, &c. *Chief towns.* Nangamessi and Padewaway. Pop. 1,000,000.

Sandarac, **Sandarach**, *n.* [*Gr. sandarakē*, realgar; *Fr. sandaraque.*] A white brittle resin obtained from *Cullitris quadrivalvis*, a tree growing in N. Africa. The powder of this resin is used in the manufacture of

varnish, for incense; and is, also, employed under the name of *pounce* to prevent ink from sinking into paper. (*Min.*) Realgar.

Sand'ay, one of the Orkney islands; pop. 2,000.

Sand'bach, a town of England, co. of Chester, on the Wheelock, 24 m. E.S.E. of Chester; pop. 5,000.

Sand'-bag, *n.* (*Engrav.*) A leathern cushion, tightly filled with fine sand, used by engravers to prop their work at a convenient angle, or to give motion to a place or wood-cut, in engraving curved lines, &c.

—*pl.* (*Fortif.*) Bags of coarse canvas filled with sand, much used in cases where cover for troops is required to be speedily obtained, as a temporary revestment for parapets, &c.

Sand'-ball, *n.* Soap mixed with sand, or powdered pumice-stone, made into a ball for use in ablutions.

Sand'-bath, *n.* (*Chem.*) See BATH.

Sand'-blind, *a.* Having a defect of sight, by reason of which small particles like sand appear to fly before the eyes.

Sand'-box, *n.* A box with a perforated lid, for distributing sand over paper.

(*Mach.*) In locomotive engines, a box from which sand is sprinkled on the rails in front of the driving-wheel, to increase their power of adhesion, &c.

Sand'-box-tree, *n.* (*Bot.*) See HURA.

Sand'-crab, *n.* (*Zool.*) See ACYPODA.

Sand'-crack, *n.* (*Far.*) A vertical crack in a horse's hoof, apt, if not remedied, to induce lameness.

Sand Creek, in Indiana, rises in Decatur co., and flowing S.W. and W., enters Driftwood Fork of White River from Jackson co. — A township of Bartholomew co. — A township of Decatur co. — A township of Jennings co.

Sand'-drift, *n.* Whirling or driving sand.

Sanded, *a.* Covered with sand; barreil; desert-like; as, a *sanded* valley. — Checkered with small spots; mottled; variegated with spots; speckled; as, a *sanded* hound. — Short-sighted; as, *sanded* eyes; — an English provincialism.

Sand'-eel, **Sand'-lance**, *n.* (*Zool.*) See AMMONYTE.

Sandema'nians, *n. pl.* (*Eccl. Hist.*) Same as GRASS-1TES, *q. v.*

Sand'ering, *a.* (*Zool.*) A small bird, a species of *Tringa*, *T. arenaria*, family *Scolopacidae*, native of North America and Europe.

Sand'ers, or **Red Sand'al-wood**, *n.* See SANTALUM.

Sand'ers-blue, *n.* (*Paint.*) See SAUNDERS-BLUE.

Sand'erson's Hoop, a promontory of Greenland, S. of Upernavik; the cliff is 3,000 feet high.

Sand'ersville, or SAUNDERSVILLE, in Georgia, a city, cap. of Washington co., about 28 m. E. of Milledgeville. Pop. (1897) 2,150.

Sandersville, or SAUNDERSVILLE, in Indiana, a village of Vanderburg co., about 10 m. N. of Evansville.

Sand'ford, in New York, a post-township of Broome county.

Sand'-fly, *n.* (*Zool.*) A small, troublesome fly, *Simulium nocivum*.

Sand'gate, in Vermont, a post-township of Bennington co.

Sand'-glass, *n.* An hour-glass.

Sand'-grouse, *n.* (*Zool.*) A species of grouse, *Tetrao arenarius*.

Sand'-heat, *n.* The caloric of warm sand in chemical operations.

Sand'-hopper, **Sand'-flea**, *n.* (*Zool.*) See AMPHIPODA.

San Di'ego, in California, an extreme S. co., having Arizona Territory on the E., Lower California on the S., and the Pacific Ocean on the W.; area, abt. 15,000 sq. m. *Rivers.* Colorado, San Diego, San Luis del Rey, and Santa Margarita rivers. *Surface*, much diversified, and in the central part mountainous; *soil*, in the E. sterile, and in the W. generally fertile. *Min.* Gold is found near the Colorado river. *Cap.* San Diego. Pop. (1897) 38,660.

—A city, cap. of the above co., on a bay of the same name, about 470 m. S.E. of San Francisco; Lat. 32° 44' 41" N., Lon. 117° 8' W. It possesses one of the best harbors on the Pacific coast. Pop. (1897) 21,400.

Sand'iness, *n.* [*From sandy.*] State of being sandy, or of a sandy color; as, *sandiness* of the hair, *sandiness* of soil.

Sand'ing Isles, two small islands off the S.W. coast of Sumatra.

Sand'isfield, in Massachusetts, a post-village and township of Berks county, about 37 miles W. of Springfield.

Sand'iston, in New Jersey, a township of Sussex county.

San'diver, **San'dever**, *n.* Same as GLASS GALL, *q. v.*

Sand'jak, **San'giac**, *n.* A Turkish governor of a territorial district.

Sand Lake, in New York, a post-village and twp. of Rensselaer co., abt. 10 m. S.E. of Albany.

Sand'-martin, *n.* (*Zool.*) A species of Swallow (*Hirundo riparia*).

San Domin'go, or the DOMINICAN REPUBLIC. See HAYTI.

San Domingo, a town of the U. S. of Colombia, abt. 60 m. E. of Antioquia.

San Domingo, an islet of the W. Indies, on the Great Bahama Bank, abt. 90 m. N.E. of Nuevitas, in Cuba.

San Domingo, in New Mexico, a town on the Rio Grande del Norte, abt. 28 m. S.W. of Santa Fé.

San Domingo Sinacantan', a town of Mexico, in Chiapa, on the borders of Tabasco; pop. abt. 2,500.

San Domingo Suriano, (*soo-re-a'no*), a village of Uruguay, on the Rio Negro, abt. 80 m. N. of Buenos Ayres.

Sandomir, (*san'do-meer*), a town of Russian Poland, on the Volga, 50 m. S.W. of Lublin. It was formerly the residence of the kings of Poland. Pop. 4,500.

San Do'na, a town of Italy, on the Piave, 18 m. N.E. of Venice. *Manuf.* Silk and linen goods. Pop. 4,600.

San'doval, in Illinois, a post-village of Marion co., abt. 61 m. E. of St. Louis.

San'down, in New Hampshire, a post-township of Rockingham county, about 34 miles south-east of Concord.

Sand'-paper, *n.* Paper covered on one side with a fine gritty substance, small as sand, for smoothing and polishing.

Sand'-piper, *n.* (*Zool.*) See TRINGA.

Sand Pra'rie, in Illinois, a township of Tazewell co.

Sand Ridge, in Iowa, a village of Des Moines co., abt. 75 m. S.S.E. of Iowa City.

Sand'-rock, *n.* A rock composed of cemented silicious sand.

Sand'-star, *n.* A species of star-fish, *Ophiura texturata*.

Sand'stone, *n.* (*Geol.*) A general term applied to all stones composed of agglutinant grains of sand, which may be silicious or calcareous.

Sand Stone, in Michigan, a post-township of Jackson co.

Sand Stone Creek, in Michigan, enters Grand River from Jackson co.

Sand'town, in Georgia, a village of Campbell co., abt. 11 m. W. of Atlanta.

Sand'town, or BERKELEY, in New Jersey, a village of Gloucester co., abt. 5 m. S.W. of Woodbury.

Sand'-tube, *n.* Same as FULGURITE, *q. v.*

Sandus'ky, in New York, a post-village of Cattaraugus co., abt. 40 m. S.E. of Buffalo.

Sandusky, in Ohio, a N. co., bordering on Sandusky Bay, of Lake Erie; area, 420 sq. m. *Rivers.* Portage, with Tonsaint, Muddy, and Sugar creeks. *Surface*, level, and in the W. is the famous *Black Swamp*, covered with dense forests; *soil*, fertile. *Min.* Limestone. *Cap.* Fremont. Pop. (1897) 36,710. — A thriving commercial city, port of entry, cap. of Erie co., on Sandusky Bay, 5 m. from Lake Erie, and 110 N.E. of Columbus; Lat. 41° 27' N., Lon. 82° 45' W. The bay, 20 m. long and 60 broad, with an average depth of 12 feet, forms a commodious and safe harbor. The city, situated on an elevation overlooking the bay, is mostly built of stone or brick, and contains many elegant churches, dwellings, and warehouses. It is the terminus of two extensive lines of railway, and its commerce is rapidly increasing. Pop. (1897) 20,100. — Also, the name of three townships in Crawford, Richland, and Sandusky cos.

—A river rising on the boundary-line of Crawford and Richland cos., and flowing N. enters Sandusky Bay.

Sandusky, in Vermont, a post-village of Addison co., abt. 22 m. W.S.W. of Montpelier.

Sand'-wasp, *n.* (*Zool.*) See VESPARIE.

Sand'wich, *n.* A viand, or slight refectory, consisting of two slices of bread and butter, with a thin slice of ham or other cold salt-meat placed between.

—*v. a.* To lay between other parts; to form an inner lamina; as, to *sandwich* the permanent way of a railroad, to *sandwich* a newspaper column.

Sandwich, a Cinque-port of England, co. of Kent, on the Stour, 2 m. from its mouth, and 65 m. S.E. of London. It was formerly a place of considerable importance, but is much decayed, mainly owing to the receding of the sea. Pop. 8,000.

Sandwich, in prov. of Ontario, a p.-v. and twp., cap. of the co. of Essex, on the Detroit River, opposite the city of Detroit, Michigan. — In Ill., a city of DeKalb co. Pop. (1897) 2,950. — In Mass., a post-township of Barnstable co., about 56 m. S.E. of Boston. — In N. H., a post-township of Carroll co., abt. 50 m. N. of Concord.

Sandwich (EDWARD MONTAGU), EARL OF, general and admiral, son of Sir Sidney Montagu, of Broughton, England, was born July 27, 1625, and in 1643 raised a regiment in the service of the Parliament, with which he distinguished himself at Marston Moor, Naseby, and the siege of Bristol. He sat in the House of Commons (1645-48), was a member of the "Little Parliament" and of the Council of State (1653), and in 1656 succeeded Penn — father of William Penn — as admiral. In 1657, England having joined France in war against Spain, he aided with the fleet to prevent the relief of 3 coast towns besieged by the French, and defeated the attempt of a great Spanish force to retake Mardike, one of these towns. After the death of Cromwell, Sandwich aided in the restoration of Charles II., conveyed him to England in the fleet under his command, and was, in reward, made Knight of the Garter, and afterward elevated to the peerage as Baron Montagu, Viscount Hinchinbroke, and Earl of Sandwich. He commanded the Blue Squadron in the war with the Dutch of 1664-65, in which he greatly distinguished himself. In a renewal of the war in 1672, he again commanded the Blue Squadron, and during the fight in Southwold Bay, May 28, his ship, the *Royal James*, was set on fire by the Dutch, whereupon he leaped overboard and was drowned. His body was recovered and buried in Westminster Abbey.

Sandwich (JOHN MONTAGU), FOURTH EARL OF, was born Nov. 3, 1718, and succeeded to the earldom in 1729. He was educated at Eton and Cambridge, and took an active part in politics as a supporter of Sir Robert Walpole. He was appointed plenipotentiary to the Congress at Breda, in 1746, and in 1748 became first Lord of the Admiralty, which he held till 1751, and again 1763-65 and 1771-82. Died April 30, 1792. He became famous as the inventor of the *sandwich*, the invention being due to his devotion to the gaming-table, the convenient layers of bread and meat enabling

him to satisfy his appetite without leaving the cards.

Sandwich Bay, an inlet of the coast of Labrador.

Sandwich Islands. See HAWAII.

Sand'-worm, *n.* A general name for any of the worms living in the sand of the seashore. There are many forms of these, mostly belonging to the order of *Chaetopoda*, and having setae for organs of motion. The most important of the sedentary forms is the Lobworm of the fishermen. This is extremely abundant on the British shores and is highly valuable as bait. *Terebella conchilega* dwells in a tube, mostly composed of fragments of shell, examples of which are common on many beaches. There are, in addition, various wandering forms, which hide under stones or burrow deeply in the sands, of the genera *Nereis*, *Nephtys*, *Polynoe*, *Syllis*, &c.

Sand'-wort, (*-wort*), *n.* (*Bot.*) See ARENARIA.

Sand'y, *a.* [*A. S. sandig*] Abounding with, or full of, sand; consisting of, or containing, sand; covered or sprinkled with sand; as, a sandy desert, a sandy soil.—Of the color of sand; characterized by a yellowish-red color; as, sandy hair.

Sand'y, a river of prov. of Ontario, entering Lake Superior 30 m. S. of Cape Chailions.

Sandy, in *O.*, a twp. of Tuscarawas co.—A twp. of Stark co.—In *Oregon*, a p.-v. of Multnomah co., abt. 15 m. N.E. of Portland.

Sandy Creek, in *Ala.*, enters the Tallapoosa River a short distance W. of Dadeville.—Or **BIG SANDY**, in *Geo.*, flows into the Oconee River from Wilkenson co., at its S. E. extremity.—In *Geo.*, unites with Labor Creek in Morgan co.—In *N. Y.*, a p.-v. and twp. of Oswego co., abt. 47 m. N.W. of Rome.—In *N. Y.*, enters the N. end of Lake Ontario from Jefferson co.—Another, flows into Lake Ontario from Monroe co., abt. 20 m. N.W. of Rochester.—In *N. C.*, flows S. into Deep River, E. of Ashborough.—In *Penna.*, a v. and twp. of Mercer co.—A v. and twp. of Venango co.—In *Penna.*, flows into the Alleghany River from Venango co.—In *Ohio*, rises in the E. part of the State, and flows S.W. into the Tuscarawas River at Bolivar.—In *Texas*, flows into Colorado R. from Gillespie co.—Another, flows S. into the Navidad R. from Jackson co.—In *Va.*, enters Banister R. at Meadville, Halifax co.

Sandy Hill, in *Md.*, a p.-v. of Worcester co., abt. 109 m. S.E. of Annapolis.—In *N. Y.*, a p.-v. of Washington co., on the Hudson, abt. 52 m. N.E. of Albany.

Sandy Hook, in *Conn.*, a p.-v. of Fairfield co., abt. 21 m. W.N.W. of New Haven.—In *Md.*, a v. of Washington co., on the Potomac, abt. 1 m. E. of Harper's Ferry.—In *N. J.*, a sandy beach at the entrance to New York Bay, 6 m. long and abt. 1 m. wide, with a fixed light 90 ft. high, at the N. point; Lat. 40° 27' 3" N., Lon. 74° 0' 48" W.—In *Va.*, a p.-v. of Rappahanuock co., abt. 28 m. S. of Winchester.

Sandy Lake, in *Penna.*, a p.-twp. of Mercer co., abt. 12 m. N.E. of Mercer.

Sandy Neck, in *Mass.*, a light-house on the W. side of the entrance to Barnstable Bay; Lat. 41° 44' N., Lon. 70° 15'.

Sandy River, in *Maine*, rises in Franklin co., and flows into the Kennebec in Somerset co.—In *Mich.*, rises in the W. part of the State, and enters Lake Michigan from Mason co.—In *Oregon*, rises in Clackamas co., and flows N.W. into the Columbia River from Multnomah co.—In *S. C.*, flows into Broad River from the S.W. of Chester dist.—Or **BIG SANDY RIVER**, in *W. V.* and *Ky.*, formed by the junction of the Tug Fork from Tazewell co., and the W. or Louisa Fork from Russell co., Va., and flows into the Ohio River, nearly opposite Burlington, in Ohio, after a N. course of 50 m.

Sandys, GEORGE, a famous early traveller and translator, was born in 1577, son of an archbishop of York, studied at Oxford, and began his travels in 1610. He journeyed by way of Venice to Constantinople, thence to Egypt and Palestine, returning by way of Sicily, Naples, and Rome. These travels gave rise to a series of geographical and ethnological volumes, written in an entertaining and often eloquent style. Later in life he translated Ovid's *Metamorphoses*, part of Virgil's *Aeneid*, and some books of the Scriptures, his verse being praised by Dryden, and deservedly so. He died in 1644.

Sandy Spring, in *Maryland*, a post-village of Montgomery co., about 30 m. W. S. W. of Baltimore.

Sandyville, in *Ohio*, a post-village of Tuscarawas co., abt. 112 m. E.N.E. of Columbus.

Sane, *a.* [*Lat. sanus*; Gr. *sãos, sós*, safe and sound; Fr. *sain*.] Sound; whole; healthy; not disordered or shattered; as, a *sane body*.—Sound in mind; having the regular exercise of reason and the other faculties of the mind; not disordered in intellect; as, a *sane person*.

Sane'sness, *n.* State of being sane, or of sound mind.

San Felipe, a port of Central America, in Honduras, on Golfo Dulce River; Lat. 15° 38' N., Lon. 89° 1' 45" W.—In *Texas*, a p.-v. of Austin co., abt. 150 m. E.S.E. of Austin City.—In *Venezuela*, a town of the dept. of Caracas, 60 m. W.N.W. of Valencia.

San Felipe de Aconagua, (*-da-a-kon-ka'gwa*), in Chili, a town, cap. of the prov. of Aconagua, abt. 15 m. N. of Santiago; pop. 13,000.

San Felipe-de-Javita, (*-ãe-ha-ve'ta*), a town of Spain, prov. of Valencia, 43 m. from Valencia. *Manuf.* Woollen goods. Pop. 13,500.

San Fernan'do, a town of the Argentine Republic, 15 m. from Buenos Ayres; pop. 3,000.—In *Cal.*, a town of Los Angeles co., abt. 27 m. N.W. of Los Angeles.—In Chili, a town, cap. of the dept. of Colchagua, abt. 80 m. S. of Santiago.—In *Venezuela*, a town of the dept. of Caracas, abt. 130 m. W.N.W. of Calabozo.

San Fernan'do, SERRA DE DOIRADOS, a mountain of S. America, dividing the Brazilian prov. of Matto-Grosso from the Bolivian territory of Chiquitos.

San Fernando de Apure, (*-da-a-poo'ra*), a town of Venezuela, 70 m. S. of Calabozo; pop. 6,000.

San Francis'co, (abbreviated 'Frisko by California usage,) a city and seaport of the U. States, in *California*, (of which State it is the metropolis in point of size, wealth, and importance,) is situate on the S. promontory bounding the great Bay of San Francisco, and a little to the S. of the "Golden Gate" (Fig. 479), opening to the Pacific, in Lat. 37° 48' 30" N., Lon. 122° 27' 23" W. The city is built over a series of eminences of comparatively moderate elevation, but from which fine prospects of the bay and surrounding country are afforded. The growth of *S. F.* has been quite extraordinary. In the early part of 1848 it consisted only of a few rude shanties; whereas it is now, comparatively speaking, one of the chief American cities as regards the number and elegance of its public and domestic edifices. This transformation, as is well known, was the result of the discovery of the gold deposits in the beds of the tributaries of the San Joaquin and Sacramento rivers, which fall into her bay. Such, however, are the advantages of the location of the city, the spirit of enterprise of its inhabitants, and the fertility of the adjacent region, that even the exhaustion of gold-mining would not sensibly affect her growth, or the extent of her trade. Among the public edifices are the New City Hall, Custom House, U. S. Mint, Banks of California and of Nevada, Merchants' Exchange, Palace, Baldwin, and other fine hotels. The Palace hotel cost, including ground and furniture, \$3,250,000. A stone dry-dock, with capacity for a ship of 6,000 tons; these, together with hand-sawmills, theatres, public halls, gardens, parks, excellent libraries and reading-rooms, club-houses, and institutions established for science, literature, and benevolence. The city of *S. F.* is well governed; an efficient police system insures the public safety; fires are less frequent and destructive than in eastern cities; prostitution is less openly carried on; and gambling is of late years forbidden. The streets are dirty, it is true, and with the clouds of dust which, in blowing weather, sweep over the city like a sand-storm, form drawbacks which,

Fig. 2303. — MONTGOMERY STREET, (San Francisco.)

after all, are but slight in comparison with its many advantages. The principal business thoroughfare, Montgomery street, the fashionable promenade, is neat and handsome, with many fine edifices. The business streets are paved with cubical blocks and cobble-stones; others are planked, both in the carriage-way and sidewalk. Golden Gate Park contains over 1,000 acres; besides this are several small squares, and innumerable gardens attached to the houses of the citizens. Flowers and shrubs greet one's sight in every direction; so much, indeed, is this the case, that a recent enthusiastic traveller has declared that *S. F.* should be called the "City of Flowers." The climate is also everything that could be desired, being at once sunny and cool. The winter is like the spring of the Eastern States, showery, but delightful. *S. F.* is the centre of great wealth and the home of many millionaires. Many of the mines of gold, silver, quicksilver, and coal, the deposits of borax and sulphur, the quarries of granite, marble, trap, slate, and steatite, the mining and irrigating ditches, the quartz-mills and saw-mills, the vineyards, farms, orchards, and ranchos, from Arizona to Idaho, and from the Pacific to the Rocky Mountains, are owned here. The city possesses large manufacturing interests, they comprising large sugar refineries, iron foundries, rolling mills, and machine shops; also extensive ship-yards, in which vessels of the largest size are built, rope-walks, door and sash factories, and manufacturers of glass, flour, furniture, clothing, tinware, &c.—*Com.* The bay of *S. F.* has a narrow entrance, but within it expands to one of the noblest basins that is anywhere to be met with, having a coast-line of about 275 miles. The city has become the seat of a very extensive foreign commerce, and is now the great emporium of the U. S. on the Pacific seaboard. A large number of ocean steamers run from the port of *S. F.* in regular lines to Hawaii, Japan, Australia, Panama, Mexico, &c., with coast lines to Puget Sound and all intervening ports. San Francisco has often been visited by earthquakes, much the severest being that of April 18, 1906. This hurled into ruin large numbers of buildings, while the fires that followed threatened to destroy the entire city and were only arrested after the business and much of the best residential parts of the city had been consumed. The total loss is estimated at the phenomenal sum of over \$300,000,000. The people of the country came nobly to the rescue and nearly \$20,000,000 was contributed for relief. Rebuilding, on improved lines, began at once, and much progress has been made, but it will take years to restore the city to its former state. Pop. (1900) 342,782.

San Francis'co, in *California*, a W. co., bordering on the Pacific, having N. and E. San Francisco Bay, and S. San Mateo; area, 50 sq. m. Surface, diversified; soil, fertile. *Min.* At one time there was considerable gold found within the limits of this county, but the deposits were long ago exhausted. *Cap.* San Francisco, with which city the co. is coextensive.

San Francis'co, a port on the S.W. coast of California; Lat. 30° 45' N., Lon. 113° 40' W.

San Francisco, in *Minnesota*, a village and township of Carver co., abt. 35 m. S.W. of St. Paul.

San Francisco, (*-fran-sis'ko*), a village of N. Peru.

San Francis'co, (*Bay of*), an inlet of the Pacific, in *California*, between Lat. 37° 30' and 38° 8' N., Lon. 122° and 122° 30' W. *Extent*. 55 m. long from N.N.W. to S.S.E.; breadth varying from 2 to 12 m. The entrance to the bay, called the *Golden Gate* (Fig. 479), is very picturesque; the shores are bold and rocky; and the channel in its narrowest part is but 1 m. wide.

San Francisco de la Montaña, a town of the Republic of Colombia, department of Istmo, on the Isthmus of Panama, N. E. of Santiago. Pop. (1897) 6,160.

Sang, *imp.* and *pp.* of SING, *q. v.*

San Gabriel, an island of the Argentine Republic, in the estuary of the Plata, abt. 22 m. N.E. of Buenos Ayres; Lat. 34° 30' S., Lon. 57° 58' W.

San Gabriel, in *California*, a post-village of Los Angeles co., abt. 8 m. E. of Los Angeles.

—A town of Los Angeles co., abt. 18 m. N.E. of Los Angeles.

San Gabriel, in *Texas*, a river rising in the W. of Williamsou co., and flowing E. into Little River, a short distance S.W. of Cameron in Milan co.

San Gabriel River, in *California*, enters the Pacific Ocean from Los Angeles co.

Sangamon, a river of W. Illinois, formed in Sangamon co. by the junction of its N. and S. branches, and falls into the Illinois River, 10 m. N. of Beardstown, after a W. course of 200 m. It is navigable for small steamboats during high water.

Sangamon, in *Illinois*, a S.W. central co.; area, 750 sq. m. *Rivers*. Sangamon and S. Fork; also, Sugar, Lick, Brush, and Spring creeks. *Surface*, level, and mostly prairies; soil, fertile. *Min.* Coal. *Cap.* Springfield. Pop. (1897) 63,400.

Sangaree, *n.* [*Sp. sangria*, a drink.] A West Indian term for wine and water sweetened and spiced; negus.

Sangerfield, in *New York*, a post-village and township of Oneida county, about 15 miles south-south-west of Utica.

Sangerhan'sen, a town of Prussian Saxony, at the foot of the Hartz Mountains, 33 m. W.N.W. of Merseburg. *Manuf.* Woollens and linens. Pop. 7,283.

Sang-froid, (*sang'-frwah*), *n.* [*Fr.*, cold blood.] Cool-bloodedness; freedom from agitation or perturbation of the spirits; presence of mind; lack of ardor or violent emotion; apathetic indifference.

San Ger'man, a town of the W. Indies, on the S.W. of the island of Porto Rico; pop. 9,125.

San Geronimo, (*ha-ron'-ne-mo*), a small river of California, which enters the Pacific from Marin co.

San Geronimo, a town of the Republic of Colombia, about 16 m. S. E. of Antioquia.

San Geronimo, a village of Mexico, about 15 m. S. W. of the city of Mexico.

Sangerville (*sang'-gher-vil*), in *Maine*, a post-township of Piscataquis county, about 70 miles N. N. E. of Augusta.

San Gil, or **Saint Giles** (*san'-heel'*), a town of the Republic of Colombia, department of Boyaca, about 64 m. S. W. of Pamplona. Pop. (1897) 7,170.

San'gir, an island of the Eastern Archipelago; Lat. 3° 28' N., Lon. 125° 44' E.

San Geronio, (*Mount*), in *California*, San Diego co.; Lat. 33° 48' N., Lon. 116° 40' W. *Height*, 7,000 ft.

Sang'iac, *n.* Same as SANDJAK, *q. v.*

Sang'iacate, *n.* A division of a Turkish province or pashalic.

Sang'realis, SANGREAL, or SAINT GRAIL. [*The Holy Cup or Grail*, said to be from Mod. Lat. *gradale*, a cup; but supposed by some to be a corruption of the Old Fr. *le Sang Real*, i. e., the true blood of Christ.] This sacred relic, preserved in an emerald cup, is said in legendary history to have been brought to England by Joseph of Arimathea. According to the romantic story of King Arthur, it could only be discovered by one possessed of perfect virtue; and the "Quest of the St. Grail" by the Knights of the Round Table, of whom the perfect champion, Sir Galahad (in other legends *Perceval*), was favored by its discovery, is narrated therein at great length.

Sanguif'erous, *a.* [*Lat. sanguis*, blood, and *ferre*, to bear.] Conveying or imparting blood; as, the *sanguiferous vessels*.

Sanguiferous vessels. (*Anat.*) The arteries, veins, and capillaries.

Sanguification, *n.* [*Fr.*] (*Physiol.*) The conversion of the chyle into blood.

Sanguif'er, *n.* That which produces blood.

Sanguif'luous, *a.* Running or flowing with blood.

Sanguify, *v. n.* [*Fr. sanguifier*.] To produce blood.

Sanguinaria, *n.* [*Lat. sanguis*, blood, because used to stop hemorrhage.] (*Bot.*) A genus of plants, order *Papaveraceae*. The most interesting species is *S. canadensis*, the Puccoon, a native of N. America. Its root, often called *blood-root*, from its containing a red juice, is used internally in large doses as an emetic and purgative, and in small doses as a diaphoretic and expectorant. When applied externally, it is said to exhibit marked escharotic properties, and has been tried combined with chloride of zinc as an application to check cancerous growths.

San'guinarily, *adv.* In a sanguinary or blood-thirsty manner.

San'guinarity, *n.* State or quality of being sanguinary.

Sanguinary, (*sang'gwī-nar'y*), *a.* [Fr. *sanguinaire*; Lat. *sanguinarius* — *sanguis*, blood.] Bloody; murderous; causing, or attended with, much bloodshed; as, a *sanguinary* war. — Bloodthirsty; savage; cruel; eager to shed blood; as, a *sanguinary* tyrant.

Sanguine, (*sang'gwīn*), *a.* [Fr. *sanguin*.] Red; crimson; having the color of blood; as, *sanguine* streamers. (*Dryden*). — Abounding with blood; plethoric; characterized by full and active circulation of the blood; as, a *sanguine* constitutional temperament. — Ardent; warm; animated; lively; as, a *sanguine* temper. — Confident; hopeful; anticipating the best; not diffident or desponding; as, to be *sanguine* of success.

Sanguinely, *adv.* In a sanguine or ardent manner; confidently; with lively anticipation of success; as, he looks forward quite *sanguinely*.

Sanguineness, *n.* State or quality of being sanguine; redness; plethora; ardor; warmth of temper; confidence; hopefulness.

Sanguineous, *a.* [Lat. *sanguineus*.] Sanguine; plethoric; abounding with blood; as, a *sanguineous* habit of body. — Of the nature of blood; relating to, or consisting of, blood. — Constituting blood; as, *sanguineous* particles. — Of a red or blood color; crimson; as, a *sanguineous* tint.

Sanguivorous, *a.* [Lat. *sanguis*, blood, and *vorare*, to gorge.] Eating or subsisting on blood, as leeches.

Sanguinolency, *n.* State of being sanguinolent.

Sanguinolent, *a.* [Fr., from Lat. *sanguinolentus*.] Bloody; tinged or commixed with blood.

Sanguisorba, *ecce*, *n. pl.* (*Bot.*) An order of plants, alliance *Rosales*, usually combined with *Rosaceae*, but separated by Lindley on account of the constantly apetalous flowers, indurated calyx, and solitary or almost solitary carpels. Their general character is that of astrigeny. The *Sanguisorba officinalis*, or Burnet (Fig. 2304), is sometimes grown as a pasture plant.

Sanguisuge, (*sang'gwī-sūj*), *n.* [From Lat. *sanguis*, and *sugere*, to suck; Fr. *sangsue*.] (*Zool.*) The horse-leech. See LEECH.

San'hedrim, **San'hedrin**, *n.* (*Jewish Hist.*) The highest judicial tribunal among the Jews, consisting of 71 members, including the high-priest. Its origin is referred by some writers to the institution by Moses of a council of 70 persons on the occasion of a rebellion of the Israelites in the Wilderness. According to the Talmudists, they assembled in a chamber within the precincts of the temple; but according to Josephus, it was in a room on the east side of Mount Zion, not far from the temple; and at the trial of Christ we read that they assembled in the high-priest's house. The authority of this council was very extensive. It decided on all the great affairs of the nation, and it was also a court of appeal from inferior tribunals. The right of judging in capital cases and pronouncing sentence of death belonged to this court alone. In the time of Christ, its power had been much limited by the interference of the Romans. It still retained the right of passing sentence of death, but the power of executing it rested with the Roman procurator.

Sanicula, *n.* (*Bot.*) The Sanicle, a genus of plants, order *Apiaceae*, having the umbel nearly simple; rays few, with many-flowered, capitate umbellets; involucre of few, often cleft leaflets; involucre of several, entire.

Sanies, *n.* [Lat.] (*Med.*) A thin, unhealthy, serous discharge from wounds or sores.

San'ilac, in *Michigan*, an E. co., bordering on Lake Huron; area, abt. 950 sq. m. *Rivers*. Cass, Black, and North Fork of Cass River. *Surface*, undulating; soil, moderately fertile. There is a great abundance of pine, sugar-maple, and other trees. *Cap.* Sanilac Center. *Pop.* (1894) 33,944.

—A township of the above co., on Lake Huron.

San Ildefonso, (*-el-da-fon'so*), a group of islands, in the S. Atlantic, abt. 80 m. W. of Cape Horn.

San'ious, *a.* [Fr. *sanieux*.] Pertaining, or relating, to sanies; thin and serous, and slightly tinged with blood; as, the *sanious* discharge of a sore. — Effusing a thin, unhealthy, serous, reddish pus; as, a *sanious* ulcer.

San Isidro, (*-e-se-dro*), a town of the Argentine Republic, abt. 12 m. N. of Buenos Ayres; *pop.* abt. 1,200.

San'itarist, *n.* One who advocates, or carries into effect, measures of sanitary reform.

Sanitarium, *n.* [Lat.] A health station; as, a *sanitarium* for invalids.

San'itary, *a.* [Fr. *sanitaire*, from Lat. *sanitas* — *sanus*.] Pertaining to health; having reference to sanity, or to the promotion and preservation of health; hygienic; as, *sanitary* rules.

—*n.* *S. science.* That department of human knowledge which regards the laws of the human body, and of the agents by which it is surrounded, with a view to the preservation of health and the warding off of disease and death. The practical application of these laws constitutes *hygiene*, or the art of preventing disease. This is commonly divided into *public* and *private* hygiene, the former having regard to the healthy condition of persons in communities, in camps, barracks, workhouses, &c.; the latter to the health of individuals.

San'ity, *n.* [Fr. *santé*, from Lat. *sanitas* — *sanus*.] Quality or condition of being sane in body or mind; soundness of the intellectual faculties; especially, the state of mind in the perfect exercise of reason; sanity; — correlative to *insanity*; as, doubts are entertained of his *sanity*.

San Jacinto, (*ha-see'n'to*), a river of Texas, rising in the W. of Walker co., and flowing into Galveston Bay, 25 m. E. of Houston. — A village of Harris co., abt. 18 m. E. of Houston; *pop.* abt. 511. Here was fought, in 1836, the battle of San Jacinto, which insured the independence of Texas. See HOUSTON, (SAM.)

San Jaime, (*-hi'ma*), a town of Venezuela, dept. of Apure, abt. 30 m. N.N.W. of San Fernando de Apure; *pop.* 7,000.

San Joaquin, (*-ho-a-keen'*), an important river of California, rises in the Sierra Nevada Mountains, and after a general N.W. course of 350 m., for two-thirds of which it is navigable, joins the Sacramento abt. 30 m. E. of Martinez; Lat. 38° 10' N., Lon. 120° 50' W. — A N. W. central co.; area, 1,380 sq. m. *Rivers*. Mokelumne, San Joaquin, and Calaveras. *Surface*, generally level; soil, fertile. *Min.* Gold. *Cap.* Stockton. *Pop.* (1897) 29,800. — A town of San Joaquin co., about 77 m. S. E. of San Francisco.

San Joaquin, a village of Paraguay, about 100 m. E. N. E. of Assumption.

San Jorge, (*-hor'ha*), a river of the Republic of Colombia, which, after a N. E. course of 180 m., joins the Cauca, 30 m. S. W. of Mompox.

San Jorge D'Olancho, (*-hor'ha do-lan'cho*), a town of Central America, in Honduras, abt. 80 m. S.S.W. of Truxillo.

San José, (*-ho'sā*), an island in the Gulf of California, abt. 100 m. S.E. of Loreto.

San José, a town of Bolivia, prov. of Chiquitos; Lat. 17° 40' S., Lon. 64° 40' W.; *pop.* 2,000.

San José, in California, a city and township, cap. of Santa Clara co., on the Guadalupe River, abt. 51 m. S.S.E. of San Francisco; Lat. 37° 24' N., Lon. 121° 54' 30" W. *Pop.* 20,000.

San José, one of the Pearl Islands of the Republic of Colombia, in the Bay of Panama, department of Istmo, about 8 m. S. W. of the island of Rey.

San José, an island in the Rio Negro, on the boundary line between Brazil and Venezuela.

San José del Interior, (*-een-ta-re-or'*), in Central America, a town, cap. of the state of Costa Rica, abt. 15 m. W.N.W. of Cartago; *pop.* 18,000.

San José del Parral, a town of Mexico, in Durango, abt. 200 m. N.W. of Durango; *pop.* 5,000.

San José de Oruna, (*-da o-roo'na*), a town and former cap. of the island of Trinidad, abt. 5 m. E. of Port-of-Spain.

San Juan, (*-hoo-an'*), a navigable river of Central America, in Nicaragua, formed by the surplus waters from Lake Nicaragua, which it discharges into the Caribbean Sea, at the port of San Juan, 80 m. S. of the mouth of Bluefields River, after an E. course of abt. 100 m.

San Juan, a river of Bolivia, prov. of Chiquitos, an affluent of the Aguapehi.

San Juan, a river of Bolivia, which joins the Pilcomayo, abt. 80 m. S.S.E. of Sinti, after a S.E. course of 300 m.

San Juan, a river of Mexico, rises in Cohahuila, and joins the Rio Grande del Norte abt. 120 m. from its mouth, after an E. course of 150 m.

San Juan, a river of the Republic of Colombia, dept. of Cauca, flows into the Pacific, by several mouths, about 35 m. N. W. of Buenaventura, after a S. W. course of 150 m.

San Juan, a town of Cuba, abt. 15 m. S.S.W. of Havana. — Also, a town, about 42 m. W.N.W. of Santiago de Cuba.

San Juan, a town of Peru, province of Chachapoyas, on San Juan river. *Pop.* 18,000.

San Juan, a town of the island of Hayti, about 80 m. N. W. of San Domingo.

San Juan, in California, a post-village and township of San Benito co., about 42 m. S. S. E. of San Jose.

San Juan Bautista, or BAPTISTA DEL RIO GRANDE, a town of Mexico, about 85 m. N. N. E. of Cohahuila.

San Juan Bautista, or BAPTISTA, formerly *Villa Hermosa*, a town of Mexico, cap. of Tabasco, on the river Tabasco, abt. 70 m. from its mouth in the Caribbean Sea.

San Juan Bautista, or SAN JUAN BAPTISTA DEL PAO, a town of Venezuela, department of Caracas, about 110 m. S. W. of Caracas.

San Juan, Cape, the N. E. extremity of the island of Porto Rico, West Indies. — Also, the most S. point of Vancouver's Island, in British North America.

San Juan Capistrano, in California, a town of Orange co., about 32 m. S. E. of Los Angeles.

San Juan Chinameca, a town of Central America, in San Salvador, about 15 m. N. of San Miguel.

San Juan de Fuca, an island of British North America. See FUCA, STRAIT OF.

San Juan de la Frontera, (*-fron-ta'ra*), a W.

prov. of the Argentine Republic, between Lat. 30° and 32° S., Lon. 68° and 70° W., having N. the prov. of Rioja, S. Mendoza, and W. the Andes. *Cap.* San Juan. *Pop.* 25,000.

San Juan de los Llanos, (*-da loce la'noce*), a town of the U. S. of Colombia, dept. of Cundinamarca, abt. 65 m. S.S.E. of Bogotá.

San Juan de los Remedios, (*-da loce ra-ma'de-occe*), a seaport-town on the N. coast of Cuba, abt. 180 m. E. of Havana; *pop.* 6,000.

San Juan del Rio, (*-ree'o*), a town of Mexico, in Queretaro, abt. 30 m. S.E. of Queretaro; *pop.* abt. 10,000.

San Juan del Sur, (*-soor*), a seaport of Nicaragua, on the Pacific, about 24 m. S.W. of Nicaragua; Lat. 11° 15' 37" N., Lon. 85° 52' 56" W.

San Juan de Nicaragua, SAN JUAN DEL NORTE, or GREYTOWN, a seaport-town of Nicaragua, in Mosquito Territory, at the mouth of the San Juan, in the Caribbean Sea; Lat. 10° 55' N., Lon. 83° 43' W. Its harbor is one of the finest on the coast.

San Juan de Porto Rico, (*-por'to ree'ko*), the principal city and seaport of the island of Porto Rico, on an island off its N. coast; Lat. 18° 29' N., Lon. 66° 7' 2" W. It is strongly fortified, one of the healthiest towns of the W. Indies, and is the seat of government and of the superior courts of the island. *Pop.* 11,000.

San Juan de Ulloa, (*-da oo-loo'a*), a strong castle or fort of Mexico, defending the harbor of Vera Cruz, on a small island N.E. of the city.

Sank, *imp.* of SINK, *q. v.*

San Loren'zo, a small island in the Gulf of California.

San Lorenzo, a river of the Argentine Republic, which joins the Vermejo, abt. 55 m. N. of Corrientes, after an E. course of 120 m.

San Lorenzo, a town of the Argentine Republic, abt. 32 m. S.E. of Santa Fé.

San Leandro, in California, a post-village, former cap. of Alameda co., about 20 m. S.E. of San Francisco. *Pop.* about 700.

San Loren'zo, in California, a post-village of Alameda co., abt. 3 m. S.E. of San Leandro.

San Lorenzo de la Fronte'ra, a town of Bolivia, on the Guapey, a short distance from Santa Cruz de la Sierra; *pop.* 4,000.

San Lu'car, a seaport-town of Spain, prov. of Cadiz, 14 m. N.W. of Cadiz; *pop.* 17,000.

San Luis, or SAN LUIS DE LA PUNTA, (*-loo'is da la-poon'ta*), in the Argentine Republic, a city, cap. of the prov. of San Luis, 2,417 feet above the sea, abt. 428 m. W.N.W. of Buenos Ayres; *pop.* 1,500.

San Luis de la Paz, a town of Mexico, in Guanajuato, abt. 45 m. E.N.E. of Guanajuato.

San Luis Obispo, (*-o-bees'po*), in California, a S.W. co. bordering on the Pacific Ocean, having N. Monterey, E. the Coast Mountains, and S. Santa Barbara; area, 3,404 sq. m. *Surface*, level in the N.E., and mountainous in the S.E.; soil, fertile. *Rivers*. San Buenaventura and Nacimiento rivers. *Products*. The usual cerealia, grapes, and fruits. *Min.* Copper, sulphur, and limestone. *Principal ports*. San Luis Obispo (the cap.) and San Simeon. *Pop.* (1897) 18,950.

—A city, cap. of the above co. *Pop.* (1897) 3,340.

San Luis Poto'si, a state of Mexico, having N. New Leon, E. Tamaulipas, S.E. and S. Vera Cruz, Queretaro, and Guanajuato, and W. Zacatecas; area, 29,486 sq. m. *Rivers*. Santander, and Panuco or Tampico rivers. *Surface*, mountainous in the W., and in the E. and S.E. undulating; soil, generally fertile. *Prod.* Maize, wheat, and barley. *Manuf.* Woollen and cotton fabrics, glass, pottery, leather, and metallic wares. *Cap.* San Luis Potosi. *Pop.* abt. 394,592. — A city, cap. of the above dept., at the source of the Tampico, 70 m. N.N.E. of Guanajuato. The houses are mostly built of stone, and there are several splendid churches and a fine government house. It has an active trade with the neighboring depts., principally in foreign imports. *Pop.* 40,000.

San Luis Rey, in California, a post-town of San Diego co., abt. 84 m. S.E. of Los Angeles.

San Mar'cos, in Texas, a river rising in the N. of Comal co., and flowing S.E. into the Guadalupe N.W. of Gonzales. — A post-town, cap. of Hayes co., about 30 m. S. S. W. of Austi.

San Mari'no, a state of Italy. See MARINO.

San Martin, (*mar-teen'*), in the Argentine Republic, a village of the prov. of Cordova, 30 m. E.S.E. of Cordova; *pop.* 2,000.

San Mateo, (*-ma-ta'o*), in California, a W. co., bordering on the Pacific, having E. and N.E. the Bay of San Francisco; area, 460 sq. m. *Surface*, diversified by hills and valleys; soil, fertile in the valleys. *Products*. Wheat, hay, lumber, and cattle. *Climate*, mild and healthy. *Cap.* Redwood City. *Pop.* (1897) 12,150.

—A post-village of the above co.

San Mateo, in Venezuela, a town of the dept. of Cumana, 50 m. S.S.W. of Cumana; *pop.* 7,000.

San Miguel, (*me-ghe'l'*), in Central America, a town of San Salvador, 80 m. E.S.E. of San Salvador. It is an old but well-built town, and has a considerable trade in indigo. *Pop.* 10,000.

San Miguel, in Bolivia, a town of the prov. of Chiquitos, 160 m. N.E. of Santa Cruz de la Sierra; *pop.* 3,000.

San Miguel, a town of Brazil, prov. of Parahyba, abt. 35 m. N. of Parahyba.

San Miguel, a town of Brazil, prov. of Rio Grande do Sul, abt. 180 m. W.N.W. of Porto Alegre; *pop.* 1,000.

San Miguel, in California, a town of San Luis Obispo co., abt. 156 m. S.S.E. of San Francisco.

San Miguel, in New Mexico, a N. co., E. of Santa Fé. *Rivers*. Pecos and Canadian rivers. *Surface*, diversified; soil, generally fertile. *Prod.* Corn and wheat. *Cap.* Las Vegas.

Fig. 2304. — GREAT BURNET, (*Sanguisorba officinalis*.)
a, a leaf; b, spikes of flowers; c, a flower.

San Miguel, in Texas, a river of Medina co., which flows S.E. into Rio Frio.

San Miguel, a gulf of the U. S. of Colombia, in the Isthmus of Darien, on the E. side of the Bay of Panama; Lat. $8^{\circ} 10' N.$, Lon. $78^{\circ} 20' W.$

San Miguel-el-Grande, in Mexico, a town of the dept. of Guanajuato, 40 m. E. of Guanajuato; pop. 3,000.

San Nich'olas, a city of the Argentine Republic, abt. 120 m. N.W. of Buenos Ayres; pop. 3,000.

San Pablo, in California, a bay connected by the Straits of Karquenas with Suisun Bay. — A post-village of Contra Costa county, about 15 miles N.N.E. of San Francisco.

San Pasqual, (*pas'kwál*), in California, a village of San Diego co., abt. 97 m. S.E. of Los Angeles.

San Patricio (*pa-tree'-se-o*), in Texas, a S. co., bordering on the Gulf of Mexico; area, 630 sq. m. Rivers. Arkansas and Nueces rivers. Surface, generally level, soil, fertile. Cap. Sinton. Pop. (1897) 1,980.

— A post-town, former cap. of the above co., on the Nueces river, about 20 m. N.W. of Corpus Christi.

San Paulo, a town and prov. of Brazil. See **SÃO PAULO**.

San Pedro, (*pa'dro*), a town of the Argentine Republic, abt. 190 m. N.N.E. of Buenos Ayres; pop. 1,200.

San Pedro, a town of Bolivia, on the Mamore River; Lat. $14^{\circ} S.$, Lon. $64^{\circ} 48' W.$

San Pedro, in Mexico, a river rising in the dept. of Tabasco, and joining the Usumasinta near its confluence with the Tabasco.

San Pedro, a town of the Republic of Colombia, dept. of Cundinamarca, about 25 m. S.E. of Antioquia.

San Pedro, in California, a post-town and port of Los Angeles, Lat. $33^{\circ} 45' N.$ It has a good anchorage.

San Pedro Bay, in California, an inlet of the Pacific Ocean, abt. 105 m. S.E. of Santa Barbara; Lat. $33^{\circ} 48' N.$, Lon. $118^{\circ} W.$

San Pedro y San Pablo, (*Rio de*), in Mexico, enters the Caribbean Sea abt. 10 m. N.E. of Tabasco.

San Pete, in Utah, a central co.; area, 1,784 sq. m. Surface, Wahsatch Mountains in the W., fertile valleys in the E.; good timber. Cap. Manti. Pop. (1895) 15,538.

San Quentin, in California, a post-village of Marin co., abt. 15 m. N. of San Francisco.

San Rafael, in California, a post-village and township, cap. of Marin county, about 16 miles N. of San Francisco.

Sans. A Latin preposition denoting without; wanting; destitute of.

"Sans teeth, sans eyes, sans taste, sans everything."—Shaks.

San Sa'ba, a river of Texas, which flows E. into the Colorado River from Bexar co.—A central co.; area, 925 sq. m. Rivers. Colorado and San Saba rivers. Surface, undulating; soil, generally fertile. Cap. San Saba. Pop. (1897) 7,120.—A post-village, cap. of the above co., about 92 m. N.W. of Austin.

San Salvador, a republic of Central America, consisting of a strip of territory stretching along between Honduras and the Pacific Ocean; bounded on the W. by Guatemala, and on the E. by Fonseca Bay, which separates it from Nicaragua. It averages 180 m. in length, by about 40 in breadth; area, 7,230 sq. m. The N. frontier is formed by a portion of the great Cordillera chain, and parallel to this range, and between it and the Pacific sea-board, runs another range of mountains along the whole length of the country, breaking it up into an inland valley, with a long, low, rich belt along the coast. This central range is highly volcanic in character, and has 16 volcanic peaks, ranging in height from 7,386 to 4,000 feet high. S. S. possesses numerous lakes, the largest of which is Guizá, about 90 m. in circumference, and abounding in fish. The greater portion of the interior valley, and the alluvial strip lying along the coast, are of extreme fertility, and agriculture is extensively and successfully practised, to the almost total exclusion of pastoral pursuits. The principal agricultural products are indigo, sugar, and maize; cotton, also, being successfully cultivated in the districts around La Libertad and the Bay of Jiquilisco. The coast from Acajutla (30 m. from the W. frontier) to La Libertad is known as the *Costa del Balsamo*, or Balsam Coast, as in the woods of this district is produced the famous balsam known as "Balsam of Peru," in such quantities that from 17,000 to 22,000 lbs. av. are annually exported. The commercial intercourse of S. S. is chiefly with the U.S. and Great Britain. In 1897, the value of imports was abt. \$2,000,000, and of exports, abt. \$6,600,000. The staple articles of export are coffee (60 per ct.), indigo, known commercially as "indigo of Guatemala," reckoned the finest of any (30 per ct.), sugar, dye-stuffs, turpentine, cocoa, and spices. The climate of S. S. is salubrious, and the temperature lower than might be expected from the low latitude and general want of elevation of the country. The population is composed of whites (of Spanish origin), Indians, *Ladinos* (of mixed white and Indian blood), negroes, and mulattoes. The whites form little more than one-fifth, the Indians one-third. The Indians are of the Aztec race, speak the Spanish language, profess the Roman Catholic religion (the one established by statute), and hold the rights of citizens. The government is carried on by a president, vice-president, and two ministers, one for foreign affairs and finance, and the other for internal business and war. The legislature consists of two chambers, an upper one of 12 senators, and a lower of 24 representatives. Education is well provided for, every village of 50 inhabitants being bound by law to support a school, and there is a university in the capital, San Salvador (*q. v.*), which is well endowed by the state. S. S., originally called *Cuzcatlan*, "the land of riches," is said to have been, previous to the immigration of Europeans, the best peopled and most civilized country in America. It was conquered

after a long and obstinate contest by Pedro de Alvarado, a lieutenant of Cortez, and under the Spanish rule was one of the most flourishing portions of the Guatemalan kingdom. In 1821, it threw off the yoke, joined the Mexican Confederation, from which it seceded in 1823, and finally became an independent state.

SAN SALVADOR, the cap. of the above republic, was founded in 1589. It was the cap. of the Union of Central America from 1821 till 1839. In 1854, it was a fine, well-built city, adorned with numerous splendid buildings, and containing a pop. of more than 30,000; but on the night of April 16th, it was completely destroyed by an earthquake, and about 100 lives lost. In Jan., 1855, it again became the capital, and its trade once more flourishing. March 19, 1873, it was again destroyed by earthquake, with great loss of life, but one building left standing. The first R.R. was begun in 1882.

San Salvador, GUANAHANI, or CAT ISLAND, one of the Bahama Islands, in the West Indies, 28 m. S.E. of Eleuthera; Lat. $24^{\circ} N.$, Lon. $75^{\circ} 30' W.$, 46 m. long, and 5 broad. It was the first part of America discovered by Columbus, Oct. 12, 1492.

San Salvador, or **Ban'za**, a town of Africa, in S. Guinea, cap. of Congo, abt. 160 m. S.E. of Loango; pop. 20,000.

San Salvador de Bayamo, (*-ba-a'mo*), a town of Cuba, abt. 78 m. N.W. of Santiago; pop. 14,000.

San Salvador Pequena, (*pa-ka'na*), an island of Cuba, W. of the above town.

San Salvatore, (*sal-va-to'ra*), a town of N. Italy, 7 m. N.W. of Alessandria; pop. 6,521.

Sansanding, a town of Central Africa, in Bambarra, on the Niger, 20 m. N.E. of Sego; pop. 11,000.

Sans-culotte, (*sông-ku-lôt'*), n. [Fr., without breeches.] (*Fr. Hist.*) A term first applied in derision by the aristocrats to the popular party in France at the beginning of the Revolution of 1789; and, as in several cases of a like kind, it came afterwards to be regarded by them as a title of honor. In the republican calendar, the five supernumerary days (each month having only 30 days, and therefore making 360 in the twelve) were at first called *jours sans-culottides*.

—Hence, by implication, a red-republican; a Jacobin; a rabid revolutionist; a bloodthirsty demagogue.

Sans-culottism, n. [Fr. *sansculottisme*.] Principles or practice of the *sans-culottes*; rabid revolutionary doctrines; red-republicanism.

San Sebastian, the cap. town of the island of Gomera, in the Canaries, on the S. coast. It is well built, and has a harbor defended by several forts. Pop. 2,000.

San Sebastian de los Reyes, (*-sa-bas-tean' da-loce-ra'es*), a town of Venezuela, prov. of Caracas, abt. 50 m. S.S.W. of Caracas.

San Severo, (*-sai-vai'ro*), a town of S. Italy, prov. of Capitanata, 16 m. N.E. of Foggia; pop. 18,000.

Sanskrit, **San'scrit**, n. The name of the ancient, and now literary, language of the Hindoos. Originally a vernacular dialect in Hindostan, it has for nearly or quite 2,000 years past been kept artificially in use, like the Latin in Europe, by the labors of grammarians and lexicographers, and the transmitted usages of an educated caste, to serve as the means of learned intercourse and composition. Its name (*Sanskṛta*, completed, perfected), denotes it as "the cultivated, elaborated, and perfected form of speech," in distinction from the uncultivated dialects, called *Prakṛit* (*prākṛta*, left in the natural condition), which sprang from, or were contemporaneous with, it. It was brought into India from the N.W. by tribes belonging to the Aryan branch of the Indo-European family, and having for their next of kin the Iranians, who spoke dialects which were the ancestors of the modern Persian languages. Syntax is a branch of the grammar of very inferior interest in Sanskrit. Whatever expressiveness and rhetorical charm the language has, lie chiefly in its boundless wealth of epithets, and not at all in the construction of its sentences and periods; indeed, a period in Sanskrit is next to an impossibility. The formation and connection of its clauses are of the boldest simplicity. The excessive use of cumbrous compounds is also a very general fault in Sanskrit construction, appearing in all styles of composition, but especially the more artificial. To say, for instance, "Water-play-delighted-maiden-bathing-fragrant (river-breezes)," for "Made fragrant by the bathing of maidens delighted with sporting in the water," is a virtual abnegation of the privileges of an inflected language, and a partial retrogradation to the stiff inexpressiveness of the Chinese. — See HINDOSTAN (LANGUAGES OF).

Sans-sonci, (*sông-sôo-see'*), adv. Free and easy; harum-scarum; devil-me-care; happy-go-lucky.

San'ta, a river of N.W. Peru, which flows into the Pacific Ocean, after a N.W. course of 200 m. Opposite its mouth, in Santa Bay, are the islets of Santa.

San'ta, or **Parilla**, (*pa-reel'ya*), a town of N.W. Peru, on the Santa, abt. 65 m. S.E. of Truxillo.

San'ta An'na, ANTONIO LOPEZ DE, ex-president of the republic of Mexico, b. in Xalapa, 1798. At the outset of his career, he served in the Spanish army, in which he attained the grade of lieutenant-colonel in 1821; but, in the following year, while stationed at Vera Cruz, he joined the movement inaugurated by Iturbide, which resulted in the total defeat of the Spanish forces, and the reduction of the whole of that province. He next turned his arms against, and overthrew, Iturbide, who had proclaimed himself emperor. The Mexican republic was shortly afterwards formed, and from that period until the year 1833, when he succeeded in himself obtaining the presidency of the republic, S. A. was engaged in opposing or defending, at the head of the

Mexican troops, the claims of rival chiefs. He maintained his position as president until 1836, when he was defeated and taken prisoner at San Jacinto by his political opponents. Liberated in 1837, he participated in the repulse of the French troops at Vera Cruz, on which occasion he lost a leg. He was once more president, from 1841 until 1845, in which latter year he was deposed and banished for ten years, but was recalled soon afterwards, reinstated as president, and charged to defend Mexico against the U. States army. He was defeated in several encounters by Generals Scott and Taylor, and finally, in 1848, was compelled to resign, Mexico having proclaimed peace with the U. States, by the cession of California, and by submitting to the erection of Texas into an independent state. From the close of the year 1852 until the middle of 1855, he again held the reins of power, only to be driven into exile, however, at the latter period, by General Carrera, who had revolted against his rule. He retired to the island of St. Thomas, where he lived quietly for some years. In the winter of 1863-64 he went to Vera Cruz, with the intention, as was naturally expected, of taking a more active part in politics than was deemed desirable. He had prepared a manifesto to the Mexican army, in which, after disclaiming any ambitious intentions, he expressed a strong desire to lay his bones among the people for whose independence he had done so much, but the French authorities would not allow him to publish it. On the arrival of the Emperor Maximilian in Mexico, he embraced the cause of the empire, but soon abandoned it, left Mexico, and returned to St. Thomas. S. A. had a long interview with Mr. Seward when he was in the W. Indies. He visited the U. States in May, 1866; and it is generally believed that his visit was connected with the then state of affairs in Mexico. He was taken prisoner by the Juarist party in 1867, but was soon after released. After that time the veteran general lived in comparative obscurity. Died in 1877.

San'ta An'na, an island of Brazil, in the Atlantic, 40 m. E.N.E. of Maranhão. — An island, prov. of Goyaz, in the River Araguay, abt. 210 m. long, and 40 m. broad. — A town, prov. of Matto-Grosso, abt. 30 m. E.N.E. of Cuyaba; pop. 4,000. — A town, prov. of Rio Grande do Sul, on the Sino, N. of Porto Alegre; pop. 1,400.

Santa Anna, or **VILLA NOVA**, a town of Brazil, prov. of Santa Catherina, abt. 20 m. N.E. of Laguna; pop. 2,000.

Santa Anna, a town of Central America, in San Salvador, 11 m. W. of San Salvador; pop. 10,000.

Santa Anna, a lake of Mexico, prov. of Tabasco, abt. 154 m. S.E. of Vera Cruz.

Santa Anna (now **SAN JUAN**), in New Mexico, a N.W. co., bordering on Arizona; area, 6,008 sq. m. Rivers. Rio San Juan and Rio Chusco. Surface, generally mountainous. Cap. Aztec. Pop. (1897) 1,960.

Santa Anna, a town of S. Peru, abt. 8 m. N.W. of Cuzco.

Santa Anna, in California, a river which flows into the Pacific Ocean from Los Angeles co.

Santa Anna, or **SANTA ANA**, in California, a post-village, cap. of Orange co., 28 m. S.E. of Los Angeles.

Santa Anna, in Illinois, a township of DeWitt co., 16 m. E. of Clinton. Pop. (1897) 2,320.

Santa Bar'bara, a town of Brazil, about 30 m. N.N.E. of Ouro-Preto. Pop. 4,000.

Santa Barbara, a town of Venezuela, on the Orinoco, opposite the mouth of the Ventuari.

Santa Barbara, in California, a S.W. co., bordering on the Pacific, having N. San Luis Obispo co., and W. those of Kern and Los Angeles; area, 2,380 sq. m. Rivers. Santa Clara, or Saticoy, and Santa Inez rivers.

Surface, mountainous in the E., and undulating in the center and W.; soil, generally fertile. Vineyards are largely cultivated. Min. Gold, iron, copper, salt, and asphaltum. Cap. Santa Barbara. Pop. (1897) 19,450.

— A city and seaport, cap. of the above co., 279 m. S.E. of San Francisco; Latitude $34^{\circ} 25' N.$, Longitude $119^{\circ} 30' W.$ Pop. (1897) 6,455.

Santa Barbara Islands, in California, extending abt. 175 m. along the coast of Santa Barbara, Los Angeles, and San Diego cos., at a distance varying from 20 to 65 m. They are nine, and consist of San Miguel, Santa Rosa, Santa Cruz, Anacapa, Santa Barbara, Santa Catalina, San Clemente, San Nicholas, and San Juan.

Santa Catali'na, an island and harbor of Central America, on the Mosquito coast; Lat. $13^{\circ} 23' 40'' N.$, Lon. $81^{\circ} 22' 10'' W.$

Santa Catharina, (*-ka-ta-ree'na*), a marit. prov. of S. Brazil, bordering on the Atlantic, between Lat. 26° and $30^{\circ} S.$, Lon. 49° and $51^{\circ} W.$; area, 25,002 sq. m.

Surface, mountainous, except along the coast, which is low; soil, generally fertile. Climate, mild and healthy. Prod. Rice, manioc, millet, sugar, coffee, and cochineal.

Chief towns. Desterro, São Francisco, and Laguna. Pop. 90,000. — A fortified island of Brazil, off the coast of the above prov., 30 m. long, and 8 broad. Surface, mountainous, and well watered. Principal town. Desterro. Pop. 12,000.

Santa Clara, (*-kla'ra*), an island of Ecuador, in the Gulf of Guayaquil, abt. 13 m. S.E. of Puna.

Santa Clara, a river in California, rises in the mountains, and flows W. into the Pacific Ocean from Santa Barbara co.

Santa Clara, in California, a W. co., bordering on San Francisco Bay; area, 1,200 sq. m. Rivers. Guadalupe and Pajaro rivers. Surface, mountainous in the S.W., elsewhere, generally level; soil, fertile. Prod. Wheat and fruits. Min. Quicksilver, copper, alum, asphaltum and limestone. Cap. San José. Pop. (1897) 52,280. — A post-town and township of the above co., about 3 m. from San José. Pop. (1897) 3,480.

Santa Clara, in Nevada, a village of Humboldt co., 13 m. N. of Unionville.

General Santa Anna

1798-1877

San'ta Cla'ra, in *Utah*, a post-village of Washington co., 6 m. N.W. of Saint George.

Santa Cruz, (-*croos*), a river of Patagonia, enters the Atlantic Ocean, lat. 50° S., lon. 68° 30' W., after an E. course of over 200 m.

Santa Cruz, a seaport-town, cap. of the island of Teueriffe, on the N.E. extremity; pop. 9,500.

Santa Cruz, a town of Brazil, 120 m. S.E. of Goyaz; pop. 3,000.

Santa Cruz, or **Saint Croix**, the largest of the Virgin Islands, in the W. Indies, belonging to Denmark, 65 m. E.S.E. of Porto Rico; lat. 17° 45' 30" N., lon. 64° 34' W.; area, 110 sq. m. Surface, generally level; soil, fertile. Climate, variable, and at times unhealthy. Hurricanes and earthquakes are of frequent occurrence. Prod. Sugar, rum, cotton, coffee, and indigo. Cap. Christiansted. Pop. 30,000.

Santa Cruz, an island of the W. Indies, N. of Cuha, abt. 30 m. N.E. of Matanzas.

Santa Cruz, an island in the Gulf of California, abt. 80 m. S.E. of Loreto.

Santa Cruz, in *California*, a W. co., bordering on the Pacific; area, 425 sq. m. Surface, diversified, but mountainous in the N.E.; soil, generally fertile. Min. Gold. Cap. Santa Cruz. Pop. (1897) 21,350.

—A city and seaport, cap. of the above co., 59 m. S.S.E. of San Francisco. Pop. (1897) 6,250.

Santa Cruz de los Rosales, a town of Mexico, abt. 68 m. N.W. of Chihuahua. It was taken in 1848 by the Americans under Gen. Price.

Santa Cruz de Mayo, a seaport-town of Mexico. See GUITIVIS.

Santa de Jesus, (*ha'soos*), a town of Venezuela, on the Meta, abt. 46 m. W. of its junction with the Orinoco.

San Tadeo, (*san-ta-da'o*), a river of Patagonia, which flows W. into the Gulf of St. Esteven in the Pacific Ocean.

Santa Fé, ("holy faith"), a prov. of the Argentine Republic, between lat. 30° and 33° S., lon. 61° and 62° W. Rivers. Salado, and the Tercero, or Carcaranal. Pop. 89,117. Chief towns. Santa Fé (the cap.), Rosario, and Fort St. Espiritu.—A city, cap. of the above prov., 5 m. N.W. of Paraná; pop. 10,670. It is situated on an island formed by the Paraná and Salado rivers, 50 m. long, and 6 in average breadth.

Santa Fé, in *New Mexico*, a N. central co.; area, 2,292 sq. m. Rivers. Rio Grande, which forms part of its W. boundary, and several small affluents. Surface, mountainous in the S.W. and E., elsewhere undulating; soil, generally fertile. Cap. Santa Fé. Pop. (1897) 14,140.

—The cap. of the territory in the above co., on the Rio Chicito or Santa Fé River, about 20 m. N.E. of its mouth in the Rio Grande, lat. 35° 41' N., lon. 106° 10' W. It is situated on a plateau 7,000 ft. above the sea, and the houses are principally built of brick. The completion of the Union Pacific and other railroads has greatly added to the prosperity of the city. Pop. (1897) 6,850.

Santa Fé, in *Florida*, a river forming the boundary of Alachua and Columbia cos. It flows into the Suwanee River.

Santa Fé, in *Indiana*, a village of Spencer co., 40 m. E. N.E. of Evansville.

Santa Fé, in *Missouri*, a post-village of Monroe co., abt. 60 m. N. of Jefferson City.

Santa Fé de Antioquia. See ANTIOQUIA.

Santa Fé de Bogotá. See BOGOTÁ.

Santa Helena, a town of Brazil, 60 m. W.S.W. of Guimarães.

Santa Hermanidad. See HERMANDAD.

Santa Inez, (*e'nes*), in *California*, a river of Santa Barbara co., rises in the Coast range, and flows W., entering the Pacific Ocean 10 m. N. of Cape Concepcion.—A town of Santa Barbara co., abt. 265 m. S.S.E. of San Francisco.

Santa Isabel, a town of Brazil, 120 m. N.E. of São Paulo.

San'taline, *n.* (*Chem.*) The red coloring matter of red-sandal-wood.

Santa Juana, (-*ho-a'na*), an island of Chili, in the river Biobio, 38 m. E.S.E. of Concepcion.

Santala'ceæ, *n.pl.* [*Ar. zandal.*] (*Bot.*) The Sandal-wood family, an order of plants, alliance *Asarales*. DIAG. A one-celled ovary and definite ovules, having a coated nucleus.—The species are natives of various parts of the world. Those of North America and Europe are inconspicuous herbs; while those of India and Australia are trees or shrubs. The genus *Thesium* is parasitic on the roots of other plants. Some of the plants are remarkable for their fragrant wood; a few produce edible seeds. See SANTALUM, and FUSANUS.

Santa Lucia, (-*loo-see'a*), a town of the Argentine Republic, on the Paraná, 106 m. S. of Corrientes.

Santa Lucia, a town of Brazil, abt. 110 m. S.S.W. of Recife; pop. 2,000.

Santa Lucia, or **Luzia**, a town of Brazil, 120 m. S. E. of Goyaz.

Santa Lucia, a town of Italy, in Sicily, 7 m. S. of Milazzo; pop. 4,500.

Santa Lucia, a river of Uruguay, which joins the Rio de la Plata 7 m. N.W. of Montevideo, after a S. course of 100 m.

Santa Margarita, (-*mar-gah-ree'tah*), in *California*, an island on the S.W. coast, from which it is separated by the Bay of Madelina; lat. 24° 30' N., lon. 111° 30' W. Ext. 45 m. long, and 15 m. in greatest breadth.

Santa Margarita, in *Colorado*, a village of Conejos co., 110 m. S.S.W. of Pueblo.

Santa Maria, (-*ma-ree'a*), an island in the Bay of Arauco, off the coast of Chili, 30 m. S.W. of Concepcion; lat. 37° 2' S., lon. 73° 34' 15" W. Its surface was raised about 10 ft. by an earthquake in 1835.

Santa Maria, in *California*, a river which rises in the Coast range, flows W., forming part of the boundary be-

tween San Luis Obispo and Santa Barbara cos., and falls into the Pacific 40 m. N. of Cape Concepcion.

San'talum, *n.* [*Arab. zandal.*] (*Bot.*) The typical gen. of the order *Santalaceæ*. The fragrant wood called sandal-wood is obtained from *S. album*, a native of India. It is employed in perfumery, and is used by the Indian doctors as a sedative and refrigerant. *S. freycinetium* and *paniculatum* furnish the sandal-wood of the Sandwich Islands.

Fig. 2305. — SANTALUM ALBUM.

Santa Mari'a de Fé, a town of Paraguay, abt. 45 m. E. of Neembucu.

Santa Marta, or **Martha**, a seaport-town of the Republic of Colombia, on a bay of the Caribbean Sea, 40 m. N.E. of the mouth of the river Magdalena. Pop. 9,000.

Santa Maura, or **LEUCADIA**, (*mo'ra*), one of the Ionian Islands, on the W. coast of Arcania; area, 180 sq. m. Pop. 20,000.

Santan'der, a river of Mexico, dept. of Tamaulipas, flows N.E. into the Gulf of Mexico, 110 m. N. of Tampico.

Santander, (*san-tan-dair'*), a seaport-town of Spain, cap. of the prov. of same name, 50 m. N.E. of Bilbao. It has a commodious harbor, protected by 2 forts. Pop. 19,000.

Santanilla, or **SWAN ISLANDS**, (*san-ta-neel'ya*), two islands at the entrance to the Bay of Honduras, about 150 m. N. of the Mosquito coast; lat. 17° 25' N., lon. 83° 50' W.

Santaquin', in *Utah*, a post-village of Utah co., 24 m. S.W. of Provo City.

Santarem', a town of Brazil, on the Tapajos, at its junction with the Amazon, 60 m. S.W. of Montalegre; pop. 10,000.

Santarem, (*san-ta-reng'*), a town of Portugal, on the Tagus, N.W. of Lisbon; pop. 8,000.

Santarem' Chan'nel, in the W. Indies, between the Great Bahama and Salt Key Banks; lat. 24° N., lon. 79° W., with a width of 40 m.

Santa Rita, (*ree'ta*), a town of Brazil, abt. 60 m. S. of Villa Rica; pop. 7,000.

Santa Rita, in *Texas*, a village of Cameron co., about 10 m. N.W. of Brownsville.

Santa Rosa, a town of Chili, 18 m. E.S.E. of San Felipe; pop. 7,000.

Santa Rosa, in Mexico, 32 m. N. of Cohahuila; pop. 5,000.

Santa Rosa, a town in the Republic of Colombia, 40 m. E. of Antioquia. It has rich gold mines.

Santa Rosa, in *California*, an island off the N.W. coast, 35 m. S.W. of Santa Barbara.

—A city and township, cap. of Sonoma co., 60 m. N. of San Francisco. Pop. (1897) 5,840.

Santa Rosa, in *Florida*, a W. co., bordering on the Gulf of Mexico; area, 1,296 sq. m. Rivers. Yellow-water and Blackwater. Surface, flat; soil, unproductive. Prod. Indian corn and sweet potatoes. Cap. Milton. Pop. (1895) 8,914.

Santee', in *S. Carolina*, a river formed by the junction of the Congaree and Wateree, at the S.E. of the Richland dist., and flows into the Atlantic by 2 mouths, near lat. 33° 6' N., after a S.E. course of 150 m.

Santiago, or **SAINT JAGO**, an island near the W. coast of Africa, the largest of the Cape de Verd Islands; lat. 15° N., lon. 23° 40' W. Ext. 35 m. long, and 12 broad. The surface is mountainous, but fertile and well cultivated. Prod. Sugar, coffee, indigo, orchilla-wood, cotton, and a variety of tropical fruits. Manuf. Cotton goods. It has an extensive trade. Chief town. Porto Praya. Pop. 20,000.

Santiago, a town of Bolivia, 190 m. S.E. of Chiquitos.

Santiago, a river of Central America, in San Salvador, which enters the Pacific about 20 m. W. of Sonsonate. At its mouth stands a small town of same name.

Santiago, a river of Ecuador, joins the Amazon a short distance W. of San Borja, after an E. course of 180 m.

Santiago, (*san-te-ah'go*), a river of Ecuador, enters Salinas Bay in the Pacific, 50 m. N.E. of Esmeraldas, after a N.W. course of 75 m.

Santiago, in *Minnesota*, a post-village of Sherburne co., 20 m. E. of St. Cloud.

Santiago Atitlan, (-*a-teet-lan'*), a town of Guatemala, between 2 volcanoes from 8,000 to 10,000 ft. high, 90 m. W. of Guatemala.

Santiago de Alanje (-*a-lang'gha*), a town of the Republic of Colombia, 90 m. W. of Veragua.

Santi'go de Chili, (-*chil'e*), a city, cap. of the republic of Chili, at the foot of the Andes, 1,800 feet above the sea, 90 m. E.S.E. of Valparaiso; lat. 33° 35' S., lon. 70° 43' 38" W. The river Mapocho divides the city into 2 parts, that on the N., the largest, being regularly laid out, the streets running at right angles. The Plaza, or Great Square, is adorned with a magnificent fountain, and surrounded by elegant public buildings and fashionable stores, the most notable of the former being the mint, the old palace (formerly the residence of the presidents), and the cathedral. The new hotel and the opera house are also fine buildings; the Alameda, 600 ft. wide, extends to the Exposition Buildings, a distance of four miles. S. was founded in 1851, by Pedro de Valdivia, but made very little progress, owing to the restrictions of Spain, until Chili became independent of the mother country, since which time it has become one of the most important cities of S. America.

Santiago de Compostella. See COMPOSTELLA.

Santiago de Cu'ba, a city, seaport, and former cap. of Cuba, on the river Santiago, 6 m. from its mouth on the S. coast; lat. 19° 55' 9" N., lon. 75° 50' W. It is regularly built, and the houses are mostly of stone; but the situation is unhealthy. The harbor, 4 m. long, is fortified and well sheltered, and is next in commercial importance to Havana and Matanzas. The Spanish fleet under Admiral Cervera was blockaded in this harbor by an American fleet in 1898, and an army was sent thither which attacked and defeated the Spanish garrison of the city. The fleet then made an effort to escape, but was attacked and destroyed by the American fleet. Shortly afterwards the city and the adjoining territory were surrendered to the besieging army, and placed under military government by the United States. See CUBA. Pop. 26,000.

Santiago de las Ve'gas, a town of Cuba, about 15 m. S. of Havana; pop. abt. 6,500.

Santiago de la Ve'ga, or **SPANISH TOWN**, a town, cap. of the island of Jamaica, on the river Cobre, 10 m. W. of Kingston; pop. abt. 6,500.

Santiago del Este'ro, a town of the Argentine Republic, cap. of a prov. of same name, on the Dulce; lat. 25° S., lon. 64° W.; pop. 5,000.

Santiago de los Caballeros, (-*ka-bal-ya-roce'*), a town of the island of Hayti, on the Yaqui River, 103 m. E. of Cape Haytien; pop. 12,000.

Santi Bachmly, (*san'tee-ba-chul'lee*), a considerable walled town of S. India, in the dominions of Mysore, 4 m. N.W. of Seringapatam.

Santi'la, or **Satilla**, in *Georgia*, rises in Irwin co., and flows E.S.E. into the Atlantic through St. Andrew's Sound.—The Little Santilla joins the above in Wayne co., after a S.E. course.

San'to Agostinho, or **SAINT AUGUSTIN**, (-*a-gos-teen'-yo*), a cape of Brazil, 25 m. S. of Pernambuco; lat. 8° 21' S., lon. 34° 56' W.

Santo Ama'ra, a town of Brazil, prov. of Rio Grande do Sul, on the Jacuhy; pop. 3,000.

Santo Ama'ro, a town of Brazil, 45 m. N.W. of Bahia.

Santo Antonio da Patrulha, (-*pa-trool'ya*), a town of Brazil, prov. of Rio Grande do Sul, E.N.E. of Porto Alegre; pop. 3,103.

Santo Antonio de Sa, or **Macacu'**, a town of Brazil, 30 m. N.E. of Rio de Janeiro; pop. 8,000.

Santo Antonio dos Guarulhos, (-*doo-gwa-rool'-yoce*), a town of Brazil, on the Parahiba, opposite Campos; pop. 7,000.

San'ton, *n.* [*Sp.* from Lat. *sanctus*, holy.] A Turkish dervish, believed in by the vulgar as a saint; a hermit; a recluse.

Santaña, (*san-tone'ya*), a fortified seaport-town of Spain, prov. of Santander, on the Bay of Biscay, 16 m. E. of Santander; pop. 1,000.

Santonine, *n.* [*Fr.*] (*Chem.*) A proximate vegetable principle, obtained from the flower-heads of *Artemisia santonica* and other species, known in pharmacy as *worm-seed*. It is white, crystallizable, bitterish, and very little soluble in water, but more so in alcohol. It is occasionally used as a vermifuge in doses of from 10 to 30 grains, followed by a brisk purge.

Santorin, (*san-to'ren*), an island in the Grecian Archipelago, 12 m. S. of the island of Scio; area, 40 sq. m. Prod. Cotton, figs, wine, and barley. Pop. 13,000.

Santos, a seaport-town of Brazil, on the N. of the island of Engua Guacu, 34 m. S.S.E. of São Paulo; lat. 23° 55' S., lon. 46° 19' W. Its harbor is large and commodious, and it has an active trade in sugar. Pop. 8,000.

Santos, (*Los*), a town of the U. S. of Colombia, dept. of Istruo, on the W. coast of the Gulf of Parita, S.S.E. of Parita.

Santos Luga'res, a village of the Argentine Republic, 14 m. W. of Buenos Ayres, noted for the defeat of the dictator Rosas, by Urquiza, in 1852.

San'tyam, in *Oregon*, a river which rises in the E. of Linn co., and flows W. into the Willamette River, abt. 20 m. S. of Salem.—A vill. of Linn co., on the Santyam River, abt. 5 m. S. of its junction with the Willamette.

San Vicente, in Central America, a town, cap. of San Salvador, 25 m. E.S.E. of San Salvador; pop. 9,000.—Near it is the volcano of San Vicente, abt. 800 ft. high.

São Ben'to, a town of Brazil, abt. 40 m. N. of Alagoas; pop. 3,000.

São Bernar'do, a city of Brazil, on the Russas, 70 m. S.S.E. of Ceará; pop. 6,000.

São Christovão, or **Sergipe**, (*sowng-krees-to-voun'*), a city of Brazil, cap. of the prov. of Sergipe, on the Paromapama River, about 20 m. from its mouth in the Atlantic; pop. 2,000.

São Feliz, or **Felis**, (-*fa-lees'*) a town of Brazil, 280 m. N.N.E. of Goyaz; S.S.E. of it are the famous thermal

springs of Caldas de Frei Reinoldo, in which the water is almost boiling hot.

São Francisco, an island on the S.E. coast of Brazil, prov. of Santa Catharina, from which it is separated by a narrow channel. *Ext.* 20 m. long and 10 broad. The cap. of the same name is in Lat. 26° 12' S., Lon. 48° 43' W.

—A town of Brazil, 45 m. N.W. of Bahia; *pop.* 2,000.

—A river of Brazil, rises in the N.W. of the prov. of Santa Catharina, and flows into the Atlantic opposite the island of São Francisco, after an E. course of 100 m.

São Francisco, or Saint Francisco, an important river of Brazil, rises in Lat. 20° S., Lon. 45° W., and after a N.E. course of 1,200 m., enters the Atlantic by two mouths; Lat. 10° 24' S., Lon. 36° 20' W. It is navigable almost its entire length, except where impeded by the falls of Paulo Afonso, 160 m. from its mouth.

São Gonçalo, (-gon-sa'lo), a town of Brazil, on the Potengi, 12 m. W. of Natal. — A town of Brazil, 75 m. N.E. of Rio de Janeiro; *pop.* of dist. 10,000.

São Gonçalo D'Amarante, (-da-ma-ran'ta), a town of Brazil, 56 m. N.N.W. of Leiras; *pop.* 1,800.

São João de Barra, (-zho-own'), a town of Brazil, on the Parahiba, near its mouth in the Atlantic, 18 m. E.N.E. of Campos; *pop.* 2,000.

São João da Palma, a town of Brazil, 400 m. N. of Goyaz.

São João das Duas Barras, a town of Brazil, at the confluence of the Aragnay and Tocantins.

São João del Rei, (-del-ra'e), a town of Brazil, 80 m. S.W. of Ouro-Preto; *pop.* 5,000.

São João do Principe, or Mar'cos, (-green'se-pa), a town of Brazil, 60 m. W.N.W. of Rio de Janeiro; *pop.* 6,000.

São Jorge dos Ilheos, (-zhor-zha-doce-eel-ya'oce), a seaport-town of Brazil, at the mouth of the Rio dos Ilheos in the Atlantic, 130 m. S.W. of Bahia; *pop.* 4,000. The above river has an E. course of 130 m.

São José, (-zho-za'), a bay of Brazil, E. of the island of Marauão, formed by the mouths of the rivers Moni and Itapicuru. *Ext.* 24 m. long and 8 broad.

—A town of Brazil, on the Parahiba, 60 m. N.E. of São Paulo; Lat. 23° 12' S., Lon. 46° W.; *pop.* of dist. 4,000.

—A town of Brazil, prov. of Santa Catharina, 4 m. W. of Desterro; *pop.* 6,000.

São Matheos, (-ma-ta'oce), a town of Brazil, 190 m. S.S.W. of Ceara; *pop.* 2,000. — A town of Brazil, prov. of Espírito Santo, 16 m. W. of the Atlantic.

São Miguel, a town of Brazil, 25 m. S.S.W. of Alagoas; *pop.* 2,000.

Saona, an island off the S.W. coast of Hayti, from which it is separated by a channel 10 m. wide. *Ext.* 15 m. long and 5 broad.

Saône, (sone), a river of France, rising in the dept. of Vosges, and after a S. course of 225 m., joins the Rhone at Lyons.

Saône-et-Loire, a dept. of the E. of France, between Lat. 46° and 47° N., Lon. 3° 40' and 5° 30' E., having N. the dept. Cote d'Or, E. Jura and Ain, S. Rhone and Loire, and W. Allier and Nievre; *area*, 3,300 sq. m. The surface is mountainous and well wooded, and the soil is generally fertile. *Rivers*. Saône, Loire, Arroux, Doubs, and Seille rivers. *Prod.* Principally corn and wine. *Min.* Iron, coal, marble, and manganese. *Manuf.* Glass, earthenware, and iron-works. *Chief towns*. Macon, the cap., Autun, Charolles, Chalons, and Loubans. *Pop.* 111,894.

Saône, (Haute), a dept. of the E. of France, between Lat. 47° 15' and 48° N., Lon. 5° 35' and 7° E., having N. Vosges, E. Haut-Rhin, S. Doubs, and W. Cote d'Or and Haute-Marne; *area*, 1,792 sq. m. The surface is undulating and fertile, except in the N.E., which is mountainous. *Rivers*. Saône, Oignon, Drejon, and Amance. *Prod.* Corn, wine, and timber. *Min.* Iron and coal. *Manuf.* China, glass, cloth, and straw hats. *Chief towns*. Vesoul, the cap., Gray, and Lure. *Pop.* 317,706.

São Paulo, (pau'lo), a city of Brazil, cap. of a prov. of same name, stands on an uneven elevation between two small streams, tributaries of the Tiede, 220 m. W.S.W. of Rio de Janeiro. There is an academy of laws, attended by about 500 students. The general appearance of the town is picturesque, and the vicinity and suburbs are beautiful.

São Pedro D'Alcantara, (-dal-kan'ta-ra), a town of Brazil, prov. of Goyaz, 80 m. S.S.E. of São João das Duas Barras.

São Pedro do Rio Grande, a marit. prov. of Brazil. See RIO GRANDE DO SUL.

São Romão, (-ro-moun') a town of Brazil, prov. of Minas-Geraes, on the São Francisco River; Lat. 15° 22' S.; *pop.* 4,000.

São Roque, (-ro'ka), a town of Brazil, 32 m. W.S.W. of São Paulo; *pop.* 5,000.

São Roque, (Cape), a promontory on the N.E. coast of Brazil; Lat. 5° 28' S., Lon. 35° 16' W.

São Sacramento, in Brazil. See PERNAMBUCO.

São Sebastião, (-sa-bas-ta-own'), a seaport-town of Brazil, prov. of São Paulo; Lat. 23° 48' 20" S., Lon. 45° 29' 6" W. *Pop.* 5,000. — Also, an island opposite the above town, from which it is separated by a narrow channel. *Ext.* 12 m. long and 6 broad. *Pop.* 3,000.

Sap, n. [A. S. *sæp*.] (*Bot.*) The nutrimental fluid which circulates in plants. As it rises in the stem it is of a watery nature, and contains the various inorganic matters absorbed by the roots, also some sugar, dextrine, and other organic substances, which it has dissolved in its upward course. In its passage to the leaves it becomes more and more altered from the state in which it was absorbed by the roots; but when it reaches the leaves it is still unfitted for the requirements of the plant, and is hence termed *crude sap*. Through the action

of the light and air, it undergoes important changes in the leaves and other green parts, and becomes adapted for the nourishment of the plant. In this state it is termed *elaborated sap*. In dicotyledons, this elaborated fluid descends through the internal bark and cambium layer towards the root, and is transmitted laterally inwards by the medullary rays. See BOTANY.

—v. a. [Fr. *saper*; It. *zappare*, from *zappa*, a spade, or *zappone*, a mattock.] To subvert by digging under or removing the foundation of; to undermine; to mine.

—v. n. To proceed by mining, or by secretly undermining.

—n. A trench for undermining, or an approach made to a fortified place by digging under cover of gabions, &c.

Sap'ajon, n. (*Zoöl.*) See MONKEY.

Sapan'-wood, n. A dye-wood produced by certain species of *Cesalpina*. It resembles Brazil-wood in its color and properties.

Sap'-green, n. See RHAMNUS.

Saphe'na, n. [Gr. *saphes*, distinct.] (*Anat.*) The large vein of the leg which ascends over the external ankle.

Sap'hire, n. See SAPHIRE.

Sap'id, a. [Fr. *sapide*; Lat. *sapidus*, from *sapis*, to taste.] Tasteful; savory; having the power of affecting the organs of taste.

Sapid'ity, Sap'idness, n. Quality of being sapid; flavor; tastefulness; savor; the quality of affecting the organs of taste.

Sap'ience, n. [Fr.; Lat. *sapientia*, from *sapiens*.] Good taste; good sense; discernment; discretion; prudence; wisdom; sageness; knowledge.

Sap'iently, adv. Wisely; sagaciously.

Sapinda'ceæ, n. [From Lat. *sapo* *Indicus*, Indian soap.] (*Bot.*) The Soap-wort family, an order of plants, alliance *Sapindales*. *DIAG.* Complete, unsymmetrical flower, petals usually with an appendage, anthers opening longitudinally, 3 carpels, and usually arillate, wingless seeds. — The plants of this order flourish chiefly in tropical regions, especially in S. America and India.

The *S.* are represented in the U. States by the horse-chestnuts. The presence of a saponaceous principle is one of the most prominent properties of the order. Many of these plants are poisonous in all their parts; but it more frequently happens that, while the roots, leaves, and branches are dangerous, the succulent fruits are innocuous, or in some cases even valuable articles of dessert. The useful products of the order are timber, edible fruits, starch, and the soapy matter above referred to. See *ÆSCULUS*, *NEPHELIUM*, *PAULLINIA*, *SAPINDUS*.

Sapin'dates, n. pl. (*Bot.*) An alliance of plants, subclass *Hypogynous exogens*. *DIAG.* Monodichlamydeous unsymmetrical flowers, axile placentæ, an imbricate calyx and corolla, definite stamens, and little or no albumen. The alliance includes 9 orders, — TREMANDRACEÆ, POLYALACEÆ, VOCHYACEÆ, STAPHYLEACEÆ, SAPINDACEÆ, PETIVERIACEÆ, ACERACEÆ, MALPIGHIACEÆ, and ERYTHORXYLACEÆ, q. v.

Sapin'dus, n. [From Lat. *sapo* *Indicus*, Indian soap.] (*Bot.*) A genus of the order *Sapindaceæ*. The most important species is *S. saponaria*, the fruits of which are employed in the W. Indies instead of soap for cleansing linen. The fruits of *S. unequalis* contain the same saponaceous principle, and are used for the same purpose.

Sap'less, a. Destitute of sap; not juicy; — hence, dry; old; husky.

Sapodil'la, n. (*Bot.*) See ACHRAS.

Saponaceous, (-äs'-) a. [From Lat. *sapo*, *saponis*, soap.] Soapy; resembling soap; having the qualities of soap.

Saponac'ity, n. Quality of being saponaceous or soapy.

Sapon'ifiable, a. That may be converted into soap.

Saponifica'tion, n. The separation of the fatty acids from their glycerine base, by the addition of an alkali or other metallic base, which unites with them. See SOAP.

Saponaria, n. (*Bot.*) A genus of plants, order *Caryophyllaceæ*. The common Soap-wort, *S. officinalis*, found by roadsides in all the States, is a hardy, smooth, succulent plant, with handsome pink-like flowers; stem 1-2 feet high. It has a bitter taste, with a saponaceous juice.

Sapon'ify, v. a. [Fr. *saponifier*.] To convert into soap.

Sap'ouine, n. [Lat. *sapo*, soap.] (*Chem.*) A substance resembling soap, contained in a large number of plants, such as the *Saponaria officinalis*, in the root of the Common Pink, and in the fruit of the horse-chestnut. It is easily extracted from these sources by boiling in alcohol. It is soluble in water in all proportions, and froths strongly on agitation. The juice of soap-wort is often used as a detergent for cleansing the finer variety of wool from grease. Powdered, it forms a powerful stercoratory. Boiled with dilute acids, it forms saponic acid.

Sap'ouille, n. (*Chem.*) A combination of a volatile or an essential oil with a base.

Sap'or, n. [Lat., from *sapio*.] Taste; savor; flavor; relish; the power of affecting the organs of taste.

Sapor I., a king of Persia of the Sassanide dynasty, succeeded his father, Artaxerxes, 240. He invaded Mesopotamia 242, and having conquered Armenia, Syria, and Cilicia, he put to death the Emperor Valerius with great cruelty. He was defeated by Odenatus 269, and d. 271.

—SAPOR II., a posthumous son of Hormisdas II., was proclaimed 310, before his birth. He became an active and warlike prince in conflict with the Romans, and was a great enemy to Christianity, d. 380. — SAPOR III., succeeded Artaxerxes II., 384. He kept peace with the Romans, d. 389.

Saporos'ity, n. Quality of exciting taste or affecting the palate.

Sap'orons, a. Savory; tasteful. (R.)

Sapota'ceæ, n. pl. (*Bot.*) An order of plants, alliance

Rhamnales. *DIAG.* Monopetalous flowers, epipetalous stamens, ascending ovules, a short radicle, and amygdaloid cotyledons. They are trees or shrubs, often having a milky juice, with alternate, simple, exstipulate, coriaceous leaves, and hermaphrodite flowers. Calyx usually with 5 divisions, sometimes 4-8; corolla with as many divisions, or twice or thrice as many; stamens definite, in a single row, half of them sterile and alternating with the fertile ones, the latter being opposite to the segments of the corolla; ovary 4-12-celled, with a solitary ovule in each cell; style single. Fruit fleshy; seed large, with bony surface. The plants of this order are natives of the tropical parts of Asia, Africa, and America; many yield edible fruits. The seeds of some contain fatty oils. The valuable substance gutta-percha is a product of this order.

Sap'per, n. [Fr. *sapeur*.] One who saps; one who digs a sap or trench.

Sapphic, (să'fik), a. In the style or manner of Sappho; as, a *Sapphic* ode.

—n. A species of Greek verse, named after the celebrated poetess *Sappho*, by whom it is said to have been invented. It consists of eleven syllables, or five feet; the first being a trochee, the second a spondee, the third a dactyl, and the last two trochees; as follows: —

Grândi | nīs mī | sīt pătēr | ēt rū | Cēntē.

This measure was afterwards introduced into Latin, and received great improvements at the hands of Horace and Catullus.

Sapphire, (să'fire), n. [Gr. *sappheiros*.] (*Min.*) A precious stone, next in hardness to the diamond. It consists of nearly pure alumina, or clay, with a minute portion of iron as the coloring matter. It is found of various colors; the blue variety being generally called *sapphire*, the red the *oriental ruby*, and the yellow the *oriental topaz*. The finest variety of sapphire comes from Pegu, where they occur in the Capelan Mountains near Sgrian. *S.* have also been found in France, Saxony, and Bohemia.

Sapphirine, a. Resembling sapphire; made of sapphire; having the qualities of sapphire.

Sappho, (să'fo), a celebrated Greek poetess, was a native of the island of Leshos, and flourished in the 6th century B. C. She was the contemporary and friend of Alcæus, and won so high a reputation by her exquisite lyrics that she was called the *Tenth Muse*. Hardly anything is known of her biography, and fragments only of her nine books of poems are extant. Among them, however, is a fine hymn to Aphrodite, probably complete. The admiration of the ancients is justified by these precious remains of her songs. The moral character of *S.* has to be inferred from these compositions, and while some critics find ground for the gravest charges, others vigorously contend for her purity and virtue.

Sap'piness, n. [From *sappy*.] State or quality of being full of sap; succulence; juiciness.

Sap'pington, in *Missouri*, a post-village of St. Louis co., abt. 15 m. W.S.W. of St. Louis.

Sapsago, n. [Ger. *schabzieger*.] A kind of Swiss cheese of a dark olive-green color.

Sap'-sucker, n. See WOODPECKER.

Sapucahy, (sa-poo-ka'e), in Brazil, a river which rises in the S. of the prov. of Minas-Geraes, and joins the Parana, after a N.W. course of 200 m. — A town of Brazil, on the Sapucahy, abt. 180 m. S.W. of Ouro-Preto; *pop.* 4,000.

Sapucaya-nut, n. (*Bot.*) See LECYTIS.

Sap'-wood, n. (*Bot.*) See ALBURNUM.

Saquarema, or Sequarema, (sa-kwa-ra'ma), a town of Brazil, 29 m. E. of Rio de Janeiro; *pop.* 8,000.

Sara, (Bayon), in *Louisiana*, rises in W. Feliciana parish, and flows S. into the Mississippi at the village of Bayou Sara.

Sar'aband, n. A slow Spanish dance, said to be of Saracenic origin. — Hence,

(*Mus.*) A composition in triple time very similar to a minuet. When denoting music for the dance, it is to the same measure which usually terminates when the beating hand rises; being thus distinguished from the *couranto*, which ends when the hand falls.

Sarabi'la, or SUAREZ, a river of the Republic of Colombia, rises near the center of the country, and joins the Galinazo, or Sogamozo, a tributary of the Magdalena, after a N.N.E. course of 160 m.

Saracenic Art, n. See ARABIAN ARCHITECTURE.

Saracens, n. pl. The name of an Arab tribe, is by some authorities derived from *Sarah*, the wife of Abraham, whom they are said to claim as their foundress, to avert the stigma of their descent from the bond-woman Hagar. Bochart denies this theory, and asserts that they were called Saracens in consequence of their nomadic and predatory habits, *Saraka* being the Arabic verb "to plunder." Reland states that the word simply denotes the eastern origin of the Saracens, *Sharaka* being a modification of the Arabic "to rise," and applied in this case because the east is the quarter in which the sun rises. They are mentioned by the classical geographers, who do not define very exactly the locality they occupied. In consequence of their predatory encroachments, the Emperor Decius caused a number of lions to be conveyed into their country from Africa, and turned loose among them, in 251. The name, at first applied to a tribe, then to the Bedouin Arabs, was afterwards given to all Moorish and Mohammedan people, and especially to the opponents of the Crusaders, and in fact to all opponents of Christianity.

Saragossa, (sa-ra-gos'sa). [Sp. *Zaragoza*.] A city of Spain, the capital of the old kingdom of Aragon, on the Ebro, which is here at about the middle of its course, and separates the city from its suburbs, 176 m. N.E. from

SARACENIC OR MUHAMMADAN ARCHITECTURE.

Bajazet, Constantinople. 9. Court of the Lions (perspective), Alhambra.

1. Don Pedro's Hall in the Alcazar at Seville, Spain. 2. Church at Kurte-Ardshish, Turkey. 3. Court of the Lions in the Alhambra, near Granada, Spain. 4. Cathedral of St. Basil, Moscow, Russia. 5, 6, 8. Decorative details in church at Kurte-Ardshish, Turkey. 7. Mosque of the Sultan

Madrid. Without being regularly fortified, it is surrounded by an earthen wall, and is built throughout of bricks. The houses are seldom above three stories in height; the streets narrow and crooked, except one long and wide one, called the *Cozo*. Here are two bridges over the Ebro. The public buildings are numerous, — churches, convents, and a cathedral celebrated throughout Spain for its sanctuary. The city has a university, founded in 1478; also an academy of fine arts, with schools for drawing, and other branches of education. It is noted in history for the memorable siege it sustained against the French, under Marshals Mortier and Lannes, and which lasted with slight intermission from July 15th, 1808, to Feb. 21st, 1809, when it finally surrendered.

Sarah, (*sa'ra*). (*Script.*) The niece and wife of Abraham. She became the mother of Isaac at the age of 90 years, and caused Abraham to cast forth Hagar and Ishmael. She lived to the age of 127 years.

Sarah Ann Furnace, in *Pennsylvania*, a village of Lancaster co.

Sarahsville, in *Ohio*, a post-village, the former cap. of Noble co., 85 m. S. E. of Columbus.

Saraisk', a town of European Russia, govt. of Riazan, 40 m. N.W. of Riazan; pop. 6,000.

Sarama'ca, a river of Dutch Guiana, which enters the Atlantic 30 m. W. of the mouth of the Surinam, after a N. course of 200 m.

Saranac', in *Illinois*, a township of De Kalb co.

Saranac, in *Michigan*, a post-village of Ionia co., on Grand River, 25 m. E. of Grand Rapids.

Saranac, in *New York*, a post-township of Clinton co., 15 m. W. of Plattsburg.

Saranac Hollow, in *New York*, a village of Clinton co., 17 m. W. of Plattsburg; pop. abt. 600.

Saranac Lake, in *New York*, in the S. of Franklin co., 10 m. long.

Saranac River, in *New York*, formed by the surplus waters of Saranac Lake in Franklin co. It falls into Lake Champlain near Plattsburg.

Sarangpoor', a town of British India, 110 m. E. of Lucknow; pop. 10,000.

Saransk', a town of European Russia, govt. of Pensa, on the Saranga, near the Insar, 68 m. N.E. of Pensa. *Manuf.* Soap and leather. Pop. 9,000.

Sarapi'qui, a river of Central America, rises in Costa Rica, and flows into the San Juan near its mouth in the Caribbean Sea.

Sarapol', a town of European Russia, govt. of Viatka, on the Kama, 188 m. S.E. of Viatka; pop. 6,000.

Sarare, (*sa-ra'ra*), a river of Brazil, rises in the prov. of Mato-Grosso, and flows S.W. into the Guapore; Lat. 14° 51' S., Lon. 60° 30' W.

Sarato'ga, in *Illinois*, a township of Grundy co. — A twp. of Marshall co., 28 m. N. of Peoria.

Saratoga, in *Iowa*, a post-township of Howard co., 60 m. W. of Lansing.

Saratoga, in *Minnesota*, a post-village and township of Winona co., 25 m. W.S.W. of Winona.

Saratoga, in *N. Carolina*, a village of Wilson co., 58 m. E. of Raleigh.

Saratoga, in *Nebraska*, a village of Douglas co., N. of Omaha City.

Saratoga, in *New York*, an E. co., bordering on the Hudson; area, 780 sq. m. *Rivers.* Mohawk and Sacandaga rivers. *Surface*, mountainous in the N.W., in other parts level; *soil*, generally fertile. It is noted for its excellent potato crops. *Min.* Iron, sandstone, and limestone. *Cap.* Ballston. *Pop.* (1897) 58,260. — A township of the above co., 30 m. N. E. of Albany. *Pop.* (1897) 4,050.

Saratoga, in *Wisconsin*, a township of Wood co., 8 m. S. of Grand Rapids.

Saratoga Lake, in *New York*, 7 m. long and 2 broad, 5 m. E. of Ballston Spa, in Saratoga co.

Saratoga Springs, in *New York*, a village and township of Saratoga co., 38 m. N. by W. from Albany. It is one of the chief watering-places in the U. States. It contains 23 mineral springs, some chalybeate, some containing iodine, with salts of soda and magnesia, and all highly charged with carbonic acid. They are prescribed in diseases of the liver, chronic dyspepsia, &c. The most celebrated are *Congress*, *Empire*, *Iodine*, and *High Rock Springs*, the last of which was known by the Indians for its medicinal virtues many years before the Revolutionary War. During the season, which lasts from about June 20 to the end of August, the number of visitors ranges from 25,000 to 35,000, who find ample accommodation in the village, which contains about 25 hotels, some of immense magnitude. *Pop.* (1897) 12,200. — Here, Sept. 14 and Oct. 7, 1777, the Americans, under Gen. Gates, fought the memorable battles the first of which is also known under the names of Stillwater and Bemus's Heights, against the English forces under Gen. Burgoyne, who, Oct. 13, was compelled to capitulate. See BURGUYNE.

Saratov, (*sa-ra-lof*), a town of Russia in Europe, cap. of a govt. of same name, on the Volga, 335 m. S.S.E. of Nijni-Novgorod, and 360 m. N.N.W. of Astrakhan. Though its houses are generally built of timber, the town has a rich and picturesque appearance. Its 16 churches are ornamented with numerous towers and cupolas; and its broad streets, from the character of the houses and of the elegant equipages that roll through them, give quite a handsome appearance. *Manuf.* Canvas, cotton goods, cordage, leather, &c.

Sarawak', a kingdom or rajahship of Borneo, extending from Cape Dattoo on the W. to the river Samarahan on the E., between Lat. 1° 8' and 1° 58' N., and Lon. 109° 19' and 110° 39' E. The aboriginal inhabitants, called Dyaks, consist of various wild tribes, who, in

1844, took for their sovereign an Englishman, Sir James Brooke (*q. v.*), through whom the country is chiefly known. *Pop.* 50,000. — Sarawak, the capital, situate upon a river of same name, carries on a considerable trade with Singapore. *Pop.* 15,000.

Sarawan', a prov. of Beloochistan, between Lat. 28° and 30° 20' N., Lon. 64° and 67° 40' E.; area, 15,000 sq. m. The surface is mountainous, the highest peak, Tuk-atoo, reaching an elevation of 11,000 feet. *Chief towns.* Sarawan, the cap., Quetta, and Mustung. *Pop.* 50,000.

Sarayacu, (*sa-ri-a-koo'*) a town of Peru, on the river Ucayale; Lat. 6° 50' S., Lon. 75° W.

Sar'casm, *n.* [Lat. *sarcasmus*; Gr. *sarkasmos*, a bitter laugh.] A bitter laugh; a sneer. — A cutting jest; a keen, reproachful expression; a satirical remark or expression, uttered with some degree of scorn or contempt; satire, personal and severe; irony; a taunt; a gibe.

Sarcas'tic, Sarcas'tical, *a.* Containing sarcasm; bitterly satirical or ironical; scornfully severe; taunting.

Sarcas'tically, *adv.* In a sarcastic manner; with scornful satire.

Sar'cel, *n.* (*Falconry.*) The pinion or outer joint of a hawk's or a falcon's wing.

Sarcenet, (*sars'nel*), *n.* [Fr., from L. *saracenicum*.] A species of fine, thin, woven silk, so named from its having been originally made by the Saracens.

Sar'cle, *v. a.* [Fr. *sardier*.] To weed, as corn. (*v.*)

Sarcoba'sis, *n.* [Gr. *sarz*, *sarkos*, flesh, and *basis*, a base.] (*Bot.*) A many-celled fruit, having its cells dry, indehiscent, few-seeded, and cohering by a common style round a common axis.

Sar'cocarp, *n.* [Gr. *sarz*, and *karpos*, fruit.] (*Bot.*) The fleshy part of a pericarp, lying between the epicarp and endocarp (Fig. 940).

Sar'cocale, *n.* [From Gr. *sarz*, and *kêlê*, a tumor.] (*Med.*) A tumefaction of the testicle.

Sar'cocol, *n.* [Gr. *sarkokolla*, a Persian gum.] A gum resin, said to be the produce of *Panea sarcocolla*, a plant growing in the northern parts of Africa. This sarcocol somewhat resembles gum-arabic, but is soluble in alcohol, and its aqueous solution is precipitated by tannin.

Sar'coderm, *n.* [Gr. *sarz*, and *derma*, skin.] (*Bot.*) An intermediate fleshy layer found in the testa of some seeds.

Sarcology, *n.* [Gr. *sarz*, and *logos*, a discourse.] (*Anat.*) The history or doctrine of the fleshy parts of the body.

Sarco'ma, *n.* [Gr., from *sarz*, flesh.] (*Med.*) Any species of excrescence having a fleshy consistence.

Sarcophagus, (*sar-kôf'a-gûs*), *n.* [Lat.; Gr. *sarkophagos*—*sarz*, *sarkos*, flesh, and *phago*, to eat.] A species of stone used among the Greeks for making coffins, which was so called because it had the supposed property of consuming the flesh of bodies deposited in it within a few weeks. — Hence, any stone coffin or tomb in which the ancients deposited bodies which they chose not to burn.

Sarcophagy, *n.* [Gr. *sarz*, and *phago*, to eat.] The practice of eating flesh.

Sarco'sis, *n.* [From Gr. *sarz*, flesh.] (*Med.*) Same as SARCOMA.

Sarcot'ic, *a.* (*Med.*) Generating or breeding new flesh.

Sarco'ie, in *Missouri*, a post-village and township of Jasper co., 170 m. S.W. of Jefferson City.

Sard', *n.* [From *Sardis*, a city of Asia.] (*Min.*) A deep brownish chalcidony exhibiting a blood-red color when held up to the light.

Sard'achate, *n.* [Gr. *sardion*—*sardis*, and *achates*, agate.] (*Min.*) A variety of agate containing layers of sard or cornelian.

Sardanap'alus, the name of several princes of Assyria, the most celebrated of whom was the last sovereign of the first Assyrian empire. His reign dates from 836 to 817 B. C., when he was dethroned by Arbaces and Belshazzar at the head of a revolt of the Medes, Persians, and Babylonians. In the last extremity, Sardanapalus, who had withstood a siege for three years in Nineveh, placed himself, his treasures, his wives, and his eunuchs on a funeral pile, which he fired with his own hand. He had ceased to exist when the city was taken, and that event was followed by the dismemberment of the Assyrian empire. The above date is only an approximation to the true one, as authorities vary.

Sard'el, Sardine, Sard'ius, *n.* [Lat. *sardius*; Gr. *sardion*, from *Sardis*.] A precious stone; a species of chalcidony; the cornelian.

Sarden, Sard'el, *n.* (*Zoöl.*) Same as SARDINE, *q. v.*

Sardin'as, or SARDINAS, a bay of the U. S. of Colombia, in the Pacific; Lat. 1° 30' N., Lon. 79° W.

Sard'ine, (*Zoöl.*) A small fish of the Herring family (*Clupea Sardina*), taken in vast numbers off the coast of Sardinia, and in other parts of the Mediterranean Sea and Atlantic Ocean, where the herring is unknown. They form an important article of commerce, their flavor being highly esteemed.

Sardinia, (*sar-din'yah*). [It. *Sardegna*.] An island of the Mediterranean, belonging to the kingdom of Italy, between Lat. 39° and 41° N., Lon. 8° and 10° E., separated from Corsica on the N. by the Strait of Bonifacio. It is of an oblong form, 160 m. long from N. to S., and 60 m. in average breadth. *Area*, with its dependent islands, 9,240 sq. m. The surface is mountainous, the highest peak, Mount Genargentu, attaining an elevation of 7,000 feet. The soil is generally fertile. *Prod.* Principally wine; — also, flax, linseed, hemp, saffron, tobacco, and barilla. *Min.* Iron, lead, salt, antimony, marble, &c. *Manuf.* Linens, cottons, leather, earthenware, and glass. *Chief towns.* Cagliari and Sassari. S. is said to have been founded B. C. 1200 by Sardus, with a colony of Lybians. It was early taken by the Carthaginians,

and afterwards by the Romans. At the fall of the W. empire, it came successively under the power of the Vandals, Goths, and Moors. It was taken by the Genoese in the 12th century, and afterwards by Aragon. It was ceded to the Duke of Savoy in 1720, when it became a part of the kingdom of Sardinia. *Pop.* 588,064.

Sardin'ia, (*KINGDOM OF*) [It. *Stati Sardi*.] The name given to the dominions appertaining to the house of Savoy, and so called after the island of that name. The kingdom of Sardinia consists of, or till lately did consist of, the duchy of Savoy, the principality of Piedmont, duchy of Genoa, county of Nizza, and the island of Sardinia. The continental territories were bounded on the N. by the Lake of Geneva and the Pennine Alps, S. by the Gulf of Genoa, W. by France, and E. by the Lombardo-Venetian kingdom. The area of these territories is 20,000 sq. m. The kingdom of S. was founded in 1720 by Victor Amadeus I., Duke of Savoy. It was the cradle of Italian unity, and the nucleus of the new kingdom of Italy, into which it was merged in 1861. See ITALY.

Sardin'ia, in *New York*, a post-village and township of Erie co., 30 m. S.E. of Buffalo.

Sardinia, in *Ohio*, a post-village of Brown co., 90 m. S.W. of Columbus.

Sard'is, or **Sard'es,** a ruined city of Asia Minor and the ancient cap. of Lydia, 50 m. from Smyrna (Fig. 2006). S. was one of the first towns to embrace Christianity, its people having, it is said, been converted by the apostle

Fig. 2306. — SARDIS.

John. It is one of the seven churches of Asia mentioned in *Revelations* (i. 11). It was captured by the Turks in the 11th and 14th centuries. *Sart*, which now occupies its site, is a miserable place, consisting of a few mud huts. All the neighborhood is covered by ruins of temples, theatres, and other monuments of ancient grandeur.

Sard'is, in *Kentucky*, a post-village of Mason co., abt. 14 m. S. of Maysville.

Sardis, in *Mississippi*, a post-town, semi-cap. of Panola co., 54 m. S. of Memphis.

Sardis, in *Ohio*, a post-village of Monroe co., 36 m. E.N. E. of Marietta.

Sardon'ie, *a.* [Fr. *sardonique*; etymology uncertain.] Forced or feigned; — applied to laughter or smiles in which, under the semblance of gaiety, one scarce conceals bitterness of thought, or mockery.

S. laugh. See RISUS SARDONICUS.

Sardonyx, *n.* [Gr., from *Sardis*, *q. v.*] (*Min.*) Onyx consisting of alternate layers of sard and nearly opaque-white chalcidony. It is the most beautiful and the rarest variety of onyx, and that which was held in the greatest esteem by the ancients for engraving into cameos.

Sa'ree, Sa'ri, *n.* A cotton fabric worn by Indian women, wrapped about the person; — also, a long embroidered scarf of gauze or silk.

Sarep'ta, a fortified town of European Russia, govt. of Saratov, on the Sarpa, near its confluence with the Volga, 15 m. S. of Tzaritsin; pop. 5,000.

Sarepta, in *Mississippi*, a post-village of Calhoun co., 28 m. S.E. of Oxford.

Sargas'so Sea. (*Phys. Geog.*) A name given to that part of the N. Atlantic Ocean, whose area is covered with floating sea-weed (*Sargassum bacciferum*).

Sargassum, *a.* (*Bot.*) A genus of *Algæ*. *S. bacciferum* is the Gulf-weed of the Atlantic. Its stems are much employed in S. America, under the name of *goitre-sticks*, in the treatment of goitre. Their beneficial effects are due to the large proportion of iodine existing in the plant.

Sargeantsville, (*sar'jants-vill*), in *New Jersey*, a village of Hunterdon co.

Sarguemes, (*sarg'meen*), a town of France, dept. of Moselle, on the Sarre, 41 m. N.E. of Metz. *Manuf.* Silks, velvets, gauzes, leather, and earthenware. *Pop.* 6,500.

Sari, (*sar're*), a town of Persia, cap. of the prov. of Mazanderan, 18 m. from the S. shore of the Caspian Sea, and 115 m. N.E. of Teheran.

Sark, *n.* [A. S. *serce*, *syrc*.] A Scottishism for a shirt.

Sark, a river of Scotland, co. of Dumfries, falling into the Solway Frith, near its E. extremity.

Sark, a small island in the English Channel, belonging to Great Britain; Lat. 49° 30' N., Lon. 2° 52' W., 7 m. E. of Guernsey, and 9 m. N.E. of Jersey. *Ext.* 2 m. in length, and greatest breadth. *Pop.* 580.

Sark'ing, *n.* (*Carp.*) Thin skirting-boards, &c.

Sariat, (*sar'la*), a town of France, dept. of Dordogne, on the Sarlat, 98 m. E. of Bordeaux; pop. 6,000.

Sarmatia, (*sar-mā'shi-a.*) (*Anc. Hist.*) A name given by the Romans to all the country in Europe and Asia between the Vistula and the Caspian Sea. The people inhabiting this country were usually called *Sauromatæ* by the Greeks, and *Sarmatæ* by the Romans. The Sarmatians began to threaten the Roman empire in the reign of Nero (54-68). Since that time they figure promiscuously among the barbarians who vexed the N.E. frontier of the Roman empire. They were finally subdued by the Goths, with whom, in process of time, they were amalgamated.

Sarment, *n.* [*Fr.*, from *Lat. sarmentum*, a twig.] (*Bot.*) A prostrate filiform runner, as of the strawberry.

Sarmentaceous, (*-tā'shuus.*) *a.* [*From sarment.*] (*Bot.*) Runner-bearing, as the strawberry.

Sarmentose, **Sarmentous**, *a.* (*Bot.*) Long and filiform, and almost nude; as, a *sarmentose* stem.—Bearing sarments; as, a *sarmentose* plant.

Sarmiento, (*sar-me-en'to.*) a mountain of Terra del Fuego, S. of Gabriel Channel; Lat. 54° 27' 12" S., Lon. 70° 51' 30" W. Height, 6,800 feet.

Sarn, *n.* [*W. sarn*, a causeway.] A stepping-stone in the centre of a brook. (*Prov. Eng.*)

Sarnia, or **Port Sarnia**, in prov. of Ontario, cap. of Lambton co., on the St. Clair River, near Lake Huron. Immense oil refineries have been erected here.

Sarno, a town of S. Italy, prov. of Principato-Citeriore, at the head of the Sarno, 11½ m. N.W. of Salerno. It is noted for its sulphur-baths. Pop. 16,374.

Sarong, *n.* A sort of petticoat worn by women in the East.

Saros, *n.* (*Astron.*) An ancient Assyrian astronomical period, the origin and exact length of which are unknown, though they have been the subject of much disputation. By some authors the *Saros* has been confounded with the *Metonic Cycle*, *q. v.*

Saros, or **Scharos**, (*sha'ros.*) a town of Hungary, 15 m. from Zemplin; pop. 5,500.

Saros, (*Gulf of.*) an inlet of the Ægean Sea, separated from the Hellespont by the peninsula of Gallipoli; ext. 40 m. long, and 20 broad.

Saros-Patak, a town of Hungary, on the Bodrog, 20 m. N.E. of Tokay; pop. 6,000.

Sarothamnus, *n.* (*Bot.*) A genus of plants, order *Rubaceæ*. *S. scoparius* is the common Broom, one of the most elegant of the European shrubs.

Sarpa, a river of Russia, rising in the government of Astrakhan, and, after a N. course of 200 m., falling into the Volga, near Sarepta.

Sarplar, *n.* In England, a large bale, or package, of wool, containing 80 tods, or a ton, in weight.

Sarpplier, **Sarpelere**, *n.* [*Fr. serpillière.*] A coarse hempen kind of cloth used as bagging, &c.

Sarpy, in *Nebraska*, an E. co. bordering on Iowa; area, 245 sq. m. Rivers, Elkhorn and Papillon. Surface, undulating; soil, fertile. Min. Limestone. Cottonwood, oak, hickory, and walnut are plentiful. Cap. Papillon. Pop. (1897) 7,230.

Sarracenia, *ceæ*, *n.* (*Bot.*) The *Sarracenia*, or Water-pitcher, or Side-saddle flower family, an ord. of plants, alliance *Ranales*. *DIAG.* Consolidated carpels, a permanent calyx, and axile placentæ.—They consist of perennial herbs, growing about mud-lakes from Labrador to Florida. They have pitcher- or trumpet-shaped leaves.

Fig. 2307.—SIDE-SADDLE FLOWER, (*Sarracenia purpurea.*)

1, A flower, from which the corolla has fallen off, showing the very large 5-angled stigma; a, a fully expanded flower; b, germin; c, section of the fruit.

Calyx permanent, imbricated, carpels united so as to form a compound ovary, and a 3-celled dehiscent fruit, with large axile placentas. A decoction of the root of *Sarracenia purpurea* (Fig. 2307) has been recommended as a remedy for small-pox; but the opinions of medical men differ widely as to its efficacy.

Sar'rasin, **Sar'rasine**, *n.* (*Bot.*) A name sometimes given to buckwheat.

(*Fortif.*) A portcullis; a sarrasin.

Saras, **Saraz**, *n.* A contracted form of sarsaparilla.

Sarsaparilla, *n.* [*Sp. zarzaparilla*; *Fr. salsepareille.*] (*Bot.*) See *SMILAX*.

Sarsfield, in *Maine*, the former name of a township of Aroostook co.

Sartre, (*sart.*) in France, a river rising in the dept. of Orne, and after a S.S.W. course of 160 m., joins the Mayenne near Angers.—A dept. of the N.W. part of France, between Lat. 47° 35' and 48° 40' N., Lon. 0° 25' W., and

0° 50' E., having N. Orne, E. Eure-et-Loire and Loire-et-Cher, S. Indre-et-Loire and Maine-et-Loire, and W. Mayenne; area, 2,470 sq. m. The surface is level, except in the N.W. part, which is hilly. The soil is generally fertile. Rivers, Sarthe, Loire, Huisne, and Vegre rivers. Prod. Wheat, barley, rye, potatoes, wine, &c. Manuf. Woollen and cotton fabrics, paper, hardware, glass, earthenware, and sail-cloth. Chief towns, Le Mans, the cap., La Flèche, Mamers, and St. Calais. Pop. 463,619.

Sar'to, (*And'rea del.*) (*ANDREA VANUCCI*), a celebrated Italian painter, b. at Florence, 1488. He was the son of a tailor, and was first apprenticed to a goldsmith, but afterwards studied painting under Piero di Cosimo. Among his earliest and best works are the frescoes of the *Santissima Annunciata* at Florence, representing scenes in the life of the founder of that convent. In the same convent is his admired *Madonna del Sacco*, painted in 1525. S. was invited to France by Francis I. in 1518, and was well received, but returned to Florence the next year, and mispending the money entrusted to him for the purchase of works of art for Francis, he never saw Paris again. Among his other frescoes are a *Last Supper*, in the convent of San Salvi, and an *Annunciation*, and *Disputa della Santissima Trinità*, in the Pitti Palace. The finest of his easel pictures is the *Madonna di San Francesco*, now at Florence. D. in Florence, 1530.

Sarto'rial, *a.* Pertaining, or relating, to a tailor.

Sarto'rius, *n.* [*Lat. sartor*, a tailor.] (*Anat.*) A flat and slender muscle, but the longest of the human body, extending obliquely from the upper and anterior part of the thigh to the upper anterior and inner part of the sibia. It serves to bend the leg obliquely inwards, or to roll the thigh outwards, and at the same time to bring one leg across the other, on which account it has received the name of *sartorius*, or "tailor's muscle."

Sar'versville, in *Pennsylvania*, a post-village of Butler co.

Sarga'na, an ancient town in the Genoese territory, on the Magra, 45 m. from Genoa. It had formerly its own parliament. Pop. 4,000.

Sasbach, (*sas'bak.*) a village of Baden, 17 m. from Strassbourg; pop. 1,500. Here Marshal Turenne fell by a random shot in 1675.

Sash, *n.* [*Ar. saj*, a green sash rolled round the head and falling down behind.] A belt or scarf wound round the waist, or over the shoulders, for ornament; a silken band worn by officers in the army, by the clergy over their cassocks, and, also, as a part of female dress.

[*Fr. chassie.*] (*Arch.*) A piece of framing for holding the squares of glass in a window. It is of two sorts—viz., that called the *French sash*, which is hung like a door to the sash-frame; and that in which it moves vertically from being balanced by a weight on each side, to which it is attached by lines running over pulleys at the top of the sash-frame. When in a window both the upper and lower sashes are movable, the sashes are said to be *double hung*, and *single hung* when only one of them moves.

—*v. a.* To furnish with sashes, or frames, for glass; as, a *sashed* door or window.

Sa'sik, a lake of European Russia, govt. of Bessarabia, 35 m. W. of Akerman. Ext. 16 m. long, and 6 broad.

Sas'in, *n.* (*Zool.*) See *ANTELOPE*.

Saskatchewan, ("swift current,") or *NELSON RIVER*, a river of British N. America, rises in the Rocky Mountains by two heads, one in Lat. 49°, and the other in 53° 30' N., both uniting near Lou. 115° W., and flowing thence into Lake Winnipeg after a N.E. course of about 1,000 m., the greater part of which is navigable.

Sas'safraz, in *Maryland*, a river which rises in Cecil co., and flows W. into Chesapeake Bay, between Cecil and Kent cos.

[Named after the above river.] (*Bot.*) A genus of plants, order *Lauraceæ*. *S. officinalis*, common in the forests and barrens of almost all the states, is 10-40 feet high, leaves alternate, flowers greenish-yellow, appearing in May and June, in clustered racemes at the end of the last year's twigs, and after the leaves have expanded. Every part of the tree has a pleasant fragrance, and a sweetish, aromatic taste, which is strongest in the bark of the root. These qualities depend upon an essential oil, which may be obtained by distillation, and which has been highly valued in medicine. The young shoots are a common ingredient in *small beer*, imparting to it a grateful flavor.

Sas'sanage, *n.* [*Fr.*, from *sasser*, to lift.] Stones left after sifting.

Sas'sanids, *n. pl.* (*Hist.*) A Persian dynasty, founded by Artaxerxes I., abt. 226. They governed Persia until the Mohammedan conquest in 651.

Sassari, (*sas'sa-re.*) a town of Italy, in the N.W. of the island of Sardinia, on the Turrutano, 10 m. from its mouth at Porto Torres, in the Gulf of Sassari, 53 m. N.W. of Oristano, and 100 m. N.N.W. of Cagliari; Lat. 40° 43' 33" N., Lon. 8° 35' E. It is well built and strongly fortified, and has a considerable trade in tobacco, oil, and fruit. Pop. 23,672.—The gulf of same name is 20 m. long and 35 m. broad.

Sas'solin, **Sas'soline**, *n.* (*Min.*) Native boracic acid, from the vicinity of Sasso, near Florence.

Sas'tar, *n.* [*Hind. shāstr.*] Same as *SHASTER*, *q. v.*

Sat, *Sate*, *imp.* of *SIT*, *q. v.*

Satalia, or *ANTALIA*, a seaport-town of Asia Minor, on the Gulf of Satalia, 50 m. N.E. of Cape Chelidonia; Lat. 36° 50' N., Lon. 30° 45' E.; pop. 8,000.

Sa'tan, *n.* A Hebrew term, meaning *enemy* or *adversary*, and used in several instances in this sense in the Old Testament. Generally, however, it is applied to the Devil, as being the great adversary and enemy of mankind.

Satan'ic, **Satan'ical**, *a.* Having the qualities of

Satan; resembling *Satan*;—hence, devilish; infernal; extremely wicked or malicious; as, a *satanic* smile.

Satan'ically, *adv.* With the wicked and malicious spirit of *Satan*; diabolically; infernally; in a *satanic* manner; fiendishly.

Satan'icalness, *n.* Quality of being *satanic*; fiendishly wicked, or diabolical; devilishness.

Sa'tanism, *n.* The evil and diabolical spirit of *Satan*. (*R.*)

Sa'tanist, *n.* A diabolically wicked person. (*R.*)

Satartia, (*sa-tar'she-a.*) in *Mississippi*, a post-village of Yazoo co., 40 m. N.W. of Jackson.

Satch'el, *n.* [*Fr. sachel.*] A little sack, pouch, or bag;—also, a lady's reticule.

Sate, *old imp.* of *SIT* for *SAT*. See *SIT*.

—*v. a.* [*Lat. satio*, from *satis*, enough; *It. saziare*, to satisfy.] To satiate; to satisfy the appetite of; to glut; to cloy; to feed, or fill, beyond natural desire; as, he *sated* of pleasure.

Sate'less, *a.* That may not be sated; insatiable. (*R.*)

Sat'ellite, *n.* [*Lat. satelles*, an attendant.] (*Astron.*) A term applied to certain secondary planets moving round the other planets, as the moon does round the earth. They are so called because always found attending them, for rising and setting, and completing the orbit round the sun together with them. The words *moon* and *satellite* are sometimes used indifferently; thus Jupiter's moons, or Jupiter's satellites, are spoken of; but the term *moon* is generally applied to the earth's attendant, and the term *satellite* to the small moons around Jupiter, Saturn, and Uranus. (See *Section II.*)—An obsequious dependant; a subservient follower; a close, submissive attendant; as, every great man has his satellites.

Satel'itious, *a.* Pertaining or relating to, or consisting of, satellites. (*R.*)

Satiate, (*sā'shi-āt.*) *v. a.* [*Lat. satio*, *satiatus*, from *satis*, enough.] To satisfy; to fill or fully gratify the appetite or desire of; to feed to the full, or to furnish enjoyment to the extent of desire; to fill to the extent of want or demand; to sate; to glut; as, a tiger *satiated* with blood.—To gorge; to surfeit; to fill or cram beyond natural desire; to gratify desire to repletion or the utmost; as, though *satiated*, he is not satisfied.

—*a.* Filled to satiety; glutted; gorged; cloyed;—preceding with or of; as, *satiate* of applause.

Satiation, (*sā'shi-ā'shun.*) *a.* State of being filled to satiety.

Satie'ty, *n.* [*Fr. satieté*; *Lat. satietas*—*satis*.] State of being satiated; fullness of gratification, either of the appetite or any sensual desire;—usually, fullness beyond desire; surfeit; repletion; an excess of gratification which cloy, or excites wearisomeness or loathing.

Sat'ipa Creek, in *Alabama*, enters the Alabama from Clarke co., a few m. S.E. of Coffeeville.

Sat'in, *n.* [*Fr.*; probably from *Gr.* and *Lat. sindon*, *muslin*, from *Indos*, *Scinde*.] A species of silk stuff, originally brought from China. It is so manufactured that it does not exhibit the crossing of the warp and weft in weaving, but has a uniform and highly-glossed surface; it is also thicker than ordinary silk.

(*Manuf.*) A soft, closely-woven silk cloth, with a glossy surface. In making other silk stuffs, each half of the warp is raised alternately, but in weaving *S.* the workman only raises the fifth or eighth part of the warp; thus the woof is hidden beneath the warp, which, presenting an even, smooth, and close surface, is better able to reflect the rays of light. In France the chief seat of the *S.* manufacture is at Lyons, and in Italy at Genoa and Florence.

Satinet, *n.* [*Fr.*, from *satin*.] A thin kind of satin;—also, a particular sort of cloth, made of cotton warp and woollen filling.

Sat'in-flower, *n.* (*Bot.*) See *LUNARIA*.

Sat'in-spar, **Sat'in-stone**, *n.* (*Min.*) A fibrous variety of gypsum. It exhibits, when polished, a lustre like satin, whence its name.

Sat'in-wood, *n.* (*Bot.*) See *CHLOROXYLON*.

Sat'iny, *a.* Resembling, or consisting of, satin; as, a *satin* texture, a *satin* skin.

Satire, (*sā'ir*, sometimes pron. *sā'tur*.) *n.* [*Fr.*, from *Lat. satira*.] Keenness and severity of remark; sarcasm; trenchant wit; biting ridicule; incisive humor; pungent irony; denunciation and exposure to derision or reprobation.

(*Lit.*) The representation of follies or vices in a ridiculous form, either in discourse or dramatic action. The Romans were the first to distinguish themselves in this species of literature. The Roman *S.* was at first a kind of rude dramatic composition, filled with various matter and written in various kinds of verse, and took its name of *satura*, or *satira*, from the *lanx satura*, a dish filled with various kinds of fruits and herbs, which was carried in procession at the feasts of Ceres as the first-fruits or gatherings of the season. These *S.* were set to music and repeated with suitable gestures, accompanied with the flute and dancing. They contained much ridicule and smart repartee; and hence poems characterized by these marks, and written to expose vice, got the name of *S.* Lucilino was regarded by the Romans as the father of this species of composition, and was the first to introduce those principles of art which came afterwards to be regarded as essential to it. His poems formed the models of the *S.* of Horace, the great master in this art, and whose humorous and playful raillery of the follies and foibles of mankind are ever fresh and ever true. He reproves with a smiling aspect, and while he moralizes like a philosopher, he discovers at the same time all the politeness of a courtier. Juvenal is much more serious and declamatory. He has more strength and fire, and more elevation of style than Horace, but is at the same time greatly inferior to him in gracefulness and
